No words of mine can portray the ludierous scene that greeted me when I joined the crest-fallen crowd. I shall never forget the subdued look of melancholy resignation that overspread the countenances of that discouraged group of martyrs. Mocking words were in my heart; but as I gazed in the sad eyes of that disconsolate band my lips were sealed. Blessed slience! Little did I dream that before the going down of the sun I should be hugging myself, and blessing down of the sun I should be hugging myself, and blessing

Blessed silence! Little did I dream that before the going down of the sun I should be hugging myself, and blessing my guardian angel that I had not intruded my ill-timed levity upon their overwhelming grief, for now I could trustingly turn to them for the sympathy I sorely needed in my distributions.

ingly turn to them for the sympathy I sorely needed in my dire distress.

But let us resume the chase. The dogs were at once laid upon the trail, and their cheerful notes brought brighter looks to the faces of the hunters, as each one returned to his stand. I wended my way to the top of the mountain, where I had so dearly won my first brush, and scatting myself in the corner of the fence under the two little pines, dreamly listened to the distant music. I had remained here quietly for many hours, and the sun was low in the west before the fox returned to the mountain. He had not been far away, for with the exception of two or three intervals of short duration, the dogs had not been out of hearing the whole time. I had greatly enjoyed the excellent race, but had given up all hope that he would come back. Now my drowsy senses are aroused, and the light of hope again dawns in my breast as I notice a change in the direction of the chase. The dogs are swinging to the right, and, knowing that this course would surely lead them back to the mountain, every nerve and fibre of my body is thrilling with intense, delightful excitement, and eye and ear are strained to their utmost tension. Listen to that magnificent burst of melody, as they turn the corner of the wood and swing into the open. Hear the soulstirring echoes, as they roll along the narrow gorge. So full of reverberating sound is the valley that scenningly in midiarione could cross to yonder bank upon the resounding trumpet chords. Hush! Don't stir nor move your head; don't even wink; just slowly turn your eyes and glance down the slope to where that sled path comes out of the woods. There in the barway, with his head turned back to listen to the dogs, stands our here, beautiful and bright as when we first beheld him.

Although nearly a decade has flown since that memorable day, and scores of deadly foos have all these years dogged his footsteps, not a single shining hair is missing. Now he turns his head and, with a keen, scarching glance to see that all is cle ire distress.

But let us resume the chase. The dogs were at once laid

Although nearly a decade has flown since that memorable day, and scores of deadly foes have all these years dogged his footsteps, not a single shining hair is missing. Now he turns his head and, with a keen, searching glance to see that all is clear, slowly trots along the beaten path. Alas! his course is not in our direction, for the path suddenly turns to the south and we despairingly see him calmly jog along for fall fifty rods—but see! he has turned around and is retracing his steps, and as he nears the turn increases his speed. Now he is at the angle, and, with a wondrous leap, he leaves the path, and, with far-reaching stride, is swinging round the knoll and coming straight here. O kindly fortune, thus to shower upon us thy royal favor. Upon the wings of the wind he comes with graceful lope and soon will cross close by that stunted bushy pine fifty yards in front—our chosen "death line." Then shall his proud form lie grovelling in the death struggle that, with all his cunning, he cannot escape; avenged will be our grievous defeat of the morning, and wiped out with his warm heart's blood the many foul wrongs and insults that we have suffered for long, weary years. Hold hard the quick coming breaft; smother the wild throbbings of that wildly beating heart. Here he is, and, as his nose disappears behind the little pine, I quickly jerk my gun into position and—all! what deep cunning the -brute possesses. He has stopped in his headlong flight and has crouched behind the bush, thinking to disconcert me, and that the sudden collapse of my fense nerves will unsteady me so that he may escape the deadly charge. Poor, deluded fool; a thunderbolt could not now distract my aim. Make your quickest rush for life and see that muscles of steel and unfaltering eyes are still here. Why does he not essay the trial? Perhaps he has recognized me; and as his thoughts go back to that ûrst meeting and he realizes that he can expect no mercy from me, he is abjectly cowering in deadly fear. Poor fellow; you shall have a chance for

your ear until you have a fair start.

But a second had passed since his disappearance when with these thoughts flashing through my mind I started upon the run toward him. I reached the little pine and tooked in vain for his trembling form. He was nowhere to be seen, but indented upon the snow were four very suggestive foot-

prints leading away in a direct line from the place where I had been sitting; glancing along their course I beheld—more than two hundred yards away—a flitting streak of red, and, although blinding tears obscured my sight, I could plainly see as it disappeared over the rise the same old well-remembered derisive flourish of that beautiful brush. Let us draw

bered derisive flourish of that beautiful brush. Let us draw the curtain here. I fain would hide from stranger eyes my overwhelming chagrin.

More than two years clapsed ere I again beheld our gallant hero. It was then on the eventful 15th of March that I have before alluded to. A "sugar snow" had fallen the night previous and covered the ground to the depth of nearly a toot; a damp south wind that searcely strred the sleeping pines was lightly blowing; the leaden sky gave promise that the snow would hold and give us a magnificent day. About a dozen of us had met at the foot of old Bald Mountain at daybreak, and starting the dogs upon the old red's trail had scattered, each one to his favorite runway. By common consent the stand at the top of the mountain had been alloted to me. Each one of them knew that I dearly loved the spot for its associations, and, although it was the best one on the mountain, with the chivalrous feelings that I have ever found to possess the heart of the true sportsman, they with one for its associations, and, although it was the best one on the mountain, with the chivathrous feelings that I have ever found to possess the heart of the true sportsman, they with one voice insisted that I, as their guest, must take the post of honor. As I approached the well-remembered corner, sad thoughts mingled with the joyful feelings in my heart. In fancy I could see the loved form of Uncle Nat standing in his favorite place under the little pines; and it seemed but yesterday that I had sat at his feet and listened to the thrilling tales of his early days, with which he beguiled the long hours when the chase had led away and the dogs were out of hearing. Treasured were his words of wisdom; and to the knowledge thus gleaned do I owe the successful termination of many a well-contested race, and the possession of many a well-contested race, and the possession of many a well-contested race, and the possession of many a well-contested race, and the special substance of the contest of the possession of the property of the

smiles, remarked, "Inat man an ta roz-numer; he moughly we were cold."

I had thus remained here for more than an hour thoroughly enjoying the pleasant memories of bygone days, before the dogs, who had taken a long turn to the west, came back. I knew as soon as I heard the first sound of their voices that they had not started the fox, for the pathetic wailing of the low melodious notes that fell upon my car told well their tale of hope deferred. Several times, while I had been sitting here, my eyes had rested upon a small dark spot on the snow, about a hundred rods to the north of me; but I had searcely given it a second thought. I might perhaps have paid more attention to it, but the dogs had passed very near it on the old trail, and I was watching them when it first caught my sight. True, they were to the windward of it, but so improbable was it that a fox should lie quiet with all these howling demons so close to him, that I was thrown entirely off my guard. Not until the dogs commenced the ascent and were not more than a half mile away, did he stir. Then I saw our subtle hero rise from his couch, and after two or three graceful shakes of his lithe form, steal away down wind and disappear over a knoll. Picture my disgust and chagrin, when I realized that the wily rascal had been craftily lying there all this time in plain view of the whole of this side of the mountain and quietly taking note of our unovements. I could imagine his smile of derision, as he saw me complacently take my sent at his favorite crossing place; and in fancy I could see the look of contempt which he bestowed upon yonder crouching form near the barway, through which he was wont to pass.

Glancing back I saw that the hunters on this side of the mountain had left their stand and were coming toward me, for well they knew that the cunning brute had located every one of them; and that they had just obtained of him would be the last that would greet their eyes for the rest of the day. The dogs were now upon the top of the mountain. While wait e were cold. I had thus remained here for more than an hour thoroughly

one of thom; and that they must change their positions, or the flecting view that they had just obtained of him would be the last that would greet their eyes for the rest of the day. The dogs were now upon the top of the mountain. While waiting with quickened pulse for the glorious burst of melody that would break upon the morning air when the hot scent should fill their eager nostrils, I was much anused to see the actions of the leader of the pack when his eye caught sight of the depression in the snow where the fox had him. Turning his head oyer his shoulder and looking at the broad trail, but a few yards away, that he had helped to make a long hour before, he appeared to take in the situation at a glance, and I could plainly see by the way that he wheeled around that he was just as mad as he could be be, and as he tore along the fresh trail his sharp jerkey yells plainly expressed his anger, and the thoughts of that long weary circle that he had so needlessly taken added fresh speed to his flying steps. When the hunters came up I told them the tale, confident that each one of them knew by experience just how the dog felt, and that he would be sure of their heartfelt sympathy. We held a short council of war and decided to advance our forces about a mile to the north and patrol an old road (that ran over the mountain. We reached our destination in good order, and placing a guard at each important position, calmly awaited events. Just below me and in full view, one of the hunters was seated upon the bank beside the road. His keen eyes were ever turning up and down the road, restlessly watching each approach. Suddenly he springs to his feet, and, whiriling around with his gun at his shoulder, twists and dodges a moment, and then stands blankly gozing into the impenetrable laurel thicket the very picture of dark, hopeless despair. There was a world of meaning in the sad, faltering way in which he slowly lowered the old gun, and I did not need to hear the curses loud and deep that he poured forth, to know that his landed upon the bank within three feet of his head, and be-fore he could cover him had twisted out of sight. Although this man had achieved the fruition of his dearest hopes, and his ardent prayers that the fox might cross at his stand had been specify answered, "still he was not happy," and so in-stilled into my mind were the generous teachings of my chivalrous companions that I could truly say that I did not envy

him his good fortune.

Instinctively realizing that remarks of mine would be entirely inappropriate, I turned to resume my post. Fancy my feelings when I beheld, not twenty yards from where I had been sitting, this satanic imp standing in the middle of the road and coolly gazing at us. Although he was good eighty yards distant I instinctively brought my gun into the road and coolly gazing at us. Although he was good eighty yards distant I instinctively brought my gun into position and as he sprang for the bank, threw it well ahead of him and impulsively pulled the trigger. With proudly beating heart I saw him miss his footing at the edge of the bank and tumble back into the ditch. With loud exultant shouts I voiced the tumultuous feelings of joy and pride that were surging in my bosom. But my triumph was of short duration, for guthering himself up he took the bank and wall with a prodigious thying leap and disappeared.

Notwithstanding the painful revulsion in my feelings I noted with no small degree of satisfaction that the derisive flourish of that beautiful brush, with which he was wont to wave me bis addeu, was entirely wanting, and that his usual nonchalant appearance of fearless abandon was suddenly changed to a frightened look of mortal fear and dread.

Some of the dogs had now reached the road and were

nonclalant appearance of fearless abandon was suddenly changed to a frightened look of mortal fear and dread. Some of the dogs had now reached the road and were howling and tearing at the stones at the mouth of the little bridge. Yelling to them at the top of our voices, we soon had them at the spot where the many bright red flecks upon the snow plainly showed us that he was grievously burt. As the screaming dogs, made frantic by the smell of the warm blood, rushed after him with terrific speed, we congratulated ourselves that the chase would soon be over and that we could soon proudly boast the possession of that long sought white-tipped brush. We saw by the marks that he left that his right fore leg was broken and uselessly dangling. There was a large quantity of blood upon the snow, and we followed the trail and saw that at almost every jump the red life current had spurted from the wounds for more than a foot. We again shook hands and raised our voices in exultant shouts of victory. Our companions now joined us, and as they beheld the gruesome sight, raised a prolonged cheer that made the welkin ring again.

The chase led down wind, and the dogs were soon out of hearing; indeed, most of them were running "still" and exerting every nerve to overtake the wounded fox; this was no time to expend the panting breath in futile noise; precious moments could not be wasted now to thrust the eager nostrils into the warm track and dally with the perfume; but mute and relentless as fate, with bloodshot, glittering eyees and promote of the will will, exerting race.

We followed on about a hundred rods to the brow of the

and reightess as fate, with obodishot, glutering eyes and proposition truding tongue, every muscle and tendon of the swiftly flying forms was strained to its utmost tension as they sped along in this wild, exciting race.

We followed on about a hundred rods to the brow of the hill, expecting to find upon the broad slope below the panting forms of the dogs lying upon the snow around the mutilated form of their victim; but when we arrived at the spot and glanced down the hillside there was nothing to be seen save the bloody trail, almost obliterated by the rushing dogs. We stood here a moment, and, as our ears caught the sharp cries of the dogs far to the west of us, with one impulse each man started back at the top of his speed.

Hearing a heartfelt grunt just behind me, I glanced over my shoulder and beheld a sight that I shall long remember. Close to me was an old, gray-headed patriarch standing on his head and gallantly essaying to reverse his position, while a little to one side of him a compatriot was struggling waist-deep in the treacherous depths of a spring hole that had been hidden by the snow. I had been ardently longing for my old stand on top of the mountain, but now I was more than reconciled and perfectly satisfied with my position. A glance at the wildly eccentric evolutions of those frisky boots, and a glimpse at the wonderful contortions of that mud-besmared visage were very consoling to my feelings. With renewed vigor I pressed on to the old road, and, tearing through the narrow laurel thicket, rushed up the slope, and breathless and thoroughly blown reached the ridge. I was still more than 300 yards from the little pines, but to save my life I could not go another step.

The dogs were about a mile to the southwest of me, and were swinging toward the mountain and rapidly approaching. Soon I saw our now thoroughly frightened hero with lolling tongue and trailing brush come over a rise, and with incredible leaps, sters straight for my favorite stand. Not more than ten rods behind and in full view

with incredible leaps, stear straight for my favorite stand. Not more than ten rods behind and in full view of him, were three of our swiftest dogs, straining every nerve to overtake him. Now they are at the top of the hill, and as they reach the descending ground I can see that they are slowly but surely gaining upon him. Poor old fellow! your race is nearly run. A few more weary leaps for life and the gleaming fangs of the releutiess fiends so close behind will be fastened in your quivering flesh. Sadly I gazed upon the scene. Profound sorrow was in my heart as I realized that this was the last of those many days of rarest sport that we had enjoyed with him; and as I saw the gallant fellow—weak and wounded—gamely struggle on, tears were in my eyes, and I cursed the hoar that hand of mine had wrought him harm. The open-mouthed dogs are now close upon him. As they spring to seize him, he nimbly doubles upon them, and they go sprawling and sliding down the hill, while he, with brave leaps, climbs the steep ascent. But new disaster awaits him here, for another dog has now arrived and cuts off his retreat. Game to the last, he boldly faces the new comer and fastens his sharp teeth in the end of his nose. With howls of pain the cowed dog tears himself loose, and with crestfallen looks sneaks away. Fatal delay; ere the fox can recover and resume his flight, cruel jaws have closed upon his beautiful form, and with vengeful shake and ever tightening grip, soon finish their bloody work.

My companions had now arrived, and together we wended our way to the spot. Deep feelings of sadness were in our hearts, and hushed and low were the few words that we uttered. Almost reverently we raised the mangled, bleeding form, and with misty eyes and husky closes, gave three cheers for our gallant hero, the Oid Red Fox of Balld Moutain.

Mr. Albert's Exploit.—The Richmond Whig reports: Mr. H. M. Albert, of Pulaski county, recently fired into a flock of ducks feeding about one of his fodder stacks. He had loaded his gun heavily for just such an opportunity. It was an antique gun, with a bore like a pint pot. Upon this occasion it capped the climax of all its murderous achievements by slaughtering outright twenty-five ducks, maining an indefinite number, besides knocking its owner senseless, and finally concluding its own career of carnage by bursting into ten thousand and odd pieces. Mr. Albert did not pick up him, and for some time little was thought of the ducks, until it was ascertained that Mr. A. was not seriously hurt.

ADIOS.

To one who has traveled far nearly two months with no other means of locomotion than mules and horses, the sight of a railroad is most refreshing. Even if the traveler make, what may be called, "Mexican connection"—that is, find himself just twenty-two hours late for the train—the sight of a railroad is most refreshing. Even if the traveler make, what may be called, "Mexican connection"—that is, find himself just twenty-two hours late for the train—the sight and the country where a train runs at stated intervals, even though but once a day. For sixteen days previous to my reaching Esperanza I had been in the saddle; in the last three had ridden one hundred and seventy miles, sixty miles in the last day, and reached the station above maned in a state of exhaustion and fever. The great heat of the Southern valleys, in violent contrast to the high plateaus traversed by the rail-way, were responsible for the latter.

Esperanza, a station on the Mexican Railway, 152 miles from Mexico, and 111 miles from Vera Cruz, lies at an altitude of nearly 8,000 feet above the sea, consequently it is cool all day and windy all night. It is below this station, in the direction of Vera Cruz, that the scenery of the road is of such magnificence that people come from all quarters of 100 such magnificence that people come from all quarters of 100 such magnificence that people come from all quarters of 100 such magnificence that people come from the two proper and the temperate zones, with a profusion of tropical vegetation and a soft, agreeable climate. It has been selected as the place for an exhibition of the products of the State of Vera Cruz, and the "exposition buildings" were about the dimensions of those used in county fairs in the States. The show took place in December. A return fever obliged me to lie over one train—twenty-four hours—at Orizaba, and here I was left to puzzle during my waking hours over a problem. It was this: Two months previously I had left Cordova for Southern Mexico, taking with me but little lug

past season, Vera Cruz looked very fresh and inviting. The scars of its sufferings do not show to one walking through the streets, (which are very clean) or to one conversing with its inhabitants.

The ravages of yellow fever and smallpox have been really terrible, yet the people seem almost to have forgotten the dreadful visitors and are as light-hearted and hopeful as ever. The official returns cannot be relied upon, and it is not believed that they represent the half of those who died, yet they admit about 400 as the number of deaths from vemito during the months of June, July and August. In June, the number is admitted as 235, when the fever was at its worst. It is thought that the norther, blowing when we left, will have rid the city of the last vestige of fever for the season. It lasted three days; the second day was a holiday—the Mexican Fourth of July—their anniversary of independence. This they celebrated with rockets and bands of music. At night the lovely plaze was illuminated and the people crowded there to enjoy the fireworks. Then the fever patients and invalids crawled out of their heated sick rooms and sait in the breeze, even enjoying the fierce gales.

A chronic complaint along the coast of Vera Cruz is this blast of Boreas called the "Norther." It swoops down upon the sen like a bird of prey, sending ships ashore and lying low many a forest monarch and many a residence on land. The open roadsteads of this coast offer no protection except for the slight shelter offered by the island and castle of San Juan de Uha, in the bay of Vera Cruz. The sea dashes over the quay in great waves and over the sea-wall into the streets, with encrustations of salt. The wind howls through the streets, filling everybody with sand and consternation, but it is a welcome visitor, nevertheless, and the amount of disease and fever germs it dislodges and sends off to be dissipated in thin air cannot be calculated. During the "Norther" all the small boats and lighters are drawn out and hauled up beyond the reach of the

in office in Washington who appoint men to foreign stations for which they are not qualified nor acclimated. The twelve years residence of Dr. Trowbridge here as our consul, during which he has discharged the duties of the office faithfully and won respect from everybody, should entitle him to a reappointment. It is impossible for one not acclimated to reside in this city long without neceiving a visit from "Yellow Jack," which may prove fatal. The Doctor and his family have passed through many bad seasons; they have all had the fever, and it is to be hoped they may be spared yet many years to live in a place they seem to like. For a city of 28,600 people Vera Cruz does not present a broad water front, as seen from the sea, nor is it far from the sea wall to the sand hills that bound it inland. It presents a lovely picture from the steamer, the soft tones of its walls harmonize so well, the many towers and the peculiar covered domes glisten in the sun, and far beyond the sand hills and the Lianos and forests, on a clear day, rises the snow-white peak of Orizaba. It is surprising how far the two great peaks, Orizaba and the Cofre de Perote, can be seen. We discerned them on Sunday at Tuxpan, a hundred miles north of Vera Cruz, and it is said that the former can be seen sixty miles at sea.

Nothing could be learned regarding the commencement of

Orizaba and the Cofre de Perote, can be seen. We discerned them on Sunday at Tuxpan, a hundred miles north of Vera Cruz, and it is said that the former can be seen sixty miles at sea.

Nothing could be learned regarding the commencement of work at Anton Lizards, the port that Gen. Grant contemplates making the rival of Vera Cruz, but reports state that a great work is being done at the River Coatzcoalcos, on the Tehuantepec railroad. Fifteen miles are said to be finished, and the grading carried well into the country. This is a railroad that seems likely to enter upon profitable work as soon as it is completed.

Beyond River Coatzcoalcos, where, at present, the steamers do not stop, is the chief and only port of the State of Tabasco, a place of some importance, called Frontera. At Frontera the great river, Tabasco, or Grijalra, discharges a turbid flood, and it is up this river that one must steam and paddle if he wishes to reach the famous ruins of Palenque.

Glorions country this land of surprises, of deep, impenetrable forests, shrouding from human view cities born thousands of years before our history began. How one longs to get on shore at these ports that lie wrapped in haze from six to ten miles distant! We know that they are the points visited by Cortés, by Cordova, by Grijalra; that here courred a skirmish, there a bloody battle; that here the heathen were converted as masse, by the thousand, and worshiped, not only the God of the conquerors, but the Spaniards themselves and their horses. It is when off Campeche, perhaps, that one feels he has reached historic ground, for it is a point mentioned in the earliest chronicles of New Spain. Here, as in Yucatan, there are numerous deer and small birds, like qualis, and in the lagoon great swarms of water fowl. But the scrub that covers Campeche is infested with the garpapata, a species of tick that worries the life out of one penetrating it. The very name of the country in Muya, the longuage of the native lindins, Cham, a serpent, and péche, a garrapata. As

bye to Mexico. Seven months previous I had landed on this very shore, a stranger, not knowing a single soul. I had gone into the interior and had since traveled many a mile through the forests and over the plains and mountains of New Spain. Now, I was returning to the States, laden with the spoils of many a foray in historic fields and rich in the recollection of many friends—pursued, perchance, by the curses of a few enemies. It seemed like parting from scenes of home when we finally steered away from Yucatan and the low sand hills with their fringes of palms, amongst which nestled red-roofed houses, sank down behind the sca. We heard that yellow fever had got that way, too, and that some of our friends were dead. Good friends—they are all good friends in Yucatan—may your souls rest in peace! Two days later, we were dodging the carriages in the streets of Havana, and listening to the band at evening, as it filled the cool air with music in the Reoque de Yabbel. Havana, too, was stricken with yellow fever, but we heard more of it before we reached the port than after we had entered it. Indeed, these officials, rotten with pestilence and jaundiced with pest fevers, wished to place us in quarantine, instead of warning us against infection on shore. But we sauntered on shore, and took aboard cargoes of sugar and tobacco, and really gave the fever little thought. Nor had we occasion to, though we were saddened and reminded that the climate of Mexico had some bad spots in it, by the death of one of our number, only one day out of Havana. We buried him next day at sea, almost within sight of the Florida coast, right abreast of Indian River, this young man, as son of Brigham Young; a right good young man, and whom we regretted should die such an untimely death.

Four days later we had crossed the Gulf Stream and were heading up towards the noble city where the Forest And Stream and the revenue officer on duty said I had better give him five dollars to prevent his dosecration of the day, and to edudent of this officer

of my late companions in Mexico, who were probably at that time on their way to a bull-fight. And did I give him that five dollars to prevent his descenation of the day, and to eke out his scanty salary? Ask him!

It was not for me to indulge in reflections at such a time, but to get my luggage out of that officer's way before he changed his mind and broke my boxes open. And, likewise, I believe it is best to act with my reader, and take myself away with my baggage before he breaks my metaphorical head. Reflections, I know, are not in order; but let me linger to wish the gentle re.der adios; and, reader not quite so gentle, utilos! our voyage is ended

ODER.

THAT TRIP TO TEXAS.

THAT TRIP TO TEXAS.

I ESTEEM myself most fortunate that I have been able to afford even a moment's amusement to my entomical friend, (idem soraos) "N. A. T.," and soip shoncy from the rich flowers that bloom in the Holy Land, and then buzzes around with the music of his aromatic wings. It occurs to me, however, that before he proceeded to indulge in his criticisms, he should have been right sure that the "spur had pricked the sides," and thus justified the "wincing" he has exhibited. There was nothing in my communication which warnants the particular "amusement" in which he gloats "Wells" never thought and never said, nor even intimated that Texas did not abound in game. He would have regarded it as most remarkable, if in a territorial domain of more than 200,000 square miles there was not enough of it somewhere to satisfy the aspirations of the most ardent sportsman. He did not expect to see grouse or deer, or mule-eared rabbits in the immense city of Fort Worth, or even in the numerous other pretentious cities which make glad the heart of the people of the Empire State of the Union, but from the representations which had been made to him by residents of Texas, he did think that when he stood near the temple of Texarrant county, and looked over miles of rolling prairie, the "visual line which circled him." embraced thousands of prairie chickens and other game of that latitude. He did not expect to be told that it was somewhere cise. He did expect to find, even in the thickly populated counties of Johnson and Hill, in which there are still many thousand acres of uninclosed prairie, in large bodies, quite a quantity of grouse, and in the tields that splendid game bird which civilization does not destroy. He was only disappointed, that is all. If he had had the honor of "N. A. T." acquaintance, and could have satisfied him that he was a fit associate, which, perhaps, he might have done by the kindness of one of the best-known citizens of his own town—favorably known all over the country for his intelligence and ESTEEM myself most fortunate that I have been able to

T. I think I cannot be wrong in supposing that the readers of the Forest and Stream were not expecting me to write of what I did not see, and to draw upon my imagination for facts. I sincerely trust that very few of them can believe me to be such a simpleton as to think that Texas has no game because I found but little of it, or that I was even so verdunt as to expect to see it in abundance in the crowded what I did not see, and to draw upon any imagination for facts. I sincerely trust that very few of them can believe me to be such a simpleton as to think that Texas has no game because I found but little of it, or that I was even so verdant as to expect to see it in abundance in the crowded streets of even so unpretending a city as Fort Worth. My communication has at least had the good effect of bringing forward so clever a writer, and, I doubt not, so cautious a gentleman as "N. A. T." to enlighten all who are anxious inquirers as to the proper game regions of that vast domain, which lies between the Sabine and the Rio Grande. But of one thing the readers of the Fordst and Strikeam may be assured—even Texas does not contain anything like the quantity of game which ardent and often fauciful writers describe, and "he who is deceived thereby is not wise." That it has a good supply there is no doubt; and in certain seasons the birds of passage are very abundant. "Wells" wanted to try his hand or his gun upon the pinnated grouse, because that sport was a novelty to him. He has killed very many duck and not a few quail, and can find them not only in the pine woods of his own State, but in some parts of it which contain much less pine than the part of Texas in which "N. A. T." lives. The central counties of North Carolina are as fine a region for Bob White as any part of this continent, and that any one can testify who has visited them and gotten from ten to fifteen miles from a railroad station.

But I think that "N. A. T." and myself will not be enemies because of this little squall, but each, in his own way, will do all he can to amuse, if not instruct, the sportsmen of the country. For mere controversy, I have no taste and have no disposition, simply "for the fun of the thing," to indulge in that kind of criticism which is sometimes resorted to, solely to exhibit skill in debate. I have had my share in such struggles as are common annong men who entertain decided convictions and desire to enforce them. But I have

way of business or pleasure. Some of her citizens are n so simple as to expect, even in Texas, "figs from thistle or that buffalo and antelope find good browsing and a se retreat in the lonely streets of Dallas, Waco, Austin Palestine. "N. A. T." assures us that they are not in FC Worth. I believe him.

Wells.

PINE WOODS, North Carolina.

Massachusetts Deer Bill.—A bill has been introduced at Boston, providing as follows: Section 1. Whoever, in the counties of Barnstable and Plymouth, in the Commonwealth of Massachusetts, at any season of the year, shall kill, take, or wound any deer, except his own tame deer kept on his own grounds, when in, near, or within two hundred yards of any pond or river, shall upon conviction be punished by a fine of not more than one hundred dollars nor less than ten, or by imprisonment in the house of correction not more than six months nor less than one, or by both fine and imprisonment. Sec. 2. In all prosecutions under the provisions of this act the possession of any deer mentioned as prohibited by this act shall be prima facte evidence to convict under the same. Sec. 3. All fines imposed under this act shall be paid to the city or town where the offence is committed. Sec. 4. Any person may, in the counties of Barnstable and Plymouth, hunt deer, with or without dogs, between the first day of November and the first day of December in each year; but no hunting of deer shall be allowed upon any days other than Tuesday, Wednesday, Thursday and Friday of each week within the time specified, and any person offending against this act shall be punished by fine of not less than ten nor more than fifty dollars for each offence. Sec. 5. It shall be the duty of the selectmen and and rriday of each week within the time specified, and any person offending against this act shall be punished by fine of not less than ten nor more than fifty dollars for each offence. Sec. 5. It shall be the duty of the selectmen and the constables of the respective towns within said counties to cause the provisions of this act to be enforced. Sec. 6. This act shall take effect upon its passage.

Matural Bistorn.

NOTES OF THE JEANNETTE VOYAGE.

THE sad fate of the Jeannette and the sufferings of her gallant crew have enlisted the sympathics of the civil-ized world. The uncertainty which still exists in regard to what has become of the two missing boats' crews cannot be

Ized world. The uncertainty which still exists in regard to what has become of the two missing boats' crews cannot be terminated for some time yet, but it is cheering to know that every effort is being made for their discovery and rescue by the Governments of Russia and the United States.

To many of the readers of the Fonest and States.

We true that the taxidermist of the expedition, Mr. R. L. Newcomb, was for years a frequent contributor to these columns, and was personally known to a large number of our readers. We trust that the missing crews may be found before long, but in the dead of winter and in such a region as the mouth of the Lena, the searchers have a hard time before them.

A few interesting notes, sent on by Lieut. Danenhauer, have been published. He says: "We discovered Jeannette Island May 16, 1881 [?], in lat. 76 deg. 47 min., long. 158 deg. 50 min. E. It was small and rocky, and we did not land upon it. Henrietta Island was discovered May 24, in lat. 77 deg. 8 min., long. 157 deg. 38 min. E. We visited it, and found it to be an extensive island, animals scarce, many glaciers. A very large island, found in lat. 76 deg. 88 min., long. 148 deg. 20 min. E. All knews distinct and some and the control of the cont land upon it. Hemietta Island was discovered May 24, in lat. 77 deg. 8 min., long. 157 deg. 43 min. E. We visited it, and found it to be an extensive island, animals scarce, many glaciers. A very large island, found in lat. 76 deg. 38 min., long. 148 deg. 20 min. E. was named Bennett Island. On it we found many birds, old horns, drift wood and coal; no seal or walrus; strong tidal action; bold and rocky. The south cape we named Emma. The general health of the crew during (wenty-one months was excellent; no scurry. We used distilled water, bear and seal meat twice a week, but no rum. Divine service was held regularly. We took plenty of exercise, and everybody hunted. Game was scarce, but we got thirty bears, two hundred and fifty seals and six walrus; no fish or whales seen. All possible observations were made during the drift, the result showing northwesterly course, the ship heeling over and being heavily pressed by ice most of the time. The mental strain was heavy on some of us. The result of the drift during the last five months was 40 miles by tidal movement of the ice; very rapid drift the last six months. Soundings pretty even—18 fathoms near Wrangel Land, which was often visible 75 miles distant. The greatest depth was 80 fathoms; average depth, 35; bottom, blue mud; shrimps plentiful; meteoric specimens got from bottom; surface water temperature 20 deg. above zero. The extremes of temperature of air were: Cold, 58 deg. below zero; second winter, 39 deg. below. During first summer mean temperature was 46 deg. above zero. The heaviest gale showed a velocity of 50 miles an hour, but such gales were not frequent. Barometric and thermometric fluctuations were not great. There were disturbances of the needle coincident with the auroras. Telephone [7] wires were broken by the ice movements. Winter's growth of ice was 8 fect. The heaviest ice seen was 23 feet thick. During the first week of the retreat from the Jeannette we drifted back 27 miles more than we could advance. The snow was nearly knee deep. The nat

DRUMMING OF THE RUFFED GROUSE.

DRUMMING OF THE RUFFED GROUSE.

WORD spoken in season—how good it is." Your kind letter reached me here, whither I had come against all medical advice, creeping along in the old stagewagon at the reckless pace of two and a half knots an hour, but I was also creeping from the Valley of the Shadow, and the weather was like May. The meilow trill of the bluebird and the querulous scolding of the robin were heard in the land, and long strings of pigeons were flying overhead; and so, hour after hour, for eight mortal hours I crawled up the banks of Pine Creek, pasing more than twenty miles of the best grouse coverts I ever saw, where a few years ago I could bag all the grouse I wanted in half a day's tramp. The coverts are still there; the grouse have vanished—where and wherefore? There are no more ticks, owls, hawks, weasels, cats or other vermin now than when grouse were most plenty. It is not to be charged to the increase of setters, pointers or breech-loaders, for they disappear just the same on the best ranges, where dogs and breech-loaders have never been arrayed against them. It is not through any lack of food, which is, and always has been, most abundant on the upper waters of the Susquelmma. And it is not caused by pot-hunters. We have none here worth mention. What is the cause?

It is a strange phase of buman nature, and goes far to

the cause?

It is a strange phase of buman nature, and goes far to prove the Darwinian theory—that the average bifurcated fragment of animated nature cannot accept a hard, plain fact without agitating his gray brain matter about the reason theoretor.

fragmentol animates acrass brain matter about the reason therefor.

This is well—when a reason can be had and proved.
But it happens that our gamiest and most beautiful bird vanished suddenly, all at once, from every section of the country without any assignable reason that any logical mind can accept. The proof of the fact is conclusive and overwhelming. It is one of the thousand my-steries that meet us at every turn from the cradle to the grave; one of the things "that no fellah can ever find out."

It is possible, though hardly probable, that the grouse may come to the front again as suddenly as he faded and failed. Treat him well in any case. Never shoot more than three or four of him in a day. He is, beyond question, our finest game bird. If you go to slaughter him for a "bag," there isn't enough of him to go round.

Once, and once only. I saw a couple of cock grouse in an animated discussion. They fought more sharply, quickly and gracefully than tongue or pen can describe. But they were not game. In two or three minutes one of them hurtled away like a shot, and the victor, taking possession of the

were not game. In two or three minutes one of them hurtled away like a shot, and the victor, taking possession of the drumming log, swelled, ruffled, strutted and put on an amount of importance that you would hardly deem possible in a bird of his size. I thought at the time that such a circus could be seen at any time in the season by one who had patience to sneak-hunt up to cycshot of a drumming log and lie perfectly quiet. But, although I turned out in sharp, frosty mornings

and lay in sight of their logs for hours, it was the only fight I ever saw, and I have met only one candid man who claims

and any in signs of their logs for hours, it was the only light I ever saw, and I have met only one candid man who claims to have seen the same thing.

I have seen the fellow drum, probably a score of times, and it is a pretty sight. He is a picture, as he straightens I have seen the fellow drum, probably a score of times, and it is a pretty sight. He is a picture, as he straightens and struts; and, as he quickens the strokes on his breast and sides, until he sends "muffled thunder" to the vales below. The man is a brute who can send a charge of shot crashing through such a thing of beauty. Now, of all the sportsmen who read Forest and Streem, and who hunt grouse, I doubt if ten men can truly say that they ever saw a cock grouse fairly in the act of drumming. And yet it is not a difficult thing to achieve. It may be done by any enthusiast, as follows: First, find the drumming log of an old bird that has drummed on the same log for several seasons. Go in the middle of the day, look the ground over and select a good stand-point about thirty-five yards away. Cut off a twig or branch here and there until you can command a clean view of the log from end to end. Get out of bed on a frosty April

branch here and there until you can command a clean view of the log from end to end. Get out of bed on a frosty April morning before it is fairly daylight, take your position and keep it, silent and motionless. A little before sunrise the bird will come, sometimes a little later. A small, well-sighted glass is a good thing to use. Here is what you will see.

A proud, beautiful cock-grouse, neck wings, ruffled to their fullest, swelled, proud, defiant, strutting back and forth on his log, making a low, cooing, love note, but, all the while watchful, wary and cautious. If you can keep him from getting suspicious, presently he will make his grandest strut, throw his wings up, and then commence the strange, peculiar drumming, that may be heard much more than a mile.

mile.

In a few minutes you may see a pretty brown bird come swiftly over the leaves, looking hardly larger than a quail. She has heard and answered the call of her lord—the sultan of the log. There is a love passage of a minute or two, in which the hen is meek, submissive, and close-feathered, her lord, ruffled, strutting, and looking his grandest. Then she glides away as she came, his majesty mounts his old pine throne and drums his readiness for another interview with members of his harem, and the thing is repeated again and again. I have seen it repeated six times of a morning, and sometimes only once or twice. It is worth a little patience and self-denial to see it.

One of our naturalists—Audubon or Wilson—describes the same thing, if I remember right. He had been there and seen it.

seen it. When muscle and brain work together a little freely and easily, I will submit a finish to the Nipper cruise. And I have got something to say on canoeing. I have watched and tread the canoe talk carefully. Canoes are like deacons, "All deacons are good—but there is a difference in deacons."

PINE CREEK, Penn., 1882.

SHORE BIRDS IN GRENADA.

GRENADA, W. I., February 6, 1882.

Editor Forest and Stream

GRENADA, W. I., February 6, 1882.

Editor Forest and Stream:

1 am much indebted to your correspondent, Mr. W. Hapgood, for the information contained in his account of the "Range and Rotary Movements of Limicolæ," which appeared in your issue of October 20 last.

A great number of these birds visit this island, and the popular belief is that they come from South America, owing to the fact that they appear immediately after the southerly winds set in during August and early in September, and the stronger the south wind, the more plentiful are the plovers, etc. The first to arrive are the yellow-legs, (Totanus Jlavipes and T. melanoleucus) generally about the middle of August, but last year was exceptional, as we had strong winds from southward during July, and I shot several yellow-legs on the 25th of that month. Then follow large flocks of sandpipers (Breunetes pusulus), plovers (Chrandrius virginicus), and grass birds (Actodromus maculata); also in less numbers the following: Squatarola helaetica, Bartramia longicauda, Popintites semipalmatus, Limosa Jada, Micropaluma himantopus, Strepsilus interpres, and a goodly sprinkling of others.

I can now understand the reason of the birds arriving at Barbados earlier than they do here, as they come from the north and not from "the mouth of the Orinoco," as generally believed and asserted by our sportsmen.

I would be thankful if any of your correspondents would inform me through your valuable columns, of the habits and migration of the blue wing teal (Querquedula discors), which arrives in our swamps during the month of October, and is also supposed, to come "from south ard." Centrificle.

The Bohemian Waxwing in Iowa.—Oskaloosa, Iowa, March 4, 1882.—I clip the following from my diary: March 30, 1880. Yesterday I saw a flock of birds in the orchard, which I at first took to be codar birds, but on shooting a pair I came to the conclusion that they corresponded better with descriptions I have read of the Northern waxwing (Ampelis garrulus). Their general color is a rich bronze, with dark brown under tail coverts; also small white spots on the wings and black around the bill, extending back under the eyes. Size, fourteen inches from tip to tip of wings, eight inches in length. There is no doubt they were waxwings. The colorings of the cedar bird and waxwing are very similar, except the spots of white on the latter, which are not seen on the former, but the cedar bird is in size about one-third smaller. What brought these birds so far south, has often puzzled me, as it will be remembered the winter of '79–80 was very mild. John Burroughs, in Scribner's, of Jun. '78 says: "The waxwing is a bird of Siberian and Alaskan evergreens, and passes its life, for the most part, far beyond the haunts of man." He confesses to having never seen the bird, but thinks that Audubon saw them in Maine. The birds with which I had experience were exceedingly tune, allowing me to approach within a few feet before taking flight, which, in itself, gave evidence of their being natives of localities undisturbed by man. Have any of the readers of Forest AND STREAM ever seen this rare and really beautiful bird in latitudes as far south as this (about 41 degrees north)? If so, I hope that they will give through your columns their observations on this subject.—J. E. Seevers. THE BOHEMIAN WAXWING IN IOWA. - Oskaloosa,

Two Live Brant.—Mr. Frederick Mather, assistant to the United States Fish Commissioner, received yesterday a present of a pair of live brant. He intends sending them to Central Park, and Mr. W. A. Conklin, the superintendent of the menagerie, has promised to look after them. Later on Mr. Mather will have them sent to a well-known trout breeding farm on Long Island, where be trusts they will mate and breed. The geese were wing-tipped last winter on the Virginia broad-water by a New York sportsman who was shooting there, and after a hard chase they were captured in the

shoal water and confined in a pen. Although, from time to time, brant have been domesticated both here and in Europe, they have never been known to follow the example of the other varieties of geese by breeding in confinement. As yet their nesting resorts have never been discovered by ornithologists or arctic explorers. Indeed, the surmise that there are open seas at the Pole has been principally based on the observations made of the habits of this mysterious fowl. As far north as the explorers have reached the brant have still been seen winging their way northward. Their food is known to consist mainly of marine grasses, which grow only on the shoals. This, perhaps, points more to open seas at the extreme north than any other evidence yet brought to light. On the day after the geese were secured they became very tame and almost instantly recognized the person who fed them. They would run to the side of their enclosure and take sea grass and cabbage leaves from his hand. They arrived here yesterday from the South in fine condition, and when given their liberty they at once proceeded to cat a good breakfast of corn and make their toilets. Of all the five varieties of geese this fowl is the most beautiful. At this time brant are migrating northward, where they will meet the ice on the coast of Labrador. It is presumed that they deseend from their aerial route and feed at the springs above fludson Bay and in Greenland on their way to their howers at the Pole.—Aew York Herdet. [The brant were shot and wounded last October by Mr. Franklin Satterthwaite, as was recorded in Forgest And Stream at the time; they fed from his hand the next day. They are now at Central Park.]

Bright Featners, "which has just appeared, is devoted to the summer warbler, (Dendræea witing) of which an excellent plate is given, showing a highly colored nale and female. A very pleasant description of the habits of this familiar little bird accompanies the plate. Mr. Rathbun's "Bright Feathers," which has just appeared, is devoted to the summer

warbler, while the topmost nest is empty. It is well known that the nest of the species under discussion is a favorite place of deposition for the egg of the cow bird, but the former understands what the rearing of the young vagrant means, and frequently in this way escapes the disagreeable task.

Answers to Correspondents.

A Reader.—The gun is well spoken of, and we believe it to be reliable.

R. S. J. N., Monongahela City.—See advertisement of "Dog Training vs. Breaking."

In S. J. S. J. Andrews, Grenada.—We should be very glad to receive from you the rates you offer.

uninistakable brook trout. Food and water make the emirernee in J. D. P., Galt, Canada.—1. Can you name some of the leading dealers in bird's eggs, or parties who have eggs to exchange? 2. About twenty years ago I had one of the linest trout ponds in this part of the country, but, unfortunately, thought I could improve the fishing by putting in some black bass. Instead of bass, however, I put in sunjish, and now they are driving out the trout almost entirely. Is there any way in which I can get rid of the pests? The pond covers about thirty or forty acres, and is from ten to thirty fact deep. Is supplied with two cold streams of moderate size; both rise within a mile of the pond. If I cannot get rid of the sunish, is there any other rish that would do well in the pond? Ans. I. Dr. A. E. Foote, 1,223 Belmout would do well in the pond? Ans. I. Dr. A. E. Foote, 1,223 Belmout the properties of the sunish of the even off, that is the cet plan to pursue. In the pond and be the wood in the time that would sweep the pond and put some fine netting inside? Commosquito netting, and drag it. Such a net would have to be drawn very slowly. You can then replace such fish and insects, or larvæ, crustacea, etc., as you wish.

HUNTING.—The March meet of the Meadow Brook Hunt, Rockaway Hounds and Queens County Hunt are as follows: Meadow Brook Hunt, Saturday, 18th, Island Trees, at 3:30 P. M.; Monday, 20th, Kennels, at 6:45 A. M.; Thursday, 23th, New Cassel, at 5 P. M.; Saturday, 23th, Hicksville, at 3:45 P. M.; Monday, 27th, Kennels, at 6:45 A. M.; Thursday, 30th, at 5 P. M. The Rockaway Hounds will meet Saturday, March 28, 4 P. M., Woodside; Wednesday, March 29, 3:30 P. M., Freepont. Special train March 29, leaves Hunter's Point 3 P. M. J. D. Cheever, Master. The Queens County Hunt meets Saturday, 18th, Richmond Hill; Tuesday, 21th, Garden City; Saturday, 25th, Queen's Toll Gate; Tuesday, 28th, the Kennels, 4;3 P. M. F. Gray Griswold, Master, Queens, Long Island.

Game Bag and Gun.

DESTRUCTION OF LARGE GAME.

INTRODUCTORY to this subject a quotation will be made from a communication written for the Field (London) newspaper about two years since and copied into the Forest AND STREAM.

Stream:
The problem of the preservation of the large game of "The problem of the preservation of the large game of Montana and Wyoming, now the best game districts of the country, is entirely-dependent upon one condition, the price of 'pelts.' As long as the price of antelope and deer skins remains less than fitteen cents, and elk skins less than twelve cents not to the hunter, there will be few killed, except for food. When the price rises above those figures, the destruction will go on in a greater or less ratio, in proportion thereto."

thereto."

As was to have been expected, this prediction has been more than verified. Since that time the prices of deer and antelope have ranged from twenty-five cents, to thirty-five cents, and the destruction of those animals has been commensurate; for the season of 1880 the shipments of hides on the Missouri and Yellowstone having been approximately 167,000, and for 1881, 143,000, representing about seventy-five per cent. of animals actually killed. The hard winters of 1879-80, and 'So-St, with their deep snows, peculiarly favored this work, as during the winter months elk, deer and antelope band together in large herds and are the more easily bagged. During the summer they disperse into small bands, the two former disappearing into the timber of the foot-hills and of the most rugged mountains. Last spring, elk skins, and of the most rugged mountains. Last spring, elk skins, which before that had been of small value, rose to twenty-two and twenty-five cents per pound (82.50 to 87 per hide). This price giving a fine profit, last summer they were even followed into the high and most precipitous mountains, this summer home, (something that had never been done before) ten to twelve days' travel of packs being necessary to get the hides to market.

And so with the buffalo. During all seasons when their robes were good, this work has been steadily going on, and mostly by men who have been engaged in the business for years on the Southern buffalo ranges.

years on the Southern buffalo ranges.

As a matter of statistical information, pains have been taken to gather the following facts, believed to be approximately correct, in relation to the shipment of hides from the Yellowstone and Missouri rivers for the years named, and which represent from seventy to seventy-five per cent. of the animals killed, by men engaged in that business.

	1880,	
	Yellowstone River—deer and antelope. 60,000 Missouri River—deer and antelopo. 107,000	
	Yellowstone—buffalo (by whites). 22,700 " (by Indians). 5,000	167,000

HOW LONG WILL THIS LAST ?

The large bands of buffalo will last about four years at the

The large bands of bulfalo will last about four years at the present rate of killing, for it must be borne in mind there is a considerable natural increase annually.

Unless there is considerable decline in the price of pelts, and to within the limits heretofore indicated (of which there is no prospect, as the decrease in supply is apt to prevent much decline) it will continue with the deer and antelope until their numbers are so far depleted as to make it unpreditable to follow them. Then it will be kept up to a certain extent by the amateur spertsmen. The decrease in small game is already noticeable, as during a trip last summer and fall of 240 miles around the foot-hills and occasionally up into one of our mountain ranges, there was a marked decrease of deer compared to what were seen two years ago in the same localities.

There are stringent laws in Montana and Wyoming against the killing of game for their pelts glone, but if the

meat is utilized, it is not unlawful, between certain months (August 1 to February 1 or March 1). It is during this open season that most of the game is killed. Out of season, the law is about as well executed as in the Western States; that is, it is not executed at all, to any extent. Why? Simply because, as in most of the States, there is not sufficient appropriation to execute the law, and in these sparsely settled Territories the cost of its execution, is ten fold what it would be in the States. It is true, the outfit of the offending hunter is confiscated and most, if not all of it, goes to the informer. But here, as elsewhere, there is something repulsive in public sentiment against an informer, however conscientious he may be, and there are few that have sufficient moral courage. In the only case, in my knowledge, where such information was given, the judge promptly fined the offender the extent of the law; but the conscientious rancheman who gave the information was so severely criticised, even by those from whom better things should have been expected, that no one has since followed his example. And such is public opinion everywhere; and unless there are a set of officers specially appointed to execute game laws, they will remain a dead letter on the statute book, here, as elsewhere. The faithful execution of the game laws in these Territories would require an outlay of several hundred thousand dollars. As the State and county taxes in these sparsely settled districts already amount to from two to three per cent, in valuation, it is not to be expected that this additional outlay will be assumed.

WHAT ARE THE REMEDIES?

tional outlay will be assumed.

WHAT ARE THE REMEDIES?

There are two. First, by the raising of a fund by the philanthropists, sportsmen and others interested, of say half a million dollars, to be used, by some hocus-pocus, in "bearing" the pelt market and keeping it "bear"-ed. In that event, this business would stop within twenty-four hours. Even were this practicable, it will hardly be done, as talking is much cheaper than action.

The other remedy is very feasible and very certain of results. Let Congress (uniting with the Territorial Legislatures, if necessary.) pass a law, forbidding the killing of any game, except for the immediate necessities of food, and forbidding the exportation of either the hides or meat of said animals from the Territory, under proper penalties, authorizing the seizure and confiscation of either in the hands of traders or at the railway stations or steamboat landings, and at the same time making liberal appropriations for executing the law. The whole business would stop within twenty-four hours. There would be no way of evading it and no one would run the risks of almost certain detection at the shipping points. It would require very little expense to execute such a law, the close watching of the shipping points accomplishing everything desired. Such a law would involve the necessity of treating on the Constitutional tors of the Indian (Interfering, to some extent, with treaty rights), but that could in some way be gotten around. Will this course be taken? I fear not. Even should it assume such strength as to get before Congress it is probable, that in the contest between the friends of the red man and those of the buffalo and elk, nothing would be done. It is true there are no voters to conciliate, no electoral votes in the near future to enter as a factor into the question. Still the average law-maker takes but little interest in this game question. So there appears very little hope in this direction.

WHAT NEXT?

It is not probable that the price of pells (with the decreasing annual supply) will again fall below a paying price to the pelt-hunter; so that the sequences before chalked out in this article will just as inevitably obtain as that day follows night, and a few pears will reitness the gradual externation of the grandest game that ever existed on the earth, viz., the prongbuck, the white-tail and the mule deer, the elk and the mountain sheep of the Rockies. I care not for the bullalo, as it is not in the true sense a game animal, and its destruction is inevitable as a means of the solution of the Indian question. But it is sad to contemplate the destruction of the others. The mountain sheep and the grizzly will be the last survivors. The latter, to the last, will need no game laws for his protection. In the future, as in the past, he will always be able to take care of himself.

As to the moral aspect of this question, Mr. Editor, I am pretty much a believer in the law of general averages. I have spent several years among the snipe, duck and chicken hunters of the Mississippi Valley, and I am inclined to class all useless slaughter of game (destruction of life) in the same eategory. Whether it be a snipe or duck or goose or a lordly elk, it is an animal life, and it is as culpable to destroy the one as the other.

The truth is, this subject of the destruction of the lower animal life, except for the more purposes of food, is to be approached with a great deal of equation. If not handled with

elk, it is an animal life, and it is as culpable to destroy the one as the other.

The truth is, this subject of the destruction of the lower animal life, except for the more purposes of food, is to be approached with a great deal of care and delicacy, you are sure "to knock things into, pi." Conceding, for the sake of argument, the right of man to kill game for sport, that certainly carries with it the right to support one's family by the same means. The fact that the sportsman is not compelled to do so is no reason why the "pot-hunting" sportsman should not combine the sport and business The "skin-hunter" and "pot-hunter," as long as he keeps within the law, stands on as high a level as the sportsman, When they transcend the law, they then occupy the same level as the sportsman, who transcends the spirit of all game laws (the "higher law") by the unnecessary destruction of animal life, and no lower. These sentiments are not fashionable in the sporting papers, but they can't be controverted.

So when I read the beautifully rounded paragraphs, devoted to the denunciation of these peti-hunters as butchers, etc., (which accomplishes about as much good as "whistling against the wind") the thought naturally occurs how much useless butchery has the writer committed among the suipe and ducks? And when these homilies are written by sportsmen (") who, a few months before, by their one arvitten confessions, committed the same "butchery," those grand words from the good book, so full of the quintessence of charity, will rise up, "Let him that is without sin among you cast the first stone." I have no sympathy for, nor am I an apologies to these hunters, but having warmed my shins around their camp fires a good many cold nights, I am fully prepared to testify that they are both flesh and blood like the balance of us, and are imbued with the usual share of the better qualities common to human nature.

In looking over the sporting papers (whether English or American) it is curious to note the animus pervading the accounts of

club owned some extensive marshes and whose letter was mostly devoted to proving his club had made a bigger score than some other club, his scoring between 7,000 and 8,000 ducks. The letter winds up with the statement that this feat had been accomplished by "rigorously protecting the marshes." The thought naturally arose, "the marshes were doubtless well protected, but who in the d—I protected the ducks?" Not that club, certainly. Here is a similar case from the South. One of a party hunting chickens in August on the prairies, writing a congratulatory account of their trip, tells of the party killing 1,500 chickens in one week. I am within bounds in estimating that not one-half of the game in either of these cases was consumed. It was impossible, under the circumstances, and yet either of these sportsmen (?) would be highly indignant to be classed as "butchers."

Here is another representative case from a sportsman

"Berte is another representative case from a sportsman among the buffalo for the first time. He is naturally very enthusiastic over the sport and at the sight of such huge monsters, and is particularly grateful to some army friend who assists with a squad of soldiers in the sport and, as it were, "rounds up" the buffalo for his convenience. This is were, "rounds up" the buffalo for his convenience. This is all very natural, and the graphically descriptive account has the ring of the true sportsman, the hunt winding up with a go of about sixty buffalo, buge monstery, too! No wonder he was chated; and only a ten days' hunt (say 50,000lbs. med, or 25,000 rations for one man). A year passes. Tempora matentar, et nos mutaamur in illis, says the Latin poot. He returns to the locality of this exploit, but either missing the buffalo, or more probably posing as "an old hunter" "who had been there" on the previous year's explicitly lecture at these wheled skin-butners a most benefit lecture at the end of the search of the control of th

Chicago, Ill., March 10.—Geese and ducks are now here in great numbers, but the high water makes it hard to get at them. Mr. C. A. Orvis of this city bagged sixty-three blue bills at the Sportsmen's Club's grounds at Thayer's Lauding, Indiana, last Saturday. I was out shooting yesterday morning on the prairies just west of the city, and saw pigeons, robins, bluebirds and meadow larks. I had bad luck, as I only get a goose and two mallards. I shot the goose's head entirely off at fifty vards with my ten-pound gun.—Ten-Bone.

MR. POST'S BILL.

MR. POST'S BILL.

[FOLLOWING is the text of the Bill introduced into the House of Representatives by Mr. Post of Wyoming: A Bill for the protection of wild game in the Territories of the United States.

Whereas it having become apparent that wild game natural to the Territories of the United States is rapidly disappearing, and that the efforts of the Territoria authorities have proved ineffectual for its preservation, and that unless adequate measures are specifily taken for its protection it will soon become extinct: Therefore.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled. That it shall be unlawful for any person or persons to kill or destroy any elk, deer, antelope, buffalo, mountain sheep, or bison in any of the Territories of the United States, at any time, for any purpose or under any pretext whatsoever, except for food, and then only when necessary for human subsistence, being governed in amount and quantity by the reasonable necessities of the person or persons killing the same Provided that nothing herein shall be construed to prohibit the killing of such quantity as may be needed for domestic market supply, for purposes of human subsistence only.

Sec. 2. That it shall be unlawful for any person or persons to have in his or their possession for the purpose of transportation out of any of the Territories into another, any of the animals mentioned in this act, either dead or alive, or the skins or pelts of any such animals; and if any such animals, or the skins or pelts thereof, be found in the possession of any transportation, steamboat, or railway company, or of any person to persons, for purposes of transportation, whether the same be in transitu or otherwise, it shall be the duty of the United States marshal to seize said property, and arrest the owner thereof if he can be found, and upon judgment being rendered against the owner thereof said property shall be forth with destroyed.

States marshal to seize said property, and arrest the owner thereof if he can be found, and upon judgment being rendered against the owner thereof said property shall be forthwith destroyed.

SEC. 3. That it shall be unlawful for any person to deal in, or to buy or sell, or have in his possession for the purposes of sale, trade, or barter, any of the animals mentioned and described in this act, or the skins or pelts thereof.

SEC. 4. That it shall be lawful for any person who has reason to believe that any of the provisions of this act have been violated to make complaint thereof to any justice of the peace, United States commissioner, or judge of any court residing convenient to the locality where such offense has been committed; and if such officer is satisfied that probable cause exists for such belief, he shall commit such complaint to writing, which complaint shall be sworn to by the complainant, whereupon such officer shall issue his warrant of arrest and cause the accused to be brought before him for trial; and upon conviction any such offender shall be fined not less than twenty-five dollars nor more than fifty dollars, or imprisoned until the fine is paid, not to exceed three months for the first offense, and for the second offense the fine shall not be less than fifty dollars nor more than two hundred and fifty dollars, and imprisonment for not less than thirty days nor more than three months; and the United States shall have execution for the collection of all fines imposed by this act, together with costs of prosecution, one-half of all such fines to be paid not the school-fund of the Territory in which such offense may have been committed; and all process required to be issued in carrying out the provisions of this act shall be served by the United States marshals of the respective Territories in which any proceedings under this act may be had.

SEC. 5. That it shall be the duty of the United States marshal of any Territory of the provisions of this act, and straightway bring him, with the accusing

ANOTHER DEER HUNT IN OHIO.

"MANY YEARS AGO."

ANOTHER DEER HUNT IN OHIO.

"MANY YEARS AGO."

THE deer hunt in Ohio, described by Mr. D. W. Cross, in Porrest and Stream, Feb. 23. brought vividly to my mind a somewhat remarkable hunt which I once had in the same county. It was in Jan. 1833. I was clerking in a banking house in Cleveland. When a lad I had often accompanied this banker on a squirrel hunting expedition, and it always pleased him, when practicable, to graify my over-longing desires for a hunt. The Cleveland, Columbus and Gincinati Railroad had not been long in operation. Within a few miles of Cleveland it penetrated what was then at best a half-settled region with long, continuous though generally narrow line of virgin forest. Some seventeen or eighteen miles from Cleveland the road passed near a large swamp. This was in the immediate vicinity of Columbia station. At the time of which I write there had been a brisk snowstorm, some seven or eight inches having fallen. The conductor of the P. M. mail train from Columbus called in at our banking office just after his arrival, and alhading to the snowstorm, said it was a good time to hunt wild turkeys, remarking that his train scattered a large flock near the swamp from above Columbia station. The banker at once asked me if I would like to try them in the morning, saying he would borrow a nice rifle for me if I wished to go. No urging was required. In the evening I was duly prepared with the necessary out-fit for a week's hunt if necessary, and instructed not to return without a turkey. Taking the early train the next morning I found myself forty minutes later at Columbia station. Upon inquiring I was informed that a large flock of wild turkeys lived in the swamp which, however, was nearly inaccessible. Learning of a hospitable farmer who lived nearest the swamp, I went there and "put up." After testing the rifle two or three shots to ascertain how it was sighted I started for the swamp about three hundred yards distant across a wheat-stabble field, the stubble just appearing above the snow. As I ne

I was on the fresh trail of two wild deer, though I did not suppose a wild doer could be found nearer than the black swamp one hundred miles away, in the northern part of the

My excitement was now at a high pitch. My excitement was now at a hizh pitch. Although in former years I had killed many with turkeys in an adjoining cousty I had never enjoyed a deer hunt, for they all disappeared many years before. I at once scaled the fence and followed the tracks with much trouble, as they went over high logs which covered the ground in every direction. I was now approaching the railroad down which I had passed nearly an bour before. I was hurrying on as fast as possible, wondering whether the deer had crossed before the train passed down, when suddenly I heard the crack of a twig ahead of me and at the same instant caught a glimps of the heads of both deer behind a large brush heap and not over 100 yards away. They kept so thoroughly out of my sight behind the numerous brush heaps that it was impossible to catch a snap shot, and finally they passed over the railroad and about one-fourth of a mile away and in full sight. One was a very large doe and the other nearly a full-grown fawn. I ran to the railroad and found that they had passed into a strip of heavy forest not much over one-fourth of a mile wide and running in a high southerly direction. The railroad rail and southwest direction. A traveled road crossed it at the station within half a mile of where I stood. Running down the railroad to the edge of the timber, I could see that only a very narrow neck of thin forest connected at the highway about 300 yards cast of the station. I reasoned that the deer would pass through this neck. Taking out my watch and time table I found that an express train from Cleveland was due at Columbia station in fifteen minutes, and the whistling-post was near where the deer had crossed. If I could only run down through the fields and gain the nick of woods before the deer passed, the train would surely drive them within range. About half way between the station and two lines was a louse, by which in the road stood a man and two larges of a lot of cattle in the field and as they crossed the road within fitty yards of me. Heavy the consumption o

route, and they assured me that I had tramped about twenty miles.

The next morning before sunrise I was again on the track of my deer and found they were bearing diagonally towards the house I had just left. Their course was through a second growth of underbrush. When I had nearly passedout of this underbrush to the open forest just beyond, I studdenly saw the doe's head elevated above a thick bush covered with dry leaves. I don't believe five seconds clapsed before I put a bullet through her brains, and upon running up (about sixty yards) I found that the doe was lying on a high knoll and had evidently been lying their several hours. I cut her throat but scarcely a spoonful of blood passed from the veins.

I soon found where the fawn had run away into the forest upon my approach, and I had not followed the track more than half a mile before the fawn sprang out of a thicket and started on a detour through the open forest in the direction of its dead mother, but within a hundred yards it passed through a little opening, where I had fair, shot, when its heels went over its head and it lay for two or three seconds square upon its back, which was bedied in the snow, and its feet went like dramsticks. I ran and cut its throat, and it bled copiously. My bullet had passed squarely through its shoulders. The shot of the previous day had struck the doe just forward of the left hip, and had passed out just back of the right shoulder.

I now had two deer killed within an hour, and not over 2000 yards from where I had even the means again and not over

I now had two deer killed within an hour, and not over 300 yards from where I had slept the previous night. I ran to the house, and with the aid of the farmer and his son, a span of horses and a sleigh, we had the deer at the station

just in time to catch the morning train for Cleveland. I put in an appearance at the banking office and was sharply reprimanded for returning so soon without any game. When I assured the banker that I had more game at the station than I could carry and was after a team, he hardly knew what rebuke to administer for the apparent trifling. When I returned a little later with his team and asked him to go with me to the station and help load the game, he began to realize that I had not been on an entire fool's errand and that I certainly had heavy game at the station. He accompanied me, and when the baggage-room was opened and the game showed he was as excited and delighted as I had been. He posted the evening papers, who published the exploit. The next day several parties went down the road deer-hunting, but I had probably killed the last wild deer in that part of the State; at least, I was so informed by Columbus people nine years afterward.

Wendam, N. J., March, 1882.

MY FIRST DEER.

MY FIRST DEER.

In 1840, for Tippecanoe and Tyler too, I cast my first Presidential vote, and shot my first deer. I was residing at that time in the pleasant scaport town of Machias, then and now the shire of Washington county, Maine. One of the peculiarities of its denizons was that what you had not done you could not do, particularly if you were young folks; this, with my love for a "still-hunt" and "we'll give you fellows fifty cents a pound for all the deer meat you'll kill," were strong inducements to try what could be done. Early morn, July 10, found my companion "Bob Foster" and the writer, with the necessary accompanying documents, footing it up to Whitneyville, four miles. Placing our birch canoe in the water we began to unload and get ready for a start. As the upper deck of a "birch" consists entirely of air it is important that the cargo should be packed in the hold, and just as near the bottom as possible. Everything in place, we took positions as follows: F. in the stern, myself in the bow, wedged in between the ribs just as far as my own ribs would admit—sitting on my heels with knees and toes on the bottom—midships occupied by camping and cooking utensits, rations and "Jack," a little wiry Scotch terrier kindly loaned by Mr. W., the postmaster, who was also Jack's master and one of the syndicate making the above liberal offer of 50 cts. per pound. Jack was of the knd a great deal of dog done up in a very little skin, and next to being second assistant postmaster, deer hunting was his forte.

Constant paddling, a few carries, a sharp lookout on the banks of the river for game, and in it for rocks and logs,

assistant postmaster, deer hunting was his forte.

Constant paddling, a few carries, a sharp lookout on the banks of the river for game, and in it for rocks and logs, made our arrival at the mouth of a spring brook quite satisfactory. Here we caught, cooked and ate a good trout dimer, and decided our manual of action in case the object of pursuit was found. Before sundown we reached an elevated point on the west side of the river a little below "Great Falls," nearly forty miles from home, where we were to camp first wight.

night.

After an examination, unpacking, supper, fixing the cedar boughs and making a big smudge for the use if not benefit of the pre-occupants, we took a look at the "big carry," which would be in order early in the morning, and a stroll by the river side to see if anything was lying round loose, then returned to quarters feeling satisfied with the day's work.

Listening to mosquitoes never was my best prescription for sleep. Jack stood watch the best of any of us because more experienced and at home, and keeping off the ampazans fell principally on humanity.

It is the stood of the sto

Crockett's method (on the bottom of the river), we made no attempt to reload anything but the canoe; that accomplished, we started without a single good-bye to the flies, mosquitoes, etc. What would that have been among so many? After a few hours' work, an internal feeling reminded us we had had little or no breakfast. The rain ceased, we made a landing, then a big fire, and intended fried deer's heart to be part of the mernt; but Jack, having been very busily engaged guarding the birch, had appropriated that part to himself, so sait pork was in order. No time was to be lost. With a square meal, we were soon on the way, and piled the paddles with a will that meant and was business. About two P. M. the sun came out; this increased our zeal and gave another steady boost. Before sundown we reached Whitneyville, hired a team to take us home, "before dark" being part of the bargain, which was faithfully performed, and arrived about eight P. M. Our return "with the largest deer ever brought into the town" was soon noised about. Hundreds came to see it. It was nicely dressed, and weighed a little under 200lbs. Jack returned to his post-office and we to our homes. The next morning distributions were made. Some parts of the meat (which in color much resembled veal, having been killed in fine condition and without running) were slightly salted, making the best corned meat I ever tasted, and finally the skin made into soft, serviceable leather, well adapted for slippers and dry weather.

PARTRIGES BROOTING IN FERRIARY—Worcester Mass Crockett's method (on the bottom of the river), we made no

adapted for slippers and dry weather.

Partridge Shooting in February.—Worcester, Mass., March 11, 1882.—So much has been said about the scarcity of partridges in New England and other States, that it would hardly seem possible that there could be a locality in Worcester county where they were so plentiful that an organized club could afford to shoot them on the 27th day of February for a club supper, even to say nothing of the disregard for the game law of the State, which all organized clubs are supposed to respect, obey and enforce. Yet we read in the last issue of Fomest and Stream, under date of March 2, that the gun club of Winchendon, Mass., did have a hunt on the 27th of February in which "sides were chosen, the agreement being that the losing side should pay for the suppers." The report says further that "James Sutherland and party reported with twenty-two rabbits, two partridges and one squirrel. The game supper was served at the American House," and after supper "President Brown made a stirring speech." Now, if this report be correct, and it must be so regarded until contradicted, it would seem that the town of Winchendon presents a field for a missionary or a constable, or perhaps both. If the members of the Winchendon Gun Club are so lost to all shame, and have no more regard for law or common decency than to get up such a disgraceful affair, they will confer a favor to the sportsmen of this State by keeping it entirely to themselves, for it is terribly humiliating to have the sportsmen of the country know that such a club cits in Massachusetts. Certainly if we believed such affairs were of common occurrence we should blush to own that we lived in the State. It is commonly supposed that game protection is one of the leading objects of all sportsmen's clubs; it certainly should be, else the fewer clubs the better.—K.

The Michigan Sportsmen's Association.—Editor Forest and Stream: At a meeting of the Executive Committee of the Michigan Sportsmen's Association, held in Grand Rapids, March 8, the following gentlemen were present: President, E. S. Holmes, Grand Rapids; C. W. Higby, Jackson; Secretary W. B. Mershon, East Saginaw. The following business was transacted, as the secretary had received a very limited correspondence regarding the calling a meeting to discuss the advisability of forming a National Association. No action was taken in the matter, but the secretary was instructed to try and secure the views of a greater number of State associations and individuals also. The English sparrow question was deferred until some future meeting. C.W. Higby, of Jackson, was appointed State game and fish warden and missionary, with instructions to form clubs whenever possible, also to enforce the laws when broken. His salary and expenses are to be paid by contributions from the clubs and sportsmen of the State; the more freely the contributions are made the more effective will be his work, and it is hoped the sportsmen and game protectionists of Michigan will keep Mr. Higby in the field the entire time.—Duparee. THE MICHIGAN SPORTSMEN'S ASSOCIATION.—Editor

Sea and River Hishing.

It happened to be both the hour and the day when fish with one accord begin to feed. The eldest, truest, and deepest chip of the ancient block of Zebedee (who is pretty surre, even in three tumble down times, to be of apostolical succession), however shrewd his study of the loaves and fishes, cannot predict when the fish will want heir loaf, but is ready to present them with the hook upon demand. The water is the same, and the weather has not changed; to the kcenthuman era and saws there is no item of difference vertex than is it. est human eye and sense there is no sign of difference, yet certain is it that for hours together no trout will even look at the very finest fare; and then all of a sudden, as if the dinner-bell rang, off scampers every trout to his private napkin-ring, wags his tail, and fans his fins, and goes up and down like a corporation saying grace.—R. D. BLACKMORE, IN "CHRISTOWELL."

CAMP FLOTSAM.

III. BLACK BASS-PRACTICALLY CONSIDERED.

THE black bass have been, until within a few years, an almost unknown fish in many localities in the State of New York. Like most new arrivals, their coming was at tended with many rumors concerning their previous standing and respectability, as well as their habits, peculiarities and idiosyncracies. Most of these rumors were utterly without foundation, so far as truth went, yet by reason thereof a noble fish has been cursed with a reputation for capriciousness which is undeserved and far beyond the reality, although study, observation or inquiry, to learn the truth concerning their habits. We have in our mind one who has long professed himself a lover of fish and of fishing, who has had deep yearnings after them, yet who cannot be induced to go anging for black bass. "Why," he says, "you have to understand algebra, geometry and trigonometry, and go when the moon is right, and then the wind must be just so, and you must fish at a certain hour, and then you can't tell whether you will catch any."

The above is a fair sample of the opinions regarding Micropterus sulmoides, held in the main by anglers of the oldschool, whose methods are still somewhat of the hoop-pole, threshing-the-water, rocking-the-boat order, and from this class the motion has been derived that the black bass is a mysterious fish and very uncertain in his times of taking the bait. It is difficult to dislodge an idea firmly rooted in the mind, and the notions above mentioned are to a considerable extent still held, together with another, that tackle not unlike the traditionary hoop pole and clothes line are requisite to the capture of those fish. We confess the use of heavier tackle than is necessary, but we have seen the native gaze in wonder and contempt at our ten-ounce rod with its light taper enameled line, and have been greeted with "Say, Mister, ain't that ar' pole an' fixins rather slim fur bass?" and, "Wat d'yer spect to git with that;" upon this he put a sunfish larger than many we were proud to any particular to the content of the fi

needs "understand algebra, geometry, frigonometry," and have some common sense besides, to eatch black bass in that way.

We have sometimes thought that black bass were as shy and wary as trout. We say sometimes, for in this respect they seem to be more shy at some periods than at others, and to differ in degrees of shyness at different lakes.

If there is anything about a black bass which may be termed capricious, it is what we call their sudden "change of bait," or more correctly speaking, their change in food. As a rule they take readily such bait as is natural to their waters or shores. We think there are few exceptions to this, among which is the shrimp and helgramite, but they are somewhat uncertain. You have royal sport for a week with crawfish, when lol on going of a morning to some favorite spot, you fail to get a strike. Sometimes two or three days will pass before you find out "whar they have gone to." It may be frogs, minnows, crickets or grasshoppers—be not surprised if you find it "wums." Sometimes it will be this and nothing else for a week. Our old companion in the camp—"Mot. S."—alluded to in a former article, than whom there is no more expert angler for black bass within our acquaintanship—and we know a few—says, "If I can have but one kind of bait for bass, give me the worm for any season." Common as the bait is, it certainly proves a tempting one. Properly put upon the hook, it is attractive and lively, and good for any season in some degree. We have found the best way to present it, is the one which preserves its natural appearance. This is, not to string or run it from head to tail upon the hook, but to pass the point of the hook through the body so as to just cover the point and barb. This permits the two ends to hang and keep up a lively wriggle. The same may be said about grubs and the famous "wasp nest." With crickets and grasshoppers we prefer to "string" them, that is, to pass the point of the hook in out through the head, so, you can just feel it. This makes the bait secure on the h

well hooked through, what may be called, the calf of the leg. This makes a wound easily healed in case you find him "not the bait" and release him, while it does not seriously impair his locomotory power. It is much better than tearing the skin off his poor little back by repeated casts, and he will be quite as lively in the water, besides, it is hooking him "as though you loved him." Most anglers prefer to hook the crawfish through the second full joint from the body, and a minnow through the second full joint from the body, and a minnow through the second full joint from the body, and a minnow through the second full joint with the latter bait, to put the book through the lips is preferable.

Thus far we have confined our remarks to still-fishing and, with the exception of fly-fishing in its season, there is, in our humble judgment, no rarer sport. We are aware of the predicted in 6 some for casting the minnow, but we are inclined to believe that this mode of fishing is confined, with few exceptions, to Western waters and the St. Lawrence, and that it has met with small favor from our Eastern waters. If we are in error, remember this is an "experience meeting," and do not leave us to "blush in ignorance."

Speaking of the "experience meeting," it seems we are doomed to have it out alone with the editor. While "Nessmuk" and "Kingfisher" seem "backward about coming forward," we are comforted with the thought that it is perhaped due to our labors that the editor has "undergone a change" on the question of "spitting on the bat."— Vide Forest and Streem. We have tried the artificial baits—frog, grasshopper, grub, helgramite, etc.—in vain; indeed we cannot now recall our having ever taken a single fish with any of them, while the natural article has proved a most taking bait. We were about

We have tried the artificial baits—frog, grasshopper, grub, helgramite, etc.—in vain; indeed we cannot now recall our having ever taken a single fish with any of them, while the natural article has proved a most taking bait. We were about to say that we doubted if any on has succeeded with them, and, upon deliberation, we believe we will say so, for if there is any place where a "lively doubt" may be expressed and a fellow helped out, it is at an "experience meeting."

With whatever bait one may angle, the old rule, "study to be quite," should be observed. In anchoring, let your anehors go without a splash; avoid making a threshing floor of the water; remain in one position—either sitting or standing—and enforce these rules with a companion, if you chance to have a companion suddenly rise without cause, rocking the

have a companion suddenly rise without cause, rocking the hoat violently in so doing, and plunging your rod, if the tip be near the surface, half its length under water; such a one fishes with us—just once. It is, however, always better to angle alone.

In choosing the places for success in angling, much depends when the independs your the independ to company the places. We have one

is near the surface, half its length under water; such a one fishes with us—just once. It is, however, always better to angle alone.

In choosing the places for success in angling, much depends upon the judgment, something on chance. We have our favorite spots every year, and they change with each year in the same lake. Year after year we have found new places where bess would take the bait lively whenever we cast; yet within the range of six or eight years we have never found the same spot a fortunate one in any but the first year.

As a rule, it may be given that a gravely, sandy or rocky bottom is a favorite resort for black bass. Upon such bottom we find them usually in a depth of from eight to twelve feet of water. Often, particularly in a cold northeast storm, they are found upon a weedy bottom, and sometimes upon a muddy bottom adjacent to deep water, as upon the border of a channel. On a clear, windy day a favorite haunt is a point of rocks or the headland at the entrance of a cove. They are rarely found in deep water—say over fifteen feet—although we have heard of their biting, late in the fall, in exceptional cases, at a depth of thirty feet.

The two methods of still-fishing—mid-water and bottom fishing—have each their advocates. In the former the bait is kept a foot or so from the bottom, while in the latter the bait rosts on the hottom. In either of these methods some anglers prefer a float or sinker, some prefer both. It depends nuch on habit, and some anglers lose half the pleasure if without a float. If a float be used, the smaller the better; a small bottle cork is the best. Some anglers use neither float nor sinker, and we think the tendency is to discard both in lake fishing. This necessitates, in mid-water fishing, the support of the bait by the rod. Many anglers permit be bait—minnows excepted—to rest for perhaps a minute on the bottom, then draw it slowly to the surface and again casting, permit to sink as before, and repeating. This is a good way. It is urged by very respectable authority

float is that it may prevent the bait from reaching the best place.

There is much of the angler's outfit when he is prepared, as he thinks, for black bass, that is purely notional and use-less. It is easier to enumerate the essentials than the non-essentials. The former are few and simple. Much of the pleasure of angling comes from the use of beautiful and delicate tackle. There is a thrill which comes with the strike upon your delicate rod, the rush, the leap and the play, which, to him who angles with his hoop pole, is unknown, or is but a sorry excitement.

It is, perhaps, an ungrateful task, if not treading dangerous ground, to attempt to specify that which anglers are not agreed upon—the perfect outfit for black bass. Individual tastes and preferences must be consulted, for each should have that which will most conduce to his pleasure. The rod should be light and nicely balanced, ranging according to taste from eight to twelve ounces in weight, and that number of feet in length. Some will prefer an additional onnee or two in weight, perhaps a trifle more in length. The

perfect rod is to each different; it lies between these extremes; consult your taste and that is perfection, so far as your pleasure is concerned. Choose a fine line, a neutral tint, for instance, a taper chambeled or sea grass line with a reel, also light, either click or multiplier, capable of holding thirty yards. Hooks of the Sproat bend on single gut are perhaps the best, and with a six-foot single gut leader which, with the such, should be of a neutral tint, complete your outfit.

With the sien, should be confit.

We are in doubt whether there is any advantage in a leader, but prefer one of the "mist" variety for harmony's sake. We have been as successful without a leader as well.

using one. Many persons—we will not say anglers—will not fish with less than three rods. They sit in a boat bristling like the "fretful porcupine." This sort of thing might be excusable in one who had a famishing camp dependent on his individual exertions, but a sportsman, an angler, for shame. Rods used with different baits, when the object is to find the right bait for the time, are pardonable, perhaps, but this ascertained, oh, gentle angler, forchear! your single rod will bring you more pleasure, and as you exhibit your eatch by the camp fire at night you won't feel like one who has "bought his fish."

profe pleasure, and as you exhibit your cation by the camp fire at hight you won't feel like one who has "bought his fish."

It is a notion with some, and a mistaken one, that their success will be the more certain if they can reach the spot chosen for their day's sport by the time the first rays of the sun strike upon the water. Such are rewarded four-fold in these early ventures, but not by the trophies of the angler. Few pleasures surpass those attendant upon the long ride along country roads, through fragrant meadows, past silent farm houses, sleeping in the twilight of the dawn, listening meanwhile to "the breezy call of incense—breathing morn, across dim landscapes just beginning to resound with the voices of the resurrection from "the death of each day's life," until a belt of mist, stretching down the valley in front, arouses new enthusiasm and fills one with eager anticipation of the sport which is awaiting him upon the bright waters now shrouded in its mantle.

Stay, eager spirit, rest yet awhile, and mark those peaks above you, how they "stand up to take the morning," and those clouds which crimson and gleam like banners across the gateway of the day. Wait, and watch the pearls of dew which now glisten over the herbage, along that pathway to the landing, until they dissolve into a cup of Nature's brewing, into a draught more precious than that in which she of Egypt drank the health of the great Triumvir. Wait, your journey is not to be in vain, nor has it already been without profit. The morning has been a poem, and your being has throbbed in unison with its rythm. The clouds, the breeze, the ripple, everything betokens good sport in store, but until the sand has twice or thrice run its round, you will court the black bass in vain.

AMATEUR REEL-MAKING.

THE manufacture of a reel, like the preparation of the other equipments of the angler, as prepared by the amateur, is often attended by vexations and disappointments. Perseverance, however, usually crowns the attempt with

rerseverance, nowever, usually crowns the attempt with success.

Let us suppose our novice has decided to attempt a reel. A hard rubber click reel, German silver bound, etc., one that shall not be too heavy for comfort and yet sufficiently large to carry line enough for a large trout or a lively "linekory" or squit, a sort of general reel, for since he may not build but one, he would like that one to fit a variety of fishing passably well. Among the reels of his friends he finds one capable of carrying some sixty yards of line of proper size. This he selects as his pattern and guide. Through his intimacy with a machinist he is allowed the use of a suitable lathe, and also of the small tools usually found in a machine shop. For stock he purchases hard rubber of sufficient thickness to admit of the recess on either side in which the spool shall whirl. German silver of the finest quality, some in the sheet, of a thickness suitable for the rims and spool. Two sizes of wire, one for the shaft and bushings, one for the various screws necessary in the work; a little hollow wire of which to make the five little posts which are to keep the sides a proper distance from the spool. For that portion which clamps to the rod he obtains a thick piece of metal.

Our novice, having no pattern from which to have castings made, is obliged to work all such parts entirely by hand, thus entailing upon himself an additional amount of labor, but since it is a labor of love it does not matter. At the bench he perhaps commences with the hard rubber, which he forms into two dises of the proper diameter and drills a hole through their centres, into which he forces the metallic bushings in which the shaft of the spool is to revolve. From his sheet metal he cuts two circular pieces of the same size of his rubber pieces. Two narrow strips of metal of sufficient length to encircle his metallic discs are then cut, and, after a thorough cleaning, are bound to their edges and charged for soldering. The ordinary blow-piec does not Let us suppose our novice has decided to attempt a reel

of his rubber pieces. Two narrow strips of metal of sufficient length to encircle his metallic discs are then cut, and, after a thorough cleaning, are bound to their edges and charged for soldering. The ordinary blow-pipe does not seem to work well for so heavy a job. He has then, perhaps, recourse to the forge. Most likely he burns the first one and has to arrange another. Eventually he will no doubt solder them, after which he drills a hole through their centres of sufficient size to permit of their being passed on to a clamp arbor. He places them in a lathe and turns their faces and edges true. Now, so much of their centres are cut out as to leave only a rim of the width necessary to afford a firm seaf for the screw heads which are to hold the posts and sides in position. A section of the rim which is to go on the crank side should present about the appearance of the letter T, the click side that of the letter L. Each rubber disc he then recesses on their edges to the extent of the thickness of the rim as shown by the perpendicular lines in the T and L sections. These pieces, with their rims, are finished, the click side with flush edges on both sides. The crank plate flush on the spool side only, on the other the metallic edge is left mised a little, inside of which travels the handle.

He now, perhaps, turns to the spool and its shaft. To make the spools he turns out a die of the proper depth and diameter, strikes in it two pieces of his sheet metal, thus shaping the cup pieces which form the sides of his spool.

The stock for the shaft he entres and places in the lathe to be shouldered in a proper manner to receive the spool cups, which are hored through their centres and forced on the shaft, when it and the shoulders shall have reached a proper shape, and there pinned and soldered to the shaft he fastens the click gear; the other is prepared for the crank.

To enter into all the details of reel making, as pursued by

our amateurs, would consume much valuable space and, per-haps, prove tiresome.

Want of familiarity with the manner of using the tools

Want of rannarity with the manner of using the tools much increases his labors and, correspondingly, his mishaps. He burned his first rim in soldering.

In turning and recessing his rubber plates, perhaps by feeding his cutter too fast, a piece was dug out too large to be overlooked, and thus this piece keeps company with the unfortunate rim.

Of the dozen or fifteen screws necessary in the reel, several,

fortunate rim.

Of the dozen or fifteen screws necessary in the reel, several, it is safe to say, would be twisted or broken ere their threads were cut. In cutting the threads in the rods which hold the two sides together, most likely one or two of the little taps used for this purpose would be broken. A number of holes have to be drilled—some in the rim, some in the shaft. Most likely the twist drill is dull. Now, if our novice is not careful in grinding it, he will find he has made a somewhat different hole than he intended.

There is trouble in the reel bottom, which, for want of a casting, he is obliged to file out. In cutting the two slots in which are to be soldered the little rods which are to hold it to the sides, he will often find, when finished, that they are not at right angles to the line of the piece. Again, when he comes to solder them, as the borax begins to melt and run the piece will commence to squirm and crawl.

Here let me advise. It would be a good plan for him to keep his borax in his pocket, or some kind, solicitous friend may substitute a piece of alum. I will warrant, if he uses that, he won't succeed in soldering the first or second time he tries, no matter how clean his work is. After all, the amount of the party was the realt wearely required to the second of the property of the realty wearely required to the party of the realty wearely required to the property of the realty wearely required to the realty wearely required to the property of the realty wearely the property of the realty wearely wearely wearely the property of the realty wearely wearely wearely the property of the realty wearely we

that, he won't succeed in soldering the first or second time he tries, no matter how clean his work is. After all, the amateur who really means reel generally completes one. It may not have quite so good a finish, run quite so smooth and click as musically as the professional "clicker;" still he has made a reel, and it is all his own—most likely no one else wants it. As the elation of having been a reel maker wears, he begins to look around and compare and examine the store reels. His reel he finds to have taken about all of his leisure time for three or four months, cost him about as much as the best store reel, which is very likely fur superior to his. Nevertheless, the fact remains that he has completed a reel which will work, and thus taken another step in the march toward the complement of home-made "traps."

A LUCID FISH LAW.

A LUCID FISH LAW.

THE New York State Fish and Game Law of 1879, with its subsequent legislation, general and local, having proved utterly ineffectual, I beg leave modestly to suggest, as the result of long experience and observation, the following substitute for all existing statutes. It has no merit but that of simplicity, all essential points being embraced in a single lucid paragraph, which any farmer's boy may read and readily comprehend. It is based on the "Jonce Tranmell Compromise," (see "Harper" for January) in which old Mr. Spiney "had drawed the papers so close and particklar that nary one of 'em couldn't find a place to pick a hole in 'em." But here is the text:

"Be it enacted, that on and after July 1, 1882, and also retroactively from July 1, 1881, all laws and parts of laws conflicting with Section 20 of the Laws of 1878, and with Sections 21 and 23 of the Laws of 1878, are hereby so far repealed as to leave the latter unmodified but the former in full force, which, however, shall not apply to the intervening sections, nor to any other section except so far as to include Otsego Lake and the Oswegatchic River with its tributaries entering into said lake near its outlet, and no pickerel (excepting only sturgeon and catfish) shall be taken therefrom (that is to say from the aforcsaid) at any time or by any one whatsoever, saving only in the months above mentioned, which applies to salmon, trout in their season, and to black bass at all other times; but nothing herein contained shall be so construed as to prevent intelligent adults from taking minnows with hook and line, or with seine or drag net, during the month of December in each year; and if any man be convicted of violating this statute or any part thereof "shoot him on the spot," which the chairman of any Board of Supervisors is hereby empowered to effect the same with a common shot-gun or other suitable apparatus held in the hands of the resident game constable, or if not any such, by the county judge of said county, unless the same shall ha

TENNESSEE FISH NOTES.

TENNESSEE FISH NOTES.

THE angling season is now near at hand, and our Waltonian disciples are already beginning to brighten up their tackle, and getting ready for the fray. Every class of tackle, from the commonest to the most elaborate, is now imported to this market, as an examination of the stock offered by Paschal & Fall, Silas Marcy, and Charley Griffith would show. It is not unnatural that it should be so, when among our most enthusiastic anglers are found men of wealth, like Col. Geo. F. Akers, Charles Hillman, Frank Furnan, Capit. W. Stockwell, D. W. Paschal, J. P. V. Brown, and Silas Marcy. They devote several weeks, both in fall and spring, to the delightful recreation, and spare no expense or troubie to procure every device and appliance which can add to their pleasure.

beaure.

Hillman and Furman generally run together, and their outfit is a museum of piscatorial paraphermain. They generally go to Coney Fork or Buffalo. Col. Geo. F. Akers has a decided preference for South Haspeth, though he is perhaps better acquainted with the best fishing places of any one in Middle Tennessee. Messrs. Paschal and Brown represent the Cumberland Angling Club, and often make extended trips, but now that they have stocked the club's ponds with game varieties, they may confine their future campaigns to them. Capt. Stockwell does most of his angling in the Cumberland River, as his duties of chief of the fire depantment compel him to remain close at home. He has good sport at times, his handsome creels are often the envy of pass-

ers-by. Silas Marcy's favorite streams are the Duck and Flint rivers, here he often does some remarkable work. Qid "Si," us he is often called, never fishes for small ones, using as he does, minnows that are big enough for a fry, when

"Si," as he is often called, never fishes for small ones, using as he does, minnows that are big enough for a fry, when larger ones are scarce.

The detailed definition of the signs of the Zodiac, which appeared in the editor's columns of the Forest and Stieram two weeks ago, annised the above named gentleman very much. When they begin operations I will keep you posted as to their luck. It seems an opportune moment to again call the attention of anglers down East to the fact that this is the most favored State in easy reach of them to have a few weeks' sport, and where they can have not only all the conforts and luxuries of a civilized country, but better still a hearty welcome from our local sports.

Our fish market is well supplied at present, most of them, however, are brought from the Nothern lakes, the Gulf, Reclotot, and Savannah. Andy Meadus, the principal fish dealer in this city, told me that on Saturday last he sold upwards of two thousand pounds, principally red snapper, perch, and trout. He had on his stall a warsaw which weighed, without the head, 150 pounds. The flesh of this fish is beautifully white, and preferred by many to any other. Shad are quite abundant, though rather dear, selling as they do 20 ets. per pound. The striped bass, which are caught in large numbers in Reelfoot Lake, are an excellent pan fish, perhaps the most dedicate of all the varieties which come from that extraordinary place.

Nashyulle, Feb. 28, 1882.

An Artistic Trade Catalogue.—We have before us, in quarto form, an illustrated book containing nearly all that an angler uses, except files. It is issued by the firm of Abbey & Imbrie, New York. The illustrations are mostly new, and are neater than is usual with this class. The hooks are not only drawn of the exact sizes and curvatures, but a new system of showing the side bends by means of shadows is introduced, which give a perfect idea of this important feature. This method is copyrighted by Abbey & Imbrie, and will make their catalogue a standard work on fish-hooks. The book is issued for the trade only, and not for general circulation. The price of it is five dollars. We do not remember to have seen finer lithograph work on a dealer's catalogue. A circular letter accompanying the book states that the plates will not be loaned, even to their wholesale customers. AN ARTISTIC TRADE CATALOGUE.—We have before us, in

Tennessee.—Port Royal, March 7, 1881. The black bass, or, as locally known here, "trout" season has opened in earnest with us, and the followers of dear old Izaac are having royal sport. The sucker season is also in full blast, and anglers who love to fish for bottom biters are having good sport. As a table fish many think suckers superior to trout. I do dearly love the sport of angling. But I had rather angle for game fish, as it requires more skill and knowledge of the habits of the finny tribe to capture them. The weather is cool now, but we have had some lovely spring weather. Fields and pastures are green, peach and plum trees in bloom, some forest trees are putting on their summer robes, and we have heard the joyous musical notes of the spring birds. Forest and Striema is simply superb in its new dress.—Birdo.

STRIPED BASS IN THE HUDSON.—Thirty years ago it was common to see boats containing two or three men anchored in the channel of the river at Albany fishing for striped bass. Good strings were taken, as we can personally testify. Now the fish is rarely seen there. The original limit to the ascent of this tish in the Hudson before the dams at Troy, Fort Miller and Fort Edward were built was Baker's Falls, three miles below Gleu's Falls. The sturgeon and shad also ascended to the same place, we are told in a private letter, recently received from a gentleman residing near there.

THE EEL OUESTION.

A paper read before the American Fishcultural Association by Prof. G. Brown Goode.

[CONCLUDED.]

STRANGE MISSTATEMENTS IN ICHTHYOLOGICAL LITERATURE

One may conclude from these observations that the cels One may concurred from these observations that the cers preparing to spawn leave the inner waters early in December and seek out the deeper places of the sea, where they cannot be caught with our ordinary implements of capture. The cel eggs can only be found by a systematic investigation of certain parts of the sea bottom with the dredge and the microscope. This investigation might also include the sink proof the migrating cels in special cases to the bottom of the certain parts of the sea bottom with the dredge and the microscope. This investigation might also include the sinking of the migrating cels in special cases to the bottom of the sea, in order to determine whether, under these circumstances, the eggs would ripen more rapidly. By using the largest fish for this purpose one could arrange, by means of small openings in the cages, to permit the entrance of the small make cels. At any rate, there is no doubt from these observations that the spawning period of the cel takes place in winter. In an article by Guido Lindenhain, entitled "The Natural History of the Eci" (Zur Naturgeschichte der Ande), which has recently been published in the Austro-Hungarian Feherry Gazette, extending through six numbers, a fanciful contributor of that paper, among other wonderful things, claims to have discovered the spawning of the cel in rivers and ponds. I will allow the very sagacious gentleman to recount his summer night's dream in his own words, in order to show with what certainty and precision the most baseless fables concerning the natural history of the cel are even yet narrated:

concerning the natural history of the cel are even yet narrated:

"The methods of spawning by the cel," writes this keen observer, "are very interesting, but to observe them is very difficult and tiresome, and, indeed, only possible when the spawning places have already been determined by experience. One must remain for many nights upon the shore, hidden behind the bushes, with unflagging attention, until these nocturnal adventurers have come into the shallow water and made their presence known by their snake-like notions at the surface. As soon as they have gathered together upon their chosen haunts there is a great commotion in the water, and powerful blows are heard, so that the water splashes up a considerable distance, and the surface is covered with little waves, as if some great object was moving about, after which one gets glimpses of parts of the bottles of the contending rivals of the happy spawning fishes themselves. After the duration of an hour or so it is again quiet, and one sees that the water is moved in different directions in serpent-like waves, which become less and less apparent to the eye of the observer, while the cels are leaving the spawning places and are betaking themselves thunt for food or are seeking their outstomary quiet dwelling-places. If the observer,

moved by overwhelming curiosity, comes on the following day to the same place, he sees nothing, but if he looks with a strong magnifying glass carefully over the water-plants, he discovers little greenish-white eggs resting upon the bottom, out of which the young ed will escape in about six weeks." It is only to be regretted that the enterprising observer has not illustrated the whole development of the egg by photographic views of his fancies.

out of which the young cel will escape in about six weeks,"

It is only to be regretted that the enterprising observer has not illustrated the whole development of the egg by photographic views of his fancies.

Another wonderful story was narrated by Dallmer. 12

A Flensburg cel-smoker told him that once, in April, one of the sacks in which cels had been sent to him, after it had been emptied, was put into the water with the others: after having been tied up he found, after eight to fourteen days, millions of living young cels from one to two inches long. He thought that fertilized spawn had been left in the bag which, in eight to fourteen days, had developed into fishes of one to two inches in length. A million of young cels of 14 inches in length would take a space of 9,761 cubic inches which would be much more than a sack could contain. Such a quantity of little fishes would scarcely be able to find in a sack fied together at its mouth food enough to enable them to grow from a very minute size (the eggs in the ovary have been found only 0.23mm large, and may, perhaps, when laid, measure 0.5mm) in eight days to a length of from one to two inches; let us, however, suppose that the eel-smoker had confounded a hundred little cels with as many millions, it rould hardly, even then, happen that these little animals in from eight to fourteen days could have grown to 160 times their original dimensions. The story would be much more probable if it were supposed that the young eels in their wanderings toward the fresh water had, perhaps, found their way into a bag which was not tied up at its mouth.

In De La Blanchere's "Nouveau Dictionaire General de Peche, Paris, 1868," occurs the following paragraph, without any indication of its source: "Chenu and Desmarest do not hesitate to state that the cel spawns upon the mud after a kind of copulation; that the eggs gremain, adhering together, joined by a glutinous substance analogous to that which concets the eggs of the fresh-water perch, and forms little pellets or rounde

selves."

According to this, the eggs are deposited in masses of sline, inside of which the young hatch out in the course of a few days, and a few days later they shake themselves free and swim about at liberty.

When and where these investigators have made such observations is not to be found oul from the "Dictionaire;" at any rate, it is very hard to understand how they have proved that the same female eel yearly lays several sets of ergs.

BENECKE ON THE MOVEMENT OF YOUNG EELS.

at any rate, it is very hard to understand how they have proved that the same female cel yearly lays several sets of eggs.

BENECKE ON THE MOVEMENT OF YOUNG ELIS.

Benecke gives the following thorough discussion of the movements of young cels:

The young cels, latched out of the eggs at sea, doubtless live at the bottom until they grow, through consumption of rich food substances there to be found, to a size from 1 to 3 centimeters. When they have attained this size they begin their wanderings in immense schools, proceeding to ascend into the rivers and lakes. These wanderings of the young cels have been known for a very long time; for instance, in the lagoons of Comacchio, in which they may be found, for the most part, after they have gained the length of from 6 to 8 millineters, and in France, later also in England, Benmark. Sweden, and, more recently, in Germany they have also been observed.

According to the French reports young cels are hatched out early in the winter, and in February, having obtained the length of four or rive centimeters, they appear in the brackish water at the mouth of the Loire in immense numbers, soon to begin their wanderings up the stream. They swim in crowded schools at the surface of the river right up to the banks, and little detachments of the army deploy at the mouth of each tributary and pursue their wanderings along its course. These swarms of young eels are called in France "Montée;" in Italy, "Montata." The number of the eggs in the ovary of the eel, wonderfully large. Redi has reconnect that, from the end of January to the end of April, the young fish is, as might be expected from the number of the young fish is, as might be consecuted that, and the instance of the word of them were taken in five hours. Into the lagoons of the Comacchio the eels pour from February to April. In March and April they have been noticed in many French rivers, in which the migration continues from eight to fourtee the risk of the many french rivers, in which the migration the eight was not pure

15 Fische und Fischerof im Sussen Wasser, Segeberg, 1877.

of about 3 centimeters in length, in the brackish water of the Elder, at Freiderekstadt; so also did Von Stemann.

"Every year," writes the latter, "from April to the end of June, there appear great masses of young cels, which are present in large schools toward the Upper Elder, seeking in every way to pass each other. In April the first cels show themselves generally singly; cold weather has evidently kept them back up to this time; since this year, until ro-day, no ascent whatever has taken place, and now the approach of the great schools is beginning. Where the current is feeble, the procession is broad; but where the eels encounter a strong current—near a mill—it becomes small, and presses close to the shore, in order to overcome the currents. The little animals swim eagerly and rapidly along near the banks until they find a place over which they decide to climb. Here they lie in great heaps, and appear to await the rising of the tide, which makes their ascent easier. The tide having risen, the whole mass begins to separate without delay; cel after cel climbs up on the steep wall of rock, determined to reach the little pools, at the height of 15 or 20 inches, into which some of the water from the Upper Eider has found its way. Into these holes the little animals creep, and have yet to travel a distance of 40 or 50 feet under the roadway before they can reach the Upper Eider has found its way. Into these holes the sluce-ways, and clings to the cracks in the wood; also around the mills their ascent may be observed, especially about sunrise." Davy sends a similar account from Ireland. He was a witness of the ascent of young cels, or "clvas," at Ballyshannon, at the end of July, 1823; he speaks of the mouth of the river under the fall being "blackened by millions of little cels about as long as a finger, which were constantly urging their way up the moist rock beside of the fall." "Thousands," he adds, "died; but their bodies, remaining, served as a ladder by which the rest could make their way; and I saw some

their way up the moist rock beside of the fall." "Thousands," he adds, "slied; but there bodies, remaining, served as a ladder by which the rest could make their way; and I saw some ascending even perpendicular stones, making their way through wet moss or adhering to some cels that had died in the attempt," "?

Such is the energy of these little animals that they continued to find their way in immense numbers to Loch Erne. In the little eels which ascend the rivers there are no traces of sexual organs, but in the fresh water they develop only into females. One of the most recent observations made by Dr. Pauly, in Munich, would appear to contradict this idea, since he discovered male cels among the fish which were brought with a lot of groung eels to Hüningen, were kept there for two years in ponds, and were finally released in the fish pond of Court-Fishermann Kauffer. We should bear in mind, however, that these young eels were captured at the mouths of fresh rivers in brackish water; and that among the numerous small cels which swim in the brackish water there must be many larger specimens, in which the male organs have already begun to develop. Such are doubtless those which were sent in the male condition to Iluningen and Munich, and were there recognized as males. This presumption can be set aside only if male cels shall hereafter be found among the fish which are caught in the upper part of rivers in the condition of young fry.

Concerning another important fact which is connected with the movements of the young fry of the eel, I became acquainted last year (in the contex of an exploration of the waters of the district of Konitzkunde) with the river Brake, at Mullhof, above Kittel, where a high dam was built in 1846 and 1847 for the purpose of watering a large system of meadows by the overflowing of the stream. Below the dam is an inclined plane (constructed of boards), about 300 feet long, built for the purpose of vatering a large system of the unitary to it, and the number of eels caught above the dam—wh

OBSERVATIONS OF DR. HERMES IN 1881 ON THE CONGER. The observations of Dr. Otto Hermes, director of the Berlin

In Professor Benecke had in his possession some of the young cels, which escaped from all the vessels in which they were confined, and even climbed to the celling of his room.

If Est-Rants in Convertory.—Fresh water cels may be caught in large numbers, in weirs along the lake streams, when descending at the fall cultury to deposit their spawn in some bower region, and in the following August their offspring, from three to six inches long, return in humeuse, numbers. The besin of the Sill River Palls, near return in humeuse numbers. The besin of the Sill River Palls, near return in humeuse numbers. The besin of the Sill River Palls, near cell in the following August their overly rock which is moistened by the spray of the fall, and endeavoring to reach their nucestal lake or dam. At the foot of the Niagara Fulls this phenomenon may be wincessed on a large scale at the same sesson of the year or later, and probably in other places where the full is too high and the current too swift for the young culs to stem it without contact with the rocks.—Annals of Winchester, Conn., Boyd, p. 20.

Aquarium, who has recently discovered the true nature of the organ of Syrski in the conger, are extremely interesting. "Since Syrski, in 1874, found the organs in Anguilla vulgaris—which are called by his name, and which, by him and most collogists, were taken for the male reproductive organs—it is only necessary that a ripe male cel should be found in order to settle forever the question of the sexes of the cel. Up to this time all efforts have failed to reach the desired result. The historical investigations of the Syrskian organs pursued by S. Freud render it more probable that these were young roes; yet there remained all the time a doubt, since the spermatozoa had not been actually observed, and this uncertainty is an insuperable obstacle to the acceptance of the Syrskian discovery. The supposed discovery of spermatozoa by A. S. Packard in the male cel proved to be another delusion. The contradiction of this imaginary discovery appeard in No. 26 of the second volume of the Zoologische Anzeiger, p. 193, in which it was stated that the motile bodies were not spermatozoa, but yolk particles. This correction was also made by Von Siebold's assistant, Dr. Paul, 1-8 and by S. Th. Cattie.

It is well known as Von Siebold remarks, the young cells. Cattie,

It is well known, as Von Siebold remarks, that young

It is well known, as Vou Sicbold remarks, that young cels, ascending the rivers, developed into females and that the males remain in the sea or at the mouths of rivers. This statement cannot be exactly demonstrated, since among 250 cels, from 11 to 15 inches in length, taken in the vicinity of Cumlosen, I found 18 males or 5 per cent. (Cumlosen is situated in the vicinity of Wittenberg, and is at least 120 miles from the mouth of the Elbe). How large the percentage of difference between the neighborhood of the mouth of Elbe, and places situated farther up the stream, as regards the proportion of males and females, may be, I lave fitherto, from want of material, been unable to decide. Forty from the Havel hard (about 20 miles from Cumlosen) were all females. Out of 127 cels taken in the bays at Rugen, in the Ballic, I found 61 or 4½ per cent, males, while at Wismar, on the Danish coast, the males only constituted 11 per cent. Whether these facts have any connection with the discovery of the hitherto unknown spawning places of the cels, it is to be hoped that further observations will determine. When Cattie, in his already cited work, gives it as a determined fact that the cels wander into deep water here, in order to let their generative organs attain maturity, which happens in six or cight weeks, and that the old male and female cels, after the reproductive act, die, according to my knowledge; there are wanting observations which will give this a scientific foundation. What Von Siebold and Jacoby only state as probable appear to him (Cattie) to have become already established facts.

As far as the distinction between male and female cels between the external characters is concerned, the cels sent to me, some

already established facts.

As far as the distinction between male and female cels by external characters is concerned, the cels sent to me, some time in November, from the coast of Schleswig showed so great difference in color that their sender, the fish-master Hiukleman, was able to decide without difficulty between males and females. The former were distinguished by a specially brown coloration, while the females, in addition to greater size, almost without exception exhibited a dull steel-gray color. Among the males were found many specimens of 17 4-5 inches in length, which I was careful to note because Syrski had only found the size of 16 4-5 inches. In Comacchio, according to Jacoby, a specimen of 18 4-5 inches had been found.

JACOBY'S TOUR TO COMACCHIO IN 1877, AND HIS CONCLU-

mehes had been found.

JACOBV'S TOUR TO COMACCHIO IN 1877, AND HIS CONCLUSIONS.

"In the fall of 1877," writes Jacoby, "I undertook a journey from Trieste, by way of Ravenna, to Comacchio; convinced of the difficulty of the questions to be solved by my own previous labors. I had no great hopes of finding sexually immature eels, either gravid females or mature males. My highest aim was at the beginning to determine the following joints: (I) Whether evidences of preparation for breeding might not be found in the eels which were wandering in the fall toward the sea; (2) to what extent eels with the origin of Syrski could be found participating in this migration; (3) as far as possible to obtain eels from the sea at a distance from the coast in order to compare their organs of reproduction with those of the cels in the lagoons.

"In determining the answers to the first two questions I was able to make some new and interesting discoveries, but with regard to the latter, my most diligent efforts were absolutely fruitless.

"I found that the eels when migrating to the sea in the fall took no food. In many hundreds examined by me, caught during their movement, I found stomach and intestines entirely empty; that the eels during their migrations eat nothing is also known to all fishermen and watermen of Camacchio. At the same time, the eels which remained in the lagoons were more or less filled with food, not only those which were not sufficiently mature to migrate, but also a breed of eels which never goes to the sea, but remains throughout its entire life in the lagoons.

Camacelio. At the same time, the eels which remained in the lagoons were more or less filled with food, not only those which were not sufficiently mature to migrate, but also a breed of eels which never goes to the sea, but remains but throughout its entire life in the lagoons.

"There may be found in Comacchio, and doubtless everywhere where cels live in great numbers in brackish water along the coast, a peculiar group of cels which, as far as I could determine, consists entirely of sterile females. These female cels with ovaries present a very peculiar phenomenon; when they are opened one finds instead of the well-known vyellowish-white, very fatty, cuff-shaped organ, a thin, seummy, slightly folded membrane, not at all fatty, often as transparent as glass, and of about the same proportional size as the so-called cuff-shaped organ. When this membrane is reasonated under the microscope there may be seen in it eggs yery transparent in appearance, with yolk dots absent or with yolk dots very small and few. This organ appears to the length of 27 inches, present all of the acknowledged female characters in great prominence and in an exaggerated glerge; the snoat is broader, and often, especially at the tip of the under jaw, extraordinarily broad; the dorsal fins are, on the average, higher; the eyes are much smaller, especially in large specimens, and the coloring is clearer; the back of a clearer green and the belly yellower than in the normal female. The ficsh of these sterile females has a very delicate flavor, and quite different from that of other cels. I was quite astonished at the fue favor when I tasted them for the lirst time in Comacchio. The flesh, as the expression goes, melts upon the tongue. It is even possible to distinguish them white living by feeling them with the hand, their soft bodies being very different from the hard, solid, muscular flesh of tho others.

"In Comacchio these cels are called 'Pasciuti.' Coste called them Presectti,' and defined them to be those eels which had not become ripe,

Pasciuto' means 'pastured,' and the fishermen understand by this those cels which do not migrate, but which remain through the whole year fredding in the lagoois. They include, however, under this name, eels of two Kinds—the sterile females already described, and the cels which are not yet ripe, as well as the normal females and supposed males, whose period of migration is somewhat remote. This circumstance is a cause of much difficulty to the investigator. '9 "The studies on the second point to be solved were of special interest, viz., the determination of the presence and the behavior of cels with organs of Syrski, at Contacchio. I can answer this question very briefly, since among 1,200 specimens examined by me at the fishing stations and at the so-called cel factories (with the exception of the largest specimens, which are always females). I found on an average of five per cent, with the organ of Syrski, of the eels under 15 inches in length (45 centimeters) on an average there were 20 per cent, so that the conclusions as to their abundance were very similar to those at Trieste, where the fish market is supplied, for the greater part, with cels from Chioggia, and to a less extent with those from Comacchio.

"In Comacchio the largest cels with the organ of Syrski, which I have observed, were about 17 inches (48 centimeters) in length, the smallest about 9 inches (24 centimeters). All of these were found among the cels taken during their migration to the sea, and, like the females, were found with

"In Comacchio the largest cels with the organ of Syrski, which I have observed, were about 17 inches (48 centimeters) in length, the smallest about 9 inches (24 centimeters). All of these were found among the cels taken during their migration to the sea, and, like the females, were found with stomachs completely empty or slightly filled with a slimy substance. It was impossible to find in any specimen a more advanced development of the Syrskian organ than in those examined in summer at Trieste.

"With reference to the third question undertaken by me, which relates to the actual kernel of the eel question, that is, the possibility of obtaining the cels which have micrated out to sea, in order to obtain in this manner the sexually mature milters and spawners, I have been unable to obtain any results. I have, so far as my opportunities permitted, left no stone unturned to gain its solution. I went out to sea from Magnavicea and from Codigora, or Chioggian vessels, and many times have fished myself, and have slimulated the fishermen by offers of reward to endeavor to obtain cels at sea, but I am forced to the conclusion that with the ordinary means this cannot be done.

"Intelligent gray-headed fisherman of Chioggia, who by means of their fishing apparatus know this part of the Adriatic as well as they know their own peckets, have assured me that throughout their entire lives they have never caught a grown-up river cel in the sea at any distance from the coast. The eels which were brought to me at Mannbach as having been caught in the sea, and which I found to be the ordinary females, or cels with the Syrskian organ, were either from localities close to the shore where they are not rare, or were taken in the Palotta canal. There was no lack of attempts at deception. Fishermen took cels from the shore with them in order to be able, on their return, to claim that they had been caught at sea. In the immediate neighborhood of the coast they are, as it has been stated, in the spring-time not rare, and there are not the

smail-meshed, they do not reach the bottom. The problem can only be solved by using apparatus constructed especially for the purpose."

The economical value of the cel as a food fish has been well established, and it is now greatly sought after for introduction into the localities where, for some physical or other reason, it is unknown. The advantages as summed up by a German writer, are, first, that an cel will live and grow in any water, however warm, and whatever be the general character of the bottom, though it prefers the latter when muddy and boggy; second, the cel requires no special food, but devours anything, living or dead; it is an excellent seavenger, feeding upon dead fish, crubs, etc., as well as supon any living prey it can secure; third, but few conditions can interfere with its development, and it grows with very great rapidity, being marketable at the age of three years; fourth, the young, on account of their hardiness, can be transported in a crowded condition, and there is no question, but that the cel can be introduced in nany waters to advantage, supplementing the earlier inhabitants. It has been planted in the waters of the upper lakes and the Mississippi River; in the latter they have reached an advanced development. It is, however, a very undesirable inmate of rivers in which fish are taken by means of gill nets, the destruction of shad and herring in the waters of the Susquehanna and others further South being enormous. It is not unfrequent that when a gill-net is hauled up, the greater part of the catch consists simply of heads and backbones, the remainder being devoured by myriads of cels in the short time the net is left out. The spawning shad are considered by them a special delicacy, and are found emptied at the vent and com-

10 It has been noticed by many early writers that there are certain cels which nover come to the sea—Hisso, in his "Histoire Naturelle," tome 3, p. 198, and 8. Nilsson, in his "Seandhavisk Fauna," tome 4, p. 98. The latter called this variety "Grasad," or gruss-cel, and spoke of its yellowish green coloration and the soft, delicious desh, except the season of the starper snown of this call, and Risso, who have the sharper snown of this call ind Risso, who have the sharper snown of this call index of the starper snown of the call index of the starper snown of the call index of the same sharper snown of the call index of the same sharper snown of the call index of the same sharper snown of the snown

pletely gutted of the ovaries. Sometimes the shad, apparently full, is found to contain several cels of considerable size. They do not seem to be very destructive of living fish of any magnitude, although the young fry are devoured with

The Indiana Fish and Game Association have elected Samuel E. Williams, President; Charles M. Walker, Vice-President; Alex. C. Jameson, Secretary, and Harry C. Holloway, Treasurer. John A. Finch, B. W. Langdon and John Colman were appointed a committee to prepare amendments to the existing fish and game laws for submission to the next Legislature, and a committee was appointed to distribute throughout the State circulars setting forth the object of the association. A committee was also appointed to secure the incorporation of the association. A resolution offered by Mr. Finch was adopted requesting the trustees of Purdue University, at Lafayette, Ind., to provide a model fish pond for the benefit of the people of the State. The association decided that nothing none could be done toward preventing the destruction of fish by the dynamite fiends, until all amendments to the existing laws could be secured and rigidly enforced through local associations. The association then adjourned until the second Tuesday in January, 1883.

Mishculture.

THE CALIFORNIA LAND-LOCKED SALMON.

THE CALIFORNIA LAND-LOCKED SALMON.

THE Watsonville, Cal., Pajaronian recently stated that large numbers of salmon were being taken in the streams in that vicinity, and that they clearly differed from the ordinary coast or river salmon. The fishes were described as being much more slender in form than the latter, with finer scales, peculiar spots, etc. The editor of the Secramento Bee forwarded the itom to Hon. B. B. Redding, State fish commissioner, with a request that he would favor the readers of the Bee will like opinion in regard to the identity of these fishes, in response to which the writes as follows:

Entrons Bee: Yours, with file estract from the Pajaronjan, duly received. In answer I would say: Jordon and Gilbert, of the Smithsonian Institute, were here in 1969 gathering statistics of fish and fisheries for the census. They made a caveful examination, and so fur there have been found five varieties of salmon on the Pacific coast. Secremento River salmon spawn in August and September, while those that come into the San Joaquin probably spawn at an earlier period, for the reason that the eggs are ripe earlier in the fish taken from the San Joaquin than those taken from the Sacramento. The salmon of the short coast rivers is one of thesi have arracties. It ascends these short streams during the heavy ratis, or after the fleet raise of winter break the bars at the mouth of vivers, and reaches as high as it can into the passures and meadows of the Coast Range, and there spawnes and inmediately returns to coast. In quality it does not compare with the salmon of the Sacramento River; it is not so good when fresh, either it is called trout or salmon troote, but it is at true salmon.

Land-locked salmon have then put into the Pajaro River, it is not so good when fresh, either is it so good when canned. When canned and sent almont, but is a true salmon.

is it so good when canned. When canned alld sent abroau in injures the reputation of the Sacramento River 18th. In the San Francisco market it is called trout or salmon trout, but it is a true saimon.

Land-locked salmon have then put into the Pajaro River, and also into the lakes of Salinas Valley, and probably have increased in numbers. A person familiar with the Sacramento River salino and the salinon of the coast streams could as readily tell one from the other as you could tell a Eurogean from a Chiamann or a negro. If the fish taken in the Pajaro have five black spots about the size of Duckshot on the operculum or gill-cover, it is certain they are land-locked salmon. If the people taking any strange or peculiar fish in any part of the State would send one of them to me! twould take it to the Academy of Sciences and have its species determined, and ascertain what particular fish it is. I hardly think it probable that land-locked sulmon in the Pajaro have become so numerous that they can be taken in large quantities, and the probability is that the ish mentioned in the Pajaronian is the ordinary coast stream salmon. It would be difficult tell what a fish is by a newspaper description. Ordinarily the particular marks which distinguish different varieties of tish are the last things to be noticed.

Once before a committee of the Legislature an old fisherman from Collinsville stated to the committee that he had fished for twenty-eight years on the Sacramento, in fact, he had done nothing else since he came to California in 1819 but lish on the Sacramento; that he was entirely familiar with eappearance and habits of the salmon; that he was statified he himself had caught several millions of them; he felt certain that they spawned on the sand bars about the mouth of the committee if he thought he was familiar with everything about the appearance of the salmon and its structure, he said the mouth of the last had not occurred to him for count them.

I state this to illustrate to you how difficult it would be for

THE RAINBOW TROUT.

THE RAINBOW TROUT.

I have noticed items in your valuable paper at various times in regard to our California brook, or rainbow trout. Being engaged in raising a species, which I believe to be the rainbow trout, and having lad but a short experience with them—a little less than three years—I am anxious to get more information concerning them. If all who are engaged in raising or intending to raise fish, were posted in regard to their raind growth, and knew how readily they adapt themselves to waters of different temperatures and to food of different kinds, it would cheek to some extent the rage for carp, and increase the demand for front.

The fact that thousands of their eggs can be procured and sent to any part of the country with safety, at a light cost, and that they can then be hatched and are ready for use within six or eight months, render them more desirable than the carp. It is well known that carp eggs cannot be shipped, and that only a few of these fish can be procured by any one person. Then it requires two years after stocking your pond for them to begin to increase. Consequently, as you see, I would be feasting on trout two years before you would get a taste of carp. We also have another advantage. It is not mecessary to draw the water from the pond in order to catch the trout, while it is necessary to do so to catch the carp. Still another point in favor of the trout, they are superior in flavor. The larger fish are equally as line flavored as the smaller ones. Persons recently from the Eastern Stock frood as the Eastern brook trout. They are superior in flavor to the Eastern brook trout. The rainbow trout are not so particular about their food as the Eastern brook trout. They eat bread crumbs greedily. Thave found in the contents of their stomachs leaves and weeds that grow in the lake, which I think must have been cared to the contents of their stomachs leaves and weeds that grow in the lake, which I think must have been should be a particular about their food. In the stocked a small take, conta

them from the head waters of Pitt River. They were from one and a half to ten inches in length. As there were no fish of any kind in the lake, and no enemies of consequence, and an abundance of suitable food, they had nothing to do but to grow. Nothing more was seen of them till April, ISSO. They could then occasionally be seen feeding during the summer. In September following I placed 1,300 more in the lake. This lot were from two to five inches in length. Their next appearance was in April, 1831, just nineteen months from the time the first fish were deposited in the lake. They then began to seem a small stream, which empties into the lake, for the purpose of spawning. To my great surprise I found them measuring from fourteen to twenty inches in length, and some of them weighing four pounds. This was so satisfactory that I concluded to experiment still further with them, and try to hatch some artificially. I took near 20,000 eggs and placed them in hatching boxes in a building over a stream of water. During the night the dam broke and looking healthy—the floor of the building being damp and looking healthy—the floor of the building being damp and coul had prevented them from spoiling. I then emptied them into the stream. In about six weeks I found many hundreds of them had hatched.

I simply mention this to show how hardy they are. After spawning they returned to the lake and began to feed on grasslorpers.

I simply mention this to show how hardy they are, After spawning they returned to the lake and began to feed on grasshoppers.

My method of feeding them is original as far as I know. At the southern boundary of the lake is an old gravel bar, thrown up by an extinct lake or ocean. This har is about half a mile wide by three miles in length. Its only production is weeds of various sorts and innumerable grasshoppers, of a local, harmless species, with indifferent wings. They do not travel. These collect along the edge of the water in great quantities, and to all appearances will furnish an inexhaustible supply of food for all time to come. To feed the fish then, it is only necessary to valk or ride close to the edge of the lake for about a quarter of a mile, when the grasshoppers will hop into the water by thousands. There is always a breeze from the South at this season of the year, which carries them "out to sea." As soon as they are out a few fect from shore the fish, which are lying a short distance out expecting them, make a rush, frequently throwing their broad purple sides into full view, and making the water boil for nearly a quarter of a mile. With such food they soon recovered from the exhausted condition in which they left the spawning bed. From this time their growth was very rapid. Those that would have weighed from three to three and half pounds, on leaving the spawning grounds in May, weighed from five to six and a guarter pounds about the 1st of October. As near as I can estimate, trout eighteen months old average from one and a quarter to one and a half pounds, I shall be pleased to correspond with parties who are raising the rainbow trout, and ascertain if possible if they will subsist on vegetable food. It is reported that the trout of GooseLake, when confined, eat boiled wheat and ice. I do not know these reports to be true.

H. Woodson.

RIGHTS OF FISHCULTURISTS.

A LAW of Connecticut provides that "Every person, who shall enter on the land of another, for the purpose of taking fish from any private pond or stream therein, after the owner or occupant of such land, pond, or stream shall have posted a notice adjacent thereto, forbidding such entry, shall naddition to the damages for such entry, forfeit to such owner or occupant, one hundred dollars."

An interesting case has just been decided in Waterbury, Comn., which may prove interesting to our readers, and perhaps serve as a precedent in other cases of trespass upon private ponds. Therefore we give the opinion of the judge in full.

vate ponds. Therefore we give the opinion of the full.

H. H. Peek vs. Elijah Mallory, action to recover a statutory penalty of \$100 for fishing in the plaintiff's private pond. This complaint came before Henry I. Boughton, Esq., justice of the peace, and was ably contested on the part of the plaintiff by Webster & O'Neil and on the part of the defendant by Judge Cowell. The following written opinion was delivered by Justice Boughton:

OPINION.

OPINION.

The principal points of contention in the case before me

The principal points of contention in the case before me were:

1. That the oouth had no jurisdiction of the subject matter of the state that the court had no jurisdiction of the subject matter of the state of the subject of the subject matter of the subject matter of the subject of the subject matter of the subject of the subject matter of the subject of the subj

on one of the lines; that he did this to help the other man. [It is to be noted here that the defendant did not make this admission until after the plaintiff had produced evidence that the defendant was seen taking fish up through the ice.] Both parties went away together about 4 o'clock with quite a string of tish. I think I should be justified in finding from this evidence that the defendant aided, abeted and assisted this other man in taking fish from the pond in question. I need not cite authorities to show that the defendant would be equally liable with this other man to pay the penalty provided by statute.

not cite authorities to show that the defendant would be equally liable with this other man to pay the penalty provided by statute.

Fourth—The fourth point, and the one which presented to me the most serious difficulty, was as to the plaintiff's title to the pond in question. Four years since the company, by vote of its directors, authorized its secretary to lease. There was no limitation of the secretary's power to, nor of, the time for which the lease was to be given. The secretary leased verbally for a second year, and then again for a third year, and the plaintiff paid the company for this occupancy usually in July. About the first of January last the plaintiff asked if he could have the pond for another year, and the secretary said yes. The company certainly would not be permitted to dispute the plaintiff's title during the first three years; during this time the plaintiff's title during the first three years; during this time the plaintiff's title during the plaintiff is lawfully the occupant of the pond. He claims to be in possession now, under color of right. I am inclined to think the plaintiff is lawfully the occupant of that pond by virtue of his understanding with the secretary; but whether he was lawfully the occupant of that pond or not seens to make no difference; he was in possession under a claim or right, and is just as much entitled to the protection of that wagainst a stranger as any other disseizor. A thief may lawfully maintain his possession against every one except the true owner.

lawfully maintain his possession against every one except the true owner.

Much was said in the argument about this statute being penal, and that a strict construction should be placed on it.

I am aware that, in times gone by, the waters of this State were thought to be a free fishery: but that this doctrine of free fishery could never strictly be applied to any but public navigable waters. Of late, however, a large share of the time of the Legislature is taken up with the protection of fishculture I think, therefore, it may be said with truth that it is a rule of public policy in Connecticut to protect the propagation and culture of fish. And therefore a liberal construction should be placed upon all acts of the Legislature for the purpose of furthering the objects in view.

This brings me to say, therefore, that I am constrained to hold, that the plaintiff is entitled to recover the penalty provided by law, viz., the sum of \$100.

WHAT MIGHT "SLICKENS" BE?—The Gridley, Cal., Herald says: "Feather River is free from slickens than it has been for many years, and the water is rapidly assuming the clearness of the Sacramento as seen during low water north of Colusa. Fish are also becoming plentiful in the streams. The first salmon seen in it for nine years made its appearance near the Thresher slough last Friday afternoon. It was a good sized one, and would weigh not less than twenty pounds. Catfish are also becoming plentiful in it, and we hear of several parties catching trout in the stream during the past month. If the stream can be kept rid of slickens it will become one of the most popular pleasure resorts in the State." It may be that slickens eat the saimon, and if so, why don't they shoot them? Or do slickens come down and drink up all the water and leave the salmon to dry up? If so, then shooting would remedy this. The Herald does not state how large the slickens grow, nor just how they destroy the fish. Perlaps after all slickens is a weed that fills the streams, so that a salmon cannot pass through between the stems. In vain we have appealed to the dictionary in the absence of any person speaking the California language: O, what can the slickens be-e-e? O, what can the slickens be-e-e? O, what can the slickens be-e-e.

FIXTURES.

FIXTURES.
BENCH SHOWS.

April 18, 19, 20 and 21—New York, Sixth Annual Bench Show of the Westudiaster Kennel Club. Entries close April 2. Chas. Lincoln, Superintendent. Ray 3, 0, 11 and 12—Boston, Mass. Third Bench Show of the Massachusetts Kennel Club. Chas. Lincoln, Superintendent; E. E. Hardy, Secretary Exhibition Committee, P. O. Box 1793, Boston. Entries close April 22.

pressive of his appreciation of the kind attentions which had been shown him by the members of the association; he also handsomely complimented Judge Taylor. Several other gentlemen tollowed in the same strain.

Mr. Gregg, the president, gave a short history of the society, stating that at the first meeting in 1871 they held a dog show in connection with their poultry show, at which only three dogs were exhibited; the next one, he remarked, was much better, as they had six. He then warmly entogized Mr. Chas. Lincoln, and paid a high compliment to his ability as a municipal control of the state of gible by the committee.

It was nearly 11 o'clock when Major Taylor commenced

judging.

Count Bondings was protested as having been purchased before the Excelsior Kennel was formed, and was pronounced ineligible by the committee.

It was nearly II o'clock when Major Taylor commenced judging.

Champor Exclisi Setter Dogs were a capital lot, each one of them well worthy the pride of place. As they were ded around the ring for inspection one of the owners whispend to us that he was beaten "by thunder." A glance at the other competitors showed that all were of one mind and when the blue ribbon was given to the beautiful son of Pride of the Border, there was not a dissentant voice. Mr. B. F. Wilson's Spot, although too fat, is a well put together animal with lot of bone and muscle, and we have no doubt is possession of bone and muscle, and we have no doubt is possession of pride of the deal of the principal principa

with some of the finely-formed bitches that lack bone and muscle.

In the bitch class Belle's Fride was decidedly the best, and thly deserved the pride of place. We liked both Dolly Dw and Minorva for second place better than Gertrude; in Inathere were several that we thought full as good as her. Lady Bird, although rather too small, was very well put together, and we fully expected to see her placed. Lase o' Georgia, at though a capital bitch, was in such condition that we did not think she deserved montion. She was protested as have mange, but as the veterinary who was consulted pronounce her free from it, of course the proteste could not be sustained. She was only a short time from a hard could not be sustained. She was only a short time from a hard could have uncomforted by consulted the such as the course of the provided the winner of dirts place, but she was laken ably crowded the winner of dirts place, but she was laken with a very severe attack of peumonia while on her journess and, in spite of every effort to save her, she died. Twilight although a little beefy and a bit coarse, we liked very well Blanche was also a good one. Had she had good feather she would have looked nuch better. Altogether this was a spleadid class. Next came the

would have looked much better. Altogether this was a splandid class. Next came the Pure Laveracks.—Don Juan was given first, as he was much the best one. He has a deal of quality, and is very well put together. We liked Prince Laverack for second place, although Fairy Prince is a rare good one, yet he is a trifle coarse and has not the thoroughbred look of Prince Laverack. He will undoubtedly be heard from again, as he is not yet mature. We fincied his action while moving round the ring the best of the lot. Royal Blue was not in first rate coardinate. We fancied his action while moving round the ring the best of the lot. Royal Blue was not in first rate coardinate. He will sale in the lot of the lot of the lot was not in first rate coardinate. He will also improve, as he is not yet two years old. Aldersha mas in very poor show condition, which was too much of a handicap in this company. In the bitch class we were again surprised. We had Petrel III., a grand one, down for first, and Pearl for second, but the positions were reversed. Part is a very handsome animal, with a gamy, stylish look, and a deal of quality, but she is a trifle sway-backed, and though his representation. Next to these two we preferred Pet Laverack, We own that we were prejudiced in her favor, as wo retained a lively recollection of her winning ways while at the fiddinals. She was sady off in coat and feather, as she has been hunted all the season. Lu Laverack, her litter sister, is also good one. Peeress, although she had just weamed her pupewas grossly fat, yet she showed many good points, and deserved all she got.

In the dog puppy class four brothers carried off the principal honors, and justly, as they were grand ones. Blue Stone was a trifle the best one, although Royal Sultan was nearly as good. Royal Lothair and St. Julien were not quite up to the

coluers, yet they were good ones. We also fancied Acme. He down quickly especially in bend, and we shall be surprised and one. Cotton looks as though he might make a good, seriosable one when mature.

The pitches were a good loc, with several very fine ones. The pitches were a good loc, with several very fine ones. The pitches were a good loc, with several very fine ones. The pitches were a good lock. Atthough a trifle long and when fully developed will undoubtedly be a stunner. If Josephine bad os good a loin as Princess Alice we should have digital loin and quarters. He sister, Queen Mand, is also a good one, although a bit too large. She has an immense chest as the pitches of the pitc

Class S.—For the best kennel of sporting dogs owned by one indi-vidual. Thunder, Bob, Berkley, Raleigh, Darkie, Banjo, Loo II., Lass o' Gowie and Lady Rapid, A. H. Moore, Philadelphia.

GORDON SETTERS.

GORDON SETTERS.

Editor Forest and Stream:

Mr. Malcalm, in your issue of March 2, in answer to mine of the 25th, has struck the right key-note in the last paragraph of his very sensible letter. In order to get the Gordon setter into his old place among lovers of the field and gun we must have a change made in the present standard of points for judging them at bench shows.

Right here a question occurs to me. What is the use of a bench show dog in the sporting classes if, by breeding him up to the standard for such shows, he is being gradually alienated from the uses to which he was originally intended?

To my mind, the judges of these dogs at bench shows, both in England and America, have been too much carried away with the idea that Stonehenge, in his latest edition, tried to figure a heavily-built dog, but my reading of his work does not lead me to believe that he had any such idea.

All the ground they have to go on for this is that he says the "skull is usually a little heavier than that of the English setter." From this it cannot be taken that he meant the whole body was to be built on a heavier scale.

What I wish to suggest is for the owners and breeders of Gordon setters in this country to form themselves into an organized club. Let them think over and lay before the judges of beach shows what they consider the standard of merit in the Gordon setters in this country to form themselves into an organized club. Let them think over and lay before the judges of beach shows what they consider the standard of merit in the Gordon setters and, if necessary, let them draw out a scale of points for judging at shows, and I have no doubt such a course would have the desire effect.

Such a club height be easily formed, and it could give additional prizes at shows and, perhaps, he able to institute a prize to be given for Gordon setters at the coming field trials. Hoping Forests and, in spite of what may be said on the contrary, ablest field dogs, a fair field in its columns, which I have no doubt ti will.

THE DOG WHISTLE, advertised by Messrs, Wilbur & Co. in another column, is a most compact and useful little article. Besides the whistle it contains an excellent compass and a water-tight match box, the whole taking up no more room than an ordinary whistle. Its convenience and compactness will recommend it to all sportsmen.

ORCILL'S POINTERS.—T. M. Aldrich writes us that Mr. Orgill's pointers, which are under his care, have improved wonderfully. He thinks that he can beat in the field any kennel of ten dogs in America, and is ready to match one of them against any pointer in the world.

PRIDE OF THE BORDER II.—Can any of our Texas reacts give us any information of the Laverack setter dog Pride f the Borler II. He was sold to a cattle dealer in that State one five or six years ago by Mr. Tasker, of Philadelphia.

EASTERN FIELD TRIALS CLUB.—There will be an important meeting of the Eastern Field Trials Club at Delmonico's, 212 Fifth avenue, on Thursday evening, the 16th, at 8:30 F. M.

KENNEL NOTES.

We wish to impress upon the minds of those who send us items for our Kennel Notes, that to avoid mistakes all names should be written in PRINT LETTERS, as we find it very carry to make mistakes where this is not done. We also would like to be one whether the animal is male or female, and to know the date or it and the breed to which it belongs, whether pointer, setter or other. A careful study of the notes in this number of the paper will show just what is wanted.

BRED.

Rifle and Tray Shooting.

FOREST AND STREAM TOURNAMENT

FOREST AND STREAM TOURNAMENT
FOR THE SUDGETERINGS CLAMPIONEMP OF 1882.

At a Licetiar of the team cantains, last Tuesday, it was agreed that the nutch be shot at the Zettler Ribt callery, 207 Bowery, to commence on Menday evening. March 27, at 80 clock. On the matter of referees, it was agreed that each citub should select a member, not a shooter on the team, to act as inferee, and that the two referees of each evening should select an umpire, not of either club. It was voted to use a movable screen behind the target to record the number and exact position of shorts.

The real was some discussion may be a first the result of time each team should be allowed only two hours and a half to shoot their score; an average of fifteen minutes to a man.

The following resolution was adopted: No member of any team will be permitted to rest any part of his body against or upon any support, nor is it allowable to place the stock of the riffe inder the coat, vest or suspenders while shooting, and any shot made in that manner will be commed a miss.

counted a miss.
It was decided to leave the entries open until Saturday evening,
March 25, when a meeting will be held to draw for shooting positions
and to nake final arrangements.

THE MATCH COMPETITORS.

THE programme for the selection of the team to represent America in the coming match with the English Volunteers, of which a summary was given in our lact issue, appears in full below. If carried out with eathusiasm it ought to bring about a fine team; and with ample time for preparation and every indication that the committee intend to have the best men on the team, from whatever section they may come, no National Guardsman who can shoot with credit need complain of a want of opportunity of securing a place, on the team.

credit need complain of a want of opportunity of scentring a place on the team.

PROGRAMME OF SCHECTION.

Resolved, That the following method be adopted for the selection of the team which shall represent the United States in this match:

1. A committee of five shall be appointed by the Board of Directors of the National Ridie Association for the purpose of carrying out this programme. The president of this association shall be ex-officio a general section of the States of Territory including the District of Columbia) desiring to be represented in the team shall establish competitions at such place or places as the military authorities may prescribe for competitors for represent, it, to be open only to members of its uniformed National or State Guard, who have been such since September

formed National or State Guard, who have been such since \$2.00, 1, 1881;

(a). Each of such competitions shall consist of seven shots at 200, 500, 500, constituting the first stage, and 800, 900 and 1,000 yards, constituting the second stage. The two stages may be fired on the same day or on different days.

(b). Weapon -Any military breech-loading rifle within the rules agreed on in regard to the match.

(c). Position—Standing at 200 yards, prone at 500 and 600; any at the others.

(d). No sighting shots to be allowed, or cleaning, except between ranges.

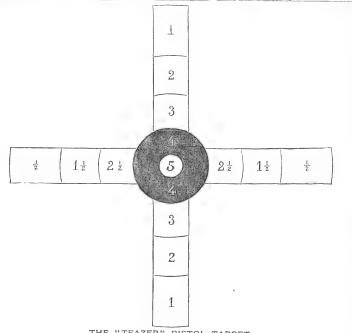

(d). No signing show to be anowed, or cleaning, except between a larger.

3. All competitors who, in taking the three best scores made in these competitions, shall average at least 132 points—say 85 at 20, 500 and 65 yards and 67 at 80, 500 and 68 yards and 67 at 80, 500 and 68 yards and 67 at 80, 500 and 68 yards All competitors who, in taking the three best scores made in these petitions, shall except at 18 points—say 53 at 20, 500 and mads and 67 at 180, 030 and 1,600 are shall be qualified to be sent receivance to represent their respective States.

On August 15, 16, 17 and 18 four competitions shall be had at dimoor by the competitors representing the several States. Upon sone lastin of these competitions fourteen competitors shall be and at more by the competitions representing the several States. Upon sone lastin of these competitions fourteen competitors shall be and as the state of their scores in these competed by aggregating the three best of their scores in these competed by aggregating the three best of their scores in these competed by aggregating the three best of their scores in these competed by aggregating the three best of their scores in these competed by aggregating the three best of their scores in these competed by aggregating the three best of their scores in these competed by aggregating the three best of their scores in these competed by aggregating the three best of their scores in these competed by aggregating the three best of their scores in these competed by aggregating the three best of their scores in these competed by aggregating the three best of their scores in these competed by aggregating the three best of their scores in these competed by aggregating the three best of their scores in these competed by aggregating the three best of their scores in these competed by aggregating the three best of the shooting committee, Mr. H. W. Cordts, read the following resolution of the corps:

THE New York City Schuetzen Corps, Capt. John F. Gerdes, held their first practice shooting at the Union Hill Schuetzen Corps, Capt. John F. Gerdes, held their first practice shooting at the Union Hill Schuetzen Corps, Capt. John F. Gerdes, held their first practice shooting at the Union Hill Schuetzen Corps, Capt. John F. The following members proved to be the best.

to add two additional mento the fourteen above named from riflemen of known skill who may not have shot in any or all of the compe-

of known skill who may not have shown any to make the titions.

6. Those selected in accordance with the preceding sections and the committee acting jointly shall, by a majority vote, select a captain who shall appoint an adjutant to assist him in his duties. The captain, when selected, shall have the management of the team and prescribe the rules for its government and practice, including the decision as to the final selection of the twelve who shall finally constitute the

who shall appoint an adjutant to assise min in in the team. And sericatin, when selected, shall have the management of the team and prescribe the rules for its government and practice, including the decision as to the fanal selection of the tewlew who shall finally constitute the leaves of the selection of the team and practice including the decision as to the fanal selection of the team of the fanal selection of the team of the state stating that he is and has been since September 1, 1881, a member in good standing of its uniformed National or State Guard, and is a proper person to represent his State upon the team.

8. Each competitor so entering shall subscribe the following: "I desire to compete for a place on the American fillitary Team to represent this state upon the team.

8. Each competitor so entering shall subscribe the following: "I desire to compete for a place on the American fillitary Team to represent the competition of 1882, and hereby agree to conform to the differentianal state of 1883, and hereby agree to conform to the differentianal state of 1883, and hereby agree to conform to the differentianal state of 1884, and hereby agree to conform to the differentianal state of 1884, and hereby agree to conform to the differentianal state of 1884, and hereby agree to conform to the addition perform such practice and submit to such discipline and government as the Captain of the Team shall direct."

9. All persons authorized to competit in the final competitions for the selection of the team shall have the free use of Creedmoor Range for the selection of the team shall have the free use of Creedmoor Range for the selection of the team and reserve subsequently, until the conclusion of the match.

10. The National Rifle Association will provide quarters and subsistence on the range for all competitions during the four days of the final competitions, and for the team and reserve subsequently, until the conclusion of the match.

11. Any person selected in accordance with the foregoing regulations may, f

THE "TEASER" TARGET.

THE "TEASE R" TARGET.

THE expert pistol shots of the day have acquired such a degree of a skill with the weapon that it has been found necessary to devise new systems of scoring their best work. Mr. J. S. Coulin, of Conlin's Gallery, this city, has just published a novel target of his own invention, which promises to supersed the old skyle of ring targets invention, which promises to supersed the old skyle of ring targets their hand at it have discarded this name for the more appropriate one, the "Teaser." We give herewith an illustration of this new target. This is printed from the block from which the targets themselves are printed, and so is an exact reproduction. In this target special regard is had to "line" and "elevation," Prominence is given to elevation, the scale here (the perpendicular scheen in the scale here the perpendicular scheen in the scheen in the scale here the perpendicular scheen in the schee

SCHUETZEN NOTES.

an-target there will be, also, a gold medal for the best shooter, essrs. W. & C. Nolte promised to give a gold medal worth \$25 to the cooter of the corps who makes the most points during the season.

BOSTON.—The Massachusetts Rife Association held an unusually well-attended shoot at Walnut Hill Saturday. The feature of the day's work was a complete score of 10 bullseyes, made by Adams. The weather conditions could hardly be called excellent, as a tricky wind blew from the northwest most of the day, although the light compensated, in a degree, for the fiftul breezes. The scores made are appended: Creedmoor Match

TRAP SHOOTERS are generally aware of the excellence of the Card trap, of which Mr. Will. H. Cruttenden, Cazenovia, N. Y., is the agent. We do not know how many of these traps Mr. Cruttenden has sold, but they must be logion.

Yachting and Canoeing.

SEAWANHAKA YACHT CLUB.

Editor Forest and Stream:
The new mode of measurement devised by the specially appointed committee for the use of the Seawanhaka Y. C. is as follows:
FOR SCHOONERS,
Sailing Tonnages $\begin{pmatrix} LWL+OH\\ 5 \end{pmatrix}$ 0.9× $\begin{pmatrix} LS+TS-\frac{MS+FS}{5} \end{pmatrix}$

corpressed in words, the Sulling Tonuage of schooners is equal to ugil on Loud Line plus one-lifth Overhang, this sum multiplied by the sum of the area Lower Sail and Topsails less one-fifth the area of Mainsail and Forell, the whole product to be divided by 4,000. In the formula above OH stands for Overhang, LS for area for both Topsails, MS for area of Mainsail and FS for an of Foresail.

FOR SLOOPS AND CUTTERS.

For sloops and cutters. Sailing Tonnage
$$=$$
 $\left(\frac{\text{LWL+OH}}{5}\right)0.9\times\left(\text{LS-TS-}\frac{\text{MS}}{5}\right)$

Sailing Tonnage—(LWH+OH) 0.0× (LS-TS-MS) 4000

Or expressed in words, the Sailing Tonnage of a sloop or cutter is equal to the Length on Load Line with one-fifth the Overhang added, this sum multiplied by nine-tenths and again multiplied by the area of Lower Sail with area of Topsail added, lies one-fitn the area of Main sail, the whole product to be divided by 4,000.

In this formula OH stands for Overhang, LS for Lower Sail, TS for Topsail and MS for Mainsail.

One-lifth the area of Mainsail goes free of tax for the area of topsail and lowed. Any increase in the area of topsail is subject to tax by the formula OH stands for Overhang, LS for Lower Sail, TS for Topsail and lowed. Any increase in the area of topsail is subject to tax by the formula OH stands for Overhang, LS for Lower Sail, TS for Topsail allowed. The committee to the club is as follows:

Commodous Any increase in the area of topsail is subject to tax by the formula of the committee to the club is as follows:

Commodous Any increase in the area of topsail is subject to tax by the formula of the committee to select the measurement now become subject to the form of the committee to select the measurement now because the committee of the committee

ore. Similar bodies are alike as the cubes of their similar dimensis. herefore, assume the water line at 71ft, for convenience. As the set of 71 is to the cube of 75, so is the contents of the Gracie 7ft, long, he contents of the Gracie 7ft, long, he contents of the Gracie 7ft long. The result is 5,251 cubic feet is equally 6, in of freeboard, making the contents 5,227, is the revalue as 4ft longer on the water line. We can say with certify that this conclusion is not true, and dismiss the cubic measurent, should be a superficient of the same type. And then the conclusion is not true, and dismiss the cubic measurent und is taken at the outset by this measurement that all are of the actype, while in this club the boats are widely different in type, length orded not be used with fainces to all, a length measurent invariably tending to wide and heavily masted vessels, very the smooth water, but not fitted for long cruises.

examined it was found that while depth could be utilized in a small boot, like the Madge, with all the ballast outside, depth could not be made use of highest way to be a small the large with the ballast outside, depth could not be made use of highest way to be a small the large with the ballast outside, him giving depth a changing value that no formula could equalize.

The same conclusion was reached in regard to beam, as the 7ft, sin, beam in Madge, with all ballast outside, has been found to be squal about to the 14/5ft, beam of the Schemer, with all ballast inside. This put an end to taxing beam as a dimension.

At length a suggestion was made to try the formula now before you. It was found to classify widely different types of boats so fairly that it was adopted. This formula allows the wide and heavily-canvased boat to contend on equal terms with the long and moderately-rigged boat to contend on equal terms with the long and moderately-rigged boat to contend on equal terms with the long and moderately-rigged boat to contend on eputal terms with the long and moderately-rigged boat to contend on eputal terms with the long and moderately-rigged boat to contend on eputal terms with the long and moderately-rigged boat to contend on eputal terms with the long and the other pays for her sail that the sail of the sail

A. CARY SMITH,
Chairman of the Committee.

THE YAWL IN AMERICA.

THE YAWL IN AMERICA.

[CONTINUED.]

THE introduction of the yawl along the Allantic coast is of recent date, and due to the publicity given the merits of the rig through a foregreat and Streeza. The unanimity with which all who have given to the area for the right with the property of the right and right and recent number of boats right with a mizzen, as well as the great number of inquiries reaching us concerning the yawl, seem to point to the permanent habitation of that rig in our deet, just as surely as the cutter has made a place for herself in our midst, strictly upon undeniable merits, with the aid of a favorable introduction to the yachting public through these columns. It is not to be supposed that the yawl is to supplant every other style of convassing in vogue, but that it will become popular as a cruising rig for shorthanded vessels, as a safe rig for prolonged voyaging, and as a faster, more wardenly and even handler rig that the schooner there seems no will, of course, demur to anything which threatens to invade the rancient order of things, but in the long run the practical advantages of the yawl are certain to be appreciated, and the old school will again be left astern, as they already have been on the question of keels, outside weights, and the cutter. Forest and Practical davantages of the yawl are certain to be appreciated, and the old school will again be left astern, as they already have been on the question of keels, outside weights, and the cutter. Forest and Practical davantages of the yawl are certain to be appreciated, and the old school will again be left astern, as they already have been on the question of keels, outside weights, and the cutter. Forest and Practical davantages of the yawl are certain to be appreciated, and the old school will again be left astern, as any preconst extended to bring the kindness of a number of owners we are enabled to bring to bear the experience of others in Sudge and advocate in o

Sprit of mizzen	Git, liin.

There was a single line of reef points in the mainsail, 2ft above the foot. The ballast consisted only of a couple of 35b, sand bags, as the beat was not intended for carrying on. The Mobile pilot "saw" our New York sand bag hen and "went" them "one better." He sewed a rope strap around the middle of the bag, and to a short tin, pennant

from the centre of the strap, secured a toggle. When blowing, he tossed the bag over the weather side, and there left hang outboard, the toggle across the inside of the thole plus. Mr. Toulmin writes concerning the James:

"If found this rig very convenient, especially in hunting as I could be a provided by the mainstall and shoot from either side. Game on he appears the provided and the provided by the mainstall and shoot from either side. Game on he appears the provided and the provided by the mainstall and shoot from either side. Game on he appears the provided and measured was lift, long, and about as big in the body as a flour barrel; but on one occasion I was with a friend on a bayon, about 50 miles from Mobile, and we both shot and killed one, which we judged to be about 5 or 6 feet longer than our boat. This was in a part of the country where people seldom penetrated. It was nearly sundown, and we heard him bellow and in a few minutes after we be making right for our boat, evided by, with hostile intentions, when we shot him. I killed one once with a muzal-bading pistol, which alligator measured %2 feet long. He had been lighting, and one of his forelegs had been bitten off close up to his body. All that I ever killed I shot about the eye in the head, as this is about all you can see of an alligator to shoot at, though sometimes a little of his tail will show above water. This pistol was litted with a stock like a rifle, and was telench barrel. If lad a patent bading-muzgle, removable, and cut out with a wad cutter. The ball was conical, and 70 balls weighted one pound. I killed a good many alligators with it over 8 feet long, and other game, and on one occasion shot the heads off of 5 'Bee one pound. I killed a good many alligators with it over 8 feet long, and other pame, and on one occasion shot the heads off of 5 'Bee Martins' in succession."

A long period now intervenes before the appearance of the yaw if now the provided was a second by the provided was suited with a wad cutter. The ball was coni

THE PROGRAMME CHANGED.

THE county delegates of the New York State Association for the Protection of Fish and Game convened at Albany last week. The report of their proceedings, which is given in another column, will be read with pleasure by all true friends of the society and of the purposes for which it was organized.

The Albany convention was in decided and pleasing contrast to those others held by the association in recent years, which have called out severe and merited criticism. It was not an assembly of trap-shooters gathered for a great pigeon slaughter, but a meeting of sportsmen who came together to engage only in the work which legitimately belongs to the society. The meeting was marked by a pleasant social feeling, earnestness of purpose, temperate discussion and dignified bearing throughout. It is a turning point in the his tory of the association, or at least it may be made such, and the change af programme will be most gratifying to those who have been outspoken in the demand that it should be made.

The New York State Association, in so far as it continues in the work inaugurated at Albany last week, will merit and receive the support of influential men and societies who have heretofore held aloof from it.

It gives the Forest and Stream much pleasure to record the change of programme adopted by the oldest society of its kind in this country. We trust that other State societies may follow in its lead. Indeed, as our columns have of late indicated, there has never been more decided necessity for deliberate, determined, and persistent effort to conserve the game supply than there is in all portions of America to-day. While that necessity exists no society which professes to be organized for such an effort can honestly fritter away its opportunities by trap-shooting pigeons.

The proposition to stop the spring shooting of ducks is one that we had hoped to see accepted, and though not received with favor by the delegates at this meeting, it is a reform that is sure to come, and one that will find favor in the eyes of all broad-minded men. Some State must institute the reform in this matter, and once started the move-ment will be accepted and followed by most of the sister Mayor Hutchinson's remarks on the wanton destruction of our forests deserve careful attention.

The truly extraordinary proposition to permit the shooting

of ruffed grouse August 1st in Otsego' county was carried, for what reason is not stated, but a more remarkable step backward has not been chronicled in late years, we think. Why people in Otsego county should desire to kill the young grouse, when many of them are no larger than quails, it is hard to understand, and still more so to conceive why a body of men containing many representative sportsmen should support such a movement. The mover of this proposes also to open the waters of Otsego Lake to the netters during July and August. It is true that permission is given only to take whitefish in this way, but how are the other fish to be warned that the net is not intended for them?

A LITTLE STORY.

NE day, when spring had fairly made its presence known by the softness of the south wind, and by-

"The bluebird shifting his light load of song From post to post along the cheerless fence'

of northern fields, and by the robin tuning his pipe where it had long been unheard, a pair of woodducks came flying northward, and after some careful viewing from above of a certain wood-bordered stream, settled in its waters. The male was in brave apparel, which he had donned in the southern swamp, where he had spent the winter and wooed his mate, and her dress, though less gaudy than his, was rich and beautiful. In fact, they were on their wedding journey, and in search of a summer home. The little river had just cleared itself of ice and was flowing between brimming banks with many water maples bending over it, their buds grown crimson with renewing life. The blackbirds were gurgling so joyfully in the trees, the muskrats swam so boldly forth to their love-making and food-getting, and the turtles basked in the sunshine on the logs so lazily that it seemed as if bird and beast and reptile might live here undisturbed through all the live months with none to make them afraid but the hawk and the mink. Hard by was a great marsh that gave promise of wild rice in August and September, and the four sharp eyes of the ducks discovered a hollow tree, in which a big woodpecker some seasons before had chiseled a doorway to as snug a home as they could wish. Taking all things into account, they felt sure they could not better themselves, and at once set about going to housekeeping.

A few days later, while they were resting from their labors and taking a comfortable bath, they heard an unwonted crashing among the underbrush, and presently a boy appeared on the bank a few rods above them. He bore an iron tube some feet longer than himself, and after groping down the stream a minute he discovered them and pointed it in their direction. If they had known anything about telescopes they might have thought this was one, from the time it was held toward them. But at last it belched forth fire and smoke and thunder, and something went hurtling over their heads with a sound as ominous as the whistling of a hawk's wings. They swam away into a secret place as fast as their paddles would take them, and left the boy there lamenting and using some strange language concerning his

The next day they ventured forth to feed and bathe, but soon had their suspicions aroused by a slight rustling in the bushes some ten rods away, and swam away from the source of alarm with moderate speed. They had not gone ten feet before there was fire and smoke and thunder again, more terrific than before, for it was instantly repeated, and the water just behind them was torn by a shower of the fiercest hail they had ever known. Then uprose a hat, and under it a man, and they heard him say, savagely, "Something or other the luck" or "the ducks," they were not sure which. Notwithstanding these disturbances they kept on making ready for housekeeping.

One day, while madam was inside giving the last touches to the nest with some feathers of her own breast, her lord, sitting outside on a branch, keeping watch and ward, saw a man splashing through the neighboring marsh, and just before him a dog. Presently the dog stood still, with one fore foot raised and his body as rigid as the limb on which the wooddrake was sitting. Then the man walked up, cautiously, behind him, and two little snipe flew up before the dog. The man threw up to his face the iron tube, which all mankind seemed to be carrying, and before the fire and smoke down came the two poor snipe, one killed outright and the other fluttering through the dead sedges with a broken wing. They were acquaintances of the wooddrake, and he knew that they were intending to summer in the neighborhood of the marsh. After the sportsman had brought kept on the premises as provided by law,

down the two birds, his iron tube seemed to be broken close to the end nearest to him, and he was very busy with it for a minute, so that the wood-drake began to think there would be nothing more to fear from him.

But he soon came their way with that death-dealing engine of his in perfect trim again. So the drake sounded his warning note "O-eek! O-eek!" and madam scrambled out of the tree and they both set forth on wing, and each urged the other to put the best quill forward. Then there were two flashes of lightning and two clouds of smoke and two thunderous reports, and the drake lost the brightest feather of his crest, and the duck a quill from her wing, which went floating down the air behind them.

They decided that there was no safety for them here, and that they would tempt fate no further, having luckily escaped the boy, the pot-hunter, and the wing sportsman. So they described the home which promised to be so pleasant, and began anew by a stream which ran through a Canadian forest where no gunner ever came. There they reared a family of fourteen, and in the fall took most of them safely back to the south.

There were no ducks in the stream they left in April, till October, whereas, except for the shooters who got only two snipe and two feathers, there might have been sixteen plump woodducks on the first of September.

There is a double moral to this little story; one for the woodducks and one for the sportsman. So far only the woodducks seem to have profited by it.

A PROPOSED MONUMENT TO HERBERT.—The Greenwood Lake Association, whose club house is situated in the Warwick Woodlands, at Greenwood Lake, N. Y., are desirous of commemorating at that spot the memory of the man who gave the lake and the park their names, and they have already secured the services of an eminent artist to paint for their reception room a fine portrait of William Henry One of the members of the association has volunteered to contribute the sum of \$200 for a monument fund, and the treasurer of the association, Mr. H. C. Cooke, No. 159 Front street, New York, has been authorized to receive other contributions for the same object. It is proposed to erect the monument in the Warwick Woodlands. The association offers to bear all attendant expenses, devoting all the funds which may be subscribed solely to the purchase of the memorial. We wish the Greenwood Lake Association success in its commendable undertaking. This is an oppor-tunity now for the namby-pamby class of professional admirers of "Our Frank" to supplement their loud and unwearied harping on their mania and put their hands in their pockets for some substantial evidence of their worship of

DESTRUCTION OF SONG BIRDS.—The bill to amend the game laws of this State, now in the hands of a committee, contains a number of most excellent features, as well as a number that must be unhesitatingly condemned. One of the most striking of the latter is that which permits taxidermists to kill the small song and insectivorous birds, except on Long Island. It is difficult to understand why any provision at all should be made to protect small birds, if the only class who do much toward their destruction is to be excepted from the provision of the act. The taxidermists kill a very large proportion of all the song birds destroyed in the State, and sell the skins to milliners. We know of many men who, during the migration of our bright plumaged warblers, employ shooters who kill from thirty to fifty of these birds each day during their migration. The loss to the agriculturist from this destruction of bird life can scarcely be estimated. It should be stopped. The persons who should be excepted in this provision are the working ornithologists of the State. They do not take bird life wantonly or for the sake of gain, When they kill, they do it with a purpose, and that purpose is a high and noble one.

POWDER IN THE CITY.—The powder manufacturers keep their stores in schooners and other sailing craft off Bedloe's Island, down the bay. The powder is delivered to city dealers by a man who comes around twice a day carrying the cans in a bag marked "Powder," as provided by law. Sometimes the bag is wrong side out, so that the label is on the inside, but we have never known of a carrier having exploded. The dealers are licensed to keep fourteen pounds of powder on hand. This permit is granted by the Bureau of Combustibles, and must be renewed annually. The fire insurance policies contain a provision allowing powder to be

The Sportsman Tourist.

CAMP FLOTSAM.

IV.—THEY WHO DWELL IN TENTS.

CAMP FLOTSAM.

IV.—THEY WHO DWELL IN TENTS.

CAMPING is not altogether so great an accomplishment as by some it is reckoned; it is far more to be a camper. The practice, to a considerable extent, is initiative; no small portion of those who attempt it do so from the notion that it is quite the thing to spend a few days of the summer in this way. The second season finds their ardor somewhat abated, and is usually the last of their camping out. Toting iron bedsteads, mattresses, pillows, comfortables, chairs and trunks—for these are the usual accompaniments of the imitative camper, the one who goes camping because some one else goes—becomes slightly monotonous after the first time. The genuine camper carries none of these. With the aid of a companion the major part of the outfit can be transported upon the back, the remainder is easily constructed from material at hand on the spot chosen for a cump. To these the years bring no monotony, naught but a nearre kinship to nature. The retreat beneath the shadow of the pines, which for weeks have nightly flung back the glare of the camp fire, is quitted with regret, and the gurgle of mountain stream, or the voice of the wave in its "stone-troubled bound" haunts the memory until again in summer days the past is lived over.

He who goes camping for the first time and sees a tent pitched, and watches in astonishment the creation, by hands skilled in forest craft, of tables, beds, chairs, and the et ceteras which make a comfortable camp, is apt to become impressed with an idea of his own uselessness; a great gulf separates him from the workers about him, a gulf passed by them long ago, but on whose bank he must wait, restrained by a code as inexorable as that which doomed the shades to tarry on the shores of Styx for a hundred years. At his first meal in camp he disposes suspiciously of the broiled bacon upon his tin plate, partakes doubtfully of the fried potatoes, but with more confidence sips the aromatic coffee, although destitute of the cream which was wont to crown hi

Trees and glimmer faintly on the can'as overhead, and once more "jocund day stands tip-toe on the misty mountain tops."

The sensations of that night come to him no more forever. It was the solemn night's vigil, in the sanctuary, whose very sod is holy; the watching of arms by him whom the morn was to see dubbed and ushered into the ranks of knighthood, into an order as honorable, as chivalric as ever wore star or garter, or moved in the forlorn hope over a stricken field. The ordeal has been passed; he rises with the rest and henceforward feels himself of them. The great mother has acknowledged her child. Yet it is not alway thus. Now and then one comes out from that lonely vigil, defeated, infamous Such an one turns back on the morn to seek the busy haunts of men, and trudges his ten or fifteen miles to "get out of the woods." It is better thus; it is the survival of the fittest. Strange to say, this conduct is observed only in the male hiped. More than once have we encountered parties who reekoned among their number two or three fair maidens, whose dainty feet had hitherto scurce strayed off the avenue, to whose cheeks the mountain air had brought fresher crimson, whom the breezes and the sun had tanned, whom the waters of the mountain lake had laved and nature kissed into mew beauty, to whom the first and last night in camp, in moonlight and in darkness, in calm and in storm, brought naught but sweet repose, and who looked back fondly to their few weeks of camp life as to a glorious idyl of the summer.

A camper must be born to it; unlike the angler, he cannot

naught but sweet repose, and who looked back fondly to their few weeks of camp life as to a glorious idyl of the summer.

A camper must be born to it; unlike the angler, he cannot be made, nor can the latter be transformed, as of course, into a camper. We recall two choice spirits of the angle, whose zeal in the sport with rod and reel never flags, who will ride all night for the fishing of a morning; yet who cannot be induced to accept the hospitality of a night's entertainment in camp. They profess years of rheumatism or "can't sleep on a hard bed." One of these worthies passed a couple of days with us in camp, and, after fishing the daylight through, walked three miles along a mountain path to the nearest house, to return by daybreak and from the opposite shore, to rouse us with a wild "halloo" to come for him with the boat for another day's sport. We verily believe that a single night of him would have turned our camp into a miniature Bedlam, and furnished us with a candidate for a straight-jacket before morning.

What may happen when such an one is pushed to the verge, is foreshadowed in the following experience:

We had enlisted a party of four for a month out. For two it was their novitiate; one of these was in fact mustered in rather as a Major Domo than a brother of the angle. However, his self-confidence as to running a camp was supreme, and his enthusiasm over the prospect of the month, with the attendant advantages of good society, stood at 90° all the way. Considering the environment and its contagion, this was not suprising. The day was a perfect one, and through its mellow hours we were traversing woody and mountain roads, through aisless of gray and gnarled, and tuted columns, arched with tracery of living green, through which the sunlight dripped over our path, across rude log bridges, along flashing streams, skirting mountain meadows, bordered with white and scarlet and gold until, from a hilltop, the sheen of distant waters told us that our journey was well uigh done. Barely enough of day rem

Two of the party started for a plunge in the lake, and night settled down on the camp with its two remaining occupants. We sat in an open end tent and looked out at the darkness. No camp-fire lighted up the scene, and in the shadow of the mountains which frowned on either hand, under a canopy of leaves which shut out the stars, with the voices of the night just opening their chorus, perhaps, to our brother just ushered into a new life, it did seem scary. The "whirr" of a tree toad came from a tree overhead, and he turned his face skyward; a "chehunk" came from the water behind the tent, and he gazed earnestly in his rear; then a plaintive "squawk" came apparently from the log on which he sat, and he hastily changed his seat to a box. Then he lighted a lantern; with it he got a fair view of the darkness, and he turned to us. His face showed that he was possessed with a spirit of vague unrest; there was that far-away look in his eyes which told that his thoughts were of home. The next moment the symptoms were fully developed.

"Ever camp here before?"

"Yes, last year."

'Yes, last year. 'Take cold?'

"Take con:
"No."
"Should think you would."
A pause followed.
"How long do you think we will stay?"
His mind was apparently wandering and he had forgotten

In mind was apparently wandering and he had forgotten our arrangements.

*CAbout a month."

"I should think you would get tired." A pause. "It is awful lonesome out here, ain't it?"

We dissented.

'Any snakes here ?"

"Any snakes here?"
"Not many."
"What kind?"
"Pilots and rattlers over on the other shore."
A sigh. "Well I wouldn't care how long I stayed if I only knew mother was well."
This exhibition of suddenly developed filial affection set us off. We whispered the episode to the veteran, after we had turned in, and chuckled ourselves to sleep.
As it turned out the langh was not altogether on our side. The "symptoms" were amusing, but the disease which the next night seized the Major-Domo, who occupied a tent alone, was not fully appreciated at the time. We had been sleeping for some time, when our curtains were drawn and a hand intruded into the tent with a sharp "hist" and a startling whisper: "There is a man out here; he has just passed in front of

my tent."

There was an uproar in a moment, and all turned out, lanterns and torches were hastily fired and for half an hour beat up the thickets in search of the intruder, but in vain. Returning to our tent a council was held.

"How could you see anyone when it was so dark?" asked

one.

"Well, I could see something move; somebody went along the side of the tent and fell over the ropes against it, right by my bed."

"Somebody trying to find something to steal," said another.

"Well," said the Major-Domo, "I don't like it; it don't look good."

look good."

Then he turned in with us, and the remainder of the night was quiet. Now, of one thing we were certain, there was not, save our party, a human being within miles, and so asserted. The veteran coincided, but the other new member was not convinced. Yet, what had he seen and heard? Something, certainly, for there was no shamming in the case. In vain we pondered; we could not solve. There is a vein of superstition in us all, however well concealed or suppressed by our philosophy, which will not down in the presence of the unaccountable. Between sleeping and waking, our thoughts, in spite of us, went over to that other camp upon the bluff, scarcely more than a stone's throw across the arm of the lake, with its half dozen silent sleepers within a "low green tent whose curtain never outward swings," campers awaiting the judgment day in couches prepared, no one knew when, and tenanted, no one knew by whom, yet where was the connection?

The following night the Major-Domo again occupied his tent alone, and we were aroused as before. This time he was able to describe the intruder as wearing a slouch hat, and, rilling to profit by his mishap of the previous night, he had again tallen over the ropes against the tent. There was another search with the same result as before. Two onen got "mad" and turned in, saying, "Whoever he is, let him go as long as he don't come in here."

Once more the Major-Domo sought his tent, but within five minutes there was a shout, "Here he is!" and we went out alone.

"Where is he?" we asked. Then he turned in with us, and the remainder of the night

alone.
"Where is he?" we asked.
"Right by that big tree; he is leaning against it; don't, you

"Where is he?" we asked.

"Right by that big tree; he is leaning against it; don't, you see him?"

"No; which tree?"

"No; which tree?"

"Ther third one from the tent."

"Let us go up to him," and we advanced.

"There he goes; see him, see him!"

There was a third man got "mad" and spoke more in sorrow than aught else.

"See here, what's the matter with you? You have kept everybody awake for two nights; you had better go to bed; there was no one there and you havn't seen anyone."

An honest confession is good for the soul, and it was poured out to us there, under the silence of the stars; "I guess it must have been fear." Just then a rustling, made by some object moving in the thicket, came from the left. The Major-Domo frantically hurled a club in the direction of the sound. A "Ki yi; ki yi" told that it had taken effect. The yelp of the dog fell upon him like a revelation, and with it came the turning point in his malady. A stray setter puppy had wandered into camp, and thereafter, with the dog tied in his tent, the Major-Domo slept in the fancied security which three men with an arsenal of some twenty shots had been unable to afford.

The camp 'enthusiast is a being of a different sort. He never goes out with a party, but is an acquaintance of one of them, and usually puts in an appearance after the camp is settled and in running order, and at once makes himself at home. He gushes, thinks "it is glorious," that he "would like this sort of thing," that he will "do it" himself next year, and meanwhile spreads himself upon your bunk to snooze until meal time. There is a remedy for this affliction and it should be applied promptly.

One of these once found his way to our camp and soon offervesced. It was late when he arrived, but the night was all too long for him, for he "had come to do nothing but fish;" the bringing of water and fuel and the culinary part

of camp, he was apparently willing to trust, with full confidence, to the rest. However, for reasons entirely natural, he got little sleep, and at daybreak was given in charge of one of the veterans, who was to make it lively for him. It was a chilly morning, the vapor had condensed in great drops and formed minature pools upon the seats in the boat, tasking to the utmost the powers of absorption of the victim who, without an intervening cushion or blanket, was taken to the fishing place. This was in a nook in the shadow of the mountain, and the boat was anchored against a wall of rock where the sun could by no possibility strike the water before ten o'clock. Here he was fished for six mortal hours without even a drop of water. Camp had been left at an hour too early for breakfast, and a lunch had not been suggested. The spot was evidently not a favorite resort for fish, for no one had a "bite." At moon the veteran salled grandly into port. In the bow sat an individual in ustate of collapse. His appearance suggested Andersonville, or an arrival from a grusshopper neighborhood. We saw no trace of enthusiasm until he struck our larder, when that useful appendage sustained a reverse which would cause the "temporary suspension" of a boarding-house not well backed. After his meal he set his face sternly away from eamp; "business called him;" he was cured.

However rough and uncouth the ways of camp and its life may be to the outward seeming, no parlor or salon sooner betrays the gentleman or the boor. The latter, unfortunately, is not confined within the limits of civilization, but two days in camp will bring him out in his true colors. The line which divides the two classes, as surely separates the true sportsman from the other kind. No toil is too arduous, no sacrifice too dear to be undergone by the one, and he is never satisfied with his success, but is always for more.

We once had for a companion in camp one of the latter. Two hours of a breezy morning had brought us forty fine bass; the noble fellows were lea

Hades.
Call it Paganism or what you will, "they whose hearts are dry as the summer dust burn to the socket." Let the true sportsnan shun them as though they were heralded by the cry, "Room for the lepen." And let us hope, aye, and see to it, that while the ancient order of gentleman, berailed by the great novelist as almost extinct, still lives, that other order born of it and inseparable from it, the ancient order of anglers, shall not perish from the earth. WAWAYANDA.

STOCK RAISING IN TEXAS.

STOCK RAISING IN TEXAS.

Etilior Forest and Stream:

I send you a very interesting account of stock raising in Texas. It comes from Judge Wilson Hey, of Mason, the county seat of Mason county. Texas, and is a part of a letter not written for publication. It shows well the grand scale on which the ranchmen of the "Lone Star State" are doing business, as well as their prosperity in maising stock. Mason county lies in the central part of the State, about 140 miles north of San Antonio. It has an elevation above the sea of about 1,000 feet, and its climate is very healthful, none more so. Mason on the north adjoins the old Fort Mason fract, Fort Mason was established by me, in Sept, 1851, and was then a frontier military post about forty miles in advance of the long line of posts already established, and running from Fort Worth on the north, to Fort Inge, Uvalde county, on the southwest. The county adjacent to Fort Mason was then in a state of nature, and only visited by bands of roving Indians, while far westward to the Rio Grande, a distance of over 400 miles, stretched a vast expanse of unknown territory. From the immense herds of buffalo, antelope, deer, etc., which were said by the Indians to roam over it, it was believed to be a great pastoral country. This western prairie country set in at Fort Mason, and constituted the southwestern portion of Mason county. How this is now being used for stock purposes, the following extract from the studge's letter will tell. This is the more interesting, for it only shows how all of this vast expanse of territory, clear up to the Rio Grande, is soon to be covered with millions of stock animals. He says: Messrs, Goock and Lockhart bought and located all the lands lying between Fort Mason and the Llano River, and are this spring going to put it all under fences. This pasture when completed will contain 16,000 acres, and take about sixteen miles of fence, which will all be of rock, four and a half feet high, and will average about twenty cents per yard to build. When this pa

than they need for their stock charge 25 cents a head per nonth for horses, and ten cents a head for cattle. There are about 30,000 head of sheep in the county, and I think they will shear on an average about four pounds of wool per head, and I guess the sheep are worth on the average about \$5.50per head.
Muson is not incorporated; the town is too small

Mason is not incorporated; the town is too small yet. I think we have 300 population, and county about 2,700. In 1870 it was 600. Knowing the great interest you take in Mason and Texus generally, is my only excuse for taking up so much of your time. In connection I will now add an extract or two from the last number of the Texus Journal of Commerce, published at Galveston, which is always replete with Texus statistics and news:

In connection I will now add an extract or two from the last number of the Texas Journal of Commerce, published at Galveston, which is always replete with Texas statistics and news:

"This section (Erath county) has had an abundance of rain; grass good and cattle in excellent condition. They are bearing a good price. Yearling steers, \$11; two year old steers \$14," and we add three year old beef cattle from \$15 to \$25 on foot in the range. "Nearly all of the young stock, calves and yearlings, of this section is under contract to be delivered to other ranchmen in April next." Thus these young ones are brought up to double in value in one or two years, feeding, perhaps, exclusively upon the wild lands of others, and at no cost beyond that of herdling and breeding, which is about one dollar per year. "Col. J. H. Holcomb smiles and says, It is only \$20 lambs my ewes have brought me in one day and two nights. The Colonel is one of our enterprising sheep growers."

"The wheat crop in this section (Fannin county) is very promising, and if everything rocks along we will have plenty of biscuit this year." Fannin county with some thirty others are great wheat and grain growing counties, together with "King Cotton" side by side in the same open rich, black prairie fields. The like, I believe, is nowhere to be found in the world.

"Mr. J. B. Wilson (Tom Green county) has recently sold the 'J. D.' stock of cattle, ranging on the Colorado river, to a Chicago firm for \$150,000." This is doing pretty well when we consider that this prairie county is yet so new and wild, that herds of antelope and deer continue to run over it. These great stock raisers often go west with their herds a little in advance of the Grangers, and so have the unlimited range of the prairies for nothing, while others pay the small taxes on the land of a quarter or a half a cent to the acre. This mode of the ranchmen is all right, it does not injure the land to graze it, and they only pluck the golden fruit when it is ripe, while others of less enterprise

NEW ROCHELLE, N. Y., March 6, 1882.

Hatural History.

ORNITHOLOGICAL NOMENCLATURE.

ORNITHOLOGICAL NOMENCLATURE.

A YOUNG student of zoology recently asked advice concerning the nomenclature for some of the common birds of North America. He was referred to the various publications generally accepted as authorities, and a brief explanation was given of the objects and necessities for the application of scientific names, for which purpose Latin is usually employed, in addition to the English names, which are not infrequently numerous as applied to a single bird, and perhaps of local signification merely.

Afterwards, coming for further advice, the student remarked that he had learned of a far greater number of Latin names than English ones applied to birds; that each author gave names differing from those of others for the same bird; and, showing a list of various appellations, asked which one of them was correct.

concerning nomenclature are best illustrated. The practices of the leading ornithologists of the present day in this country have had a decided tendency toward the multiplication instead of the simplification of synonyms, and toward confusion ways confounts.

of the leading ornithologists of the present day in this country have had a decided tendency toward the multiplication instead of the simplification of synonyms, and toward confusion worse confounded.

The distinguished ornithologist, P. L. Sclater, has remarked that "it will be generally allowed, I believe, by all ornithologists that the systema avium is not at present in a very satisfactory state. The Cuvierian arrangements and its modifications have been broken down by the criticisms of modern inquirers; but no other system has arisen to take its place, or, at all events, has secured general adoption." (Ibis, July, 1880). His remarks are well applicable to our subject. In fact each "modern inquirers" has been occupied in building walls that are speedilly broken down, or partially so, by other modern inquirers. Orders, families, genera, and species, have been divided and "subdivided" ad libitum; families created without a single generic name characteristic of the pedigree, or even indicative thereof; species divided into genera with but a single individual for representation; unlimited subdivisions for climatical, geographical, and minor local varieties. And instead of seeking simplification by the restriction of names to the fewest possible number, and as far as practical by the reference of individuals to well known genera and species, the practice of American authors, almost without exception, appears to be in favor of creating a new generic or specific name whenever there can be assigned a plausible reason or excuse therefor. The latest Smithsonian catalogue of North American birds (1881) has a list of sixty-eight species, "eliminated from the catalogue of 1839," and a list of thirty-five "untenable species and races of North American birds described since 1850."

And yet there is now an average of but two species to each of the 378 genera named. And there is a list of 160 "subspecies," in addition to the 764 "species" named.

One of our leading ornithologists, Dr. Elliott Coues, whose valuable writings a

apropos:

"Some seventy-five species are currently reported; there are certainly not over fifty, and I doubt that there are over forty unquestionable species. For these, thirty (I) generic names have been invented, nine-tenths of which are simply pre-

posterous

sterous."
The rule of priority of names is varied and adopted or de tried from as suits the views of each writer. Several of The rule of priority of names is varied and adopted or departed from as suits the views of each writer. Several of our leading ornithologists have, "to a considerable extent," adopted the Linnæan names of 1758, and the rather remarkable statement has been made that "Linnæan had no more right to change his own names, once fully set forth, than any one else has." Yet "European ornithologists steadily refuse to recognize such names, on the ground that they do not take Linnæan's work until it finally left his hands in 1766." If an author be denied the sole right to after his own work, it would appear that European authorities grant him the first right to do so. But even the Linnæan names theoretically adopted by modern American authorities are in many instances so subjected to addition, subtraction or transposition, as to render them barely possible of recognition for the original.

original. In reference to the law of priority, and the rules for nomenclature as applicable to a certain case, Dr. Coues says: "Is it worth while to make the change? Cases like this make one wish there were in our nomenclature some 'law of limitation,' by which a name which has not been challenged for, say fifty years or a century, might then acquire an inalicnable right to recognition." And he then adds that "in default of any such rule — — becomes in strictness the tenable name."

lenged for, say fifty years or a century, might then acquire an inalicnable right to recognition." And he then adds that "in default of any such rule — becomes in strictness the tenable name."

Dr. Coues, more liberal in his views as thus expressed than in the practice followed, has here given one of the many tenable excuses for a change of name, and in so doing only falls in with the custom of his associates in science. Truly, if a name has been generally known and used for the last half century, what practical benefit can be derived from a succession of changes, as the errors of each preceding name may be pointed out? Is it worth while for scientists to create new names that are not, and probably never will be, accepted by all and come into general use?

What matter if the bird known throughout North America as a robin is not even a relative of the bird known as a "robin" in Great Britain? Is it practically desirable to attempt the innovation of another name for the bird? Our robin, known as such throughout this country, and exempt from other local names, has been for a very long period recognized by ornithologists as the 'robin or migratory thrush," and, classed as one of the family Turvidue, or true thrushes, was given the comprehensive appellation Turdus migratory thrush, "and, classed as one of the saming the properties of the same corresponded to its established English name, and had been allowed to remain unchanged. Yet now, by the authority of one of our foremost American ornithologists, Robert Ridgway, Esq. (see Smithsonian Ins. Catalogue, N. A. Birds, 1881, this bird is no longer Turdus migratoria," by all who wish to keep up with the fashions of modern nomenclature. It seems as if the araving for novelty, so characteristic of Americans, pervades even the departments of science, to the extent of perverting its scrubes of the great public to which they should be practical teachers.

Numerous examples could be cited illustrative of the frequent changes in our modern nomenclature. New names are created, gave names differing from those of others for the same bird; and, showing a list of various appellations, asked which one of them was correct.

He was told to choose for himself from the many names authorized, and to mention in connection with the term used the name of the author quoted, lest the identification be confused or imperfect. There is absolutely no single publication among the many of comparatively recent date relative to North American birds, generally adopted as an exclusive authority; nor is there any recognized author, or unison of authors, whose writings adhere to any generally adopted systematic rule of nomenclature.

It is a matter of deep regret to students of American natural history, desirous of an acquainfance with nomenclature, that those who make this study a profession do not prepare simple paths to knowledge that shall prove of practical value to the great multitude, thus devoting their own experience and knowledge to the benefit of the world, rather to prefer tortuous, intricate and ever-changing paths, and to seek the distinction that may come of innovations.

At the annual dinner of the American Fishcultural Association, Hon. Robt, B. Roosevelt, of New York, good-humovedly premarked that, "Before the advent of the Smithsonian in fishculture we all knew a little leithyology, but now they make new names so fast that we cannot keep up, and he would call on Prof. Goode to give the latest atrocity in nomenclature."

Prof. Goode said that 'perhaps the president of the California salmon, which is now Oncorhynckus technical technical salman to pronounce it as he chose."

But it is in the contibological department of American paths and to promounce it as he chose."

But it is in the contibological department of American paths and to promounce it as he chose."

But it is in the contibological department of American and the proliferation and the proliferation of the Russian name for the California salmon, which is now Oncorhynckus technical paths and the proliferation of the Russian had to con

new students a mania for collecting birds' skins and seeking plausible points upon which to hang a new name, rather than seeking to add to the knowledge of themselves and the world by studying the life history of its creatures.

A prominent naturalist of Great Britain once said, "The ignorance of your more collector as regards the life history of any one animal is truly marvellous, and yet these gentlemen will debate by the hour as to whether Columba Schamperi be a 'good species' or a mere geographical sub-species, whatever that may mean, of C. livia."

Nearly a century ago Oliver Goldsmith wrote that "natural historians have hitherto, like ambitious monarchs, shewn a greater fondness for extending their dimensions, than cultivating what they possess. While they have been labouring to add new varieties to their catalognes, they have neglected to study the history of animals already known."

While the most of the leading ornithologists of America, at the present time, are laboring to add new varieties to their catalognes, but few, if any, have "neglected to study the history of those already known."

But their discussions largely relate to the additions of new varieties, and deductions krawn from the studies of dried skins. And how many of these would agree with their great predecessor Audubon, as regards the identification of birds, and "place more value upon a thorough knowledge of the habits and life history" of them, than upon the differences of dried skins?

Simplification and uniformity of nomenclature are greatly

habits and life history" of them, than upon the differences of dried skins?

Simplification and uniformity of nomenclature are greatly needed. Yet most surely a frequent change of appellations and the multiplication of synonyms will never bring about either. And apropos to one of the least evils of the custom now in vogue, is the remark of J. A. Harvie-Brown, that "an additional burden is laid upon memory, which should always be avoided if possible."

Science has been defined by some one (our eminently practical scientist, Prof. S. F. Baird, we believe) [Dr. Cones.—ED. F. & S.] as "knowledge set in order." In the light of this definition, may not the fashion among the modern ornithologists of North America be regarded as an exemplification, in some respects, of knowledge set in disorder, and thus a parody on science.

Ornithology was not included as one of the ancient "seven Sciences," yet quite apropos to the subject is Pope's complet: "Good sense, which only is the gift of Heaven,

"Good sense, which only is the gift of Heaven, And though no science, fairly worth the seven.

There has never been a time in the history of our country when so many persons have manifested an interest in ornithology as at present, and there are hundreds of students looking to the few noted specialists for practical instruction, examples and rules, that shall prove simple, comprehensive, examples and rules, that shall prove simple, comprehensive, accurate, and of a permanent nature. And the prayer is offered that some of our competent scientists will manifest sufficient independence and wisdom (even if requiring some sacrifice of theory) to mark out a practical path for such needs, by him who ever has been and through life will ever be one of the students.

EVERETT SMITH.

PORTLAND, Maine, March 4, 1882

Portland, Maine, March 4, 1882.

General Sheridan's White Goat.—Chicago, March 9, 1882.—Professor R. A. Turtle, our well-known taxidermist, had on exhibition at his rooms in Ogden Building last week, a rare curiosity in the shape of the fiead and neck of amountain goat (Aplocerus columbianus, Coues). Professor Turtle tells not that there are only three other specimens of the Aplocerus columbianus in existence. It is a fac simile of the domestic goat with the exception of its horns, which resemble those of the African antelope. The horns are jet black, seven inches and a half in length, and are slightly curved. There is a slight hump near the shoulders, which gives the neck a bulky look. The entire body, except the legs, is covered with long milk-white hair, under which is a covering of fine silky wool. Its eyes are hazel, with black centres, and a long goatee sets it off with a very venerable appearance. It was killed on a lofty mountain peak near the Misoula Valley, Montana Territory, last January, by a trapper who had lain in wait for it a long while; and it was sent to its present owner, Gen. Phil Sheridan, by his friend, Mr. Theo. Sackett. General Sheridan placed it in the hands of Prof. Turtle with instructions to spare neither pains or expense, and the professor faithfully obeyed instructions, and mounted now on an ebony shield, it looks as natural and lifelike as when it nibbled the dark green grass on its native mountain peak. It is now on exhibition at Matson & Co.'s jewelry store, corner of State and Monroe streets, where it is the mot very common in collections, is by no means so rare as Mr. Turtle states. We know of several specimens here in New York city, and there are a number in Washington and elsewhere. Still they are not abundant anywhere. They are very difficult to kill on account of the bad places which they inhabit.]

New Bird Books.—A new work, by Dr. Coues, will be published at an early day which will engage the attention of every student of our birds. It is entitled "The Coues Check List of North American Birds, Second Edition, with a Dictionary of the Etymology, Orthography and Orthogy of the Scientific Names, revised to date and entirely rewritten by the Author." The importance of this work to all ornithologists will readily be understood. It will be uniform in size with "De Coues Key to North American Birds," and its price will be §3. It is stated that the continuation of Baird, Bewer and Ridgway's "Birds of North American" will soon be issued. This will consist of two additional volumes, uniform with the first three, to contain the water birds. The work is said to be now in the hands of the compositors, and will no doubt be issued as soon as the work of manufacture can be be completed. We understand that the second volume of "New England Bird Life" is now in press and will be issued the coming season. coming season.

Spring Notes.—New London, Conn., March 9, 1882.—February 28 I saw several flocks of crow-blackbirds, which we do not usually see before March 12. Blacbirds and English sparrows have commenced to build, as also hawks and owls. I found a screech-owl's nest with five eggs March 2, and a red-tail hawk's with three eggs the 7th. There are four young sparrows in one of my bird boxes at present. Does not this look as though winter had left us? Sparrows, finches and warblers are appearing and their advent goes to prove that the force of winter is spent. Woodchucks and snakes have all left their winter quarters, the river is full of wild ducks, and for several days a flock of Canada geese have under our river their home. This is a very rare occurrence, for as a general rule, the geese fly very high and do not stop with us at all. While out yesterday I flushed three migratory quail,

I know my bird and cannot be mistaken. They must have wintered with us, as I know of no one who has put out any. These are the only ones that I have heard of around here. know where these are and can find them again.—B. C. Smith

Mink and Ferret.—A correspondent is anxious to learn whether there is any case on record of the mink and ferret interbreeding. Can anyone tell us?

Game Bag and Gun.

BIRDS AT COBB'S ISLAND.

THIS makes my second visit to this "lone isle by the sea" during the winter.

A few days before Christmas Jcm Fox and your correspondent found ourselves at Old Point Comfort en route for Cobb's, and we spent a most enjoyable evening at the Hygcia Hotel. This resort has been enlarged and improved year by year, extensions, wings, new annex hotels have been built, until the building has reached the stateliness, beauty and dimensions of a palace. The grand hotel is seven hundred feet long, which two wide porches encircle, eleven spacious parlors, half a dozen private duing rooms, eight hundred bed chambers, most of them elegantly furnished, electric bells, electric lights, telephones and every apphamee of modern art go to make the Hygeia the most costly building on the Atlantic coast. This property is owned by Mr. Harry Phebus, who has expended upon it over \$300,000. He is a self-made man. During the war he was a bright but pennises youth looking for odd jobs, and held horses for two dollars a month, and now he is one of the most esteemed magnates of the Old Dominion.

Phabus is still a young man; in appearance he is thick-set and fast developing into a rotundancy of Falstaffian proportions. His head is well shaped, his face round and covered with thick beard and mustache; his eyes are his best feature, and are clear, searching and piercing. Indeed he is such a good fellow and bears such a resemblance to certain high eards in the pack that he goes entirely by the name of the "King of Trumps."

Sportsmen and tourists, whether on the way to Cobb's Island, Currituck or Florida, will live to thank me for my advice if they follow it, by stopping at Old Point instead of

such a good fellow and bears such a "resemblance to certain high cards in the pack that he goes entirely by the name of the "King of Trumps."

Sportsmen and tourisis, whether on the way to Cobb's Ishand, Currituck or Florida, will live to thank me for my advice if they follow it, by stopping at Old Point instead of Norfolk. The Hygeia is incomparably superior to any Norfolk Hotel; it is a far more enjoyable place than the dreary stay at the inns of either Norfolk or Portsmouth.

To get to Cobb's Island take the steamer Northampton that runs to Cherrystone, and which leaves Old Point every Monday, Wednesday and Friday, Captain McCarrick, who is a good type of a genial Virginian. The ride in the boat to Cherrystone takes about two hours, and is pleasant and exhilerating if you happen to have about a hundred shells loaded with No. 4 shot, for the ducks, loons and coots are in myriads in the bay, and are so lazy that they won't thy until the steamer's prow cuts its way through the flock. It is beautiful sport, and the best practice an amateur can have. Shooting down at them from your elevation in the bow as they fly across the prow, you can see where the shot hits in the water, and can thus practice alming and perceive the laws of shooting ahead of the game, the velocity of the bird's flight, and especially discover that a tough loon is as hard to kill as a cat.

Fox and myself got our hands in on our way and made some handsome fancy shots. All the ducks killed are picked up by passing schooners. There was a brilliant bridail party on board, and the groom tried his hand with the breechloader, but whether from agitation or excessive happiness his nerves were so unstrung that he did not touch a feather.

Christmas eve we reached the island; and on this day that the whole civilized world was celebrating, when radiant looks, hearly greetings and especially the exuberant joy of childhood was visible on every hand, making the poor feel more content, the sorrow-stricken happier and the rich more charitable, the island loo

gineers.

That night, as Fox and myself sat by our solitary fire, Tom Spady came up with a bottle of Madame Clecquot under each arm, and insisted on us drinking a glass in honor of the day. We drew the last drop, and then gave as a toast Mrs. Spady and the Twins, for Tom is the happy father of the lustiest, most marvelous favored duplicates that ever were seen; they were boys, about four years old, and so much alike their own mother can't tell them apart. Of course, she claims she can.

their own mother can't tell them apart. Of course, she claims she can.

Shortly after, and just before midnight, we had the first touch of Christmas. A noise was heard on the stairs, and Bill Johns entered, as happy as a lord. Everybody who ever was on Cobb's Island knows Bill; he is Nathan Cobb's henchman and right-hand man, and, while sober the rest of the year, yet gets tight as the allegorical and metaphorical brick on every Fourth of July, Easter and the holidays, on principle. His drunks were what is known as bloody. A good tale is told of Bill's adventure at Hog Island last summer. He is a bachelor and, withal, a great admirer of the fair sex. There was a ball given by the natives there, and a delegation from Cobb's went over in a row boat. After dancing all night to the music of one cracked ninety-nine cent

tiddle, the party prepared to embark. All got safely in except Bill, who, standing on the wharf, singing out lustily the refrain of the "Jolly Mariner," that goes something in this

"Here's to the wind that blows—the ship that go And the lass that loves a sailor."

"Jump in Bill, and stop that confounded hollowing," said

Warren, holding on to the pier with a boat hook.
"Steady her boys," ordered Tom Spady. "Now Bill, in

"Jump in Bill, and stop that confounded hollowing," said Warren, holding on to the pier with a boat hook. "Steady her boys," ordered Tom Spady. "Now Bill, in you go!"

Bill took his position on the extreme end of the wharf, and straightened his limbs.

"Are you ready?" he hiccoughed.
"Yes!" was the reply. "Now!"

Bill let out to the best of his ability; but he miscalculated the distance and jumped clear over the boat, and striking the blue waters disappeared beneath the depths; a few bubbles appeared on the surface, and then after what seemed as an interminable waiting, the head of Bill himself appeared spouting water like a whale; a half a dozen hands grasped him, and pulled him dripping into the boat.

Bill coughed and threw up about a gallon of salt water, and then spluttered out as he raised himself:

"By George, boys; how this darned old boat does leak."

But, to return to story. Bill sat down in the chair, and shouted in a hoarse, indistinct voice, "Hurrah for Chrisums; hurrah!" He continued to repeat these words at intervals, and then went fast askeep, no doubt dreaming of the time when he was a barefooted boy living on the main, and kept his pennies in an old battered tin savings' bank, which was only to be opened at Christmas.

Finally, just as we turned in, we called Tom, a colored major domo, who acted in any capacity that the guests might order, and told him to lead Bill out."

Tom came back laughing—"Mr. Bill is a strange man; he's got some idea in his head, and wont go home; he's standing up by the draw-bars, and says he's a fence-post, and if he leaves go, the whole fence will fall down and the cows will get into the cabbages."

We went out and there was Bill as erect and determined as the Roman sentined on guard at the city gates of Pompeii. Neither entreaties or reason could rule him. It being a clear, warm night, we left him.

Hanging our stockings up first for luck, Tom and myself were in the land of dreams.

The next morning when Tom burst in the room with the congratulations of the day, we

that little record out.

Christmas Day was warm, bright and sunny. The ocean lay in all its majestic beauty, as calm, still and smooth as a lake hid away in some mountain fastness; stately ships decorated with bunting appeared motionless on the surface, and earth, air, water, harmonized in one grand anthem in honor of the nativity.

"It's too calm for ducks," said Nathan, whose opinion on all scorting matters is a surpasswarshle and unexpectable as

all sporting matters is a sunanswerable and unappealable as the laws of the Medes and Persians, "but it's a perfect day for sitpe."

"Why?" we asked.

all sporting matters is as unanswerable and unappealable as the laws of the Medes and Persians, "but it's a perfect day for snipe."

"Why?" we asked.

"Because bad weather scatters the large flocks in every direction, and they are very shy, but on a calm warm day they unite and become lazy and will let a man walk almost up to them. I'll make the boy get the cart and carry you where there are acres of them."

In a short time we were on our way along the beach toward Hog Island. Going about five miles, our island gradually contracted, until a narrow strip of sand some fifty yards wide, over which the waves at high tide dashed, showed where the possessions of the Cobbs ended. On this sandbank the snipe were feeding in countless numbers, and I am not exaggerating when I say that the bar running into the sea was so thick with them that there was not a bare spot discernable. Creeping up on our hands and knees to within forty yards we sighted along the fluttering mosaic looking floor and pulled trigger. Two long swaths of dead and dying marked the track of the shot. The vast flock rose and swept away, and then turning came back literally hiding the sky. Four sudden reports, a shower of birds, and the flock swirl to the right and divide. One half goes further down, the others again turn to the fattal spot. Yet again the miniature thunder peals out in the still morning air, and with affrighted whistles the snipe fly away out of sight.

Fox goes one way, I another, after the dead. For every one killed there are two wounded, and we have a lively chase in the water after them, dozens and scores escape us, for the tide is rising and the crippled birds can swim like a duck, and they soon reach deep water and are safe from us, but not from the sean hawks, who come out in force and swoop down on the wounded as certain and relentless as fate. We gather up the dead and pile them in great heaps; we have nearly gotten through when we stop work for further sport. Look Isn't that a beautiful sight'a flock of snipe fully a hundred ya the gorgeous crimson and red of the sunflower, than did we in looking at the bright glancing of the sun or the exquisite gloss and sheen of the feathers. But when the branching cloud bore down upon us again, our æsthetic taste vanished and the sporting spirit assumed its sway. Our trusty breechloaders we grasped and we waited.

"Don't fire until they turn," whispered Jem, and just then they swept to the right not ten yards away. "Give it to them," shouted my companion, and four triggers were

pressed, and the sound swept over the placid waters, scaring a flock of geese who were feeding a full mile away.

All that morning we had splendid sport, and not until the tide fell and left all the fields bare, did we stop. We killed hundreds, and they were in fine condition.

Our stay on the island was only a week, and we waited so long for a favorable day to shoot brant from the decoys in vain. We could look through Nathur's powerful spy glass and see thousands feeding on the banks and shoals, but any attempt to shoot them was worse than uscless. There have to be three elements, all favorable, before you can have any luck over the decoys. The tide has to be just right, that is, falling, on the cbh at daybreak. The sun must come out brightly and the wind blowing. In all of our stay these three things did not assimilate together. If a wind was blowing, the tide was wrong. If the tide was right, there was a perfect calm. If the wind was blowing, the sun wasn't shing. Or if the sun was shining and the wind was blowing, the tide was on the flood. Or if it was not on the flood and the wind was just right, then the clouds were banked up in the sky. In fact these three uncertainties, in all making one harmony, was as risky a thing to count on, as a call in faro, and everybody knows how uncertainthat is.

In a crowd, awaiting the pleasure of the elements, the true character of the man would show itself. One would take the matter philosophically and coolly, read a ten cent novel with all the absorbing interest of a bibliomaniae perusing a rare volume at a book stall. If takes things as they come, and nothing can daunt his spirits. If the shooting is good, he enjoys it to the top notch. If the sport is bad, he accepts it with the same equanimity of temper, and if it rains, he can pass long hours in the mysteries of old sledge or draw poker.

poker.

What a contrast is that restless, miscrable looking being who yawns, looks at his watch every ten minutes, gazes out of the window a dozen times in an hour, and grumbles, grumbles, grumbles, until even his best friends wish that some miracle would strike him dumb.

Then there is the gloomy sportsman who always indulges in dark forebodings—something's going to happen to prevent good shooting. In his life, the "something" is like the remorse of Macbeth, it poisons his every cup of wine.

My comrade was of the first sort; a born Bohemian who could take the fat and lean of life with as much uonchalance as any man I ever met.

as any man I ever met.

Our duck shooting was a failure—we left without a single

could take the fat and lean of life with as much nonchalance as any man I ever met.

Our duck shooting was a failure—we left without a single good day's sport.

This second trip I came down with a party of three—the others were not shootists, but capitalists, or representing capital, who intend buying Cobb's Island with a view to build up a grand watering place, a charter to that effect having been rushed through the Virginia Legislature.

There were no ducks. The brant had all been driven away by the Jersey oystermen who flocked down to Cobb's and Hog Island like the lice in Egypt. They played the mischief, violated the oyster law, and coolly took thousands of bushels of oysters without leave or license, and worse than all, commenced to shoot the brant in the night time with the aid of light and reflectors. Whole flocks can be slaughtered in that way. The dazzling gleam of the lamps confuse the ducks. They make no effort to get away, but swim together in as tight a lump and in as compact a mass as they can get, and then sit stupidly and blink at the brilliant glare. A discharge of a heavy gun, and dozens are killed at a shot, many more are wounded, and the others, bewildered and scared, fly aimlessly about, and in the morning migrate to distant parts. The wounded swim off unnoticed in the obscurity of the night, and die lingering deaths in the sedges and grass of the flats.

The owners of Cobb's and Hog Islands are indignant, nay, they are almost frenzied at this unpardonable spoliation, and if they could catch the vandals in the act they would never trouble judge or jury. But it is almost impossible to capture the scoundrels, for when the islanders eatch the gleam of the lights and hear the heavy report of the gun they man their boat and put out in pursuit. It is like hunting for the proverbial lica in a tar-burrel, for the reflector is extinguished and the pot-hunter rows silently and quietly away.

Thus it is that a half dozen vile wretches have utterly ruined the brant shooting in the vicinity of this isla

for such miscreants? Oh, that they could only be caught and tried by a jury of sportsmen, I wot well what the verdiet would be.

There being no duck shooting I took advantage of a bright sunny day and went up to the beach and had tolerable sport, killing one hundred and twenty-eight snipe.

Now, a word about hunting here. The best time of the year is in May, when the robin snipe comes in uncounted numbers, and the shooting is superb. I doubt for the time—two to three weeks—if there is any spot on this continent where better sport can be had than at Cobb's, the bags averaging from sixty to a hundred and fifty per day. Board on the island is two dollars a day, and first-rate fare.

I cannot refrain here from thanking the FOREST AND STREAM for the finest gun I ever handled. It was an advertisement I saw in the FOREST AND STREAM that induced me to get it, and though the "ad" was doubtless paid for; still, if there had been no FOREST AND STREAM there would have been no advertisement, and I wouldn't have possessed my weapon; don't you see the logic of the thing? Well, I own several guns and was never exactly satisfied until I got a No. 10 Greener trap gun, full choke. It is the best piece I ever handled, and for partridge, turkey, ducks and saipe, it is simply perfect. I have consigned my other guns to their covers, where they will hereafter rust out, and not wear out, and use my "Greener" alone, and I can say of my favorite what Selwin wrote of his fiancée, Miss Bread.

"While toasts women's graces spread,

"While toasts women's graces spread, And fops around them flutter I'll be content with Annie Broad. And won't have any but-her."

Writing on this topic reminds me of the controversy in the Forest and Streem in regard to rust in guu barrels. I asked Nathan Cobb how he kept his double-barrels so clean and bright and free from rust. He has five. Just here I can say that there is no man in Virginia that has shot as much or killed as much game as he, or knows as much about gun and ammunition, all practical knowledge, too, which he has gained by close application and unremitting observation. "I don't waste no time on them," he said, "and I don't take pride making "em shme inside, but the best preventation from rusting is the caked powder inside. That keeps the salt air from moulding the barrels, and when I clean them I

use whale oil and not a drop of water, so my gun is never

use whale off and not a drop of water, so my gun is never rusted."

I think with Nathan, that rust don't hurt the barrels, and for one prefer to keep the outside and the mechanism of the works perfectly clean than the inside of the tubes. The idea of carefully cleansing the gun after every hunt, no matter if the barrels have been discharged only once, is absurd in my eyes, though I see some of your correspondents advise it, If they would find it impracticable. A man coming home after dark broken down and dead sleepy, is not apt to worry over his gun, and when on a ducking sloop he dives down in his cabin twenty times a day and soizes his gun and blazes away at some skurrying duck or darting wild foul, were he to attempt to clean up after every shoot he would find that the cleaning rod would never leave his hand. A fancy gun for a fancy sportsman, both to be in keeping, should be speckless and spotless, neither rust on the one nor dirt or mud on the other, but to the true huntsman all such daintiness is senseless and silly.

Chasseur.

AN ARKANSAS BEAR FIGHT.

IN TWO PARTS-PART I.

AN ARKANSAS BEAR FIGHT.

IN TWO PARTS—PART I.

YES, a bear fight. A bear fight I suppose means, technically, a fight between two bears; and a fight with a bear means that something else, for instance a man, a dog or a bull, fought with a bear? My heading may be wrong for my story, but my private opinion is that Judge Bill Jones, of the northeast part of this State, when he had his hide wrapped around a quart of whisky, was nearer the genus ursus than the genus homo. Therefore let us not quarrel with the heading, but proceed with the story. As editors say, as we were not there ourselves, we will have to give the story as nearly as may be as it was given to us.

The members of a certain county court in the northeastern part of this State—old bear-hunters all three of them—after a tedious two weeks' session of their honorable court, concluded as soon as they adjourned for the term to have a regular old-fashioned bash* hunt for a week. So, carly Monday morning, the three "Jidges"—Bill Jones, Jidge Sol. Smith and "Jidge" Jim Barker—loaded their tent, a bushel of corn meal, a ten-gallon keg of home-made peach brandy, and a few other "traps" and things into Judge Barker's oxwagon, and, with old Sol Smith on his old 'yaller mash' (mare), started for the "bottoms" of the St. Francis River, some thirty miles away, which they reached about ten o, clock of the evening of the same day. They had brought with them about fifteen dogs, some of them veterans of many a baah fight. They had full-blooded mongrels, high-blooded curs, "yaller dorgs," "chrindle dorgs," half-bloodhounds, blue-blood "fists," etc., etc. The blood of nearly every breed of dogs on earth was to some extent represented in the motley pack, if we may call such a conglomeration a pack. The main reliance was placed on five large, heavily-built dogs, headed by Judge Smith's old veteran Tige, a great brindled dog, seemingly a cross between a large bulldog and a hound, with a little pure mongrel and cur thrown in. Tige had an excellent nose and plenty of true coura

close quarters when the bear was brought to bay by the larger tracking dogs.

The manner of killing bears in this country is to go into places where bears range, start the trailing dogs out who, when they find a bear's trail follow it very fast, giving tongue or barking as they follow the trail, the hunters and the other dogs following by the sound as fast as possible, all the other dogs following by the sound as fast as possible, all the other dogs falling in as the chase gets hot, until the bear, stopped by fatigue or by the dogs nipping at his heels, turns to fight them off. He usually stops in the thickest part of an almost impenetrable cane break; here he pauses and gives battle to the dogs, here the small active dogs have the advantage of the large ones and also of bruin, for being quick and active, they can slip up and give the bear an irritating nip and then dodge back out of the way; therefore the more of these small dogs in one of our southern "baah" hunts the better. The large dogs if not killed on their first hunt, soon learn great descretion when in close quarters with a full grown black bear, for a single fair stroke with one of his powerful arms armed with its long claws, will "knock the stuffin" all out only dog, and all the fight and life also; therefore there is seldom a bear chase of this kind without some of the dogs being fearfully wounded or killed outright. When the bear is brought to bay in the thick cane in this way, and does not care to run from the dogs any longer, it devolves upon the hunters or part of them to slowly cut and force their way through the cane to where the "circus is going on" and shoot the bear if possible. This is usually done with a Colt's cavalry pistol or a short carbine, sometimes with a shotgun charged with heavy buckshot or a large bore rifle; but these are very unhandy. The pistol or carbine is the correct thing, but generally as soon as the bear gets secut of the approaching hunter, if not too far gone, he bolts at once for another retreat, and so on until he

eye.

Bill Jones had the only gun with the party, an old rifle with a barrel about four feet long, the barrel tied into the stock at several points with buckskin "raw hide," and the stock wrapped with many coils of "stove-pipe wire," where it had been split asunder behind the lock. This rifle "carried about twenty balls to the pound," and to use Judge Bill's own words, "she is a regular old ripper. I can put a buck's eye out every time [sometimes] eighty yards off. I have killed many a deer two hundred yards; she will hold up that

*I have endeavored to spell the word bear as the people of this region speak it. The nearest I can come to it is b-a-a-h, giving the broad sound to the a. My friend Col. "Bob "Crockett, on looking over my manuscript, said that this was not correct, but that it should be must take issue with the Col., thinking that I am nearer right than the. The pronunciation of the word here is the same as if we put an h, instead of an r, at the end of bar, or bah, or possibly bawh. The same is true of mare; it is pronunced m-a-wh.

† Bears living in some of the Southern river bottoms, as a general rule, climb trees when pursued by dogs. They sometimes do this here, but generally, if the cane is thick and strong, they prefer to try and whip the dogs on the ground; especially will they not tree if very angry. Old hunters say that a wounded bear never trees here.

far as level as water" [running down hill]. The brackets are mine. This Judge Bill Jones was six feet, one inch tall, weighing two hundred and twenty pounds; the "bully" and best staying fighter in Eastern Arkansas; good-natured and full of fun when sober, but he did love a good old-fashioned "rough and tumble" fight, drunk or sober. When "full," he was full of fun and always "spoiling for a fight." Drunk, he would fight anything or any number. If "whipped," he would "give the word," get up, shake the gravel out of his hair, and be as good friends with his late opponent as ever. But, if he considered himself very badly imposed on, he "got mad cl'ar through," and staid mad and resentful for some time. He had fought and drank his way to be one of the foremost men of the county, and had the county judgeship. of the foremost men of the county, and that the straightful gridgeship.

I find that I have left out one of the most important per-

or some time. He had fought and drank his way to be one of the foremost men of the county, and had the county judgeship.

I find that I have left out one of the most important personages, or rather two, of our little party, namely, Uncle Larkin Smith and his old "yaller 'possum" dog Cæsar. Uncle Lark, as he was called by every one, was a very trusty full-blood African, afraid of "nuffin" but a "baah" and "spooks." He was the property of Judge Sol. Smith—for the time of our hunt was in anle bellum days. Lark "could roast a 'possum or bake a hoe-cake bettern any cullud gen'eman in the State." Lark's business was to drive the "steers" and "get up the grub" for the party.

Well, as I said, our party reached their camping ground about ten o'clock in the evening. Before the camp was half ditted, was heard barking furiously a little distance away in the timber. Away went all the dogs to see what was up. Uncle Lark picked up an axe, and soon returned with a fine fat 'possum. Judge Bill had knocked over a fine fat doe as he came along, and Judge Sol. had helped the dogs catch a few rabbits on the road. These, with Uncle Lark's sweet hoe-cake and sweet "'taters" roasted in the ashes, washed down with a pot of "bilin" hot coffee, gave our hunters a good supper, ending up with a liberal allowance of "peach and honey," and provisioned the camp for several days. They slept the sleep of the just, and were up betimen in the morning, preparing for business.

The first work of Uncle Lark in the morning was to bring a bucket of water from a "crick" a few yards away. In a few moments be came running back fairly white in the face with fright, yelling, "Ohl golly, massa, I thought I had to go suah."

Judge Barker at once started off to see what had so frightened Uncle Lark, and soon he came back about as badly frightened as Lark. The other judges gathered around Judge Barker at once started off to see what had so frightened Uncle Lark, and soon he came back about as badly frightened as Lark. The other judges gathered around Judge Ba

had been sitting on a branch of a tree over the water watching for "a mice" or a muskrat.

This owl will frighten most anyone. I recollect that when quite a boy, the owls were catching our chickens, and early one morning I heard one squeal. I seized the old shotgun and rushed out toward the barn to kill the robber. Near the barn there stood a slender tree stump about fifteen feet high. When within a couple of rods of this stump, I heard a fearful rush through the air over my head, and looking up I saw perched on top of this stump in the dull gray of the early morning the most fearful looking object my eyes had ever rested on. It bowed and beekoned to me with both arms, and its great fierce eyes withered me with fear. I gave it two looks and a half, dropped the old gun, and rushed screaming to the house, and reached it in full as bad a condition as Uncle Lark came into camp after his interview at the "krick." I was so badly scared that I have never been able to tell the truth since. I had yet breath enough to tell my big brother what I had seen. After consultation we organized for battle. He got his rifle; we called "old Bull," the best hunting mongrel dog that ever lived. Bull was the advanced guard, my big brother the main army, and I, major-general, commander-in-chief in the rear, to impel the army directly on the enemy. My big brother the main army, and I, major-general, commander-in-chief in the rear, to impel the army directly on the enemy. My big brother the main army, and I, major-general, commander-in-chief in the rear, to impel the army directly on the enemy. My big brother the main army, and I, major-general, commander-in-chief in the rear, to impel the army directly on the enemy. My big brother temarked when loading his rifle that, "be it devil or be it ghost, I will put a ball through it." We marched. A big apple tree stood between us and the stump. As my big brother stepped out from under the branches of, the apple tree and the demon came in full view, he did not sever raise his rifle, but turned "

break. Some explanation is needed here, or many of my Northern readers will not understand this hunt. We read of swamps in the South along the rivers. The name swamp gives the Northern man no idea of these low lands subject to overflow by high water. The Northern man understands by the word swamp a wet, miry or muddy place well-nigh or entirely inpassable. The swamps along the margins of Southern rivers are simply land overflowed in high water, and are as dry as any land generally from midsummer until the rivers overflow their banks, usually the latter part of winter. The cane breaks* are generally found growing on the highest ridges of these overflowed lands, often above high water mark. Old cane breaks generally occupy the land alone to the exclusion of everything else, except green briars, a long, slender tough vine covered thickly with sharp strong briars. There is nothing pleasant about them, especially when one is in a hurry, and now and then an immense and generally dead tree. It is said the timber is killed by the cane burning in a very dry time. When the ground is covered with young cane the timber is as dense there as elsewhere. The rest of the country is covered generally by tall, straight timber, except where it is covered with permanent deep water, into which the express and Tupelo gum generally extends considerably.

deep water, into which the cypress and Tupelo gum generally extends considerably.

The woods are generally open and free from underbrush, except vincs and the greenbriars and cane on the ridges. It takes a very slight rise in the earth to make a Southern "ridge." The country is nearly a dead level, but slightly undulating, like the great swells of the ocean suddenly solidified by frost. Logs, great and small, solid and rotten, and great uprooted trees strew the ground everywhere, more or less—therefore a man on a horse or on foot can travel through these bottom lands quite comfortably, and by twisting around the logs can get along slowly with a team and wagon, but in all cases he must skirt or go around the cane breaks. These, if strong, are practically impassable. Only by cutting a road or path right through can they be traversed.

Our judges knew "the lay of the land" exactly, and one to get around in these bottoms must have a good knowledge of the country, or he will quickly become badly bewildered and lost—for one acre is very like the next, and the ridges, bayous, and cane breaks run in every direction, as do also the rivers. Each hunter carries a horn, a veritable horn, made from the horn of a "steer," which they toot continuously to know where each one is, and to encourage the dogs. The camp was near a very large and strong cane break, stratching for many miles along the margin of a partially dry lake. It did not take our experienced hunters long to find "baah sign" in plenty. Soon old Tiger gave tongue across a moist place in the lake. Judge Barker examined the trail, and found the tracks of three bears, that of a very large female and two good-sized cubs. He said the old one was very large and in the lake. Judge Barker examined the trail, and found the tracks of three bears, that of a very large female and two good-sized cubs. He said the old one was very large and poor, the cubs strong and very fat. He could tell this readily by the depth of the different tracks in the soft earth. Away went the bear dogs, and plunged into the cane break, no more to be seen until the hunt was over. A bear dog, hog, 'coon, and some other animals can run through a break of cane very feet, a deer can also get through them lively, while a man. and some other animals can run through a break of cane very fast; a deer can also get through them lively; while a man, afoot or on a horse, is brought to a stand-still. A bear started in a large cane break seldom breaks cover. Cane breaks are not usually wide, but are narrow and long—therefore, all the hunter has to do is to skirt the break and keep as near as he can to the sound of the chase. The bears have their paths leading through the breaks, in which they can run at great speed, also paths leading from one break to another, always

can to the sound of the chase. The bears have their paths leading through the breaks, in which they can run at great speed; also paths leading from one break to another, always through the thickest cover. The experienced hunters know all these paths, so they can make "short euts" on the bear. A bear when started, either by the dogs or by a scent of the hunter, runs for a great distance, and then stops in the thickest and most impenetrable cover, whether pursued or not.

The hunters separated, Judge Sol. on his mare taking the outside of the break; the other two the inside next the lake, where it was the best walking. Away went the hunt, for many a mile down the lake. The dogs were fresh, the old she-bear a good one, the dog cool, and everything favored a long and lively chase. Our hunters on foot were soon left far behind, also the Judge on the old "maah." At last the hunters on foot could no longer hear the yelping of the dogs, still they followed on, knowing full well that the "baahs" would either be brought to bay, or that they would turn and come back through the same break. After a long tramp they stopped. Even Judge Smith's horse could no longer be heard, and they sat down on a log to rest, intently listening. After a long time they heard away down the lake the faint yelping of a dog. After attentively listening for some time they nearly concluded that the dogs had a bear "treed." This term "treed" is not always used by Western and Southern men to mean literally "up a tree;" but when they say an animal is "treed," they mean it is brought to bay, either up a tree, in a hollow log, tree or a hole in the ground; also that it has quit running and stopped to fight off its pursuers.

There being no hurry they continued to rest and listen.

ground; also that it has quit running and stopped to fight off its pursuers.

There being no hurry they continued to rest and listen. After sometime the yelping began to be heard more plainly. They had stopped at a narrow and rather thin place in the cane, and on the side opposite from where the wind came from. Louder grew the noise of the chase. Every few minutes there would be a halt, and then on they would come again. Judge Bill straightened himself, uncorked his rifle and said: "Jim, when them critters come past, I can see the cane shake, and I am going to see if I can't put one of old Betsey's pills into one of them." Now the chase was drawing near. The cubs could be heard complaining in a voice half way between the whine of a puppy and the squeal of a pig. The hoarse growls of the mother could be heard as she fell back to protect the rear of her cubs; and then as wher ushed on ahead of them to encourage them, their piteous whines would be heard. On they came. Judge Bill had his "nerves strung up" like a man of steel. It so happened

"Cane break. When I first began to write this bear hunt I was camp a long distance from civilization. By the words from civilization and not mean that I was many miles from houses and people, but th was many miles from houses and people, but th was many miles from houses and people, but th was many miles from houses and people, but th was many miles from houses and people, but the I was many miles from houses and people, but the I was many miles from the first of life, at I of course had no books in camp. Therefore when I undertook spell the word cane break I did not know how to spell the word break I studied over it for some time and concluded that from the meaning fiven to the word that break was the proper way to spell I, as per the meaning the planted in the text. Such a have had a chance to consult the most of the south of the word that the text is the latest of the planted in the text. Such a have had a chance to consult the most of the word that the text is the latest of the mild a chance to consult the most of the word of the southwest, coined her and has in no sense the meaning of brake. By the word "break" is mean a sudden change in the growth of anything, especially time for instance I say I struck a break of cypress, I mean I passed out some other kind of timber into a growth of cypress, then we have break of ash, a break of cane. I do not know whether the wo should be spelled break or brake, it makes no difference. When v get a dictionary to the Arkansas language I will spell le right.

that just before the bears reached a point opposite Bill the old bear fell behind to drive off the dogs, and the smaller and lighter enb was ahead. Bill heard it come puffing along saw a slight shaking of the cane above it, leveled his rifle and "let go." For a moment all was still; then the old bear came rushing up, scented the hunters, and gave a fierce growl, but did not stop to fight. She knew her cubs were ahead, and with a nother's duty there lay her first cure.

On went the chase but soon there was a halt, nearly opposite, with some fearful yelling of the dogs, then it went on for a short distance and halted again. There were two outbursts of agony from dogs, and then the hunters could tell by the barking of the dogs in eircle that they did not care further for close quarters with the old bear. The hunters come up opposite where the "circus was going on." They were about 300 feet from the fight. They stopped, listened and consulted. They could not quite make out the situation. Every few moments there would be heard a great rush and yelling among the dogs. Then all would be quiet, except the short barking of the dogs, and the sullen rumbling growl of the old bear. Bill Jones wanted to go right in and shoot the bear, but Judge Jim restrained him. He said, "Bill, things ar not right in than, the dogs don't fite in clus enuff, I don't understan' it; and you had best keep outer thar, and let the dogs wurk."

"Shucks!" said Bill, "who's afraid of a bash," I can whip my bash in the State, bare-handed, without gun, knife or club."

any baah in the State, bare-handed, without gun, knife of

or. The two judges had brought along a large flask of "peach I honey" and Bill had consumed most of it and was

while Bill was taking another "snort of peach," Jim remarked: "Nonsense, Bill, that old she bath would chaw you up quickern a cat would a mice." But he had almost to hold Bill to keep him from going right in; Bill had his big knife out ready to cut a path. The hunter generally, when the canc is heavy, gets down on his hands and knees and crawls and cuts his way through.
"Hold on, Bill," said Jim, "let's listen awhile and see what is going on."

"Hold on, Bill," said Jill, the same old rumpus was kept up. Neither of the hunters could understand the exact situation. After some little time, a part of the dogs were heard to lead off through the cane "barking to track." The rest kept up the racket at the old place. After some little time, before the tracking dogs were out of hearing, a terrible rumpus was heard away up the lake where they had gone. Soon after this there was a rush by the dogs near the hunters and away most of them went after the old bear, as the hunters could tell by her hoarse growls.

tracking dogs were out of hearing, a terrible rumpus was heard away up the lake where they had gone. Soon after this there was a rush by the dogs near the hunters and away most of them went after the old bear, as the hunters could tell by her hoarse growls.

"I see into it now, Bill," said Jim. "You hit one of the cubs when you fired, and it's in here dead, and the old one and t'other cub is yonder, at that point."

Bill saw through the whole thing then, and started into the cane. Jim caught him with the remark, "Whar you gwine, you brarsted jibut?"

"Gwine in to get the devil!" said Jim; "don't you know that ar old banh will be right back here to pertect it?"

"Chemie in to get the devil!" said Jim; "don't you know that ar old banh will be right back here to pertect it?"

"Lemme go," said Bill; "who's afeared of a baah? Lemme go," said Bill; "who's afeared of a baah? Lemme go," said Bill; "who's afeared of a baah? Lemme go," said Bill, "or l'Il liek you and the baah too." But their attention was suddenly drawn by a change in the programme. The barking dogs came tearing back. Soon there was a rush to the place of the first fight, then the dying shrick of a dog, and a fearful snashing around, then all was comparatively quiet, and then a noisy fight was heard away up the Jake again. There was another rush in that direction again. "Now's your time," said Jim, and into the cane rushed Bill. "I'll give you warrain' if I hear her cumin' back," yelled Jim after him.

Bill worked his way quickly into where the first fight was, and there, sure enough, he found one of the cubs dead. Just as he seized it by the hind leg to drag it out he heard Jim yell, "Run, Bill, run! here comes the old baah!"

"Who the devil cares for the old baah?"

"Who the devil cares for the old baah?"

"Who the devil cares for the old baah?"

"Who the devil cares for the old baah?" answered Bill, and kept on dragging the cub out. Luckily for Bill, the dogs stopped the old bear several times before she got back, or he would have had a nice old figh ing a poor dog.

ing a poor dog.

"Now would you like to be in thar now, Bill?" whispered Jim. The light was still going on up the lake, and whether the mother heard it or whether she gave up the scarch for her other cub as fruiltess or not, at any rate she soon made a rush in that direction again.

At that moment old Sol came up on the other side of the cane, and the hunters hung up the dead cub, and started on after the dogs.

CHOCKERT'S BLUFF, Arkansas.

BYRNE.

Another Old Powder-Horn.—A Stuyvesant, N. Y., correspondent, W. A. McA., writes: D. I. Pritchard, of Stuyvesant, N. Y., has in his possession a very old powderhora. It was captured by his grandfather in the Revolutionary War, in one of the Southern battles; the exact place is not known. This horn is in a good state of preservation, with the exception of the leather strap, which has become rotten with age. It hears the following inscription: "This horn, the property of Sarg't Robart Holmes, made at Fort Edward, N. Y., March ye 4, A. D. 1758."

Campelliton, N. B., Feb. 18.—The weather is very cold and severe here at present, the mercury ranges from 16 to 18 deg, below zero, and the snow back in the woods is from 3½ to 4 feet deep. Caribou and moo e are quite numerous a short distance back in the wilderness from here, but the Miemac hunters have not been as successful as usual in bringing this large game to bag, though their general catch of fur has so far been fully up to that of former years. A resident of this place says that last spring he helped an Indian near "Seven Islands," Maine, haul out of the woods thirty-two moose hides that were taken from moose that he bad killed in the deep snows. The carcasses of these animals were left to feed foxes and bob cats.—Stanstead.

THE NEW YORK STATE ASSOCIATION.

THE NEW YORK STATE ASSOCIATION.

Fish and Game held a meeting at the Delavan House, Fish and Game held a meeting at the Delavan House, Albany, on Wednesday the 15th. The meeting was called at one o'clock and Captain W. L. P. Sterrs, of Brooklyn, was chosen chairman and John Bedford, of Onondags, secretary. There being many counties not represented whose delegates would arrive at three P. M., the convention adjourned until 3:30 P. M. At the hour named the convention again assembled, a large representation of delegates being in attendance. bled, a large representation of delegates being in attendance. The convention was called for the purpose of procuring leg-islation to protect the game of the State, and also to preserve the matural forest and streams of the Adirondack region.

Islation to protect the game of the State, and also to, preserve the natural forest and streams of the Adirondack region.

The following delegates were present:
Capt. W. L. B. Stears, Brooklyn; Col. Thomas Carroll, Kings county; Dr. Kennedy, Auburn; Henry R. Jones, Buffalo; R. J. Richardson, Lowville; ex-Senator Wagstaff, New York; C. W. Hutchinson, Utica; John Bedford, Syracuse; H. R. Tiffany, Clifton Springs; G. D. McManns, Oswego; H. A. Alkenbrand, Hempstead; A. Paul, Troy; James Bulger, Staten Island; J. Otis Fellows, Hornellsville; Dr. Morgan, Ithaca; W. H. Griswold, Lyons; Calvin Russ, Penn Yan; George Dawson, Albany; John R. Wittis; Nowburg; Louis Livingston, Rhinebeck; Abel Crook, Warren co.; H. Hederman, Harrington; Charles E. Fiske, Highland; F. D. Bump, Jr., West Randall; Dr. W. H. Hart, Hudson; S. A. Kellogg, Champlain; Harry Miller, Saratoga Springs; Hon. E. C. Rice, Fairfield; A. W. Thayer, Cooperstown; B. M. Stebbins, Owego; E. Page, West Fulton; Dr. Fra Wilcox, Franklin; P. Moeller, Nyack; Frank P. Chamberlain, Elizabethtown; Samuel S. Mulford, Tannersville; Alexander Jennings, Union; Manley Blakeslee, Olean; S. Call, Malone; J. C. Gray, Cortland; Edward D. Palmer, Schenectady; M. R. Dodge, Rockland; S. B. Truesdell, Cold Springs; Samson Horseman, Wells; Almond Daniebe, Lyndonville; L. M. Smith, Elmira; D. Sidmore, Gloversville; H. N. Sidmore, Perry; H. L. Smith, St. Lawrence co.; A. A. Yates, Columbia co.; B. Ives, St. Lawrence co.; A. O. Smith, Wooming co.

Wyoming co.

Ex-Mayor Hutchinson proposed that a committee be appointed to examine the bill for the Adirondack region. Mr. Altenbrand moved that the whole house be that committee.

Carried.

Mr. Crook stated that the bill known as the "Bergh Bill,"

Separa Bill No. 58, and had been re-

Carried.

Mr. Crook stated that the bill known as the "Bergh Bill," with amendments, was Senate Bill No. 58, and had been referred to committee. It contained penalties for any person who shalf shoot, or rent yards or grounds for the shooting of, any birds or animals from a trap, etc. The amendment was to strike out "rent yards," etc., and "persons shall not go outside of the State for such purposes." Mr. Crook moved that the bill, as amended, be endorsed. Mr. Thayer was willing to have all the pigeons in the State killed. Carried.

Mr. Crook moved that Hon. Thomas Carroll and two others be appointed to represent the association on this subject before the Senate Committee. Carried. The chair named Messrs. Thayer and Sargent to act with Mr. Carroll.

Dr. Hart objected to the Armstrong bill of last winter, and much discussion ensued. Amendments by the dozen were proposed. Mr. Thayer finally moved that a committe of five be appointed by the chair to go before the Legislature with a bill to be framed by them. The chair inquired how this committee was to know the wishes of the association. It was then moved and carried that the law known as the Armstrofe law of last winter be taken up section by section and voted upon. Messrs. Verplanck Colvin of Albany, Thomas Carroll of Brooklyn, and J. H. Dudley of Dutchess, were then appointed delegates from the State at large. Members wishing changes in the law were requested to state them as the sections were read. A member stated that the Attorney General cannot tell what the game law now is, and that if the law of 1881 was taken and read it would be in. them as the sections were read. A member stated that the Attorncy General cannot tell what the game law now is, and that if the law of 1881 was taken and read it would be impossible to amend it, because of the impossibility ro define its provisions.

Mr. Chamberlain then read Section 1. Mr. Dawson spoke

possible to amend it, because of, the impossibility ro define its provisions.

Mr. Chamberlain then read Section 1. Mr. Dawson spoke of running deer with dogs in St. Lowrence county, but made no motion. Mr. Richardson said that he did not object to running them with dogs at a reasonable season, but that it was wrong to run them in hot weather, as the meat is then black and worthless. He suggested a law to protect them to the 1st of November, as a law that permits shooting before that time permits it when the flesh is good for nothing. He made this as a motion, and it was carried.

Sec. 2. After the reading, Mr. Altenbrand remarked that, if spring duck-shooting was stopped on Long Island, the birds pass on to Connecticut, and are shot there. If spring shooting could be stopped all over the United States, he thought it would be a good thing, but to stop it on Long Island would be merely giving others a chance at our expense. Mr. Hart liked spring shooting because the ducks are then wild, and it is more sport. Mr. Page said that it made little difference in the district where Mr. Hart lived, on the Indson River, as there were but few ducks, and they were shot for sport; but on Long Island thousands are killed for market. He thought all spring shooting wrong. Mr. Smith, of Wyoming, wanted the law to give two months more shooting of ducks, as the ice does not go from the waters in his part before the 1st of May. He moved that the law for duck-shooting be extended to May 15 for the county of Wyoming. Carried. It was then moved that all spring shooting of ducks be abolished within the State. Captain Stears did not see how this would accomplish much good unsess they are general law in all the States. The motion was put to vote and lost.

Mr. Hutchisson sold that this society once took high ground on the protection of forests, which not only affect the preservation of game but increases and preserves the rainfall and so affects the rivers and the general water supply. Reports from Holland, which he cited, have proved th

read the proposed bill, which was approved.

Mr. Crook thought that it would take three months to deaft a proper game law. Mr. Thayer believed that a motion was before the house to appoint five persons to do it. Mr. Page insisted on the original motion, of a committee to revise the laws, but thought that the more discussion it brought up at present the better. Capit. Stears said, "Let the law be read and let each member comment on such portion as may affect his district. When it touches Kings

county I'll be there." Mr. Page said that he would not then insist on the motion being put at present.

Mr. Hart moved that the penalty for using a swivel gun on ducks should be \$25, instead of \$50, as the latter sum is too much and it is lard to convict when penalties are excessive. Also that the law should include a penalty for having such a gun in possession. Senator Wagstaff favored the lower penalty and approved the proposed amendment to punish having such a gun in the boat. Carried.

Sec. 3 to 5. Read, but no debate nor amendments were proposed.

penalty and approved the proposed amendment to punish having such a gun in the boat. Carried.

Sec. 3 to 5. Read, but no debate nor amendments were proposed.

Sec. 6. Mr. Hart moved to strike out the words "gunner concealed." Carried.

Sec. 7. Mr. Smith moved that Wyoning county be excepted, the same as Long Island Sound. Carried.

Sec. 8. Mr. Altenbrand moved that the law for qualishooting on Long Island be amended so as to begin the season on the 25th of October and close on the 25th of December. Carried. Mr. Ives, from St. Lawrence, advocated shooting woodcock in September. He said that if they did not shoot them in this month in St. Lawrence then there was no woodcock-shooting at all. Mr. Wagstaff claimed that the bill as drawn is indorsed by all. (Applause). It is better to amend the bill, which is nearly perfect. It includes the whole State, except Long Island, in a general law, which forbids woodcock-shooting, except during July, October, November and December. It excepts Long Island because the season is earlier there, and it is just to do so. A general law for the State has its objectionable features. It is best to leave this matter to the supervisors, He said that this is a feature of the Armstrong bill of last year, and that it will be introduced this year. Approved. Mr. Thayer wanted Otsego county excepted in the matter of the shooting of ruffed grouse, called partridge, so as to have the season open on Aug. 1. Carried.

The secretary moved that the law regulating the capture of black bass be amended, to make the 26th of June the opening of the season all over the State. Carried.

Mr. Thayer wants the law to permit the capture of the whitefish of Otsego Lake, during the months of July and August, with a two and a half inch mesh. The fish do not take the hook and are there in great numbers. Carried.

A member whose name we did not catch then moved that the game protectors and constables be empowered to destroy them. The weirs destroy all the fish in the river where they are placed. Carried.

Sone fis

Sec. 24. Moved to strike out the Wallkill River from this section also. Carried.

Sec. 25. Moved to strike out the last clause of this section, which allows it to be at the option of the manufacturer whether it is necessary for him to empty coal tar or other deleterious materials into streams. Carried.

Sec. 26. Moved that no net fishing be allowed in Gravesend bay, Kings county, between the 15th of May and 1st of October. Carried. Mr. Wagstaff moved that the provision regarding pound nets in the town of Islip, on Great South Bay, be stricken out. Carried. Also moved that tyke nets be prohibited in the Walkill River. Carried.

Secs. 27 to 81. Read, but no objection was made to their provisions.

prohibited in the Walkill River. Carried.

Secs. 27 to 31. Read, but no objection was made to their provisions.

Sec. 32. Moved that it be amended so as to allow trapping of skunks and other vermin by striking out words, "all wild beasts." Carried.

The question of game protectors then came up, and Chap. 591 was read. The member from St. Lawrence wanted two additional ones appointed for his own and two adjoining counties. Mr. Altenbrand wanted one for New York city and one for Long Island. It was then moved that these four additional ones be appointed, making twelve in all. Carried. Mr. Wagstaff moved that all penalties be recovered before courts in districts adjoining that where the offence was committed, providing that the amount of penalties does not exceed their jurisdiction. Carried.

Moved that trout be lawfully taken in the month of September, or to October 1, in the counties of Warren, Essex, Hamilton, St. Lawrence, Jefferson, and Lewis. Carried.

The chair then appointed the committee of five to draft the laws. They were as follows: Messrs, Crook, of Warren; Sargent, of Jefferson: Hart, of Columbia; Altenbrand, of Suffolk; and Richardson, of Lewis counties. Mr. Hart moved that Capt. Stears, of Kings, be added. Mr. Dawson proposed to add Mr. Sampson Horseman, of Hamilton; and also Mr. Wagstaff, making eight in all. Carried.

A voice of thanks was then given to Capt. Stears for the

A voic of thanks was then given to Capt. Stears for the faithful discharge of his duties as presiding officer, and the meeting adjourned.

Dog, RABBIT AND COAL TEAUN.—Grand Tower, Ill., March 15.—Last Monday, while the passengers on a coal train on the Grand Tower and Carbondale Railroad were watching a go-as-you-please spurf between a half-breed hound and a rabbit, which was being run within a few yards of the track, the latter suddenly changed his course and came directly toward the moving train. His pursuer was close at his heels, and either from excitement or inability to stop, followed on when he ran under the wheels. As the train passed the body of the dog was seen, much cut and apparently dead, on one side of the track, while the crushed form of the rabbit rolled into the opposite ditch.—T. M. W.

Indiana.—Reynolds, March 7.—The migratory game has not yet arrived in large numbers. The past winter was very mild, no snow at all. The combined snowfall here during the past winter has not exceeded four inches, while has winter it was seventy inches. Grouse and quall wintered well and none were killed. This is the best place for grouse and suipe in the State. Sportsmen come here from New York city, Albany, Cincianati and Kentucky to try our game. About the first week in April every kind of game is plenty.—R. A. L.

VETERAN BEAR HUNTERS

TWO old hunters, belonging to the numerous order of thas beens," were recently exchanging truthful tales of their early lives in the backwoods, both, "unbeknownst" to each other, modestly inclined to let the other know that he was a trifle the smartest.

each other, mortestly inclined to let the other know that he was a triffe the smartest.

Col. Crock opened by remarking "he had once killed three b'ars at one shot with an old army horse-pistol."

Capt. Ben thought "that was lucky. How did you do it?"

Crock replied, "Easy enough. You see an old she b'ar and two cubs came night after night and depredated my corn crib. I built it higher, still they came. I built it sixteen feet high, corn disappeared all the same, so I just made up my mind to stop it. I loaded up my old flint-lock hoss-pistol with two balls, and lay for the old b'ar behind the smoke house close by the crib. Pretty soon the old b'ar and two cubs came. It was too dark to see 'em. Bimeby, the old b'ar clun on top of the sixteen-foot crib and begun to throw down corn to the cubs, and she, bein' up high, and it bein' starlight, I saw her pretty plain, so I just pointed old '1812' at her head and fired, and down she come ker-whack. My wife come whewing out with a lantern. I told her to go back, the cubs might tear her to pieces. Wall, that woman went back quick. I went and loaded up the old war-pistol agin and took the lantern from her hands all atremble, and went up to the crib pretty cautious like. There she lay, dead agin and took the lantern from her hands all atremble, and went up to the crib pretty cautious like. There she lay, dead as a door nail."

Here Crock paused. Capt. Ben, thinking his story done, and believing he "had him," sarcastically inquired: "I thought you said you killed three bears to one shot?"
"So I did," quickly responded Crock; "killed the old she b'ar, and she fell onto them two cubs and killed 'em both; she weighed 500 nounds."

old, and she relevant them two clus and kinet embods she weighed 500 pounds."
"Wall, that was lucky, and it reminds me of a b'ar I once killed with a hoe," said Capt. Ben, as if talking to himself. "Killed a b'ar with a hoe, did you say? How you talk.

"Killed a b'ar with a noe, did you say, killed a b'ar with a noe, did you do it?"

"Wall, you see I war on my last corn hoein'; corn was pretty stout, and I 'spose the b'ars thought it was big enough to eat; at any rate, as I was hoein' along, I hoed right up to a b'ar, comin' so close we was both a little skurt—the b'ar most, for he run. Seein' he wa'nt going to tackle me, I thought I would tackle him, so I took arter him lick-it-a-split though as I could run, and before he got out of that cornfield

thought I would tackle him, so I took arter him lick-it-a-split tight as I could run, and before he got out of that cornfield I killed him with my hoe. He weighed 600 pounds."

"Wall, I don't dispute you killed the b'ar, but what worries me is how you could outrun him and get near enough to kill him with a hoe."

"Easy enough," said Čapt. Ben; "you see the snow was about three feet deep, with a pretty stiff crust on; the bar slumped in while I could run on the crust; see? No trouble to overtake him."

"Yes, I see; with snow three foot deep, and a crust to bear a man and slump a bear, you might do it; but I can't exactly see how snow could be so deep and crusted in hoein' time."

time."
"Yes; wall, that would look a little strange," said Capt. Ben, with head hung down a little, but the fact is, (brightening up) it's true, only I have made a little mistake and told a part of two stories."

Crock was satisfied and gave up beaten.

X.

IDLE HOURS IN THE BLIND.

IDLE HOURS IN THE BLIND.

I'd often falls to the lot of those who frequent the blind to sit for hours on calm, still days when no fowl are stiring, and when, after a time, the sweetness of that tried friend, the corncob pipe, grows insipid. At such times, if alone, you grow drowsy, and struggle with the feeling, knowing that to succumb is to lose perhaps the only shot of the day, which, with unerring fatality, always presents itself when you are least expecting it. Not every day does the sportsman return laden with game (of his own killing), and, wherever found, his past records many blanks on the calendar of his shooting experience—a day's tramp with nothing to show for it, or a lazy snoozing in the blind under the warm sunshine of a cloudless sky. He has cast longing glances toward the rafts of fowl sitting quietly at rest on the glassy surface far out of shot and drawing the few stragglers who may be on the wing, despite the attractions of his decoys, a tempting flock of which he has carefully placed. Oh! for a rifle to send a ball skipping into their midst and send them scattering off, trusting to drop a couple as they whirl wildly this way and that. (Give up wishing, my friend, and devote your attention to the little circle in your own immediate neighborhood, and, my word for it, you will be surprised to find how active Nature is down there among the reeds; and at the same time you may acquire such information as to the manner of life in such locations, and find the hours slip pleasantly by while so employed, all the time keeping an eye open for any opportunity that presents to "cut loose" at approaching fowl.

In Sinepuxent Bay, on the Maryland coast, near Beach House Point, are numerous sedgy islands, separated from the

In Sinepuxent Bay, on the Maryland coast, near Beach In Sinepuxent Bay, on the Maryland coast, near Beach House Point, are numerous sedgy islands, separated from the main marsh and from each other by shallow stretches of water, which, when the tide is out, are bare mud flats, teeming with small oxeyes and all sorts of waders, who find abundant feeding ground there. Sitting alone in the tall, dry sedge, you listen to the wind and ever-changing voices and cries in the great brown marsh spreading on every side. The sun has come around in front and, as he blazes on the water, which is the support of the wind and ever feet tall is removed. cries in the great brown marsh spreading on every side. The sun has come around in front and, as he blazes on the water, sends the reflection of the burning rays full in your face, nearly blinding you. Lie down; you need a change of position, and the fowl will not stir until the breeze springs up at sunset. How sweetly that meadow-lark's song sounds out there among the sedge. While listening to its repetition you become conscious of a faint "scrunch, scrunch." A pause; then "scrunch, scrunch, scrunch, scrunch, serunch, sight of a little creature busily gnawing among the reed stalks, and, as te turns his square, chubby face toward you, you recognize the marsh rat. What brilliant black beads he has for eyes, Don't move! Watch him. His sleek coat testifies that wholesome food is plenty where he lives. Now he sits upon his haunches, like a miniature squirrel, and washes his face with his little pink paws. Ha! he has spied you. What a sudden change; what an expression of intense curiosity appears on that fuzzy little visage. He is afraid, certainly; but you plainly see that he is curious. His nose works energetically up and down as he endeavors to snuff you, while sundry little squeaks plainly tell of his excitement at discovering you. Move ever so little, and off he scuttles in the most laurchalle manner. Move ever so little, and off he scuttles in the most

sandy interstructure spann, early and off he scuttles in the most laughable manner.

A few moments after a buckchip dashes into the reeds with a noisy flutter, and is soon in angry altercation with a little brown wren, who, for some time past, has been poking

around close by, with a most business-like air, darting here and there like a mouse in the reeds, so quick are her motions. After a noisy wrangle chip gives it up, and perches on a tall reed, where he swings up and down, flirts his long tail, and, by his manner, appears to be heaping abuse on his more plucky little antagonist unconcernedly grubbing below. He soon grows tired, however, and with that strong whirr of wings, so indicative of health and freedom, is off.

The tide is down, and numbers of small euipe are seampering over the mud scarching for food. Wait until they bunch. There! enough for a pot-pic anyway; and very toothsome these little fellows be, I assure you.

Whew-w-w-ew, a flock of killdeer plover alight on the mud far out of shot. How graceful they are; now running zigzag across the flat, now bunching and squatting down fogether to compare notes, their white sides showing plainly against the dark color of the mud. A weird feeling comes over you at their cry, repeated in rapid succession, now high, now low, as the fancy seems to take them, and the uncomfortable effect is heightened by their wailing as it grows momentarily darker, the sun having set, until in sheer desperation you rise and with a whoop force them to leave. The moon comes up cool and solitary over the sand dunes on the beach, and the chill flies all over you at the sound of a heron's cry who has stationed himself somewhere in your vicinity, and now booms away until it seems as though the suspected all was not exactly right, betrays the presence of a black-duck. Slowly he swims into sight, and just as you draw a bead on him, whir-r-r, away he goes, and as the beat of his wings grows fainter, you hear the steady chunk-a-lunk, chunk-a-lunk of oars in the oarlocks as Tom pulls across after you. You take up your rig, and as you glide along the water in your little punt, you involuntarily start as the ghost-like form of a mouse-hunting owl filts past. Nearing your snug quarters on board the sloop, you see the dew glistening on deck like pipe in the can'n root shows that Brunt has the contee on, and stepping aboard, his cheery voice salutes you, "What luck, old man?" and his hearty laugh greets your little string of oxcyes. No game, to be sure, but you have enjoyed yourself notwithstanding, and in after years, when you hear the plaintive cry of passing birds coming down through the still night, that evening on the marsh will come back to your mind with a strange fascination.

'BYRNE" AND THAT SHOTGUN AGAIN.

"BYRNE" AND THAT SHOTGUN AGAIN.

WHEW!!! How "Byrne's" sentences flash and "kick!" I really believe the fellow has shot some, and has some money too. What a pity it is to be a poor preacher—sometimes; especially poor! Anybody can bet at him, challenge him, and discredit what he says, and he has to grin and bear it (I don't know how much grinning I have done, but I am getting along finely with the bearing part).

Now "Byrne" dosen't believe what the "reverend gentleman" wrote, and wants to back his unbelief with money. (Some things need backing). Shame on him! Ho ought to go to some out of the way place in Arkansas, as he is going to do) I believe, and stay there. Wanting to bet with a "reverend gentleman!" If my father ever goes to the Arkansas Legislature again, I am going to have him introduce a bill making it a criminal offence to propose betting with a preacher, or to challenge one to shoot. (This is designed as a protection to preachers; for some goose among them might take bets, and beat "Byrne" and get into the papers. Then where would be the preacher's reputation?)

"Byrne" writes to keep me and other novices within the bounds of reason. Now he couldn't have hit me in a harder place. Didn't hirt a bit. Fact. I don't propose to be bound by reason. Wby? Reason doesn't belong to the sportsman's vocabulary. What is the use of being a sportsman if you can't be unreasonable? Why even "Byrne" himself admits that he is sufficiently unreasonable to draw on his imagination sometimes, and say things about his hunts which didn't happen. Now I don't do that exactly. I don't throw in any fiction; but I do propose to be unreasonable to fig about a thirteen-pound, single barrel shotgun, and shoot twice as big loads as I do; while I shoot a ten-pound three barrel gun, and kill deer faster than he does; still I can believe as unreasonable things as that. I protest strongly against being held in the bounds of reason. It robs lunting of half its charm. It is so nice to have fellows stand around, mouths open, while you tell

on "Byrne's" very impressible mind that I shot only seven times at deer, while on my hunt. He failed to impress me with the idea that he shot only twice on his hunt; but then I am not so impressible as he. More stupid perhaps. I must set things right, or he might be grieved. I did shoot more than seven times—just twice seven. Of these fourteen shots, seven hung up ment, of the other seven three got blood, and one enabled the buzzards to have a fine feast of venison once that I know of. One of these seven was a rifle shot, and not one of them was at deer nearer than fifty yards. Very unreasonable I know, but that is just the kind of facts I like to relate.

relate. In conclusion, as we preachers say, let me add: I won't shoot on exhibition for "Byrne," or bet with him, (I would take \$2.000 for my gun though) but if he will join me on a deer hunt next fall, using his thirteen-pound gun and I using my ten-pound three barrel Baker, I will heat him killing deer so badly that he will go to Arkansas and hide under a thicker cover than "Byrne." If he ever comes my way, I want to get him into my congregation once and preach him a sermon on "Charity envieth not, charity vaunteth not itself,

is not puffed up; doth not behave itself unseemly, is not easily provoked, thinketh no evil; rejoiceth in truth, and believeth all things."

Wonder if he did "flare up" because I killed more deer than he did.

MORE QUAIL EXPERIMENTS.

MORE QUAIL EXPERIMENTS.

I NOTICE the two letters in your issue of the 9th inst. from J. E. W. and H. B. S., and am very sorry to hear they have been so unfortunate with their Southern quail. It may interest them and others of your readers to know that although I received fifteen dozen birds from the same parties as they did, between the 18th and 27th of January last, I am happy to say that I had better fortune, as I have now turned off seventy-eight birds and have yet thirty-one left in the cages ready to be loosed the first sunny day. Now, this is not bad, as it leaves 100 birds out of 180, and is nineteen more than I ever expected to save. Nearly all the birds lost, with the exception of nine that arrived dead, died within ten days of arrival. After that, I had no trouble at all.

Now, of course I watched these birds very closely, to try and find out the reasons for any loss, and can only attribute the trouble to two causes, first that the birds arrived in almost a state of starvation, and, therefore, were not in a condition to eat largely; but those of the first cases I fed too plentifully, and in consequence of this, as I believe, I lost more than in the last lot, as I brought them to their feed by degrees, and don't believe that more than half a dozen out of sixty-two died. The second reason is that the boxes I had them in were oblong, and, therefore, had corners in which they used to crowd, and a bird at all weakly getting into any corner, with the rest crowding over it, would never get up again. As I saw this frequently happen I know that these weaker birds were simply crushed to death by their stronger mates.

The boxes I kept them in were three feet long, sixteen

ates. The boxes I kept them in were three feet long, sixteen The boxes I kept them in were three feet long, sixteen inches broad, and seven inches high, covered with calico, which is better than sacking, as it does not pay off and entangle their feet; a trough, in part for feed and water, one inch deep, and an opening over it, another inch; also an opening all along behind of about one-half an inch; but I should another time try a round box, as it would do away with the corners. I fed chop feet (oats and corn), also wheat, all of which the birds seemed to appreciate, and those I have left are as fat and healthy as can be. As to the birds I turned out, I gave them two weeks' rest, and then worked a brace of setters over a small part of the ground, fizding two bunches, and hearing reports of several having been seen. What I saw were strong and able to hold their own. They were let out in cardboard boxes, eight to twelve in a box, with a slit in one end, and placed in small woods near feed and water. When the slit was torn off and I had moved away about a hundred yards, out they came in less than five minutes, pluming themselves, and feeding just as though their confinement had been a dream, and they had only had a bad nightmare after two field trials in succession at Memphis.

Sportsman.

LAST SHOTS AT THE GROUSE.

HAVE received here the last three numbers of the Forest and Stream, and see that each number contains letters from different correspondents regarding "unifed letters from different correspondents regarding "ruffed grouse" shooting. I would say to that class of timid sportsmen who foresee the total destruction of this game-bird by those who hunt them with dogs, that their fears are groundles?— Mr. Flower is quite correct when he says that in the older sections of the country but a small percentage of these birds tree when flushed by dogs, and only a portion of those that "tree" remain until the sportsman arrives within range. If the ruffed grouse had no other foes but those who shoot them after they have "treed," they would in settled districts rapidly increase in numbers.

To those other correspondents I would say that, so far as I am concerned, your "thrusts" are quite harmless. So, should you feel disposed, continue to fire away so long as the editor will give you space.

am concerned, your "thrusts" are quite harmless. So, should you feel disposed, continue to fire away so long as the editor will give you space.

My former article, giving rules for finding "ruffed grouse" after they have been flushed, was not written for the benefit of young gentlemen of leisure, who are able to spend the greater portion of their time in cracking away at glass balls and pigeon-shooting, thus becoming at an early age expert wing-shots, but was given for the benefit of young sportsmen who only occasionally get a day out in the woods. With them expert wing-shooting is a growth of time, and were they at first only allowed wing-shots at ruffed grouse, they would soon become discouraged and leave this game for the market shooter, who is often a dead wing-shot, but not a sportsman. For years past I have, when out with my shotgun after ruffed grouse, practiced wing-shooting; but I love to occasionally go out with a rife and a cheery, gay little spaniel after this game, and, after it has been flushed, to "stalk" them, and shoot only at their head or neck. This is fascinating sport. In settled districts, where these birds are wary and shy, it very often taxes the sportsman's greatest skill to get within range—and this style of sport ranks to still-hunting deer as fly-fishing for trout ranks with salmon fishing—lighter and easier sport, but equally attractive. My experience has taught me this lesson, that in the majority of cases the class of sportsmen who talk 'the loudest about the most scientific methods of killing their game, are, when out in forest or stream, the poorest performers, and need the most watching, How often do we hear geutlemen boasting loud and long about their exploits in killing the salmon that they had brought in, when we knew that their guide cast the fly that caught those fish; and what full baskets of "jigged" trout they would bring in, and unblushingly affirm that the was not observed, and take a long pull at the "medicine bottle," and then put water into the bottle to hide his t

O, no, gentlemen; when you are out in the woods alone, during one of your 'off' days, and have missed a dozen wing shots at ruffed grouse, and saw one on a tree, you wouldn't shoot it—O, no! usersheless ninety-nine out of one hundred sportsmen would do so.

rtsmen would do so. have always found genuine sportsmen to be a class of I have always found gentime sportsmen to cea class of genial, whole-souled gentlemen, who in a rational and temperate manner appreciate and delight in the pursuit and capture of fish and game—never "hogs" nor "misers," who only kill for the sake of destroying, and making "big bags," or wholly for the sake of gain—neither are they extremists or Pharisees, who set themselves up as better than their brethren who may differ from them in their method of pursuing their sport. A sportsman is a law-abiding gentleman, and ever interested in the protection and propagation of fish and game. He may use the latest and most approved kind of guns and fishing-tackle, or he may, perhaps, cling to his old and well-tried tools, which are endeared to him by long and pleasant associations; he may either use "artificial lures" or natural baits in his piscatorial sports—but is never devoted to the use of the "jigg" net, snare, or silver book. Some sportsmen find their greatest pleasure in still-hunting deer, while others prefer the exhilarating sport of running them with hounds, but neither butcher their game in the season of deep snows. Fox hunting is enjoyed by a certain class of sportsmen only when on horseback, following a pack of hounds, while another class prefer a gun and a single or brace of hounds. And so on to the end of the chapter—as there are many legitimate ways for the sportsman to pursue and capture his game.

are many legitimate ways for the sportsman to pursue and capture his game.

Regarding the whisky-drinking theory advanced by one correspondent, why, that is all "bosh." In my native town, the only man who claims to do only wing-shooting is a poor drunken fellow whose reputation and credit are not worth five cents; and the worst "pot-hunter" there was a man who need notify my higher wort to become

used neither whisky nor tobacco.

In conclusion, I would say—Brethren, we should learn to be charitable, and be sure that our own garments are clean before we criticise those of our neighbors.

HALIFAX, Nova Scotia.

THE MISSISSIPPI FLOODS.

THE MISSISSIPPI FLOODS.

I AM en route from Vicksburg to my home in Lincoln, Nebruska. On account of early and continued high water in the Mississippi, duck-shooting has not been good near Vicksburg this winter. Quail have been very numerous, but bave not been hunted much, the weather having been so wet and the roads in such fearful condition it took a brave man and an enthusiast with the gun to tackle them. Snipe came in two weeks ago, and on last Thursday Mr. B. B. Myles and myself ran out to a station on the railroad thirteen miles back of the city and during the day bagged twenty-two quail and fifty snipe. I think we would have made the score an even hundred, as we started out for that, but the weather was so warm we had to lay up two or three hours to prevent utter exhaustion. As the steamboat Sunflower was passing through Old River below the mouth of the Yazoo one night, it encountered thousands of ducks that had settled there to roost. The pilot, who is quite a sportsman, Yazoo one night, it encountered thousands of ducks that had settled there to roost. The pilot, who is quite a sportsman, signaled the engineer to start the engine that grinds out the electricity for the electric light, and when that bright light flashed out among the flocks of ducks, it created such a consternation among them they lost their senses and flew in every direction, many of them dashing aboard the loat, where over a drew ways contracted by the resear. every direction, many of them dashing aboard the hoat, where over a dozen were captured by the crew. One flew into the open carcass of a deer that hung out upon the forecastle and became wedged in there, where it was found, alive and kicking, after the boat reached Vicksburg. The devastation caused by the present overflow in the lower to Vicksburg is one of painful destitution and desolation. The full extent of the loss and suffering will never be known. And the present condition of affairs must last a month longer at least, for the Mississippi does not go up and down the same day. It has been known to remain at a stand for thirty days. The extent of the calamity may be in part imagined when it is remembered that the submerged district comprises an area of about 1,000 miles in length and fully imagned when it is remembered that the submerged district comprises an area of about 1,000 miles in length and fully fifty miles in width. In sympathy with the suffering of our own race we are apt to overlook or forget that of the brute creation. But who will ever tell the suffering of domestic and wild animals that is now being endured by those caught in this flood? It cannot be done. When the levees on the and wild animals that is now being endured by those caught in this flood? It cannot be done. When the levees on the cast of the river below Memphis were broken the water rushed in torrents toward Deer Creek, Sunflower and Tallahatchie rivers, and by this time the entire Yazoo delta must be under. And it has been done so suddenly that much of the stock and game perished in the flood. Deer have fallen an easy prey to any woodman who owned a dugout, and they have been wantonly and mercilessly slaughtered on the higher ridges, mounds and patches of levees where they have sought refuge from drowning. It may be well enough that a bullet has shortened suffering where death would have come at last, but one cannot think of these things without a feeling of pity. For my part I think the case of the wild animal, in the present emergency, is the hardest of them all. Human beings can take care of them things without a feeling of pity. For my part think the case of the wild animal, in the present emergency, is the hardest of them all. Human beings can take care of themselves, or be succored by their neighbors, and will, in a measure, look after their stock, but the poor, friendless, wandering wild animal must take care of itself with only its instinct as its aid. Truly they are objects of pity.

Measuremy Pump was Cairo, March 1882

Mississippi River, near Cairo, March, 1882.

A Gayoso, Missouri, correspondent writes: We have been overflowed since about the 20th of January, and the waters of the Mississippi still cover the face of the earth. Our game is mostly destroyed, and we have just any amount of deer is mostly destrand turkey. T is mostly destroyed, and we have just any amount of deer and turkey. The deer have been seen in droves of nearly 100 going west toward Crowly's Ridge, in Arkansas, but the most of them must have drowned, as the nearest hills are at miles from here. I am sorry to say that a great been killed by pot-hunters, solely for their hides. least thirty miles from here. many have b

The Natchez, Miss., Democrat reports: "A Natchez man says a she bear yesterday swam the river, pushing in front of her a log on which she had put eight cubs. This is about the tallest story we have yet heard in connection with the overflow. Next!"

overflow. Next!"

"Accidentaly Shooting Again.—Baltimore, Md., March &—Editor Forest and Stream: The Baltimore papers this morn ing report what seems to me to be a particularly aggravating case of carelessness with firearms. The particulars are these: "Miss Lillie Roach, aged 16 years, daughter of Mr. Wm. H. Roach, a prominent citizen of Somerset county, Md., was necidentally shot in the chest by a pistol in the hand of William Berry, aged eighteen years, son of Dr. Berry, on Saturday night last, at her father's residence, near Hopewell, about three miles from Crisfield. Miss Roach and others had been on a visit on the evening in question to the house of a friend a short distance from Mr. Roach's place. On their way back to Mr. Roach's place they were accompanied by Mr. Berry. It is said that Mr. Berry fired his pistol several times in the air for the purpose of frightening the young ladies during the walk, and that he snapped it playfully at Miss Miles. The trigger fell upon one of the emptied chambers of the pistol, as expected by Mr. Berry, and of course did not do any damage. It is also said that in

the same manner he pointed the weapon at Miss Coleman, when Miss Miles is said to have told him to put his pistol up, as Mr. Roach would not be pleased if it was discharged. Miss Lillie Roach is said to have remarked that the old pistol was of no account, and that she was not afraid of it. Mr. Berry then pointed the weapon at her playfully and pulled the trigger. Unfortunately the hammer came in contact with one of the loaded chambers, and the ball entered Miss Roach's chest, inflicting a painful and what was at first thought to be a mortal wound. The young lady fell upon the porch, but got upon again and walked into the house. Dr. G. T. Atkinson, of Crisfield, who is her brother-in-law, was called in attendance, and on his advice Miss Roach was brought to Baltimore yesterday on the steamer Maggie, being accompanied by Dr. Atkinson and wife and Col. Lemuel Malone and his wife, whose niece the young lady is. She was taken to the Maryland University Hospital and attended by Dr. McLane Tiffany. Dr. Tiffany does not think it advisable to probe for the ball, nor does he consider Miss Roach's condition dangerous." It is with pleasure and gratication that I have noted the just severity with which you deal with criminal cranks, such as this William Berry has proven himself to be. That the law should take its course in this matter there can be no question. It is the obvious duty of the grand jury of Somerset county to bring in a bill of incitement against this reckless idiot of assault with intent to this matter there can be no question. It is the obvious duty of the grand jury of Somerset county to bring in a bill of in dictment against this reckless idiot of assault with intent to dictiment against this reckless idiot of assault with intent to kill, whether his victim dies or finally recovers. The law in this case is so plain that there can be no option. The court, it is to hoped, will speedily find Berry "guilty as indicted" and fix his punishment at ten years confinement at hard labor in State's prison.—Ches. A. Peake.

Notes from Tennessee.—Taken altogether, this past winter has been the most unfavorable to all classes of field sports known in years. The early fall was hot and dry, then came an unparalleled period of warm wet weather, which rendered walking difficult. In consequence of the above causes, but few of our sportsmen attempted hunting, and but comparatively little game was killed. Formerly, quantities of venison were brought to this market, but this winter only a few deer were to be seen, and they were invariably from one of the several herds owned by private individuals in the vicinity of the city. The only bear meat sold here during the past season was from two or three half domesticated ones, which were killed at Christmas by butchers in the city. The result will be an enormous increase in game all over our State, provided the spring proves favorable to bird breeding. At this time snipe should make their appearance, but their favorite feeding grounds about here are still covered with the back waters from the river. Several of our most enthusiastic hunters have braved the storm, mud and water, however, and been rewarded by tolerably feir have. The dead of the selection of the selection of the lead of the storm, mud and water, however, and been rewarded by tolerably feir have. are still covered with the back waters from the river. Several of our most enthusiastic hunters have braved the storm, mud and water, however, and been rewarded by tolerably fair bags. "Bob Grubbs" and the old "Commodore" brought in ten or twelve snipe last week, but they were in bad condition. Fox hunting has been fairly good, and a number of brushes adorn the sanctums of some of our bold riding Ximrods. Col. W. H. Johnson's famous pack made a number of splendid runs, never failing to catch their game. Ton Chadwell, George Petway, Marsh Pinekard, Felix Mitchell, and Reuben Greenfield form the inevitable quintette in these chases, and a more daring set of fellows never crossed a horse's back in these parts. William Hobbs, the noted 'possum and 'coon hunter, put in his work successfully, as his record shows several score of these much coveted animals, but William has no regard for weather, and his pack of dogs are invincible. Tuesday begins our close season for game, and then gons will be cleaned and stowed away until the 15th of September, unless a few of the ardent sportsmen revive glass-ball shooting during the summer. We have in Andy Meaders and Felix Mitchell two remarkably expert shots, as their winnings last summer in Chicago, Ohio and Kentucky will show. They will doubtless make the circuit again this season. Andy is already practicing, and says he belleves he shoots better now than ever.—J. D. H., Nashville, Tenn.

Philadelphia Notes.—Philadelphia, March 18.—On the Raccon Creek meadows, N. J., wherever wet grounds are situated, our sportsmen are killing snipe in good numbers; also at the Pedricktown marshes, N. J. Those who have gone to Delaware last week and the early part of this week found birds plentiful, but wild. We have not had our warm spring spell yet to make Mr. Longbill a little lazy. From the farmers in New Jersey and Pennsylvania we learn an unusual quantity of woodcock have arrived and settled down in their usual nesting haunts preparatory to breeding. Some have already laid their eggs. This argues good summer shooting, but how much better it would be to allow the woodcock to remain unmolested until October. We should then have sport indeed, and good goers. Duck-shooting at Havre de Grace is drawing to a close. Fowl are still plentiful there, but the season is getting late, and birds are pairing for northward breeding. The members of the Carrol's Island Ducking Club brought their guns up to Philadelphia yesterday and have ceased warfare against the high-flyers from their points. There have been quite a number of sprigtails, mallards and pigeons on the Delaware River during the past week, but they have, to a great extent, left for the North. Between Delaware Gity, Delaware, and Port Penn, Mr. Sim, Lord of the latter place has sunk a box on what was formerly called "the Hundred Acres," directly on the marsh to which the ducks come in from the river to feed, and good shooting has been made from this novel blind by several gentlemen of Philadelphia. Three Canada gees were killed on the river near the Point House within the city limits last week.—Homo. PHILADELPHIA NOTES.—Philadelphia, March 18.—On the

limits last week.—Homo.

A Texas Game Country.—Rancho Grande, Spanish Camps, Wharton County, Texas, March 6, 1882.—Wharton county is mostly prairie country, interspersed with belts of timber from one to two miles wide, and is watered by many small creeks. It can be reached by the Galveston and San Antonio Railroad, which crosses the northern end of the county. Shooting begins here October 1. The principal game we have here is deer and prairie chickens on the prairies, which may be shot in very fair numbers, it being not unusual for one man to bag from eight to ten brace of chickens in a day's shooting. In the timber may be found a few turkeys, and at some seasons the trees fairly swarm with fox-squirrels. I have counted as many as fifteen on a single tree. There are so many it takes all zest away for the sport of shooting them. During the months from Dec. I to April 1 ducks and geese may be shot in the creeks and bayous, and on the prairies in the greatest quantity, not to mention swans, cranes and snipe. The hunting here is done principally on horseback, as tramping through the long grass would be too tiresome, at least so it is before the grass

is burnt. Any person coming to Texas to hunt could not do better than to pay this county a visit. Good board can be had at the ranches from \$2.50 to \$4 per week, and good hunting (saddle) horses can be hired from 50c. to \$1 per day.—James Wixters.

The Destruction of Large Game.—Dublin, Ireland, March 3.—I was sorry to see in a recent number of Forest and Stream, an attack on British sportsmen on the grounds that they were exterminating the big game of the far West. The real exterminators are the skin-hunters, who annually slaughter their tens of thousands of your noblest game animals for the few shillings per head which their skins produce. If I had time, I should write you a letter on the subject and produce none but American authorities in support of this statement. I have just read an able work on the far West in which the descriptions of wasteful slaughter by American hide-hunters are perfectly sickening. I hope you will, in the columns of Forest and Stream, see that the "saddle is put upon the right horse" in this matter.—R. O. O'C.

EARLY SNIPE.—Ithaca, N. Y., March 13.—I killed this morning (Monday) an English snipe. This is the earliest that has been killed or seen in this vicinity. It was snowing hard and the marsh was skinmed over with ice. It is the earliest that has been killed here, I believe, in some years. It was in good condition, and weighed 4½ ozs.—HERBERT G. WILLSON

WILLSON, A. Princeton, N. J., correspondent reports, March 15: A few snipe were shot here last week. The change in weather

Northern Michigan.—Mr. Frank N. Beebe, of Columbus, O., become so charmed with Indian River in northern Michigan last year that he brought "Dave" Smith's hotel there. The building was recently destroyed by fire, but Mr. Beebe will rebuild at once in time for the summer season, and will doubtless retrieve his fortunes by the increased patronage the pleasure seekers in Michigan annually bestow upon which this normar house. this popular house.

ILLINOIS.—Charleston, March 17.—On the 7th inst. D. Nicholas went a few miles north and bagged two sprigtail and eight mallard ducks and returned home by noon. On the 14th inst. Messrs. Nichols and Cartright were out, and they bagged ten mallard ducks. They report the brant and geese very scarce. Ducks are tolerably plenty yet, but very wild. They saw a few jacksnipe.—J. B. D.

A LARGE WHITE SWAN was shot in Grand River, near Paines-ALLARGE WHITE-SWAN WASSHOTH GRAIN GIVER, near Palmes-ville, Ohio, a few days ago, that measured seven feet from tip to tip of wing. Through one of its wings was about ten inches of a copper-pointed hone arrow, which is unlike any ever seen in that part of the country, and is supposed to be a kind used by some of the tribes of Northwestern Indians. The flesh had grown firmly around it.

HUNTING RIFLE SIGHTS.—Ashtabula, O.—While the subject of rifles is being discussed through the columns of your paper, I would be glad to see the subject of sights, that is, practical sporting sights, touched upon too. Let us have the views of some of your correspondents upon this subject.—

Illinois.—Lacon, March 17.—Duck-shooting has been extra good along the Illinois River until this week. The mallards appear to have gone north. Bluebills not here yet.—BYRNE.

Missouri.—Grave's Mills, Morgan County.—We have plenty of game here, including deer, ducks, turkeys, quail, squirrels, etc.—J. E. H.

GAME NOTES, reports of the movements of migratory game irds, etc., are invited from our readers in every part of the country.

BOOKS FOR SPORTSMEN.—Attention is called to the Forest and Stream Publishing Company's list of standard works.

Sea and River Hishing.

That which we have we prize not to the worth While we enjoy it; but, being lack'd and lost, Why, then we rack the value; then we find The virtue that possession would not show us.

SHARESPEARE.

SNAPPING MACKEREL AT CAPE MAY.

SNAPPING MACKEREL AT CAPE MAY.

YOU were kind enough to give my fancy play in your captured the red drum or channel bass, as ye editor calls it, with the Piscatorial Preacher, and now let me briefly chronicle how I bagged the bounding mackerel at Cape May with two of "the world's people."

I have often wondered why it is that Izaak Walton's disciples tell us in the Forest and Stream of the perils and pleasures of deep sea fishing. True, it is a laborious effort after "tripping the light bombastic toe" or nimbly capering in a lady's chamber (a figure of speech) at a hop, till church yards yawn—it is difficult to hear the Stockton House porter say, "Ladel if you're a-goin' a-fishin' you've got to get up," and it is still more trying to the flesh to arouse, and without breakfast gaze out of the east window at the joeund morning kissing the distant waves, while the sea, noisily, beneath your window, woos her bride, the ever shifting beach.

But scarcely a stone's throw off, by Denizot's pier, is Captain Foster and his Vandalia, as jolly a jack tar as ever sailed a ship. He promised us a little earle noir, breakfast bacon and a boiled mackerel caught the day before by daylight, if we would come aboard ship early. So, yawning, the dauntless Douglass, and he of the "skipping spirit," the youthful Miller kicked at my door and called "time." Douglass' good wife had killed three of the finest spring chickens, broiled them tenderly, put in a dozen raw tomatoes from Donglass' own garden and a bottle of Durkee's dressing. Loaded dayn with traps we were soon at Denizot's pier on a balmy July morning when the air seemed as invigorating as the heavenly air which comes over from Hart's orange groves to Palatka in the month of March in Florida.

Slowly Captain Foster first let down an immense coil of rope belonging to some of the many and mysterious applainces of a sailing vessel, and then Douglass and the skipping Miller slid down on deck. Captain Foster, who was as lean as a Rabelais sailor who had disposed in an adventurous w

tion of privilege," that "the bacon we was a-cating was not exactly his'n, but it had laid on the pier three days and he just tuk it." "Dod rot it," said Captain Foster, "I never could stand temptation nohow, that's the kind of sallor I am, and that there bacon laid there three days and three hights, just as long as Jonah was in the whale's belly, and I felt justified, as no owner appeared, to corral on to it." Said the captain; "I'll be ding-blamed if it ain't the best bacon I ever did set my tooth in! what do you say, Lawyer Dug," as he facetiously called the junior lawyer. Douglass looked wise and said he was not more than twenty-five years old; he didn't count the ten years of his life—when he lived at "Forked River"—but he had studied law with that eminent conveyancer John G. W. Ware, and that that pre-eminent legal luminary had told him it was the common law of Cape May county that when you found anything floating about loose it became flotsam and jetsam, which are law forms that mean any man may pick up the thing and keep it."
"Now," said lawyer Dug, "that is what I call John G. W. Ware's common law, and it is very common around here, and I therefore hold the bacon to be Captain Foster's under the tion of privilege," that "the bacon we was a-cating was not

legal luminary had told him it was the common hav of cape May county that when you found anything floating about loose it became flotsam and jetsam, which are law terms that mean any man may pick up the thing and keep it."

"Now," said lawyer Dug, "that is what I call John G. W. Ware's common law, and it is very common around here, and I therefore hold the bacon to be Captain Foster's under the Ware statute of flotsam and jetsam, or as Ware more tersely expresses it, "the hog is yours under the Chinaman's rule 'no catchee no habbee!" "Captain Foster expressed himself explanation of lawyer Douglass, and we devoured the bacon. And I am bound to admit that the snapping mackerel cooked by the festive Foster over a charcoal fire was a recherché dish, and scarcely a bone could be seen among the breakfast debris, when Douglass whistled to Miller the couplet which narrates what the Governor of North Carolina asid to the Governor of South Carolina.

While all this junketing was going on we were nearing the mackerel grounds where the fish most do congregate from the last of June till the first of October. Right ahead of its was the pilot boat E. C. Knight, commanded by Captain Bennet, as brave and noble a sailor as ever trod a deek. To our delight the gallant captain and the crew of the pilot boat were hauling in the ponderous mackerel as fast as their lines could be hauled in and the fish unhooked, no light task with three hundred feet of line out. Captain Jake, a sailor, who had clearly mistaken his calling, for the campmeeting lost what a sea-fearing life had gained in him, soon put out the two lines and outriggers on each side of the Vandalia, and one line for the stern. I took the middle line and rigged it with a blue squid, and while all the skippers, Foster, York and Rice, laughed heartily at this new device, they were compelled to admit before the day ended that the blue lead squid caught more fish than both the other lines, which Foster had equipped with a Virginia hook—a round piece of wood and an eel skin draw

sometamg organ to had away at Douglass' line and mine simultaneously.

"By the everlasting Jingo, a whale!" shouted Douglass.
I pulled and Douglass pulled, while Miller, of the skipping spirit, smiled, so did the skipper. Soon our lines seemed to mix, and yet we pulled and with a long pull and a strong pull we landed a fifteen pound mackerel, both swearing it was our individual fish, when Captain Foster with a middle township oath decided that the unoffending mackerel had swallowed both hooks! And true it was. As we bounced our joint mackerel, a sort of tenant in common, on the Vandalia's deck, out jumped a herring and a dozen small fish larger than your little finger.

As to the character of the mackerel I cannot say much, but next to a shark I reckon it is the greediest fish that swims. As to its voracity it is a case of negari non potest quin!

I had a curiosity to open this bouncing mackerel after we had taken out both books. Its heart was not like that of any animal, bird or beast, ever seen by me. Taking out my watch I observed the contraction of the valves of the heart, and the muscular action continued to be plainly visible for twelve minutes after the heart was taken from the fish, and while it remained in the palm of my hands.

while it remained in the palm of my hands.

The fun became fast and furious, and skippers Foster and Jake stood back to give us a fair fish, a free ballot and a full count. And for two mortal hours, till tired nature and our torn hands demanded rest, we engaged in the friendly rivalry as to who would pull in the most mackerel. I have ploughed a ten-acre cornfield of potatoes at old Hanover in Indiana, but I never remember being more tired after an honest day's toil behind a plow, than I was at 4 P. M., when Miller called a halt, throwing overboard the pair of cotton stockings which the "Wild Joey" in his kindness of heart had presented him to save his fingers, instead of gloves, as he hauled in the difficult fish.

We had seventy-eight fish outside of the dozen given us by Captain Bennett. We felt good, and we felt that we had fasted longer than Tanner. That big mackerel, so lately bounding over the blue brine of the fishing banks, felt no more ravenous when he grabbed both hooks than we now did.

We roused Skipper York with our joint and stentorian

did.

We roused Skipper York with our joint and stentorian lungs, demanding "food." We plainly told him, as he pirouetted below the deck, cutting a double shuffle (for he was happy and full of the flotsam-baccon, having gorged while we fished), that he had to do one of three things, viz.: Cook, ciimb or drown! He said he would rather cook than drewn, and soon the sea-coal fire burned in the little fiery furnace. We dived down to the bottom of Douglass' basket, where to our delighted vision Miller's rapacity had spared us two spring chickens, cight tomatoes and "chunks of butter thickly spread on corresponding chunks of bread." I took

the Durkee dressing and without peeling the tomatoes, I soon had a "salad for the solitary" that gastronomic Sam Ward would not have despised under like circumstances. And when the fish was done we dined. It was not the old wine and fat venison of the pious Zheas, but it was elegant, and no venison or "sweetbread in a box" at "Willard's" when the waiter expects fifty cents, or wants you to buy a ball ticket every time he looks at you, ever tasted so sweet as Foster's bacon, fresh mackerel, salad à la Chateaubriand, one hard-boiled egg apiece and lice water.

But in the west the clouds began to look angry—a faint streak of black which quickens a sailor's eye with anxiety—caused Foster to order Rice to steer straight for Cape May Point, for no sailor willingly goes over the "barbor bar that moans" after dark; too many drowned men have paid the penalty of daring after dark hat dangerous surf.

How York sang that "His father was a robber bold," and sung camp-meeting roundelays; how the quiet Rice enjoyed the fun; how Douglass moaned because the bacon was gone; how Foster told us how fond his aunt in Cold Spring was of "shrimps;" how fully we all enjoyed this one day's sport alone with old ocean and the mackerel, I will more fully narrate in another chapter.

Campen, N. J.

THAT BIG BASS.

sport alone with old ocean and the mackerel, I will more fully narrate in another chapter.

THAT BIG BASS.

SCENE—Robbin's Reef; time, 11 o'clock on a pitch dark night. Three carnest fishermen waiting for slack water and a bite, during the last two hours. Promptly at high water slack I strike a weakfish of five and a quarter pounds and feel rather offended that it does not turn out to be a bass, the fish we are sighing for. Ebb tide setting in strongly we change to the other side, the anchor is let go, and presently Fred sings out that he has hooked a big bass. Watching bis line I see that it runs out rather slowly but in a desperate fushion, and know by this that the fellow on the other end must be a rouser. Although Fred is a steady fisherman, it has not been his luck yet to capture a big bass, and consequently he becomes somewhat flurried as the fish will not let up at all, neither making a decided run nor lying down to spik after the approved fashion of that tribe, but keeping at a slow, powerful tug.

I have taken in my line on the first outcry and am all ready with the gaff. Our third man hops around and is getting wilder every minute, he being but a novice in the gentle art, and handling as yet but a handline. Finally Fred car't hold on any longer, his wrist giving out, and he instrusts me with the rod. Heavens! what a grind there is on the reel. I make up my mind the fish is no less than fifty pounds, and confidentially give it to my friends that he may turn out to be an eighty-pounder. We have been playing the bass now over half an hour, when I find of a sudden that our position has greatly changed, the boat having drifted through the eddy to the easterly side of the reef. Our third man has not let out anchor rope enough. This is done, and at the same time the bass begins to sulk and lies as immovable most of the time as a sunken log.

Once in a while he shakes his head in a sort of discouraged manner, as I fondly believe, but his great weight makes even this movement ponderous. However, I cheer my fri

LARGE POMPANO.

LARGE POMPANO.

A S your paper is the medium of entertainment, instruction and information between American sportsmen, I write to you to tell you what I saw at the Boston Club of this city on the 4th of March, and to ask if you have ever heard of anything like it?—viz. a pompano of the following immense dimensions: Length, three feet seven inches; weight, thirty-three and a half pounds, and thirty inches around the shoulder. It was positively a pompano, and not a "caraux." It was one of three brought in the city; one said to be larger and the other smaller, the smallest only weighing twenty-eight pounds. Any number of people saw it, and I and many others ate of it. Has it ever been equalled that you know of? A twelve pound fish is the largest I have ever known of before this one.—H. K., (New Orleans, La., March 9).

Three pompano, caught off Pensacola, Fla., at one haul of

Three pompano, caught off Pensacola, Fla., at one haul of scine, were brought here on Friday last. Their dimensions, given on enclosed slip, is substantially correct. The flesh of the thirty-five pound fish was good, but not quite equal to that of smaller pompano, say of three or four pound weight.

—J. E. McD., (New Orleans, March 6).

Mr. McD. gives the following dimensions: Twenty-eight pound pompano—breadth, twelve inches; length, thirty-nine inches from tip to tip. Thirty-five pound pompano—breadth, fourteen inches; length, forty-one inches. One of these fish was served up at Leon's, one at the Boston Club and one at Astredo's. Referring to the latter, a local paper of the 9th saves.

says: says: 'The largest pompano ever caught in the world, weigh-

ing thirty-five pounds, will be served in steaks at the above-

ing thirty-five pounds, will'be served in steaks" at the abovenamed house by the enterer of the South to his numerous
customers this afternoon, Sunday, March 5, 1832, and the
following days, and don't you forget it."

Three species of pompano have been known to our coast
for a long time. The favorite one is Trachynotus rarolians,
called "pompano" on the southern coast, "cavalle," or "crevallé," in South Carolina, and "pompynose" at New Orleans,
called "pompano" on the southern coast, "cavalle," or "crevallé," in South Carolina, and "pompynose" at New Orleans,
Another species is the T. nature, or short pompano, an oval
fish, and the third is T. glaucus. All these are small fishes,
and seldom exceed two pounds. Within the past two years
occasional specimens of an African species, the T. goreensis,
common to the Canary Islands and the west coast of Africa,
has been occasionally taken on our coast, and seem to be
getting more plentiful. The first one weighed twelve, and
the last one eighteen pounds. This fish grows large, and is,
no doubt, the one mentioned by our correspondents, whose
figures exceed that of previous captures. To distinguish this
species it may be well to call if the "African pompano." The
following is Gunther's description: "The height of the body
is two and three-fourths in the total length; the length of the
head four and a half; one of the caudal lobes four times.
The snout is obliquely truncated; the upper maxillary reaches
to nearly below the centre of the eye. The anterior rays of
the dorsal and anal extend beyond the middle of the fins if
hid backward. The dorsal, caudal and anal lobes black."

the dorsal and anal extend beyond the middle of the fins it laid backward. The dorsal, caudal and anal lobes black."

Hood's Charlesso called "Bull Trout" of Cocur d'Alene Lake. Drum Major Sattes, Second Infantry, now stationed near Vancouver, W. I., after a careful study and examination of the habits of the Bull Trout, claims that this beautiful fish is the Hood Charr first described by Dr. Richardson, although first discovered by Lieutenant Hood in Pine Island Lake. It is not a little remarkable that this fish should have so long remained unknown, as it is common in every lake and river from Canada to the northern extremity of the continent. One of the remarkable characteristics of our Bull Trout corresponds with that of the Charr in the great height of the dorsal fin. He is a bold and daring biter, voraciously seizing a bait of sucking carp, pork, deer heart, or belly of one of its own species albred on a hook. Drum Major Sattes used, as bait, on the 7th of February, beef, and caught two. One weighted four pounds and two ounces, the other four pounds and four ounces. They were caught by cutting a hole through the ice, using a twenty foot line and a .45 cal. bullet as sinker, at the head of Spokane River. This fish attains the weight of fourteen pounds and over in Coeur d'Alene Lake, and takes the fly readily in season. Captain Mills. Second Infantry, caught with an ordinary salmon-fly one that weighted over twelve pounds, just above the head of Spokane River. From mid-summer until late in the fall he is caught with a surface troll, no sinker being used. The spoons mostly used are the Abbey & Imbire, fluted Nos. 4, 5 and 6; Whitehall, McDonald, and Peek & Snyder's propellor. The minnow for trolling has proved a failure. Our trolling is done by a slow and steady rate, by oar, about two miles an hour, length of line usually fifty yards or more, considering the depth of water. Three or four pounders have been caught in the Spokane River with troll where water is from 2½ to 6 and 8 feet deep. The back and sides o

Ireland and Scotland.

A PLUCKY GAME PROTECTOR.—Ithaca, N. Y., March 13, 1882.—State Game Protector Norton resides here and is closely watched by the Anti-Fish and Game Club. His movements are sent abroad by signal or some other system. The game protector was going to Geneva and had boarded the train. It is about a mile from the city limits to the head of the lake, and the train has to ascend a hill and through a thick forest. When opposite the lake, and the train going about twenty-five miles an hour, the game protector saw through the forest down on the lake several parties with seines. Norton ran out of the car, and having but one arm threw himself out on terra firma. He struck at first on his feet, and next on his shoulders, and then stood up on his head in a soft dirt pile, and ended his tumble by rolling down the hillside a few rods. But Norton stood upon the hillside and took a list of the actors and witnesses. He has had ten illegal fishermen arrested, and their trials are all pending. The game club of this county now support Norton, but the fish club support by the cight State game protectors was sent to the comptroller by the cight State game protectors was sent by Norton as the result of several arrests he made on this (Cayuga) lake. There is a seeming determination on the part of Norton to enforce the State game and fish laws, and if he can only get such information as he can use to advantage, he will stop illegal fishing in all the surrounding lakes and streams. This information he solicits. His intention and backbone are both well illustrated in the dive from the train such rapid motive will supply with the paid and the surrounding lakes and streams. This information he solicits. His intention and backbone are both well illustrated in the dive from the train such rapid motivo. Let us hone that his tumble will streams. This information he solicits. His intention and backbone are both well illustrated in the dive from the train in such rapid motion. Let us hope that his tumble will prove beneficial to the poor fish and those of us who have any respect for the dignity of the State and its laws.

Chubs.—There are several fishes with soft fins called chubs. The angler's chubs are the Senolilus corporalis, (Mitch. Putnam) called chub, horned-dace and corporal, in different parts of the country, and the S. butloris, (Raf. Jordan) called fall fish, dace and roach. These tishes grow in favorable waters to a length of fifteen to eighteen inches, and a weight of a pound to a pound and a half. They are common to fresh water streams from New England to Virginia and the Carolinas, and west to the Missouri region. The first named fish has a black spot at the base of the dorsal fin, There are smaller fishes, as Ceratichthys bigaths, and others which frequent the same streams and have horny heads. These latter seldom exceed six inches in length.

TROUTING IN DELAWARE COUNTY, N. Y.—The trout fishing will, perhaps, he very good here this spring. We have the finest bass fishing here, or as good as anywhere in the State, in mid-summer. It has always been a conundrum to me why so many people from your city go up on the Beaver-kill and on the Neversink streams, where the scenery and fishing

is, to say the least, very poor. I have been there fly fishing for trout a number of times, and would see about ten men to one trout, and that trout, perhaps, from two to four inches long. The trout fishing here is far superior to any place on the Beaverkill or Neversink, and we have fine bass fishing here all summer, while they have none. We have also good hotels, good liveries, and all at moderate prices. We are on the line of the N. Y., L. E. & W. R. R., and there are, perhaps, three times as many trains each day as on the N. Y., O. & W., or on Beaverkill. Our country is much the roughest, with higher hills and better roads. Why is it?—E. M. EDWARDS, (Hancock, N. Y.).

First Fish.—The first salmon of the season arrived at Blackford's from Nova Scotia on the 15th and sold at two dollars per pound. On the 17th a shad weighing five and a half pounds was taken at Weehawken, opposite the upper part of New York, on the Hudson, and sold for five dollars. Although a shad was taken on the first of the month it is regarded as a stray one, and the fish which came on Patrick's Day is looked on as the first of the regular school.

THE ABBEY AND IMBRIE CATALOGUE.—The illustrations in this catalogue are wood cuts, and all of them are new, made especially for the catalogue.

THE LONDON FISHERY EXHIBITION IN 1883.

MR. R. B. MARSTON, editor of the London Fishing Gazette, has an article in the Standard of Feb. 27, in which

THE LONDON FISHERY EXHIBITION IN 1893.

MR. R. B. MARSTON, editor of the London Fishing Gales and article in the Standard of Feb. 27, in which he says:

The Prince of Wales presides to-day at an influential public meeting held at Willis' Rooms, in furtherance of the great histenational Fisheries Exhibition which is to be held in London next year. The object of the meeting is to hear the report of the committee, which will be read by its chairman, the Duke of Richmond, and to pass certain resolutions. The aim of the exhibition is to illustrate every item of knowledge and experience, of practice and theory, of manufacture and appliance, connected with fisheries, that can be gathered from the four quarters of the globe.

Of the value of special exhibitions of this kind there can be no two opinions, and it may be interesting to glance at what has already been done in this direction. In 1850 an international fisheries exhibition was held at Berlin, under the German Court and aristocracy. It proved a success far beyond the expectations of its promoters, the visitors during the few weeks it was open numbering over 300,000. It paid all expenses connected with it, and the Government guarantee fund was untouched, and this, too, notwithstanding heavy expenses connected with it, and the Government guarantee fund was untouched, and this, too, notwithstanding heavy expenses connected with it, and the Government guarantee fund was untouched, and this, too, notwithstanding heavy expenses connected with it, and the Government guarantee fund was untouched, and this, too, notwithstanding heavy expenses connected with it, and the Government guarantee fund was untouched, and this, too, notwithstanding heavy expenses connected with it, and the Government guarantee fund was untouched, and this, too, notwithstanding heavy expenses connected with it, and the Government guarantee fund was untouched, and this, too, notwithstanding heavy expenses connected with it, and the Government guarantee fund was untouched, and this, too, notwithsta

Walpole so carriestly, though indirectly, appeals for in the same report.

It would be impossible to mention a tithe of the benefits to the fisheries interest which resulted from the Berlin Exhibition—those who desire to get some idea of the scope of that enterprise should examine the most valuable and voluminous official German reports which have been published at Berlin in the shape of monographs by the highest authorities on the several branches of fishculture and fisheries. One of the great results of that Exhibition is the fact that it undoubtedly gave rise to the National Fisheries Exhibition held at Norwich last year, which in its turn has led up to the International Fisheries Exhibition which is to open in April at Edinburgh, and to the Great International Exhibition which opens in London next year.

Great International Exhibition which opens in London next year.

It may be useful to look for a moment in what directions good may be expected to come as a result of the Great London food may be expected to come as a result of the Great London food may be expected to come as a result of the Great London food may be expected to come as a result of the Great London food may be expected to come as a result of the Great London food may be expected to come as a result of the Great London food may be expected to come as a result of the Great London food may be expected to come as a result of the Great London food may be expected to come as a result of the Great London food may be expected to come as a result of the Great London food may be expected to come as a result of the Great London food may be expected to come as a result of the Great London for the London food may be expected to come as a result of the London for the London food may be expected to come as a result of the London food may be expected to come as a result of the London food may be expected to come as a result of the London food may be expected to come as a result of the London food may be expected to come as a result of the London food may be expected to the year.

It may be useful to look for a moment in what directions

of young fish and fish eggs. As instances of the good done, it may be mentioned that some of the Northeastern States rivers, notably the Connecticut, Hudson, Susquehanna, Merimac, and Delaware lawe been re-stocked with salmon or shad, or both. Salmon had been extinct in them for years, and the shad fishery has so fallen off as to be practically worthless. In the Connecticut River alone, in 1878, no loss than five hundred salmon, ranging in weight from ten to twenty pounds, were captured in the shad nets; the catch would have been very much larger if proper salmon nets had been used. These salmon were sold in New York fish market at from three to four shillings por pound—giving as a result from one river restocked by Government a return to the country of over one thousand pounds sterling.

Another fish which has been cultivated by the Americans even more successfully is the shad. More than half a century ago shad were plentiful in the Thames—the names Shadwell and Shad Thames are all we have left to remind us of this fish now. The Americans are willing to send us shad for restocking our streams, their dish being superior to our European variety, which in large numbers ascend the Rhine every May, and is thus known on the Continent as the mailfish. As a food fish the Americans chim that their shad is even superior to salmon. Marvelous results have attended Professor Baird's experiments in the propagation of this fine fish. In some of the rivers restocked by him with fry as many as several thousands of mature shad have been captured at one hou; and this too, in rivers where the shad fishery had previously been almost abandoned. Carp, which the Americans imported a few years ago from Germany, are now naturalized all over the country, and thrive so well that Germans are actually getting back American-bred earp to improve their own stock.

Such results as these in fishculture speak for themselves. In England we have been captured at the Hamistan imported a few years ago from Germany, are now naturalized all over the f

THE OHIO HATCHERY.

THE OHIO HATCHERY.

THE hatchery of the Ohio Fish Commission, at Toledo. in charge of Mr. D. Y. Howell, was inspected last week by a delegation of members of Joint Committee on Fishculture and Game, who visited Toledo for that purpose. The following members were present: Senator H. O'Hagan, Chairman, of Eric, and Senators J. D. Norton, of Henry; Elmer White, of Defiance, and Charles S. Foresman, of Fairfield; Representatives William Wetmore, of Wood; C. L. Allen, of Pulton; A. L. Frese, of Ottawa; Henry Maury, of Monroe; J. H. Kahle, of Putham, and Joseph Pukskin, of Eric. They are accompanied by acting Sergeaut-at-Arms Walter B. Norris, of Columbus.

companied by acting Sergeant-at-Arms water.

Columbus.

On Friday, the 10th, at 10 A. M., in company with Mr. A. D.
Howell, Assistant Superintendent; Mr. C. W. Bond, State Fish
Commissioner: Mr. Frank Utrup, of Ottawa county; Major
E. L. Jones, of Toledo, and a representative of the Evening
Bee, the committee proceeded to the hatchery, where over an
hour was spent in examining the premises and gaining an inhour than the methods employed in the artificial culture of

hour was spent in examining the premises and gaining an insight into the methods employed in the artificial culture of fish.

That all were interested was shown by the manner in which their observations were conducted. Most of the gentlemen learned for the first time how fish were batched, and much surprise was manifested upon ascertaining the vast numbers of fish that are turned out, and the success which attends the work. The old method of hatching the spawn on trays was discarded in this hatchery some time ago, and what are known as the Chase Automatic Jars are now in use. These jars are of glass, about two feet in height, and will each contain from 150,000 to 160,000 eggs. By an arrangement of glass and rubber tubes fresh water is constantly being forced into the bottom of the jars, which agitates the eggs, keeps them clean, and does away with much labor which by the old process was necessary. When the eggs are hatched, the young fry rise to the surface of the water and float off into a trough, from which they are gathered, put into large cans and distributed. The present method requires but one or two hands, while by the old method from thirty to forty were employed.

Senator O'Hagan stated that he was very much pleased with the condition of the hatchery, and especially so with its management. He had carefully inspected the hatchery, and was convinced that the present condition of the hatchery, and especially so with its management. He had carefully inspected the hatchery, and was convinced that the present condition of the hatchery, undespected the hatchery, and especially so with its management. He had carefully inspected the hatchery, and especially so with its management. He made a proportiated last year, but in consequence of the many applications to stock inland streams, he favored the increase.

Other members of the committee coincided with Senator O'Hagan. In this connection it may not be out of place to state that in the two hatcherics (Cloded and Sandusky) under the charge of Superintendent Howel

"SLICKENS" IS MUD.—Boston, March 15.—In the last number of the FOREST AND STREAM I saw an inquiry concerning the meaning of the word "slickens." Being a Californian, and therefore having some knowledge of the language spoken in that section of the United States, I beg to inform you that the word does not represent any portion of the animal kingdom, neither can "slickens" be said to belong to the finny tribe, nor classed as a vegetable. In fact, I do not think it can be called either "fish, ilesh or fowl." I cannot explain the origin of the word, but presume that, like many others, it was coined in that section. It is simply mud, yellow mud washed down from the hydraulic mines in the flumes and empiried into the rivers, making the water so thick and muddy as to be uninhabitable to fish.—E. C. W.

LAKE TROUT FOR NEW JERSEY.—The State of New Jersey has received a couple of thousand fry of the lake trout which were intended for Germany. Professor Baird ordered a few eggs to be sent from the hatchery of Mr. F. N. Clark, at Northville. Mich., with a lot of whitefish and brook trout eggs. On reaching New York they were found to be too far advanced to stand the journey, and on being placed in a hatching jur they batched in a few hours. Last week Mr. William Linn Allen, of Newark, offered to bear the expense of transportation to Culver's Lake, in Sussex county, N. J., and Prof. Baird gave him the fish. They were deposited to the number of 2,000, as reported by Mr. Allen.

UTAH.—I know you will be pleased to know that our Legislature, which closed its session yesterday, made an appropriation of \$600 for the two years for my use as fish commissioner. This is the beginning of a new crain this Territory for fishculture. The carp received here are very much admired and give great satisfaction. The first set of five cans had not one dead carp in it; the next consignment were too closely packed, by mistuke, and some of them had died. I shall write you again soon. I am going to have a central Utah and also a south Utah hatchery. Much interest is beginning to be taken in increasing our fish food.—Joseph L. Barroot.

SALMON DISEASE IN SCOTLAND.—The Kirkendbright-shive Advertiser, of Feb. 3, contains the following: On Friday and Saturday, Mr. Armistead, the well-known salmon breeder, of Keswick and Douglas Hall, accompanied by Mr. Fenton and some fishermen, endeavored to take the ova from salmon in the Nith for experimental purposes. A great many fish were netted, but Mr. Armistead was not successful in securing one in proper condition, all the fish having either recently spawned or not ready for spawning. Nearly every fish caught was badly diseased.

GREENWOOD LAKE.—Within the last few days the Greenwood Lake Association have placed 50,000 salmon trout in the lake, and they are planning now to build a fish hatchery of their own. German carp were placed in the lake during the winter.

PITTSBURG DOG SHOW.

WE publish below our comments upon the dogs which were omitted in our last. We notice only some of the more prominent of the specials, as all of the animals were reviewed in the regular classes. One of the most pleasing features of the show was the parade of the prize winners on Friday evening. Mr. J. J. Snellenburg introduced each one with a few appropriate remarks as they were alternately placed in full view of the audience, who were enthusiastic in praise of the management for the pleasure thus afforded, dany of the favorites were greeted with warm applanse, the pug George coming in for his full share. When the handsome Don Juan was placed upon the stand he seemed to realize that he must do his best, and the buzz of applause that greeted his beautiful pose was a fitting tribute to his grace and beauty. At the close of the meeting the association presented Mr. Chas. Lincoln with a purse of \$100 as a slight token of their esteem for the very efficient manner in which he had conducted this most successful show. We resume our coments:

of their esteem for the very efficient manner in which he had conducted this most successful show. We resume our comments:

IRISH WATER SPANIELS were well represented by Champion Barney and Count Bendigo. Barney was on exhibition only, but the committee awarded him a diploma, which was well bestowed, as he is undoubtedly as good a specimen of the breed as can be produced. Count Bendigo is also a well made, powerful dog, and well deserved first, place. Barney, Jr., was out of condition, although of fair form and markings. Do Comnor is a bit leggy, and lacking in top-knot and coat. Black spaniels, large size, had only three representatives, but all were good ones. Benedict, who was placed first, is a rare good one, his make-up is almost perfect, he has a good flat coat, and a wonderful eye, and gets around in a gamy style that is very taking. Bob III., although he has taken many prizes, is a trifle too short in the body and neck to compete with Benedict. We thought him better than Black Prince, who is only seven months old and not yet mature: but the judge thought otherwise, and we shall not quarrel with him as the youngster is a capital one and will no doubt make his mark, if he lives. In the small class, Black Bess was rightly placed first, as she is a grand one. She was shown too fat, which detracts from her appearance. Beatrice is also a good one. If the animals shown are fair samples of the Black Spaniel we don't wonder that they have become so popular. Cocker's were some of them very fine. Princess we think exceptionally good. She has as good a head and neck as we ever saw; her body is also first-class. Pansy and Pith II.we thought very close together, and Rose K. only lacked a little better, lead to be even with them. The spaniel uppois were not numerous, but a very good lot. We thought were not numerous, but a very good one. If the nick as a rough oad. Minnie Warren is also a good one. Fourty make and the sevent.

one.

FOXHOUNDS—Roxey came in first with Rover a good second.
If these two are as good as they look, we cave their owners and would go many miles to see them east off on a red hortest.

and would go many miles to see them cast off on a red portrail.

BEAGLES were a good class, ao loss than three whe,'s were given, and all were deserved. We fancied Music for first place, as she has lots of quality and for capital form. Melody is very close to her, and also of good form, but she is just a trifle behind Music in head and coat. Both of them are first-class and good enough for any company.

BENCH-DEGGED BEAGLES were properly placed, as were the beagle puppies.

DAGISHUNDE were'not so good as we had hoped to see. Waldien II. was the best one, but she was heavy in whelp and grossly fat, which, we prosame, induced the judge to give the blue to Waldman III., a very good one, in prime condition, although he is but seven months old.

PON-TERMERS.—Oly one entry in each champion class, but they were both good ones and worthy the honors bestowed. There were only three in the open class for dogs. All were good ones and rightly placed. The same may be said of the birch class, except that only two were present. There were only two in the puppy class, and both were poor. Brittle, the winner, is low forward, with body much too long. She also lacks in quality. We think that the prize should have been withheld, as she is not the type that should be encouraged.

GREYHOUNDS were not good, although the winner was a fair animal.

winner, is low forward, with body much too long. She also lacks in quality. We think that the prize should have been withheld, as she is not the type that should be encouraged. Generalcours were not good, although the winner was a fair animal.

MASITEFS.—Gurth was the only mature animal present. He is a grand one and worthy the prize he won. The others were all of one litter, and very good ones for their age.

St. Bernards trough enated).—Prium the magnificent missed connection at Buttalo and was absent, and Rover Lion the only other entry, had a walk over. He is a noble-looking animal, and attracticed much attention. In the class for smooth coated, Snowball, the only entry, was not in good condition.

Newpoundlands.—Pluto, a fair animal, was awarded first. Collies.—In the champion class Rose weily penned the prize. He is very stylish and moves gracefully; he was also in good condition. Asyrshire Laddie is a grand made one, but a trifle heavy. Isle is also of goof compand the winner. He is a grand one, as less for longs Marcus was the winner. He is a grand one, as less five weil, although Juno is perhaps a trifle the best all these years well, although Juno is perhaps a trifle the best all the servery well, although Juno is perhaps a trifle the best all winpen by Blister, who is undoubtedly one of the best in the cumbry. Hero is also a very good one. BLLEBREES were good one. BLLEBREES were good one. BLLEBREES were good one. BLLEBREES were an uneven lot, and the prize was divided between Lady (a small-sized Scotch terrier, a very good one) and Kelpic, a good Dandy Dinnont in poor condition. Since the prick-carred variety, and, of course, handicapped by his shorter, more wire coat. We think that two classes should be made of the skye, as these dogs, although more serviceable, stand un chance to win over their more handsone competitors.

Young and deservedly placed first. An unnamed one, exhibited by Mr. Le channa, of Cleveland, O., we liked very well was defined as perial first for her good looks. In the light we

CLASS A.—For the best kennel of five English setters.

There were five entries in this class and not a poor animal in the lot. Mr. James H. Goodsell is the fortunate owner of the winners. Petrel III., Petrel III., Fairy II., Plantagenet and Don Juan. We doubt if twenty-five better dogs ever before competed in one class, and it will be long before we see them excelled. Very noticeable in this collection were the five Racket-Kelp puppies only ten months old. They are of good size and nearly alike, and are a grand lot, and were very well shown for their age.

CLASS P, for the best kennel of five cocker or field spaniels, had but one entry by the Hornell Spaniel Club, of Hornells-ville, N. Y. They were a capital lot, and shown in good condition.

shown for their age.

CLASS F, for the best kennel of five cocker or field spaniels, had but one entry by the Hornell Spaniel Club, of Hornellsville, N. Y. They were a capital lot, and shown in good condition.

CLASS H, for the best English setter, brought a dozen good ones, for which there should have been at least half a dozen prizes, but as there was but one. Thunder deservedly won it. CLASS H, for the three best English setters bred and owned by exhibiter, was won by the Detroit Kennel Club, a decision that we could not indorse. The dogs were handsome and well-matched, but they lacked the quality and good form that was apparent in the entry of the Laverack Kennel Club, who should have been placed first. Class M was but a repetition of this, as two of the same dogs were placed over Petrel II. and Don Juan. The wording of the prize list is as follows: For the best matched pair of English setters, fregardless of sex) color and quality to be considered. Although St. Julian and Royal Sultan were a trifle the nearest alike in marking, the pair of Mr. Goodsell were far superior in quality, and clearly entitled to the award.

Class N., for the best English setter dog under two years old. Plantagenet scored another victory.

Class P., for the sporting dog axhibited in the best bench show condition, brought out a rare lot of shining coats, but Berkley outshown them all and was justly awarded the prize. This class should be a prominent one at all bench shows, as nothing adds more to the attractiveness of a show than well-kept, well-groomed animals.

Class B., for the best English setter brood bitch, was won by Fairy II., shown with Thunder and Fairy Prince, a trio hard to beat.

Class B., for the best pointer puppy, was won by Yam. Class KK., for the best collection of non-sporting dogs was won by Mrs. Thomas Harrison's black and tan terriers Tiney, Topsy and Bessie. Messers. Rutherford's entry of fox terriers not being eligible.

Class S.K., for the best pointer puppy, was won by Yam. Class KK., for the best collecti

ited on the stage, George received quite an ovation. He was the recipient of a very handsome basket and a bouquet of flowers, and smiles and caresses were showered upon him without stint.

CLASS PP., for the best Irish water spaniel bred and sold by the Excelsior Irish Water Spaniel Club, was won by Barney, Jr., Count Bendigo having been purchased by his present owner before the Kennel was formed, was pronounced incligible.

owner before the Kennel was formed, was pronounced in-eligible.

Class QQ., for the best Llewellin dog puppy, was awarded to Blue Stone, who was protested as not being a pure Llewel-lin. The committee referred the matter to the National Ame-rican Kennel Club for their decision.

Class SS,, for the best kennel of sporting dogs, was won by Mr. A. H. Moore, with Thunder, Berkley, Lass O'Gowrie, Raleigh, Bob, Ludy Rapid, Darkie, Leo H., and Banjo.

NEW YORK DOG SHOW.

NEW YORK DOG SHOW.

THE show which is to be held on the 18th, 19th, 20th and 21st of next month gives promise of being a grand success. Every day a large number of applications are received from all parts of the United States and Canada as well as some from England and Ireland. The entries so far exceed those of any previous year and the indications are that they will greatly exceed last year's. A great number of the prize winners at littsburg will come here; all of these will have to be entered in the champion classes.

The following list of special prizes have been offered since the last published: L. B. Wright, Esq., of this city, will give a very handsome silver cup for the best fox-terrier puppy under twelve months.

Max Wenzel, Esq., of Hoboken, offers a silver cup for the best Irish setter, any age, sived by Chief, donor does not compete.

Alax Wenzel, Esq., of Hoboken, ofters a silver cup for the best Irish setter, any age, sived by Chief, donor does not compete.

W. H. Beadle, Esq., offers twenty-five dollars cash as a prize for the best pug on exhibition at the show.

Williams & Powell, of Liverpool, Eng., have written to Mr. Lincoln, donating one of their fine guns.

The club have decided to offer a special prize to the best pair of trained dogs for field purposes of any age; the handlers of these dogs will be allowed the use of live quall which must be placed in the ring in cages so that a dog can point them as in the field. They then will be required to show their traing as field dogs, such as retrieving, backing, quartering, dropping to hand, etc.

The judges have all been appointed and are: For English setters, J. O. Donner, Esq. For black and tan and Irish setters, Major J. M. Taylor, of Lexington, Ky. For pointers, grey-hounds, deerhounds, foxhounds and beagles, Hon. J. S. Wise, Richmond, Va. For fox-terriers, bulldogs, bull-terriers, fixey-hounds, deerhounds, black and tan terriers and other kinds of terriers, G. deForest Grant, Esq., New York. For water spaniels, field and cocker spaniels, Thomas Orgill, Esq., of Brooklyn. For mastiffs, St. Bernards, berghunde, New York. The entries close on the 3d of April, and should be made as

foundiands, collies, dachshunde and pugs, James watson, Esq., New York.

The entries close on the 3d of April, and should be made as early as possible so as to give ample time for the preparation of the catalogues.

The Great Western Railway of Canada have issued an order for the free transportation of dogs to the show when accompanied by their owners or attendants. Exhibitors coming by the Birle Railroad can obtain passes for their dogs by applying to the general ticket agent, Mr. John N. Abbott. New York. Those who come through Jersey City should there take the Twenty-third Street Perry and from their take express wagon to the American Institute Fair Building, which is on Third avenue between Sixty-third and Sixty-fourth streets.

EASTERN FIELD TRIALS CLUB.

EASTERN FIELD TRIALS CLUB.

A VERY important meeeting of the members of the Eastern Field Trials Club was held at Delmonico's, 2!2 Fifth avenue, last Thursday evening, the lith inst. The following gentlemen were present: Mr. J. O. Donner, Presidents, Mr. James H. Goodsell and Dr. H. F. Aten, Vice-Presidents; Mr. James H. Goodsell and Dr. H. F. Aten, Vice-Presidents; Mr. F. N. Hall, Sceretary: Mr. W. A. Costar, Treasurer; Messrs. John G. Heckscher, H. N. Munn, Max Wenzel, Geo. T. Leach. Dr. Monroe, Major G. B. Watkins, Dr. Green, Robt. C. Cornell, A. E. Godefroy, E. E. Hardy, (Boston), J. Von Lengerke, H. W. Livingston, H. T. Danforth, H. E. Hamilton and J. E. I. Greinger. After the reading of the minutes the treasurer's report was called for. While it was being read the members crowded around the table, depositing their dues for the current year until there was a pile of crisp bank notes and shining gold displayed that was very cheering to the hearts and gratifying to the pride of the gentlemen who have so freely given of their time and money to promote the success of the association, which is now assured. After adding the amount thus received to the funds on hand and deducting the indebtedness, the very gratifying amountement was made that there still remained in the treasury a handsome surplus. As an example eminently worthy of imitation we would mention in this connection that the treasure has received as a donation to the club, checks of fifty dollars each from Mr. Chas. H. Raymond, Mr. James H. Goodsell, Dr. H. F. Aten and Mr. Geo. T. Leach. Mr. John G. Heckscher also donated the prize of one hundred dollars, which was won by his Ferida at the tate trials. Others have expressed a willingness to subscribe, and we hope to soon be able to announce that a fund has been established sufficient to meet, the expenses of the year, and warrant the offering of prizes for the next relats that shall be worthy the club and well worth the winning. Mr. Goodsell, of the committee of ways and means, reported progress and as I. Grainger. After the reading of the minutes the treasurer's report was called for. While it was being read the members crowded around the table, depositing their dues for shining gold displaced that was very cheering. The control of the control of their time and maney to promote the success of the association, which is now assured. After adding the findebtedness, the very grainfying cumulement was nande that there still remained in the treasury a handsome surphus. As an example embendy worthy of initiation we would member that there still remained in the treasury a handsome surphus. As an example embendy worthy of initiation we would member that there still remained in the treasury a handsome surphus. As an example embendy worthy of initiation we would member that there is the control of
allowed to read extracts from a letter without putting the allowed to read extracts from a letter without putting the entire letter in as evidence. There were doubtless large portions of such letters irrelevant to the question, but it was always desirable, and especially so in this case as the writer was dead, to distinctly understand the context. Mr. Liewellin undertook to furnish the committee with attested copies of all the letters. Mr. Buckell stated that he was in Mr. Laverack is house in 1872, and Mr. Laverack had on that occasion informed him that 'he (Mr. Laverack) had crossed his breed for the last forty years." He had taken notes of the exact words used at the time, but could not now find his note-book. The whole of the afternoon was then taken up with reading extracts from letters received by Mr. Llewellin from Mr. Laverack, and from Mr. Robinson. The inquiry was adjourned until the next committee meeting.

Mr. Llewellin has also submitted to the committee the following:

Mr. Llewellin has also submitted to the committee the following:

To the Consulter of the Keynel Club:
Gentlemen—I maintain that the definition of "pure Laverack," for the purpose of this inquiry, is not that which shall be in future agreed upon by the K. C. for their own satisfaction, but that which was regarded and accepted as "pure Laverack," at the time when the class in which Comet won was instituted, and thus before the time at which my protest was entered.

The term "pure Laverack" was given by general consent of

but that which was regarded and accepted as "pure Layer ack" at the time when the class in which Comet won was instituted, and thus before the time at which Comet won was instituted, and thus before the time at which Comet won was instituted, and thus before the time at which Tomet won was entered.

The term "pure Laverack" was given by general consent of setter breeders, for many years past, in virtue of the fact that every dog sent out of Mr. Laverack's Fedigree Tables, page 21 of his book (which pedigree he forwarded with every dog sold by him), and in addition to all dogs in the possession of other persons who also traced their origin on all sides to the same pedigree. The fact that the Kennel Club did not at that time even him at any other definition, type facto, proves that they themselves accepted this commonly received definition, and therefore. I maintain, are bound by it.

The idea of Pride straining back through a fifty years' pedigree, in which his color (liver and white) was conspicuously absent to a sincle cross with the Edmond Castle breed, as asserted by Mr. Robinson, is ridiculous, and also disproved by the dates given by Mr. Laverack and Mr. Robinson. Mr. Robinson states (The Field, Jan. 14, 1882)—"It is now forty-three years since the blood was 'infused' into Old Moll (that is, in 183)," Mr. Laverack states he got Old Moll from Mr. Harrison in 1825, makes her to have been fourteen years old at least, at which age it is gravely asserted she produced whelps! Mr. Laverack states here been proved to have tried crossing his breed with Edmond Castle and other breeds on six or eight occasions, as indervals during a period of forty years; also that he got rid of the produce of those crosses.

If has been proved that Mr. Laverack stated that Pride of the Border was the produce of those crosses.

If has been proved that Mr. Laverack, during the time he thought it possible to keep up the "pures," made a distinct difference between Pride and them.

By an attempt to alter the always accepted definition of

I am glad your correspondent "Mont Clare" has posted "East" a little as regards color. I wish to say that Victress has been in this city for nearly two years, and it is well known that her markings are lemon and white (not liver and white.) I speak of the Victress, own sister to Countess, Nellie, Daisey, etc., by Dash II.—Moll. III., which old lady I would be happy to show "East" at any time.—Sportsman, (Lancaster, Fa).

organization, and I always like to "keep an eye on" such in all dealings with them.

I hope all lovers of the dog will be ready to present "an embattled front" against any legislative body that in any way essays to rob the poor man of his friend, and to amony the rich man in the full enjoyment of his pet and co-worker by fireside and in the field.

"The best part of man is the dog that is in him."

O. W. R.

A DAY AND A HALF WITH THE BEAGLES. BY DORKIN.

A DAY AND A HALF WITH THE BEAGLES.

BY DORKIN.

It had been arranged that Hawley and his friend, the cashier, should celebrate Washington's birthday by a rabbit hunt in the vicinity of Granby, with the well-known beagle breader, N. Elmore, and a draft of the necessary dogs from his extensive kennel.

Now the cashier had notified his friend Elmore that it would be agreeable to have him meet Hawley and himself at Tariff-ville, a station several miles from Granby, but not to be on hand if there should be a "blizzard." The morning of the 21st of February opened with a cutting storm of hail and sleet. This being the day to set out for Granby, the two fellows in question anxiously read the weather report and indications, carefully scanned the clouds for signs of a change, pumped old weather prophets for hopeful prognostications, but still it stormed. They hoped for some let-up before 4 o'clock, the time they intended to start. About 3 o'clock the storm was at its height, and the anxious hunters held a council in Hawley's office. To go or not to go, that was the question. Would Mr. Elmore be at Tariffville? They hated to have him go there an i not find them, and again they hated to go and not find him. There seemed but little doubt but what the storm was a "blizzard;" still it might be different twenty miles to the eastward. One argued that Elmore would be in as great a quandary as they were and would probably go to the station, the other said he would not if he were in Elmore's place. The hail came against the windows with renewed fury about that time. Finally it was left with the cashier to decide whether they go or stay at home. He, who may be considered a trifle impetuous and always terribly anxious to go anywhere when once he gets his mind made up, decided. Andrew Jackson like, to take the responsibility and go whend. As they set out for the railroad depot leading a dog, carrying gun cases and other baggage, their friends were inclined to smile at their courage.

Upon boarding the train, Hare Belle, the dog, was

a pair of immense fur gloves
"Something of a storm," said the cashier.
"Well, Bushy Hill is as good as any other place in a storm," responds Elmore.
"Might be termed a blizzard," ventured the cashier.
"I should think so," says Elmore. "I should not have been here if I should think so," says Elmore. "I should not have been here if I had not written you that I would."

It is necessary to say the above epistle had not been received by those for whom intended.
The party soon loaded themselves and their belongings into the sleigh, and after one stop for a supply of meat for the kennel, set out for Bushy Hill. A lad from a Massachusetts State charitable institution was taken aboard at Granby depot. He was stowed, with his carpet bag, between the cargo in the back part of the sleigh.

It was dark when Bushy Hill was reached and the snow flying in all directions. All hands fell to unloading, guns, meat, bags, dog, boy, etc. No sooner was the delegate from the State primary school on the ground, than he sprawled over a mound in front of the house and plunged headlong into the snow, slinging his grip-sack in one direction, his hatin another and filling both sleeves full of snow. He did not say much, at least nothing was heard, for by the rules of the institution from which he came, speaking above a whisper is not allowed. After the demoralized youth had gathered himself, the procession moved toward the house. Supper was soon at hand, and a ceaseless flow of talk followed until the time arrived for feeding the dogs. The guests then with Mr. Elmore sallied forth to go the rounds of tac kennel.

The first pen visited contained Mr. Elmore's pair of pointers. Gay by Snapshot and Grace by Sensation. They were looking finely and showed plenty of life. The next enclosure contained a handsome lemon and white six months old bitch pup by Gay and Grace that is sold to be delivered next fall after some handling; a couple of Gordon setter setter pups, a gift from Dr. Rehwinkle; also several beagles, among them, little from Dr. Rehwink

country.

As the feeders and spectators left the dogs and returned to

country.

As the feeders and spectators left the dogs and returned to the house, they noticed that the last snow which had fallen was light and feathery, and that the stars were beginning to show themselves through the thin breaking clouds, all of which augured well for the morrow's sport.

At an early hour on the morning of the 22d, the anniversary of the birth of him who was first in war, first in peace and first in the hearts of his countrymen, our hunters were up and about. Dogs were cared for, horse and sleigh made ready and lunch prepared. The place decided upon for the day's hunt was known as Wild Cat Mountain, and as the depth of snow was unknown in that locality, a pair of foxhounds—froop and Meta—and a pair of beagles—bucy and Bess—were taken. The young gentleman heretofore mentioned as halling from Massachusetts and spreading himself over the mound, did not necompany the hunting party.

On the way to the mountain, several persons noticing the four dogs in the sleigh, asked if the party was after foxes, one wanted to engage a bear when they returned. All were told that white rabbits were the game for that day's business. When the field was reached the snow was not so deep but what the beagles could work as well as the hounds. All four were cast off, and away they went circling the whole region.

Not long after Lucy gave tongue and the whole pack followed her example, as they crowded the hare to her lively pace. The hunters string out and took places where there was a probability of a chance for a shot. The cashier got the first sight and let go one harrel of his Parker without effect, ditto the other barrel. Mr. Elmore's ten-pound, 10-gauge gun was ready for action a few rods away, but he saved his live drachms of powder that time, as Hawley pointed his little Bonehill at the approaching hare, and sent an ounce of No. 6 where it would do the most good. Score one for the senior partner.

Bonelhill at the approaching hare, and sent an ounce of No. 6 where it would do the most good. Score one for the senior partner.

The dogs came in, received whe, for their labor, and started out again. The base of operations was moved a little to the south near a swamp, where the beagles soon got up another white hare, which was run for an hour or more without any chance for shots. As the hounds and beagles went out of charing, the cashier took occasion to sample his lunch which he was enjoying with considerable relish, when all at once the dogs opened with full cry close upon him. He crammed his sandwich into his pocket and ran a short distance below to a spot where he thought the chase would cross a cart path, but the hare got there first and his snap shot did not stop him. "What are you firing at?" inquires the senior partner.

"Firing salutes in honor of the day," responds the cashier. This willy courser gave the dogs a long chase afterward and finally got away. Later in the day the third one was started, and that one proved a stayer, for the dogs had business until the party decided to start for home, and they were with difficulty gotten off the trail and secured.

When it is considered that the white rabbit or great northern hare does not take to earth or wall, and will run nearly as long as a fox, it will be seen that when it takes the entire day to run three, the securing of one is a fair proportion, but if the cashier's salutes had been a little more in the right direction, the lunters might have taken a majority of the game.

The sportsmen returned to the farmer's barn, where their team was quartered. A small boy appeared on the seen that fell in love with the beagles. He inquired the price of Lucy and Bess, and not getting a satisfactory reply, he finally offered to trade a brace of cats for them, but his offer was not accepted. The ride homeward was pleasant, the sleighing being excellent. Three of the dogs curled down in the straw in the sleigh and went to sleep, but Meta trotted along behind as fr

fered to trade a brace of 'cats for them,' but his offer was not accepted. The ride homeward was pleasant, the sleighing being excellent. Three of the dogs curled down in the straw in the sleigh and went to sleep, but Meta trotted along behind as fresh as a daisy.

The evening was spent in cleaning guns, discussing beagles and nodding before the fire.

Thursday morning, the 23d, after again looking over the dogs, it was decided to try the gray rabbits near the house. Lucy and Bess were again brought out, together with Flute. Lucy and Bess were again brought out, together with Flute. The first rabbit that was started, unfortunately for itself, ran in range of Mr. Elmore's heavy ten-bore and was tumbled over. After considerable hunting the beagles got up another which ran in close proximity to Hawley, who was reclining against a rail fence in such a position that he could not make a shot. He fired both barrels, but was only rewarded by a tuft of hair. Backward toward the house the party next took their way. One more rabbit was started from a brush heap that has occasion to thank its lucky stars that one of the men tried to shoot without cocking his gun. As it was, the gun was at last fired, but like the sonior partner's shot, only a tuft instead of a whole "har" was secured.

After dinner the two started for the railway station. Time was short and the party anxious to make the connection, honce the urging of "Cub" to his best paces; but the feat was accomplished with two minutes left for buying tickets, answering the numerous questions of bystandors, and lighting up a Connecticut Valley seed leaf regalia. When Hawley & Co. got settled in the car, they ran over the events of the past few days, and voted that they had what may be considered more than a good time, and that Bushy Hill and its dwellers were altogether pleasant.

GORDON DOGS.

GORDON DOGS.

Editor Forest and Stream;
As a lover of the Gordon I am glad to see such well-known names as Messrs. Niven and Malcolm calling for a new standard for this dog.

It seems to me that the great trouble has been the bench show. We all of us remember how such great calves as Kupert, Grouse, and even Bob, continued to carry all before them, while the lighter and cleaner built dogs were invariably turned down; indeed, the first judge who dared to break away from this old-fogy notion in any degree whatever was Mr. Wise, last year, in New York, and yet he scored Bob.

No, Mr. Editor; give the Gordons a Gordon judge, just at the others have. Let such men as have written to your paper serve as judges, and a standard will be set at once which will convince everyone that this dog is neither clumsy nor beefy, but a clear, clean, all-day dog, with qualities equaled by few and surpassed by none.

Let New York lead in this matter in April.

Let New York lead in this matter in April.

ISAAO NORRIS,

A DOUBLE FOX CHASE.—Macon, Ga., March S, 1882.—I send you herewith a scrap from our daily paper—notice of a "fox hunt." It is, in my judgment a very rare occurrence. A Mr. Haskill, of an adjoining county, caught two crows at one time in a small trap, such as is usually set for quail. Isn't this also rare? Our season is about over, and was one of the poorest in our experience as to game and sport. The fox hunt report is as follows: Yesterday the old Macon fox hunter, Emanuel Hunt, accomplished a feat seldom done in fox hunting—that of running two foxes together and capturing them. Emanuel has been engaged in hunting foxes, opossums and coons for nine years. He has a pack of fourteen hounds which he is ready to match against any other pack in the South. It is composed of the July, Red Ball and Birdsong breeds and one genuine English fox-hunting hound, which he declares will clean up anything that gets before him. Yesterday morning Emanuel gathered a crowd of men and, taking his hounds, started out on a big hunt for foxes. They jumped two, and they sprang forward together and kept so for about three hours. The race was exciting, the dogs keeping up with the procession, Emanuel drinking in the music of the far-away velping. When about ten miles from the starting point, and in the vicinity of Bolingbroke, the foxes parted company, and then the dogs piled in on one of them. Some of the hounds who had followed the other fox heard the squall of the captured and came up, but when he was killed the English dog. Jake, led off after the other, followed by ten of the hounds. They soon closed in on him, and the race was over. The skins were brought into town and exhibited as trophics of the double capture. Emanuel is a drayman for Geo. S. Obear, and when the takes a notion to go hunting puts some one on his dray and takes to the woods. During the fall he hunts possums and coons, and in this way makes a living. He is proud of his dogs, and to go hunting buts some one

BROOKLYN.—Mr. Ralph Chaffee gave a reception at his residence, 134 St. Felix street, on the 16th inst. to the members of the Young Men's Kennel and Gun Club. Mr. Chaffee was in the best of spirits and succeeded in inspiring his guests to a degree most extravagantly youthful. The supper, which was the main feature of the reception, was very "necherche," prepared to the most appetizing manner, and well calculated to satiate even Epicurus himself. It was bountiful and the boys did as full service as though they had just returned from a long tramp through hill and vale. After supper numerous jokes were cracked and served to keep the spirits flowing till the club was called to order by the president, when the following

officers were elected for the ensuing year: President, A. Porter; Vice-President, Edw. Russell; Treasurer, Bassett Keep; Secretary, Geo. Lewis. After thanking Mr. Chaffee for his liberal hospitality and bidding him a hearty good-by, as he is about to leave our city, the revellers returned to their respective homes to wonder if they ever had so good a time.—Geo. S. Lewis, Secretary.

THE ESSEX COUNTY HUNT,—The spring meets for 1882 are as follows: Saturday, March 25, 4:30 P. M., Bloomfield; Wednesday, March 29, 4:30 P. M., Watsessing; Saturday, April 1, 4:30 P. M., St. Cloud; Wednesday, April 5, 4:30 P. M., main entrance, Llewellyn Park; Saturday, April 8, 4:30 P. M., Verona; Wednesday, April 12, 4:30 P. M., Mountain House, Montclair.—J. H. KNAPP, Master.

"TRAINING vs. BREAKING."—This series of papers, published in these columns, will be issued in book form early in April. To the ten chapters on training Mr. Hammond has added one on rearin puppies, and also two pleasant sketches of sport in the field. The book will contain about one hundred pages, and will be bound in cloth. Price, postpaid, one dollar.

FOSTER MOTHER WANTED.—Wanted to purchase or hire, a healthy bitch of any suitable breed to act as foster mother for part of a litter of English setter puppies, due April 3. Address, D., 47 West Forty-second street, New York.

KENNEL NOTES.

We wish to impress upon the minds of those who send us items for our Kennel Notes, that to avoid mistakes all names should be written in PRINT LETTERS, as we find it very easy to make mistakes where this is not done. We also would like to be informed whether the animal is male or female, and to know the date of birth and the breed to which it belongs, whether pointer, sotter or other. A careful study of the notes in this number of the paper will show just what is wanted.

[INFORMATION WANTED.]

Can any of our readers give us the pedigree of Belle, a setter bitch resented to the late Mr. Charles Gassert, of Brooklyn, N. Y.?

SHIPS.

THERE is among Americans a great deal of common-sense, sound "horse sense," and no observer of the times will doubt that the curtor is in consequence destinated to constitute a very large fraction of united in consequence destinated to constitute a very large fraction of prefer to go sailing in dangerous "slobs" rather than in safe ships unless the slabs offer some especial advantage not to be obtained in the safe boat, especially if the latter may claim, in addition, greater accommodations, cooler cabins, singger and better arranged sails. It has hitherto been supposed that light draft and the great beam in duced by it were innispensable to speed, and that deep boats, what ever their other chains night be, were of necessity slow. Hence the cramped headroom, encumbering deel-houses, and towering spars and big sails. Forest and start and the great beam in duced by its belief, but in view of conservative perjodices for the existing order of things and patriotic aversion to learning from other nations, little headway had been under among the masses. Now that the Maage has shown the light-draft faith to be theory unsupported by the continuous of the continuous decided in their favor, the main objection to adopting safe, able, roomy, cool, handy models and rigs has disappeared. We, at least, give Americans credit for common-sense enough to drop the old love shorn of its attractions, and to consort with the new slower of the arrange of the two. The transfer of popular favor from the Monayus, Sophius, Eras, and their whole for to boats of more credition of the deep loads and the safe should be added in their favor, the main objection to safety favor from the Monayus, Sophius, Eras, and their whole for to boats of more creditions of the two. The transfer of popular favor from the Monayus, Sophius, Eras, and their whole for to boats of more creditions of the creditions of the transfer of response of the credit south flay, Albemarle Sound, and there is in minety-nine cases out of its attractions, and to consort with the

We are indebied to the New York Herald for the following particulars of the two largest now building by Piepgras at Greenpoint:

Mr. Henry Piepgras has commenced the construction of a large cutter yacht at his yard, foot of Franklin street, Greenpoint, L. L., for Mr. Archibald Rogers, of the Seawanhaka Chub, from lines furnished by Messrs. Harvey & Pryer, of London. She will be build and cquipped in the best possible manner, the stern to be elliptical and the hull to be sheathed with copper. Her dimensions will be as follows:

Length on deck. Length on load water line

mainter by Messis. Intrivey & Fryer, of London. She will be eblighted and the best possible manner, the stem to be elliptical and the best possible manner, the stem to be elliptical and the best by the stem of the best possible manner, the stem to be elliptical and the best by the stem of the same material. The best is of this white oak and the stem of the same material while at the forefoot is will be moulded him. The stem of the same material while at the forefoot is will be moulded him. The stem of the same material while at the forefoot is will be moulded him. The stem of the same material while as the forefoot is will be stem of the same material while as the forefoot is will be stem of the same material while as the forefoot is will be stem of the same material while as the forefoot is will be stem of the same material while as the forefoot is will be stem of the same material while as the forefoot is will be stem of the same material while case, sided 7½ in. at the head and tapered to siding of the dead and sight at the heed, while its moulded dimensions will be sin. at the downtal plates holed through with coppen one keep with grant and and the same of the same and and sight at the heed, with the same of the same stem of the same and and the same and same and the s

and aft, the inner skin to be of red cedar or teak, throughout lintheks, and tree-nailed to the frames and bent timbers. The outer light, thick when finished, forming a flush wake, the centre plank of which will be 2½nt. Thick and the garboard strake 3½nt, thick in the centre. The outside plank to consist of American elm from the keel to 2ft. 2in. below the load water line; American oak, stak or red cedar wake of channels and tackle plates, and red cedar for fore and aft hoods, all to be well secured to the frames; bent timbers and inner skin, with patent dump boats for the frames and copper bolts driven through and clinched on rings for the bent timbers and inner skin, with patent dump boats for the frames; then timbers and inner skin, with patent dump boats for the frames; bent timbers and inner skin, with patent dump boats for the frames; bent timbers and inner skin, with the control of the frames and copper bolts driven through and clinched on rings of the same wider, where the planking does not exceed bin, in, width while the number will be hereafted where the planks are wider, we enging a distance apart of about \$2\chin\$ in a vertical line; all butts and the state of the same metal. A sister keelson, 5 by 5\chin, tapering to 4 by 3\chin, at the after end and 33\chin, by 4\chin, and the property of the same metal. A sister keelson, 5 by 5\chin, tapering to 4 by 3\chin, at the after end, and 3\chin, by 4\chin, at the force end, will be of American oak or teak, in one length, extending 6tf, before the mast and 6tf, abaft the tackle lower deek beams, and continued through and aft with red cedar or red pine of the same scantiling as the oak or teak, tapering to 3\chin, and the six and silver the same scantiling as the oak or teak, tapering to 3\chin, and the six and silver the same scantiling as the oak or teak, the pine or cedar running past the but end of the oak for at least two sets of frames. Will be for American and \$\chin, \text{sit} \text{ prine} \text{ prine} \text{ prine} \text{ prine} \text{ prine}

WEIGHED AND FOUND WANTING.

WEIGHED AND FOUND WANTING.

That all we have written against "mean length" and in favor of a necasurement by size is sound to the core, has recently found a most pertinent illustration in the East River Yacht Chib. Their rule has hitherto been to measure by mean length. Recently a cabin yacht with a square stern, similar to the Henry Ward Beecher of the Atlantic Y. C., made her appearance in the E. R. fieet. The members were not slow in discovering the fallage of mean length, for though the square sterned yacht had no greater "mean length" than another several feet shorter on the load line, but supplied with an overhang, estern without an allowance. Now, wherein lay the point of their objection?

the members failed to see the equity in same are separated to their objection?

In the fact that, though of the same "mean length," the square sterned yacht was a larger boat than the rest. Almost without knowing or intending it, a confession of the fallacy of the mean length non-sense was drawn unanimously from the club by a single practical illustration with which they were brought face to face. The club denied their former fact in a twinking. They saw ut a glance that is soon truth for practical purposes, the bottom dropped out of the whole business.

So, to include the real size of yachts more nearly, they resolved upon adopting load line length for the future, "because it more correctly estimated the size of the boats." This is a virtual admission of all we have charged in these columns against measuring by length, that, though fair enough in boats of strictly the same type and style, the rule possesses no equity where applied to boats of different types or styles, and inasmuch as it discriminates against all but one type without any show of reason or justice, ordinary intelligence seems to determine setting aside what has been weighed and been found wanting.

The Larchment Y. C. in adopting the report of their committee.

ng actual size and not fictifious size, would have rendered their report an impossibility.

The immediate effect of this and all other length rules, is the control in the immediate effect of this and all other length rules, is the control in the immediate effect of this and all other length rules, is the control in the immediate effect of the same to have the same the same that all aft, or when such a beat is haunched on one own shores, the washowls will receive a threasing to windward videl will probably do more to awaken the Lauchmont Y. C. and others to the absurdity and superficially of the recent "investigation," which has unfortunately filled the property of the same to have the same that the same that have the same the same that
SMALL YACHT STOVES.

SMÁLL YACHT STOVES.

Elitor Forest and Stream:

I have been much interested in the several communications in regard to proper cooling stovers for small yachts, as I have personally experienced the objections to any of the coal-oil articles now in use. The dirt, smoke, smell and danger are too evident. But what better substitute has yet been offered? It is evident from Mr. Danforth is letter to Forest and Stream, and the state of t

and curr up missing at breakfast—die, like Villikins, from "cold pizen,"

Any adaptation of the charcoal furnace to the use of yachts' forecastles must, as a sine qua non, involve the use of a pipe to carry off and outside the products of combustion, which cannot be called smoke, as they are colorless. To be sure the pipe could be small and unobtrasive, but pipe there must be. Can you not, the faller, get and galvanized, if possible so as to stand our damp little forestables—with a suitable pipe and the necessary culinary fixtures? It would start with so many good traits—safety, cleanlines and spleadid cooking qualities—that I think it would be progress in the right direction. You know, Mr. Editor, how much we are suffering until the ideal has been found; so I pray you will gontinue your good help until our relief comes in the shape of a stove, safe, clean, strong, easily lighted, free from smoke and smell and with good cooking qualities.

Saucepax.

ONE-GUN STARTS.

WE are glad to note the increasing favor with which one-gun starts are being received. It is thue the boy's play of strong-line across like a flock of skeep pare way to something more manly and wide-awake. Seamanish among both canticurs and professional wide-awake Seamanish among both canticurs and professional center crews up to the standard exhibited aboard the Madge. Suart-one-gun starts would do much to make live men out of the skeepy heads now at the wheel of most racing crafts. Commodore Lee broached the subject at the last meeting of the Seawaniaka Yacht Club, and for this he has the thanks of all who wish to see yachting here brought ont of the leading strings imposed by children and barnacle custom. Those who white-set the intensely exciting 'get away' of a cry pap served out to the skulfull in the skape of "ten minutes in-creval" to stop and think or to eath a fulter to begin with. Smart men want smart starts. Sionehy fellows who never saw a thorough-related in their lives, don't know what racing really is or what it can be made, are those who show such itender regards for the last poor devil who comith't read his watch ciose enough to lit for the gun and sallors.

The same the same start aget left will sharpen their wils for the second occasion.

THAT TRACT.

FOUR months ago, several gentlemen, desirous of converting their brethren to better ways, and removing from their club the stigma of being the only cabin yacht club in New York still, adhering to the simpleton's method of measuring by "mean length," did us the honor to compile a "tract" from our articles on the subject. This they distributed among the club, with what cleer transits to be seen in the future. Recently there appeared in a contemporary over tract. This strong is the subject of the subject tract of the subject of the subject tract of the subject
"REAL" YACHTING.

"REAL" YACHTING.

"IS Wanderer schooner, E. D. Morgau, Jr., N. Y. Y. C., has arrived I. safely at Bernauda, and will proceed to the Mediterranean. The Norsenian schooner, Ogden Goelet, N. Y. Y. C., is cruising in Southern waters. The Nokomis schooner, W. W. Stewart, S. Y. C., and the Oriva entire, Commodore Lee, S. Y. C., will soon put to sea for warmer climes. This is a bit of "reel" yachting which will knock slab holbies out of our yachtsmen at a stroke. Fancy Fanny, or even Mischlef undertaking to accompany the rest on a voyage with a fair chance of capsizing, tossing sticks over the side, straining or doubling up altogether! We all recollect the fazie Vision and Wats made when they got it a trille nasty outside in a would-be match some years ago of the Blook. Yet there are persons so deliciously green as to deem our light drafts "the finest sea boats in the world sir, yes, sir."

THE TIMES.—Step by step progressive ideas are making their way. Antipathy to depth in yachts has been overcome. Keels are more than a fair half of the iteet. Few yachts are built any more without ballet outside. All here housing topmants. Many have doubt ballet outside. All here housing topmants. Many have doubt ballet outside. All here housing topmants. Many have doubt ballet outside. All here housing topmants. Many have doubt ballet outside. All here housing topmants. Many have doubt ballet outside. All here housing topmants. Many have doubt ballet outside. All here housing topmants. Many have doubt ballet outside. All here housing topmants. Many have doubt waters. Plain to exceed the property and the second outside are receiving more attention. Yachts are venturing to sea. Displacement is growing larger year by year. Square-headed topsails are appearing both here and in Boston waters. Freeboard is receiving just recognition. Mainsails loose on the foot are being essayed has lead the way, and others are now tardly following, driven into has lead the way, and others are now tardly following, driven into we have all diskingly the force of experience, the results of which we have all diskingly the force of experience, and selection we have all diskingly the force of experience, and the second we have all diskingly the force of experience, and selection we have all diskingly the force of experience, and all the day and others are now tardly following and the feat and all the day and others are now target of the fines. What was ridiculed as a craze of FOREST AND STREAM a year or two ago is now looked upon as settled beyond controversy. It is the old school who thought we could sail round cutters "as though they were anchored," who still question the "good authority" it is the old school who thought we could sail round cutters "as though they were anchored," who still question the "good authority" this four and time is bearing so ut, ever where we differed most widely with the ancient ways of thinking we found so d

that due is bearing as our even where we interest most widely with the encient ways of thinking we found so deeply rooted when a few years ago the heliu passed into our hands.

FANITA.—Under her new owner, his fast sloop is to be improved in several respects. She has shed her bargey single jib and will show the state of the property
a certain class of old logios kick gaginst everytain experience more involentately than ever. Forest and Strakan has neither patience nor sympathy with such.

THE EVA.—Editor Forest and Strakan has neither patience nor sympathy with such.

THE EVA.—Editor Forest and stream; Some years are when the New York Yacht Club left Glen Cove for New London, the wind came cast and staid there "with the nine lives of a cat, and the staying power of a woman in a millinery store." As afternoon came on and topmasts were housed, and some of the boats began to long for a harbor, the Vindex had housed heretopmast, and was down to the deadlights. But the guests were cating their dinner as usual. There was a nice breeze for her, and everyone was in high glee. At this very as the owner said afterward nor foresail, and at last had to run backfore it could get out, along came another one, and we had to give it.

As the owner said afterward nor foresail, and at last had to run backfore it could get out, along came another one, and we had to give it.

But we had not be the dead powerful boats, and Dra was one of the most powerful of her kind; but, poor thing, he has played Mohawk at last, and gone to the bottom. For a smooth-water boat she was unrivalled. Think of the day when she beat the Magic, how she did go. Now for the moral. Do not sagrifice all for speed in smooth water, but put in less beam, and more depth.—Viritax.

BULK WAYTED.—In "Hunt's Magazine," for March, we find the following editoria But though the new Y. R. A. rule has been established to be a some plan devised whereby the depth of a veen called the considered as a factor in the calculation of size, and therefore of stability and speed, and should undoubtedly be considered as a factor in the calculation of measurement. Until this looked-for change takes place we accept with hankfulness this improvement upon the old system and this small instalment of future favors.

SEE-SAW.—First it was mean length, then it was one-third overhang, then it dwindled down to one-fifth o

ished forever.

HORSE SENSE.—The New York Herald is never ancient in bit ideas. It lives in the day, hence its recent editorial indorsement of the new cutters building in directipoint. Yes, there will be a whole feet of them before long.

YAWLS.—A continuation of the series on yawls, with illustrations of sabel, James, and Caprice, is left over till next week, with numerous letters from the public, which will be published at earliest opportunity.

Rifle and Tray Shooting.

FOREST AND STREAM TOURNAMENT

FOREST AND STREAM TOURNAMENT FOR THE SHORT-HANGE GHAMMONSHIP OF 1882.

The above tournament will be shot at the Zettler Rife Gallery, 207 Bovery, commencing Monday evening, March 37, at 8 o'clock. A meeting of the captains, to draw for shooting positions and to make final arrangements, will be held at the Zettler Gallery, on Saturday evening, March 23, at 8 o'clock.

MILITARY REVOLVER USE.

MILITARY REVOLVER USE.

THE importance of the revolver as a military arm is becoming more appreciated every day in European military circles, and several large contracts have recently been made for the supply of the convenient little weapons. An officer would be little better than a foot weapons and on the weapons which we will not one of these indispensable weapons and or weapons. An officer would be little better than a foot weapons and or weapons and weapons and weapons and or weapons and the latter of the latter of the supply into action with nothing but his swood to defend himself. It has been proposed several times to establish some matches for pistol shooting at Creedmoor and to make the conditions such as to encourage the use of a service ann, one which is heavy enough to do good work, and one which is so built as to be loaded readily under the various circumstances which may surround an officer mounted or atoot. It does not appear that the officers of the militia have any holster pistols, forecratually no one ever heard of the use of any, but the officers of the regular army have such arms and any practice individual officer. This is not as it should be. The arms have been issued at much expense to the officers, but beyond occasional stories of wonderful shots and chance hits there are no returns or records in connection with them. The arms seem to be capable of good work, for when they fall into the hands of the bush-whackers they make very formidable arms; but what is needed is a scries of figures showing just what these heavy single-handed weapons are capable of. We have looked in vain for intelligible accounts of what work these revolvers for but their principal function seems to be the filling of a line of the late of the weapons are capable of the late of the l

cow and Toula contractors for 100,000, to be issued to the artillery and Caurcasian Cassacks. The Ontario Rillo Association are therefore to be commended for heir efforts to reader the volunteers, especially the commended for heir efforts to reader the volunteers, especially the commended for heir efforts to reader the volunteers, especially all the readers of the connection with this matter which must be definitely settled on an early date so as to give those who wish to enter for the match an opportunity of practicing, and these area A minute description of the weapon to be used, which shall include its weight, calline, length of long burnel, nohme of cartridge, whether "long" or "short," and whether rim or central fire, also the "pull oft."

7	BOSTON, March 18.—(conside	nng i	the very disagreeable w	eather	con-

Bosrox, March 18.—Considering the very disagreeable weather of diffions that existed there was a goodly number of gentlemen pres at Walnut Hill. The sun was obscured by clouds, producing a vacoul light, but the wind blow from the northerst, celd, disagreen and very crutic, despite which, however. Mr. Bixby succeeded making a clean score of ten bink, thereby qualifing the score in by Mr. Adams the week previous.

Creating of the product of the bink of the production of the bink of the previous of the bink

GARDNER, Mass, March 15.—The last weekly meeting of the Gardner Ciub at Hackmatack Range was well attended. Mr. A. Mathews made an unusually good record. The conditions were the same as on former occasions, distance 25 yards, off-hand, using maching and Creedmoor targets combined. The score will tell the story of the work done:

*Handicap.

STRING*IELD, MASS.—The Rod and Gun Club of Springfield, Mass., have organized a team for glass-hall practice, and have creeted a commodious house upon their grounds, which is fitted with every requisite for the comfort and convenience of the shooters. On the north side of the bullting the traps are arranged in a pit some 5th deep, which not only conceals them from the view of the shooter, but deep, which not only conceals them from the view of the shooter, but deep, which not only conceals them from the view of the shooter, but haustive trial, the club have selected the Hoblen trap, as requiring a greater degree of skill to make a good score with than any that they have tried. They meet once or twice a week, and we shall expect to record some good scores after they have had a little practice. The following season matches have been arranged and will no doubt be sharply contested, as many of the members are capital shots. The first, or "Good-fellowship" match, is at 340 bulls, commencing April 1, 20 at each weekly meeting, highest scores to win. The first prize is a 12-gaugo Colt club gun, presented by Mr. E. S. Bradford, The

second prize is a silver-mounted, 33-cal, revolver, presented by Mr. M. B. L. Bradford. The third prize is a sole-leather gun-case and jointed cleaning rod, presented by Mr. L. H. Mayott. The second is a handle prize are \$10 to first, \$7.50 to second, \$5 to third, and \$2.60 to ourth. The third match entitles the one who makes the highest score to the exclusive right to sit in and use, at the next weekly meeting, an easy chair, presented for the purpose by Mr. E. T. Houghton. That the cube will have a very enjoyable season we are well assured, and expect to be called upon to record some remarkable scores. There will probably be quite a number of friendly contests with other clubs during the summer, as there are many well-known associations in their vicinity, and we shall confidently look to see the colors of the Spring-field boys well to the front.

LYNN, Mass., March 17, 1882.—The Lynn Central held their regular

field boys well to the front.

LYNN, Mass, March 17, 1882.—The Lynn Central held their regular shoot the 14th. They had a gale of wind to contend against, which made it almost impossible to make good scores. There was a very good attendance, considering the unfavorable weather. The first on the list was the team shoot of five men in the clay pigeon match. After that was three sweeps with clay glass balls, five each. The following scores were the result:

Pigeons	Glass Balls
	4 Moore
	13 Webster
	13 Schaefer
Moore	18 George
Randall	12 Johnson
	2 Thomas
Thomas	2 Hatch18

will be represented.

SHADY SIDE GUN CLUB.—A meeting of gentlemen engaged at a pigeon match held at Shady Lake Farm, Corona, L. I., March 10, was organized by forming the Shady Lake Gun Club, with the following officers; President, Geo. Ott, J.; Vice-President, Fredl. Opperman, Jr.; Secretary, Geo. A. Lambrecht; Treasurer, Jacob Carevein. At the match, Opperman silled 9 out of 10 pigeons; Geo. Jantzer, also, Among the members are such crack shots as Herman Clausen, Henry Schwallenburg, Peter Harringer, Jacob Winter, Ed. Arnold, Peter Stocky, Phil Rochler.

THE CLAY PIGEONS.—Capt. A. H. Bogardus has been testing the Ligowsky clay pigeons, and writes to the Forest and Steram that he considers them wastly superior to the glass balls. He thinks that the clay pigeons form an excellent-substitute for live birds, and gives it as his opinion that with five or six traps, with use of one barrel and Byds. rise, the shooting would be as hard as live bird shooting. He says:

clay pigeons form an excellent-substitute for live birds, and gives it as his opinion that with five or six traps, with use of one barrel and flyds, tise, the shooting would be as hard as live bird shooting. He says:

"I am now preparing 'Bogardus' new continued rules for Clay Pigeon Trap-Shooting,' which I will send you for publication shortly. I am having made thirty medals in the shape of a watch charm for distribution to clubs. The medals are to be shot for once a month for twelve months by the members of the clubs to whom each is given at least ten members of club to shoot at each match at fifty Ligowsky clay pigeons each man, and the shoot at each match at fifty Ligowsky clay pigeons each man, and the says that the standard of the sta

EVERY SPORTSMAN'S LIBRARY should contain the books which are advertised elsewhere as published by the Forest and Stream Publishing Company.

N. A. K. C. STUD BOOK.—Gentlemen who wish to register their dogs in the second volume of the stud book, should bear in mind that the entries will positively close April 1. See advertisement.

Answers to Correspondents.

street, New York.

R. S. W., Elizabeth, N. J.—You can procure the powder from any of the New York dealers.

R. S. W., Eduzabeth, N. J.—100 can proceed on potential of the New York dealers.

J. B., Thomsonville, Ct.—For a shot gun is a 23-inch barrel as good as a 30-inch barrel? Ans. Yes.

W. L. M., Lynn, Mass.—There is no book on the subject. We will give directions in an early issue.

J. H. W., Corning, N. Y.—Mr. Steele's new book, "Paddle and Portage," has not yet been published.

Vernavan S. Ferra, Taylor county, Wis.—We do not know the bounty. Write to the Governor of the Territory.

Merwin, Geneva, N. R.—For a rubber cushion write to the firms dealing in rubber goods. See their cards in our advertising columns. K. B. R., Amherst, Nova Scotia.—The Allen duck caller is a good thing. It is not a "genuine duck call," but is the next thing to the real article.

real article.

W. T. N., Cincinnati, O.—You will probably find a good summer camping place in the Adirondack region, or perhaps somowhere in the St. Lawrence River region.

A CAMPER, Franklin, N. Y.—We know of no waterproof ground sleeping blanket better than a rubber one. There is nothing else that will effectually resist the dampness.

W. H. D., Baltimore Md.—There is no such firm in Birmingham known to us. The name is, we believe, a trade name used by the American agents. The \$80 gun named is a fair, safe arm.

American agents. The \$80 gun named is a fair, safe arm.

J. E. H., Gravis Mills, Mo.—I put lung un into a vise to whe it out, and one of the barrels gave in. Do you think I should pay for a new one, or should the maker supply it? Ans. You should pay for it.

E. T. B., South Bend, Ark.—I. What kind of feed is best for young pupples just weaned? 2. Is butter-milk good for them? Ans. I. See article on raising pupples in Forest And Stream of Nov. 3. 2 Yes.

G. A. W., New Orleans, La.—A gentleman in this city is now preparing a colored plate giving correct delineations of the different tites. This will suit your purposes. Its publication will be announced in due time.

paring a colored plate giving correct delineations of 'the different files. This will suit your purposes. Its publication will be announced in due time.

E. C. P., Hampshire, Ill.—The Boston firm mentioned is not reliable. We have refused their advertisement. Of the other firms we know nothing. Should not advise you to purchase the rifle, as there are better ones in the market.

L. T. M.—At No. 29 East Eighth street, this city, Dec. 20, 1870, Capt. Bogardus shot at 5,556 glass halls sprung from a Bogardus trap at Egards distance. He broke 5,550 of them. Time of shooting was 7 and 5 glasses, and the street, the street of the street of the control of the street of the

ritle.

Eis House, Andover, Mass. Is the coach dog a distinct breed cross. Ans. More than three hundred years ago a dog greesenbling the coach dog was brought from India to Spain. The authorities agree that the present breed is from this dog, probable with the pointer.

crossed with the pointer.

Anxious Ingoirrer, Fall River, Mass.—My setter dog has got over the distemper, but is very week; can hardly walk, shivers, and does not desire to move at all. He needs some kind of strengthening prescription. What shall I do for him? Ans. Give him a tablespoonful of cold line that one grain of sulphate of iron twice a day, and

occasionally a teaspoonful of port wine. Let him remain quiet keep him in a warm, dry place, where he will have plenty of fresh air.

fresh air.

E. T. P., Washington, D. C.—If the barrels were pronounced defective by the gunsmith they should have been returned before they were used. If you accepted the barrels and used them, you cannot recover for them, now that they have burst. The firm is square-dealing, and we think you will find them disposed to do whatever is right.

NEW "KATHLEEN MAVOURNEEN."

NEW "KATHLEEIN MAYOURNEEN, the gray dawn is breaking, The birds in the buckwheat are whistling "Bob White," The maids in the kitchen my sandwich are making—Oh, don't keep me waiting—It's hardly polito.

It isn't the day to be taking a nap on; The yellow leaves whirl in the pale, slanting sun:
And see, I have put my corduroy cap on,
And am snapping the locks of my breech-loading guu.

All day we will roam through the mild autumn weather, And find in the gloaming the bouny brown broads Of dappled-wing quail, as they huddle together;
For I know that my beauty delights in the woods.

At the whirr of a partridge you'll half lose your senses, And when the moon rises, hungry and wan, We'll eat the raw turnip on ancient stone fences— At least, I will eat it and you may look on.

You'll prove yourself worthy the bright silver whistle You took at the show; but I can't understand Why you don't come a-dancing, like down of the thistle, And leaping around me and licking my hand

Come out of your kennel! You'll find that you'd better, Or the whip in my pocket will cause you to wail; Oh, Kathleen Mavourneen my red Irish setter, I'm off for the uplands to knock down the quail.

THE BISBY CLUB.-The fourth annual report of the Trustees of the Bisby Club for 1882, is before us. The club is situated on the Bisby lakes, Herkimer county, in the State of New York. The fishing has not been as good the past year as previously, the cause of which is unknown. The club has continued its operation in fishculture with success, and last summer the brook trout could be seen jumping every evening and the young fish might be seen about the shores, while in the inlet they fairly swarmed. The large fish, how ever, seemed to prefer the natural food of the lake, and it was on his account that the catch was poor. In August a rainbow trout, from the stock deposited in June 1879, was taken, which weighed one pound. After the ice disappeared in Woodhull lake several land-locked salmon were taken. The planting of this fish was accidental, a lot intended for Bisby in 1879 became weak, and as the weather was hot they turned into Woodhull, without much expectation of ever hearing from them again. Deer have been plenty on the grounds of the club. The officers are: R. U. Sherman, President; C. Roby and W. W. Snow, Vice-Presidents; Henry H. Thompson, Secretary; Sanford F. Sherman; Treasurer.

SICILY ISLAND FOR SALE.—We call special attention to the notice of Sicily Island in the Susquehanna River at Lan-caster county, Pa. It is a fine location for a club, and will, we presume, find ready sale.

Clay Pigeon Match for \$500.

Clay Pigeon Match for \$500.

Capt. Bogardus, champion wing shot of the world, has made a bot with the Ligowsky Clay Pigeon Company, of Cincinnati, of \$290 a side, that he can break \$50 clay Pigeons in thirty minutes, loading his own guns, one bird to be spring at a time from six or more timps three yards apart. The Clay Pigeon Company furnishes the birds, traps and firing when Capt. Bogardus is ready to shoot, or lose the match, the birds to be thrown fair, from three to ten feet above the ground, and at least ten yards distance from the trap.

Preceding the above, at 1 p. m. sharp, there will be two sweepstakes matches, open only to amaleurs. Sweepstakes—First shoot, fifty cents; class shooting; ten single that pigeons, fifteen yards rise; cont. Second shoot, \$5 entrance; class shooting; sweepstakes; three prizes, \$5, 30 and \$90 per cent.; ten single birds, rise eighteen yards; use of both barrels, English rules, with the exception that both barrels must be fired while the clay pigeon is in the air. Capt. Bogardus will give a silver cup to the party making the best score in the above sweepstake matches.

Island For Sale.

Island For Sale.

The Sicily Island Fishing Club will sell their properly known as "Sicily Island," situated in the Susquehanna River, in Lancaster Co., Pa., at Fites Eddy, about 22 miles below Columbia, Pa.

The island contains about five acres, heavily timbered, and is never overflowed. The improvements consist of a neat two-story frame club house, 50x31 feet, well plastered and painted throughout, with 8 feet wite balconies on first and second iloors, well of water and large dancing platform. The Island sistinated about 300 yards from Fites Eddy And Is readily measured from all pointer actions and standing the second from the Control of the Standing State of the Welling State of the Welling and State of the Welling State of the Welling and Islanding the State. This is a rare chance for a club of gentlemen who wish to enjoy good gumning and fishing. The bass fishing season opens June 1, hence application should be made at once. Address D. MollULLEN, Secretary, Lancaster, Fa. mcht23,24

The Parker Gun.

MELBOURNE, AUSTRALIA.

"THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their power beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island last year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 200 competitors. ANSWERS TO CORRESPONDENTS.

ANOTHER TROUT SEASON.

NCE more the agile fish, which wears the motley, leaps into the ring with a cheerful "here we are again" which stirs the blood of the veteran more than that of the angler of but few seasons. The first day of April opens the season on which our fish may be legally taken in the States of Virginia, Pennsylvania, New York, New Hampshire, Massachusetts, Connecticut, Minnesota and California. Wisconsin permits it on April 15, and Vermont, Maine, Michigan and the Province of Ontario forbid it until May. Rhode Island and New Jersey allow it in March; North Carolina in January, while in Iowa and the Province of Quebec they may be taken in February.

Within the State of New York the only portion where trout-fishing is at all likely to be a comfortable enjoyment is on Long Island, and about New York city. Even there the winds are apt to be chilling, and we have seen blue noses and aching fingers on those whose enthusiasm impels them to wet their lines on the opening day. For ourselves we prefer to wait a month and enjoy nature, pleasant weather and trout at the same time. From New York city probably two hundred anglers will go to the Long Island streams on the first day, no matter what the weather may be, and if it should promise to be pleasant the number will be doubled.

It is a common fault to sneer at people whose tastes differ from the speaker; and we have heard uncomplimentary epithets bestowed upon those enthusiasts who brave the storm to fish on the first day. We have a high regard for them, although we do not enjoy fishing unless perfectly at case and comfortable both in mind and body. The enthusiasm of first day anglers in spite of weather is certainly a source of enjoyment to them, and that is a good and sufficient reason, if any be required, why they venture forth in overcoats and mufflers to brave the gales that March sometimes bequeaths

In Virginia and North Carolina the first of April often brings enjoyable weather for angling, but in the Northern States it is often of a chilly character, which is worse than the severe weather when the hardy northern fisher cuts holes in the ice to take the savage pike, or pickerel. Still it is a cheerful sight to see the veteran don his overcoat and, favoring his rheumatic leg, which he is certain will be worse on

the morrow, start forth with rod and creel to get the first cast at the fish which have been growing undisturbed all winter, in the hope of capturing one which will beat the record for size on that particular stream. He cares not for east winds, nor rheumatic legs; his coat will moderate the one, and a hot stove at night and plenty of linament will alleviate the other. He is cheerful and contented if a few trout are still in the stream, and enjoys himself under circumstances creditable to his manhood. Long may he live to enjoy the opening seasons, and may the poachers never invade his sanctuary.

The opening of the trout season in the city is an event which has been enjoyed for the past few years, not only by anglers who can't, or do not desire to get out so early, but by others who are interested in fishculture, natural history, or a love of the beautiful. Their headquarters is at Black ford's in Fulton Market, a notice of whose opening display will be found in another column. This display is a valuable one to those who wish to compare the appearance of trout from different parts of the country, and has grown in popularity yearly. We will content ourselves with that opening of the season and will try to give such an account of it as will picture its beauty and usefulness to those of our readers who cannot attend it. We will be pleased to meet you there at any time in the day.

THE CHOICE OF RANGE.

THE Committee of the Directors of the National Rifle As sociation charged with the preparations for the meet with the British riflemen in September next is busily at work. Circulars describing just what is expected on the part of the National Guardsmen of the several States, have been sent out to officers throughout the United States. There is at least a determination that the existence of the match shall be known to all who might assist in conveying it out. All this is very well, and while this activity of preparation is going on, the gunmakers are not idle. In several of the more prominent armories some very excellent weapons are in the course of construction, intended to fall within the "Military Breech Loader" class under the Wimbledon rules, They may be very far from being a service of course. weapon in the ordinary meaning of that phrase. hardly be proper to call a 90 or 100 grain cartridge service ammunition and the match will no doubt be shot with charges The new Remington .42 calibre rifle, sighted for a mile, will have a test in the preliminary trial at least in connection with the match. Other rifle making firms are working to produce a rifle better than any now in use, and the match promises to bring out some excellent ideas in longrange military weapons which it would be well if our regular ordnance officers would take note of.

There seems to be some uncertainty as to the target to be used in the match. Our readers will remember that in speaking of comparisons of records we pointed out the variations which exist between the shot and mid-range targets in use at Wimbledon and those employed on this side. The programme of selection issued from our American office requires the use of the Creedmoor targets. The British challengers undoubtedly effect to have their targets used in the match. So long as it is definitely understood which of the two systems are to be employed in the final test, there is little objection to having the practice take place on another target. Comparisons are impossible, but they are of small moment at best, and provided that our percentage of ability is well up in the nincties we have little to fear.

A real difficulty which the committee ought to look fully in the face is that of range. The committee owe a duty to the public, who will wish to come in no inconsiderable numhers to become spectators of the match. It is to the interest of the association as well to gratify that desire. done at Creedmoor? As Creedmoor is at present situated, and with its present facilities for getting to and from the ground. we answer emphatically no! It will be the duty of the newspapers to warn the public away from the mercy of the Long Island R. R. Co., from the hardship of being dumped down upon the wilds of Hempstead Barrens, a mile or more from the gate at Creedmoor, from finding itself exposed all day to a broiling sun or downpour of rain, and then from considering itself lucky to find a chance to get home the same night. even though the return trip is nothing more than a suffocating stand-up crush into ill-smelling freight-cars, dragged along at the rate of five miles per hour. All this is certain to happen if the Creedmoor of the present day is selected as the theatre for the match. Sentiment will urge this range with all its associations as the spot for the match, but common sense will dictate the selection of some other range, or the immediate taking of steps to render Creedmoor at least not more than an hour from the city.

There is no difficulty in making a good choice of range. There is no Hobson's choice in the matter at all. The match can be shot within a half hour of New York on a perfectly appointed range, which will have the advantage, too, of being a neutral range, and cut off the excuse for the to-bedefeated Britishers that they were handicapped by the familiarity of the home-team with the range. No doubt other problems will suggest themselves to the committee as the date for the match draws near, but this question of a range can be met at once. It can be known at once what may be expected in the way of making Creedmoor at least as accessible as it was at the time of the matches of 1874 and 1876. Upon the answer to that will depend the task of the committee. Creedmoor should be abandoned without hesitation if the present arrangements for transportation are to remain unsupplemented up to the day of the match. An entirely new range can be fitted up at desirable points, perhaps, for less money than it will take to make Creedmoor accessible. it is to be a match fought out in the presence of the public, then that public should be decently treated in the matter of accommodations of travel, which certainly is not the case with those who have occasion to go to Creedmoor at present. Of course it may be made a private match, shot out before a small party of invited guests. Such a procedure would not be out of keeping with the conditions; but on the assumption that the public is to lend its support, it is plainly one important feature of the committee's work to see that the public have access to the scene of battle.

To Anxious Enquirers.-It frequently happens that we receive letters from correspondents asking for information on various subjects, which are signed only by the initials of the writers, and sometimes by a pseudonym merely. ceive no attention, and are usually followed, at longer or shorter intervals, by complaining epistles asking why the information sought has not been furnished. At other times we receive letters containing checks, money orders, or bank bills, without any name, sometimes without even the name of a town or State. Of course it is quite impossible to do anything about such letters, and we can only hold them, trusting that in the fullness of time, the sender will write again, giving information which will enable us to identify him. It would scarcely be thought necessary to impress upon people the importance of signing their names to their letters, but it appears that we must do so. We cannot take any notice of letters that come to us without full name and address. We have no desire to print any one's name, but must have it for our own protection.

THE DESTRUCTION OF SMALL BIRDS, to which we alluded last week, is not fully appreciated, except by those who are in the way of knowing-through their acquaintance with taxidermists and professional shooters—how large it really is. We feel that all working ornithologists will sympathize with us in our desire to have the song birds adequately protected, and within the past week we have received a number of letters expressing interest in the topic. No one should be allowed to shoot small birds without a permit, or license, and care should be exercised that such permits should be issued only to proper persons.

OPENING OF THE NATIONAL ACADEMY.—The fifty-seventh annual exhibition of the National Academy of Design opened last Monday. The pictures exhibited are many of them of a very high order of merit, but there is as usual considerable dissatisfaction manifested at the decisions of the hanging committee. Many of the paintings will attract the eye of those who spend much of their time out of doors, and will call up pleasant memories of days afield.

It is an encouraging sign of the times that some of the great dailies are giving their attention to the preservation of the large game of the West. We copy elsewhere a sensible article on this topic from the Sun.

THE COMING BENCH SHOW in this city promises to be fully the equal of the Westminster exhibitions of the past. There will be many new dogs on the bench, and among them some clegant specimens of fine stock.

WE UNDERSTAND that the draft of the proposed new game law for this State has been sent to Albany, but we have been unable to obtain a copy of its provisions, and must therefore defer any remarks upon them,

PORTRAIT OF MR. BANKS.—The very wide circle of warm friends of the late Mr. T. C. Banks will be pleased with the portrait which we give herewith. The drawing was made from a photograph taken at a time when Mr. Banks was in good health, and shows him as most of our readers, especially those in the West, remember him.

OUR NATURAL HISTORY COLUMNS are always open for the record of observations in nature. The amount and value of the information contained in these from year to year, is well illustrated by the book, "Forest and Stream Bird Notes," which Mr. H. B. Bailey has compiled, and which has just been issued.

BACK NUMBERS OF FOREST AND STREAM, -Owing to the constantly increasing demand upon us for back numbers of the Forest and Stream, and the fact that our supply of certain issues is very limited, we shall be obliged to charge, from this time on, twenty-five cents each for numbers more than two and less than four years old, and fifty cents for those more than four years old.

THE Archery and Lawn Tennis News is a monthly publication devoted to the sports named in its title. The editors, Messrs. A. G. Constable, A. S. Brownell and A. H. Gibbes are well-known authorities in their respective fields; and they certainly succeed in making the News an entertaining and valuable paper for archers and tennis players. They merit a substantial success, and we trust may have it. The address is No. 206 Broadway, New York. \$1 per year.

The Sportsman Tourist.

THE WHALE OF COBB'S ISLAND.

THE denizens of Cobb's have lately had a sensation beside The denizens of Cobb's have lately had a sensation beside which the largest wreek ever driven by westward winds upon the banks and shoals sinks into insignificance. It is something that will furnish them food for gossip for nine years to come, an unfailing topic for talk when conversation lags and silence becomes oppressive. Hereafter all dates will be fixed by the occurrence, and years hence the questions and answers will be something like this:

"Annue Maria, how old is young Elkenny Anderson Krumpy"

Krump?"
"Well, I don't know prezactly; somewhere going on three

"Yens, I guess."
"Oh, I remember now. He is three years and six months; born the day before Captain Spady tackled that whale. There's the date on the rafters where I put it with a piece of chargeal."

charcoal."

About that same period Albert Cobb goes over the island on business, for he farms on the mainland, and tells the boys that a ship has run ashore on the bar about ten miles away, and proposes for them to go and try to save the cargo. "Count me out," growled out old Captain Cornell, "what's the sense of saving it? Them owners is going for to beat us out of our price, and if the crew's safe let her sink."

"Them's my sentiments exactly," put in Warren Cobb. "I'll be club-hauled fore and aft before I risk my life and work myself to death to save a cargo that won't be paid for. Here I is, and here I stays."

Hore I is, and here I stays."

"I swore," said Captain Spady, three years ago, "if I wasn't paid for the last job I'd throw up my hands, burn my boats, and let them that owns the cargo save it."

"How long ago was it that we saved that vessel off Shell Island."

"How long ago was reason."
and."
"Somewars 'bout four years," spoke up one.
"Not over three," said another.
"I'll tell you, boys, it was only four days 'fore Captain ady tackled that 'ere whale."
"'Lord, Lord! them was rum times," spoke up Nathan bib who was setting in a corner. "It was three years

"Lord, Lord! them was rum times," spoke up Nathan Cobb, who was setting in a corner. "It was three years and a leetle over six months ago. How time do fly."

The true history of the fight with the great Arctic whale, as near as I can get at it, and as told without contradiction by the different members of the attacking crew is as follows:

It seems that about three o'clock one afternoon in the first at seems that about three o clock one attention in the print of February of this year, Jack Andrews, a resident of the place, was gathering oysters, when, casting h's eyes carelessly around, he saw a huge black spot, like the bottom of a long boat turned upside down, on the bar about two miles from the island. He gave the alarm, and Nathan, scanning the object with his field telescope, said with an intense excitement that rarely found lodgment in his phlegmatic

nature:

"Boys, it is a big sperm whale stranded on the sand-bar, and is worth a cool thousand if we can capture it."

The effect was electrical; the island was in an uproar. Tom Spady, who was sitting down with a twin, aged two years, on each knee, surveying their features with paternal pride, and trying if he could tell one from another, as soon as he heard the news jumped to his feet, and the twins fell to the floor and on their heads, but as they inherited their cranium from their father—which was the hardest part of the Spadys old and young—each little chip of the arcient block. num from their father—which was the hardest part of the Spadys, old and young—each little chip of the ancient block only sat up a rival solo, which speedily brought Mrs. Spady to the scene. In one swoop she gathered the pair in her lap. "Poor little dears; don't cry, both will be well before you're married;" and she rubbed the bumps. Oh, magical words! that have been used with effect by our grandmothers' great grandmothers. In those simple combination of letters how much cogent puissant power lies hid; infant tears are dried, infant sobs are checked, and the new tooth just cut is displayed in an infantile grin.

infant sobs are checked, and the new tooth just cut is displayed in an infantile grin.

"Mr. Spady," indignantly, from the matron, "you ought to be ashamed to treat your own flesh and blood so."

"Oh, bother; there's a while on the coast." And forgetting wife, baby and twins, Tom Spady rushed to the wharf. A motley crowd, roused from their avocations, was there. Bill Johns, just bolted from a quiet game of draw, held in his paw a full hand, that he hadn't time in his excitement to call and claim the stakes, when the news came, and which he had forgotten to leave behind. On Captain Crump's arm was a long hank of yarn, showing that he had been helping his spouse.

In a few & ef minutes the large lifeboat was manned by a

half dozen volunteers, and with Nathan Cobb and Captain Spady as joint commanders, who sat in the bow, the craft was soon speeding towards the place where the whale lay, like the armored back of some deadly Merrimac or iron

half dozen volunteers, and with Nathan Cobb and Captain Spady as joint commanders, who sat in the bow, the craft was soon specding towards the place where the whale lay, like the armored back of some deadly Merrimac or iron-plated monitor.

Now there are three kinds of whales; one the Balænido or baleen, of which there are two species, the fin-back and the trior the Delphinidae which last comprises the grampus, dolphins and porpoises and marwhals. The first two are of vast size, averaging between seventy and eighty feet; their mouths are fifteen to eighteen feet long and from six to eight feet wide, and ten to twelve feet high, presenting a semoid curve when shut. Their ordinary rate of speed is four to five miles an hour. They swim not far beneath the surface, and sometimes throw themselves in sport entirely out of the water. They usually come up every ten minutes, but can remain down half an hour or more. They generally keep on the surface about two minutes, during which time they blow eight or nine times and then descend. They feed just below the surface with their mouth wide open. The baleen whale has two blow holes.

The sperm whale is smaller but is more valuable. Both kinds are found in all seas, but the former are most abundant in the waters of the Pacific and the Arctic Ocean, and especially along the shores of -8pitzbergen. They are very valuable; as much as eighty to ninety barrels of oil being taken from a single individual, besides the spermaceti which often weighs a ton. In addition is found in the whale that precious porfume known as ambergris, for which wholesale druggists often pay five golden dollars an ounce. This is science and facts, reader, and though the wreckers didn't know all this, yet their intuition told them that a rich prize lay helpless on the reef, and they determined to get him if they could. And so the willing crew sprung to their oars and made the boat fairly if brough the water. They soon reached him and then they took in the situation of the captive at a glance. It appeared

head of the Prussian Ziethen's columns appear.

Unless the whale was killed before the flood tide he was lost.

Nathan Cobb began the fight. Standing up in the bow of the boat, he put the muzzle of his heavy gun within two feet of the back, and pulled trigger. Two thundering reports echoed across the waves. The mighty leviathan of the deep merely waved his tail like a dog when his ears are scratched, or as a cat when its fur is rubbed. Again, again and yet again did Nathan send the buckshot into the mass; but the blubber, which was some four feet deep, absorbed the shot, and probably did not worry him any more than a sand fly would a hippopotamus.

Next Tom Spady's device was attempted. The sharpened stake was thrust in the spout hole, but the united force of three men could not hold it in. One breath of the huge fish was like a blast from a volcano, and mocked the puny strength of man; the stakes would be hurled twenty feet high. Stop his breath—as well try to stop a woman's tongue, as easy, indeed, for three Lilliputians to attempt to close the nostrils of the mighty Gulliver!

"Hurry up, boys!" sang out Cornell; "give it to him with the axe." And the steel sank deep in the blubber that was as soft and white as hog's lard. Like the shot, the stroke only seemed to give pleasure, and the broad tail gently fanned the water.

"Let's get on top of its back." said the Captain. "TII follow," said Spady. "TII risk it," put in Nathan, and "I guess I won't be backed out," said Warren Cobb, gave a hitch to his breeches and took a fresh bite at the plug of tobacco. Bill Johns "allowed that he would go," too, so preparations were made and all hands got ready to board the strange craft, though no boatswain's whistle was heard. But that whale's time hadn't come, and neither of the Cobb's or Spady was fated to play the role of Jonah, for the tide flooding in, had risen a couple of feet, and the great fish floated off and started at a slow, leisurely gait up the channel; the boat getting on the outside, kept up with him, Nath sun dipped below the ocean's rim, and giving a gentle flirt with his tail, he sank out of sight and was seen no more.

The third and final scene ends the history of this whale. It is five years hence. In the year 1887, the good ship, The Dancing Sally, from Nantucket, a staunch whaler of 500

tons, lies off on the coast of the Arctic Ocean. The misty tons, les oil on the coast of the Arctic Ocean. The missy spectral light shows that the night of the polar winter is not far off. It is a calm but intensely cold day, the rigging of the ship choked with ice makes spars, masts and ropes look as if they were manufactured of pure silver. The ocean, of deep blue, gleams like steel and reflects with marvelous idelity the color and outline of the Dancing Sally, that gracefully rises and falls in the smooth undulating billows. Afar

deely once, greams like steel and rehects with marvecions fidelity the color and outline of the Dancing Sally, that gracefully rises and falls in the smooth, undulating billows. Afar off, gleaming in immaculate white profile against the cerulean sky are towering icebergs that take the form of moated castles with turreted towers and postern gate. The sun shining upon it all, makes it gleam with the iridescent hues of opal. A whale has been captured after a long chase and the whole ship is in a state of bustling activity. A dozen men with their cutting spades as sharp as razors are severing the blubber in huge cakes; another dozen are securing the carcass to the ship by the means of chains. A third detach ment are rigging a derrick from the mast to be used as a crane to hoist up the immense pieces of fat, some thirty or forty feet long, when suddenly all the work is suspended, the busy hands stop, and a half a hundred eyes glance inquiringly towards a sailor who, crushing a handful of blubber between his horny flippers, starts, and then with his eyes protruding from his head, gives a loud hello and looks at the contents of his hand.

It is a handful of Nathan Cobb's shot!

"Smash your toplights, what's the matter?" roars the skip-

"Smash your toplights, what's the matter?" roars the skip-per stepping on the platform.
"May I be blowed," said the whaleman holding out his paw with the lead in it, "if somebody hasn't been a hunting this ere fish with a shot gun." "May I be blowed," said the whaleman holding out his paw with the lead in it, "if somebody hasn't been a hunting this ere fish with a shot gun."
"That's so," said the skipper, examining the buckshot. "Shiver my timbers if I can account for it. I have followed

the sea man and boy for forty years and never seed the like

The cutter scratched his head, while the crew in sympathy scratched theirs also. All at once his weather-beaten bronze face lighted up and he called:

"Cap'en!"

Avast there, what is it?

"Avast there, what is it?"

"Avast there, what is it?"

"What was the craft that was lost somewheres near the North Pole when they were trying to get to the open sea?"

"The Jeannette you mean, commanded by De Long."

"The same," was the reply. "Now this here whale must have blowed his flukes close along that ship, and the crew not having her irons handy and being jammed up in the ice-flows, just pulls at him with a gun, d'yer see?"

"That's it Jack, but look ahead; lively, men, and stop that palaver," shouted the skipper, "this carcass will yield ninety barrels of oil and is worth a thousand dollars if its worth a cent. So lively, my lads, pitch in, my hearties. Loft shoy! keep a sharp lookout," and then the skipper hummed, as he looked in his pocket for a match, that ancient song of the whaler:

Jack Darling was a landsman bold, Who would a whaling go,

COBB'S ISLAND, Va.

CHASSEITR.

NOTES FROM SPIRIT LAKE.

PRING is spring, ducks and geese have commenced their flight. Prairie chickens are very plenty and very fat even now. Should we have a good season for the chicks, there will be countless numbers for the season's sport. We have had a very open winter, some mallards have not left at all; a pair have been in the outlet of my hatchinghouse all winter. I expect every day that some vandal will that they have have accorded so far.

even now. Should we have a good season for the chicks, there will be countless numbers for the season's sport.

We have had a very open winter, some mallards have not left at all; a pair have been in the outlet of my hatchinghouse all winter. I expect every day that some vandal will shoot them, but they have escaped so far.

Parties here are making all possible arrangements for coming visitors; buildings have been going up all winter. Hotels are being enlarged, boats are being built. Thousands of dolars will be laid out for accommodations for visitors; new men are coming in every day; lots and lands are going up, up; we are having a real "boom." Three railroads will be in running order to this place by the Fourth of July, 1882, just in time for the summer rush.

The sporting here is of the best at present, fishing especially. I was out late last fall about three hours with Gov. Gear, of this State, and a friend of his; we caught one hundred and nine pike, pickerel, perch and bass, could have got more, but our bait ran out. A catch of one hundred pounds a day per man is a common occurrence, and not overdrawn either. But when the fish run in the spring is the time to see fish; the stories told about them seem "fishy" to an outsider, but they are generally trullful. I have seen wagon loads taken out with pitchforks, and hundreds, yes, thousands of pounds thrown out and left to rot. I have tried for several sessions of our Legislature to get a stop put to such waste, but our "Solons," I regret to say, have as yet made no laws of much account. "Tis true some feeble attempt has been made, but what has been done is set at naught by a good many.

There is now a hope that some steps will be taken to remedy this cvil, but you are well aware that laws amount to but little unless public sentiment goos with them, and I am glad to say that the people here are awakening, and will, no doubt, take a different course for the future. As yet there is plenty, and if all those interested would put forth an effort, the evil would be

CARE vs. COOT.

PART II.

SOME time ago I told the story of our search for sounder sleep and better digestion while we tarried at Good foround, passing the time "in battery" or out of it, but enjoying each moment to the full.

I ninted that later I might furnish your waste-basket with rejected manuscript, which should tell something of our subsequent cruise around Gardiner's Bay and the Sound.

It is doubtless a fact that many might go through the same experience and find but little recreation and profit, much less discover any satisfaction in rehearsing the story or listening to it from another.

But there is a class for whom the open page of nature has an endless charm, who never tire of the wonderful revelations of the great "outdoors," who find "sermons in stones, books in the running brooks, and good in everything."

You, my friend, I know are of this good fellowship; and knowing also, as you do, what an opportunity such as this really means to many of us, who through the major part of daily life are tied down to close application and the sedentary habit of office work, it may be that you may get a whilf of the salt breezes through these lines—a refreshing dash of salt brine—even if afterward you toss these pages into the aforesaid basket.

It was in October of last year—October, not midsummer.

said basket.

It was in October of last year—October, not midsummer.

the salt breezes through these lines—a refreshing dash of salt brine—even if afterward you toss these pages into the aforesaid basket.

It was in October of last year—October, not midsummer. A time of clearer atmosphere, fresher breezes, more invigorating influences than in "the heated term." A time when the blood courses through the veins with vigorous flow, and when each breath drawn, charged with life-giving ozone, is better than a draught of sparking champagne.

We left the cars at Sag Harbor one Saturday noon, and after gathering gun cases and traps in one conglomerated pile, and placing in charge thereof a possible future President of this great Republic, we sallied out to look up the Nahma.

Great Boreas! how it blew!

The wind had shifted during the preceding night, and after getting itself settled into exactly west-northwest, and by dint of some extra brace seemed to have entered into the spirit of self-competition and was doing things up lively, each hour showing more "laps" than its predecessor.

Jamming our hats down on to our heads, and streking forward one shoulder well into the wind, we laid our course to the dock. The blue water, rolling along in heavy seas, was flecked with foam, while the crest of each wave was caught up by the laughing gale and whipped into what Oscar Wilde has so poetically called "unravelled lace," and scattered far and wide.

Riding at anchor were eraft of every 'longshore description, most of which had sought harbor during the night. Some were snugly moored, while other shad dropped anchor where they were caught, and where a second anchor had been dropped to hold fast against the dreaded drag. The driving mist from the water shut out the low line of the other shore across the bay; while above we observed ducks, singles and in hunches, scudding on the wind to the shelter of inland coves.

As we reached the foot of the pier, on which no living thing was visible, we saw the old, familiar rig of the Nahma sweeping with graceful motion as she bowed her acknowledgment to the bo

slippers followed, when we jumped aboard, locked hands and took command.

It seemed as though the old yacht herself acknowledged old acquaintance with a gentler dip than usual, and yielded her allegiance with willing spirit. It was out of the question making any start until the wind went down, and so we took things easily, getting traps aboard and well stored, looking over the ship's stores, adding a few things in way of "fresh provisions," purchasing oilskin overalls up town—and getting our "bearings" generally.

All this afternoon we were unconsciously perhaps, taking on sea airs, and drifting into nautical slang. A certain spreading of the legs was giving our walk the roll of an "old salt," and we gave the stem of our briar-root an extra shove into the corner of our mouth, while "northeast" became "no"theast," and "starboard" or "larboard" covered everything that did not lie too many points "ahead" or "stern."

The wind still blew with unabating force and we took a stroll up into the town before dark and before supper, and our first night again aboard the yacht.

This good and staunch old boat deserves a word of special mention. Built some years ago for safety, speed and context and the suppers of the statements of the statements.

our first night again aboard the yacht.

This good and staunch old boat deserves a word of special mention. Built some years ago for safety, speed and comfort, she is in these respects, of perfect model. With good "waist," pleasant lines, and, to our eyes, a comfortable "sheer," with a snug and comfortable cockpit, ample deck and everything aloft sound and well bent, her appearance outside is winsome and satisfactory.

Down through the companionway into her cabin, one gets a view of pleaty of room and jolly, jolly quarters. Twenty feet in clear length, full breadth of boat and height enough to clear the tallest commodore's chapeau, with good, clean berths and all the appointments and fittings essential to every comfort during a cruses, nean a jolly good time for two such light-hearted land-lubbers as now were in possession.

But clever old boat as this Nahma is, she owes half of her charm to old "Capt. Bill," who knows her through and through, from stem to stern, from peak to keel, and every changing mood that she may ever indulge in. Capt. Bill, who treats her with loving care, who at any and all hours is alert to anticipate her lightest whim; Capt. Bill, whose idea of heaven would be incompleted id it not include some shadowy. Nahma and etherial eel chowder; Capt. Bill, whose word is fual and square everytime; old frizzled-topped, gray-haired, honest Capt. Bill, all hail!

Sixty years have dashed and washed their briny waves about him; have blown that hair about his weather-beaten.

face only to make the children love him more, and to crys-

Take only to make the children love him more, and to crystalize his truthfulness into changeless shape.

We had learned never to doubt him or his barometer. Each working backward by some mysterious and inexplicable methods of their own, they came out right, blackguard them as you might, argue as you might, reason and differ as

them as you might, argue as you might, reason and differ as you pleased.

If to us the barometer was falling and warning us in no uncertain tone to make things snug and look for different weather, Captain Bill's cheery and confident tone came to the rescue. "That 'ere barometer was out of the ship Italy, and was made in London, England. She knows what she's about; it's going to be fair, boys."

Useless to call his attention to the fact that painted right across the face of the thing, stared the letters, "New London Spa, New York'—useless to insist that when barometers go down, "it means business" the world over—the same confident reply came solemnly forth, after rolling his quid from one check to the other: "Can't help it boys, that 'ere barometer was made in England—in London town—took out of the ship Italy, and knows her business. I tell you when she goes down it's going to be fine, and that's just the size of it."

And the wonder of it all was that it always did as he said, give it time enough. But he is a jolly old salt, and he knows his business just the same, and we love to think over all the pleasant days we have sailed together, in storm and calm, and to look forward to the days to come, which we trust may be filled for us with like pleasure and delight.

Lamps lighted, a good square supper eaten, (no sait junk and hard tack) led the way to books, talk, "seven-up," and finally to turning in and sound sleep till about "five bel's" in the morning.

Sunday morning! Bright, glorious and clear. The wind

the morning

Sunday morning! Bright, glorious and clear. The wind still blew hard, but not so like a gale as the day before.

T. C. BANKS.

It was decided to make sail comfortably during the day (the cussed old barometer having begun to fall), and lie that night under the shelter of "Gibson's Neck."

Our old friend O. H. Fordham, having heard of us over night, came down in the morning to board us, and learning that he was proposing to take a little stroll over to Greenport (his legs will carry him anywhere), we insisted on his starting with us, agreeing to lund him over on the Island or at Montauk, according as he felt the need of exercise.

Final preparations all completed, and everything being in readiness, we only waited for the appearance of Fordham. As he jumped aboard, the mainsail crippled to a double reef and flapping noisily in the wind with jib "unseized" and ready to run up, they cast off our hawser, and instantly, like a bird released, we left the pier with a swoop to leeward, caught her with the tiller, and we were off.

Not "a life on the ocean wave" exactly, but a close approach to it. Much of the poetry and but little of the prose. To go where we pleased, as we pleased, we almost wished we were pirates—good pirates of course.

We had discovered a brass cannon aboard, and it was somewhat in our minds to rig it up and challenge every passing craft; to compel obedience or blow them out of water.

Our first run was across the bay, and before coming to anchor we cruised hither and thither, as our sweet will bade us, fairly revelling in the freedom which a free wind gave us, dancing over wave top or cutting through some briny billow, whose dashing spray thashed bright in the morning sunlight, and bathed us with foaming, sparkling shower.

The gulls, with their heavy but powerful wing-beat, kept us company, hanging over our wake, or dipping ever and anon to scize some floating "id-bit" thrown out by us, or swooping in wide circles to pick up drift from other sources.

White clouds rolled up against the dark blue background of a clear sky, lighted everywhere by the all glorious sun, hung like a canopy over us. Captain Bill at the helm, with

"Ready about," and 'hard-a-lee," gave us new and changing views, and we changed our songs as often.

And so we passed this Sunday at sea, not unmindful of the day, and perhaps with as truthful worship as that of some werry worshipper in some temple made of hands, whose drowsy nod or wandering thought were only arrested by the benediction. benediction.

benediction.

Toward dusk we drew in under "Gibson's Beach" and found good anchorage, made things taut and fast for the night, while we had the small boat manned and pulled ashore to look the blinds over for a morning with the ducks at daybreak.

While walking over the neck we sent our boat down the

ashore to look the blinds over for a morning with the ducks at daybreak.

While walking over the neck we sent our boat down the shore to a runway, where we had noticed some wicked siners of fishermen overhauling their nets, that we might have somewhat of fish fry for supper. As darkness came on we were back at the yacht, lights were set in the rigging and in the cabins, and supper found us at our common board again. As we paced the deck in the evening with a fragrant Havana as a sort of grateful "burnt offering," the glory of the heavens stood revealed with new wonder. The immensity of space, the overpowering vastness of university, awed us into silence, broken only by the swash of the waves breaking on the yonder beach, and we could but ask, "What is man, that Thou art mindful of him?"

"All hands, ahoy! Tumble up!" woke us in the morning with a cherry ring, and up we tumbled "fresh as roses and ready for business."

First business—breakfast. This we attended to strictly, No fooling nor "soldiering." "Bills receivable" of fried fish, baked beans, baked potatoes, were "accepted" and "discounted" without hesitation. Whole invoices of bread and toast were taken in, and storage was at once found for a small line of sausages, while shipments of tea and coffee were taken aboard as fast as offered and no "rates" asked.

After this we were pulled ashore, Fortham rigged out with the trusty thirty-four-inch ten-bores.

Snugly hid in blinds of favoring bushes or long sedge grass, we lined along the Neck and waited for anything to fly over! Two little black specks away beyond the yacht, flying low, settled us well hid in blinds, and the writer, with that characteristic unselfishness which marks him, prayed they might come to him.

But no; mounting to clear the Neck, they swerved to the left, and Fordham's salute bade them "good speed," which they ackneveledged with quickened flight, and were soon lost—"to memory dear."

Standing up to chaff the unfortunate man, our brother's gentle cry, "Get down, you tool, you," came dow

self, in a veritable tangle of ulster, gun, legs and bushes.
But this bird was to be ours. Heading right for us, unconscious of the deadly arm and unfailing aim, came a pair of broadbills. Steady, now! Bang! bang! And these two ducks, unlike Ford-ham's duck, took their course onward, a little more "sou-west by nothe," we judged.

We never could understand it, and shall not attempt to explain it, but, as you must know, there eas some good reason for the miss. Either our catridges had no shot in them, or the wind, you know, for which we made no allowance, changed at that exact moment, or else they were spectre ducks, or something, we never

allowance, changed at that exact moment, or else they were spectre ducks, or something, we never could tell what, was wrong.

Any way, the other two men rose up, howled in an altogether needless manner, as though something was a very good thing indeed, and then dropped in to "blind" again."

Each hour was so filled with a variety of constant enjoy-ment, the temptation now is to amplify and cover each detail of the week.

But evi bonof. You have the picture of the start. Can you

plify and cover each detail of the week.

But eut beno!

You have the picture of the start. Can you not imagine the Nahma and her party? Can you not imagine how, after Fordham leit us, we made sail again—how we passed out into the open bay by Cedar Island Light—how, as the fog shut us in, we ran by "bearings" and compass, as it liftedtaking fresh observation.?

Can you not hear the animated discussion as to whether it was really too late for hook and line fishing? You certainly feel no surprise to know that we pulled off in the small boat and made fast to "Old Rodney," and tried in vain to hook something or anything, while the yacht stood off and on, awaiting our signal of victory or defeat.

"Cela va sans dire," that we sailed by "Fireplace Point," where we stepped ashore to replenish our stock of wood, almost reached the shores of "Promised Land," and for harbor, lay snug in the shelter of "Nappeague."

One night while here the wind again blew for twelve hours a perfect hurricane, and our brother, who had ventured ashore with one of the crew in a crazy search for geese, barely made the yacht, when pulling to her, broadside to the wind, and that only by dragging the boat a quarter of a mile to windward before shoving off.

Thousands upon thousands of ducks were in the bay, and as we sailed them down they often rose in clouds, while the whistle of their wings seemed like a merry laugh at our expense.

Many a venturesome bird, however, waiting just too long.

Whiste of their wings scales and an expense pense.

Many a venturesome bird, however, waiting just too long, met its fate and swelled our load. The loons this year were too quick for us and we failed to secure one, and their macking cry as they arose from their flash-like dive, was the only response to our guns, save the echo which sometimes came back to us from the distant hills or the sides of some passing steamer.

We cruised to the eastward and the westward hither and thither as we pleased, finally darting across the sound, run-

We cruised to the eastward and the westward hither and thither as we pleased, finally darting across the sound, running between Old Silas and Little Gull, and so by the Lightship and into New London.

Leaving the Nahma and Capt. Bill until we again shull hail them, we came out of rooms at the hotel, metamorphosed from flannelly nauticusses into ordinary landsmen and sober citizens, but with a brown and ruddy glow, a healthful and hearty appetite, and a restful spirit, that gave promise of better work and more of it, in office life again.

WINTER HOUSE OF THE BLACK BEAR.

WINTER HOUSE OF THE BLACK DEAR DEAR DEAR OF TO.

TO a recent issue of the Lake City (Linn.) Review, Dr. D.

C. Estes, with whose pleasing writings all old-time readers of Forners And Stream are milliar, gives a very interesting account of a curious nest of the black bear which once came under his observation. This nest was discovered by the doctor at the close of a long hunt, which he can be all the black of the control of

BAY RIDGE, L. I., March 24.—Song-sparrows are here in full force accompanied by numerous bluebirds, a few fox-colored sparrows and numbers of robins. I have also seen two pair of brown creepers. To-day I saw four wild geese passing North. They were not very high and answered a call, but would not stop. Have seen one red-winged black-bird.—A, L. T.

SPRING NOTES.

SPRING NOTES.

Nova Scotta, March 18.—February and March to the present date have given us one incessant continuance of winter in its severest forms—bitter cold northeast gales and snowstorms always accompanied by high winds, which piled up highways and railways with huge drifts. Whole townships have had to turn out to try and make a way for traffic, and the snow-ploughs have been shovelling away in some cases wholly without avail, the drifts having been frozen hard and inpenetrable, save by the spade of manual labor. No trains have reached here for three days at a time. Every vessel that arrives at Halifax from the North reports great fields of ice and icebergs all over the banks of Newfoundland, while in the Gulf of St. Lawrence, the ice king reigns supreme. Such a winter, at least from the commencement of February, has not been known in Nova Scotia for years. As a natural consequence, not a single migratory bird has appeared in this neighborhood as yet. The goese, which usually pass over us on their way North, some years as early as the 11th of this month, could not face such weather as this, and the song-sparrow, due usually on the 15th, has delayed his departure from the latitude of New York State, where I see he has arrived ten days ago, by the latest accounts in Forest AND STREAM. A few robins have stayed with us all the winter, but the migratory host has yet to arrive. The crow and blue jay are our most common winter birds, and have been abundant even during the severest weather. On taking a walk on the 12th inst., as cloudy day with westerly wind, and every appearance of a change to milder temperature. I observed the snow nearly the whole distance of my walk, to be specied over with a small insect which, on examination under the lens, proved to he a species of neuroptera, with six addominal joints. Some specimens had perfect lengthened wings with numerous cross veins, while others were destitute of these appendages. The genus is unknown to me. I hope another week will bring a change, and let us hear on

lass blocked the roads and generally impeded travel].

IOWA.—Coralville, March 21, 1882.—I notice that an IOWA correspondent in the last issue of FOREST AND STREAM desires information in regard to the Bohemian waxwing in this State. Lost April a boy near this place shot into a flock of waxwings, killing nine of them; the birds were in the orchard very close to the house. Four or five of them were brought to me, and I mounted three of the finest ones, and have two of them in my collection, where there beautiful crests and wings tipped with the coral red wax are much admired. Some of the specimens were without the wax on the wings, and I think a little larger than the others; those I supposed were the females. I have a few spring notes that I will give. February 11th, ducks, geese and wild pigeons are flying; 12th, heard the first bluebirds; 13th, first robins. Yesterday (March 20th) was a warm, showery April like day, and great numbers of geese, ducks, cranes, etc., were flying North; but to-day we are having a genuine Westen blizzard, and it is ludicrous to see them hastening back with all possible speed. One fancies that they are soundly betating their leader for taking them off on such a "wild goose clase," such a hawking and quarking is heard. I have occasionally written for the Foness AND STREAM above the signature of W., but as W's are so numerous, and nom de plumes are being objected to, I have concluded to adopt my own name, though it is with some repidation lest (being a woman) I may be excluded from the columns of this very nice gentleman's paper.—Violet S. Williams.

Hounellsville, N. Y., March 26.—Bluebirds arrived February 16th; robins the 19th; blackbirds the 24th; kingstishers and meadowlarks have been here all winter. Saw the first swallow to-day.—J. Otts Fellows.

HABITS OF WOODPECKERS.

HABITS OF WOODPECKERS.

I HAVE noticed and read with pleasure many articles in the Forest and Stream about the red-headed woodpecker. But he has one accomplishment which I have not seen mentioned, and I hesitate about giving it, fearing it may excite incredulity in the minds of many who have not observed it. Yet it is a fact that the red-headed woodpecker is one of the most expert fly-catchers to be found among the fly-catching birds. When a boy I have watched him for hours, and admired not only his skill, but his sound judgment. In early summer, before the sap has stopped flowing in the birch and maple, he will select a number of these trees and pick in the south side of them, where it is exposed to the sun, some fifteen or twenty holes, through which the sap will flow, knowing the flies will readily be attracted by the sweet liquid, and when they have well settled upon the place. Mr. Redhead will, noiselessly and still as the flight of a bat, light upon the side of the tree just opposite where he has set his trap for the greedy fly, and then with his long tongue reach round and gather in—I can't say how many flies, but certain it is that he is well satisfied with his success, for I have watched him run half a dozen trees in this way for an hour or two at a time.

Mantox, Mass, March 18, 1882.

The habit referred to by our correspondent has not, so far the way hear absyred in the red-headyle woodpecker.

hour or two at a time.

Marios, Mass, March 18, 1882.

The habit referred to by our correspondent has not, so far as we know, been observed in the red-headed woodpeeker; Dr. Merriam, however, in an interesting communication to the Natlett Bulletin (IV., p. 1, Jam., 1879) noted the same habit in the common "sapsucker," or yellow-hellied woodpeeker, Sphyarapieus varias. He says of this species: "In the central district [of the Adirondack region] they really do considerable mischief by drilling holes in the bark of apple, thorn-apple, and mountain ash trees, in such a way as to form girdles of punctures, sometimes two feet or more in breadth (up and down), about the trunks and branches. Whether in like manner they affect trees (excepting occasionally a young elm) pertaining to other genera than the one (Typus) to which the above belong, I am unable to say; but the fact of their destroying some of these, notably the apple, and especially in the West, has often been recorded. The holes which are sometimes merely single punctures and sometimes squarish spaces (multiple punctures) nearly half an inch across, are placed so near together that, not unfrequently, they cover more of the tree than the remaining bark. Hence more than half of the bark is sometimes removed from the girdled portions, and the balance often dries up and comes off. Therefore it is not surprising that trees which have been extensively girdled generally die, and mountain ash are much

more prone to do so than either apple or thorn-apple trees, due, very likely, to their more slender stems.

"The motive which induces this species to operate thus upon young and healthy trees is, I think, but parily understood. It is unquestionably true that they feed, to a certain extent, both upon the inner bark and the fresh sap from these trees, but that the procurement of these two elements of sustenance, gratifying as they doubtless are, is their chief aim in making the punctures I am inclined to dispute. As the sap exudes from the newly-made punctures, thousands of flies, "yellow-jackets," and other insects congregate about the place, till the hum of their wings suggests a swarm of bees, If now the tree be watched, the woodpecker will soon be seen to return and alight over that part of the girlle which he has most recently punctured. Here he remains, with motionless body, and feeds upon the choicest species from the hosts of insects within easy reach. Therefore it is my firm belief that their chief object in making these holes is to secure the insects which gather about them.

Some time ago Mr. C. L. Bagg called my attention to a clump of mountain ash whose leaves had turned yellow and were fast falling off. Here a pair of these birds, with their young, had established an unfailing food supply, and at almost any time of the day several of their dark, motionless forms might be seen adhering to the trunks and branches of the young trees. Evidently this had been their headquarters for several seasons, for all the main stems in the cluster were for several seasons, for all the main stems in the cluster were form the ground), and most of the branches of any size were fixed by the summary of the sum of the young trees. Evidently this had been their headquarters for several seasons, for all the main stems in the cluster were fixed by the sean adhering to the trunks and branches of the young trees. Evidently this had been their headquarters for several seasons, for all the main stems in the cluster were fixed fo

THE NEW CHECK LIST.

Washington, March 24, 1882.

Editor Forest and Stream:

I have read with interest Mr. Everett Smith's article in the last number of Forrest and Stream:

I have read with interest Mr. Everett Smith's article in the last number of Forrest and Stream, and hearfily agree with him in the general drift of the complaint he makes that our nomenclature of birds is so incessantly shifting. The evil of which he speaks has grown almost intolerable, and I can only hope it is not an insuperable one. I have long been convinced of its magnitude, and have attempted of late to do what I could to lessen, if not remove it, by offering a system of nomenclature of our birds, based upon recognized rules for the tenability of names, and tending, as I trust, to a degree of fixity we have not hitherto attained. To place the names, determined upon good grounds to be tenable, entirely within the grasp of all who have not made the subject a special study, I have moreover undertaken to explain and define each one of them. The little treatise to which I allude is so nearly ready for publication, after a delay of nearly two years in passing the press, owing to my long illness and absence from my desk, that I feel at liberty to enclose to you a portion of the introduction, explaining the character and objects of the work. I shall be amply rewarded for the pains bestowed upon its preparation, should it have any good effect in correcting existing abuses, in lessening the difficulties Mr. Smith adduces, and in contributing to the fixity of our nomenclature.

ELLIOTE COTES.

ENTRODUCTION.

INTRODUCTION.

In 1873, shortly after the publication of the author's "Kay to North American Birds," appeared the original edition of this "Check List," which was almost immediately reissued in connection with the same writer's "Field Ornithology," in 1874. That list reflected the classification and nonnenclature of the "Key" with much exactitude, although it included, in an appendix, a few species additional to those described in the "Key," and made some slight changes in the names. Excepting some little comment in foot notes and in the appendix, the original "Check List" was a bare catalogue of scientific and vernacular names, printed in thick type on one side of the paper.

Meanwhile, the science of ornithology has progressed, and our knowledge of North American birds has increased, both in extent and in precision, until the original list, faithful as it was at the time, fails now to answer the purpose of adequately reflecting the degree of perfection to which the subject has been brought. A new edition has therefore become necessary.

The list has been proposed and the progress of the proposed and the proposed and the proposed and the purpose of adequately reflecting the degree of perfection to which the subject has been brought. A new edition has therefore become

The list has been revised with the utmost care. The graft

necessary.

The list has been revised with the utmost care. The gratifying degree of accuracy with which it represented our knowledge of 1873 is exhibited in the fact, that it is found necessary to remove no more than ten names. On the other hand, the progress of investigation has resulted in adding one hundred and twenty names to the list, and showing the necessity or expediency of making many changes in nomenclature. The exact analysis of the differences between the two lists is given beyond.

In revising the list for the main purpose of determining the ornithological status of every North American bird, the most scrupulous attention has been paid to the matter of nomenclature.—not only as a part of scientific classification determining the technical relations of genera, species, and varieties to each other, but also as involved in writing and speaking the names of birds correctly. The more closely this matter was scratinized, the more evidences of inconsistency, negligence, or ignorance were discovered in our habitual use of names. It was therefore determined to submit the current catalogue of North American birds to a rigid examination, with reference to the spelling, pronunciation, and derivation of every name—in short, to revise the list from a philological sas well as an ornithological standpoint.

The present "Check List," therefore, differs from the original edition in so far as, instead of being a bare catalogue of names, it consists in a treatise on the etymology, orthography and orthoepy of all the scientific and many of the vernacular words employed in the nomenclature of North American birds. Nothing of the sort has been done before, to the same birds. Nothing of the sort has been done before, to the same

extent at any rate; and it is confidently expected that the information given here will prove useful to many who, however familiar they may be with the appearance of these names on paper, have comparatively little notion of the derivation, signification, and application of the words, and who unwitingly speak them as they usually hear them pronounced, that is to say, with glaring impropriety. No one who adds a degree of classical proficiency to his scientific acquirements, be too latter never so extensive, can fail to handle the tools of thought with an case and precision so greatly enhanced that the merit of ornithological exactitude may be adorned with the clarm of scholarly elegance.

The purpose of the present "Check List" is thus distinctly seen to be twofold: Pirst, to present a complete list of the birds now known to inhabit North America north of Mexico and including Greenland, to classify them systematically, and to name them conformably with current rules of nomenclature, these being ornithological matters of science; secondly, to take each word occurring in such technical usage, explain its derivation, significance, and application, spell it correctly, and indicate its pronunciation with the usual diacritical narks, these being purely philological matters, affecting not the scientific status of any bird, but the classical questions involved in its name.

THE SCARCITY OF GROUSE.

THE SCARCHY OF CROUSE.

THE laborious efforts at ridicule borne to us on the northern breeze in your issue of Feb. 16, are so clearly of a suicidal nature, that we resign them to their inevitable fate, merely observing that the cause of wing-shooting from its first inception has only been strengthened by the envious assaults of the pot-hunter.

It was with pleasurable emotions that I perused the confinuitieation of "Nessmuk" in your last issue.

It is evidently one of "nature's noblemen—born, not manufactured"—as expressed in his manner of worshiping at her shrine.

munication of "Nessmuk" in your last issue.

He is evidently one of "nature's noblemen—born, not manufactured"—as expressed in his manner of worshiping at her shrine.

However, is not his philosophical manner of disposing of the "scurcity of grouse" question quite as illogical as any theory previously advanced, in view of the fact that not only the grouse, but also all of our other game and fish have shared the same fate wherever exposed to the onward march of our peculiar civilization. In short, wherever the same cause has exhibited its baneful influence that is to-day accomplishing the rapid extermination of our large game at the West.

I can point to large tracts of formerly fine grouse country in New England where the "treer" and snarer have wrought practical extermination within a space of time covering only a few years. And similar reports reach us from every direction. "Adirondack" writes that in Northern New York thousands of grouse are shamefully slaughtered every season and sent to market by parties making this their sole business at certain seasons of the year. He also states that one man potted seventy grouse over a little treeing cur in a short time, and shooting only at odd intervals.

"H. L. G.," writing from Brookfield, N. Y., in your issue of December 30, 1880, states "that of all the rulfed grouse that are killed during the month of December in the central and northern counties of this State, nine out of every ten are killed by market-hunters, pot-hunters, and the like, and, worst of all, eight out of every nine are killed sitting on trees, where they have been seared by the traditional 'yaller' dog,' whose idea of sport is about as exalted as the man who owns and hunts him," and "that unless immediate steps are taken to arrest the slaughter that is going on among the feathered tribe, our children will have no use for the costly guns and implements which we leave behind us, save to look at them and curse the stupidity of the men who did not protect that which God provided for the recreation of

Therefore, as we sweat over our task of restocking with quait, let us reflect on the fact, that if ever reduced to the same exigencies with the wary, determined grouse, the rigor of our task will be multiplied many fold. Shall we indolently neglect our fleeting opportunities for the preservation of our sadly decimated stock of grouse?

Proceedings of the Philadelphia, which comprises the received Part III. of the Proceedings of the Academy of Natural Sciences of Philadelphia, which comprises the records of the meetings and the papers read at such meetings from August to December, 1881. An idea of the varied and interesting contents of this part may be had from the contents, which we give below: Revision of the Palæcerinordea, by Charles Wachsmuth and F. Springer; Revision of the Cis-Mississippi Tertiary Pectens of the U. S., Remarks on the Molluscan Genera Hippagus, Verticordia and Pecchiolia, Note on the Approximate Position of the Eocene Deposits of Maryland; Revision of the Tertiary Species of Arca of the Eastern and Southern U. S., all by A. Heilprin; On Hieracium aurantiacum, and Note upon Plantago clongata (Pursh.), by S. II. Redfield; How Orb-Weaving Spiders Make the Framework or Foundations of Weaving Spiders Make the Framework or Foundations of Webs, by Rev. II. C. McCook; On the Nature of the Diphtheritic Contagium, by Dr. H. C. Wood; Notes on Mistletore, Dimorphism in a Willow, Color in Autumn Leaves, On Movements and Paralysis in the Leaves of Robinia, On Pilobolus crystallinus, and on the Varying Influence of Heat on Flower Buds and Leaf Buds, by Thos. Meelhan; Occurrence of the same species of Protozoa on both sides of the Athanic, by John A. Ryder; The Genus Carterella vs. Spongiophaga Pottsi, by Edw. Potts; On a Feetal Kanagaroo and its Membranes, by Dr. N. C. Chapman; Reports of various officers; Elections during 1881; Additions to the Museum and the Library. The proceedings of the Academy are published at \$5 per annum, payable in advance, and are important to all naturaliets.

The Rose-Briested Grosbeak in Captivity,—The rose-breasted grosbeak—the bird that I have before written about as being so useful a destroyer of the notato-break—is easily kept in confinement, if captured when it is young. A

family near this place kept a pair of them for some time. The birds were taken when very young, and soon became so tame that they were allowed their liberty through the day, and they invariably returned to their cage at night. When spring came they made some preparations toward building a nest, but seemed disgusted with the undertaking, and tore it to pieces. They were finally sold to Mr. J. A. Pickering, of lowa city; and the melody of that beautiful songster is poured forth as clear and sweet from the confines of that gentleman's store as it ever is by his more fortunate brethren of the woods.—Violet S. Williams.

Albino Muskrat.—A Hornellsville (N.Y.) paper says "Mr. S. W. Owens brought into our office last evening a veritable curiosity in the shape of a white muskrat, which had been trapped by Fred. Wombull in the river at Canisteo yesterday morning. His ratship was of usual size and while his fur was of a cream color outside, upon the blowing it apart it was found to be nearly a pure white. The tail was broader and flatter than the ordinary muskrat and more closely resembled that of the beaver, and in color was a pure white." This specimen was a true albino having plnk eyes.

Game Bag and Gun.

AN ARKANSAS BEAR FIGHT.

PART II,-TO BE CONCLUDED.

AN ARKANSAS BEAR FIGHT.

PART II.—TO BE CONCLUDED.

WHEN they came opposite the scene of action they tooted their horns and encouraged the dogs. After a time the bears started again slowly, the old bear apparently keeping the dogs well back. After going about a half a mile there was another halt, the hunters came up and encouraged the dogs for some time. Bill wanted to go in again and shoot the bear, but Jim would not hear to it. Jim could see the top of a dead tree over the cane in the direction in which the dogs were barking. He climbed up on the roots of a great upturned tree, and from there could see the cub up in the tree, about one hundred yards away. He told Bill to hand him up the rifle. "You couldn't hit a barn that far," said Bill. Jim insisted and the rifle was handed up. Jim cracked away but no baah dropped. "Git down outern that and let your dad come up," said Bill. Bill loaded her up for 300 yards, climbed up, drew a very fine bead on the cub and out it tumbled, and then there was a fearful "muss." After some little time things became more quiet, and Judge Bill Jones insisted on going in and shooting the old bear, but Judge Barker urged him to keep cool. He insisted, and as a compromise they concluded to consult Judge, smith, so they went back a short distance to a thin place in the cane, forced their way through, found the old Judge, and held a council of war. Judge Smith, having been away from the flask all day, was perfectly cool.

After listening intently for some time and encouraging the dogs, and getting run of the movements of the old bear, Judge Smith, having been away from the flask all day, was perfectly cool.

After listening intently for some time and encouraging the long, and getting run of the movements of the old bear, Judge Smith said, "It won't do, Bill, that old she devil has got her grift up, and she would chaw you up quickern you could say Jack Robinson, you could not get near enough to her to see to shoot; and if you will listen you will here her bear but he same way.

Bill in

two dead dogs.

On consultation they concluded as it was getting late in the day that Judge Smith should follow up the chase on the old mare, call off the dogs, and that the other two should take each one of the cubs and return to camp. This plan was carried out and all reached camp before dark. A muster by companies of the dogs that evening only found seven on deck, and nearly all of them somewhat injured. Old Tige was among the missing. Old Lark had a splendid supper ready, to which all did ample justice. Lark also had an ample and savory mess for the dogs. After supper, and after the lining of their nests had been warmed up by a careful mixture of spiritus fermenti, they carefully looked over the wounded dogs, and made them as comfortable as possible. the hing of their nests and been warmed up by a carcing mixture of spiritus fermenti, they carefully looked over the wounded dogs, and made them as comfortable as possible. While this was going on old Tige crawled into camp. The old veteran was in a bad fix; they found on him no flesh wounds, but one shoulder was badly swollen, and opposite hind leg entirely useless. Lark bathed his wounds with some "liminent" that he had prepared during the day, made him a nice warm bed, and gave him some warm gruel. When the hunters sat down to enjoy their pipes, Jim undertook to joke Bill about fighting and whipping a bear bare handed. But Bill did not take it very kindly. He said, "Blast you, if you had let me gone in and killed that ar old bash at first, our dogs would not all have been spiled, and we could go on with our hunt to-morrow. It's a purty scrape we have got into away out heah on a bash hunt, and no dogs left good enough to catch a rabbit." Judge Smith chimed in with Jim a little, but they soon found that Bill was in dead carnest, so they changed the subject, and soon all were in bed sleeping soundly.

most of them in a sorry condition. Our hunters consulted on what they should do for the remainder of the week. "We cannot do anything here at present," said old Sol, "for all the best dogs are in the horsepital." "I'll tell you what we'll do," said Jim. "Bill you go out and kill a deer, and I and the Judge will go down to the deep place in the lake and catch some trout, (loss) and to-morrow we will put the sorest dogs into the wagon and start for the mountains, (hills) and by the time we reach there the dogs will mostly be well." All agreed to this as being the best course to pursue, so our hunters started off in their several ways. Sol and Jim were not burdened down with jointed rods, creels, reels and other tomfoolery; they each had a stout linen cord in their pockets, securely tied to a strong clumsy hook; they cut some strips of fat with the skin attached from the young bears, and started for the lake. When they reached it they went into the cane break and cut a couple of long straight canes for poles, tied on their lines, baited their hooks and went to fishing. Their manner was to throw the bait as far as they could from them and then twitch it along just under the surface of the water. They did not have to do much twitching, for the bass were ravenously hungry, and often had the bait as soon as it struck the water. When they hooked a fish they made a vigorous jerk and generally, if the fish was a small one, threw it over their shoulders on to the ground behind them. These bass range in size from two to seven pounds, and in this clear, bright water are very game. When they hooked in extra large fish, they drew it up on the bank by "main strength and awkwardness." In this way they would catch from one to six in a place and then move on to another. They soon had all they ould carry and returned to camp.

Bill did not come in, "I I hearn him shoot wunst, after he'd bin out a little while," said Lark. They waited until

strength and awkwardness." In this way they would catch from one to six in a place and then move on to another. They soon had all they could carry and returned to camp.

Bill did not come in, "I hearn him shoot wunst, after he'd bin out a little while," said Lark. They waited until near dark. It was nothing very strange that Judge Bill was not in early, yet all the party were uneasy, "You don't think he can be lost, do you, Judge?" said Jim. "Bill Jones get lost in this neck of woods! No, sir-ce. Did he take a flask along with him, Lark?" "No, sah, not as I knows on." said Lark. "Lark, look around and see if any are missing," said Jim. "They be all heah, Massa Barker."

Just as the curtain of night was being lowered there was a great commotion among the dogs; they all rushed off barking through the woods, with a half-whining bark. Directly Lark's old possum dog Cesar came rushing into camp, hair on end and tail between his legs, and took up a position in the farther corner of the tent from the door, where he crouched, an abject picture of fright and cowardice. Soon the voice of Bill was heard, scolding, and kicking the dogs, and he came in with a long yellowish brown something on his shoulder reaching nearly to the ground on each site. He threw it down, and the dogs fiercety whined and growled around it. It was the skin of an immense panther. "Give me some peach and honey, Lark, and get me some gruel quicker 'n lightning, for I am nearly famished," said Bill, and he took in out of the wet a square pint of the "critter." Lark soon had enough grub on the board for three men. Bill pitched into it, or, rather, pitched it into him, and was soon heard to growl at Lark, "Lark, old man, your samples are first-rate, in fact, splendid; now please give me my supper, old man." Old Lark looked at him with a silly, dazed kind of an expression on his countenance. "What are you standing there gauping at me for, you blarsted old hulk! Give me some supper." Lark drew a long breath and replenished the board with double the first

sore you the same way.

Bill insisted that be 'could whip any baalt that ever lived' with the help of his kaife, and keep of insisting on going in. They got into a pretty hot wrangle, and the probable result would have been that bill would have 'theed' both of the was coming over the battle in the cane. While the men were taking and the cone out, generally badly wounded, and the noise in the cane showed that but very leave the forest the cone of the dors had come out, generally badly wounded, and the noise in the cane showed that but very leave the dorse to the olders. Pretty soon old They cancelly badly wounded, and the noise in the cane showed that but very leave the dorse to make one grand final effort to drive the old bear away from the dead cub, so that they could get it, but it was no use: the dogs had all had coneyl of it. So they called then all off, and sat down on a log to cat their down the cone of the con

old Betsy as quick as possible, seen that primin' was up, and cautiously stepped toward where the racket was going on, for there was a fearful floundering in the switch cane. [Switch cane is young cane two to cight feet high]. When I got within about twenty yards of the fracas I stopped, ready to shoot instantly. Soon all was quiet. I waited some little time, then cautiously stepped up, when I found them both stone dead."

'Oh, Bill! oh, Bill! that's too thin; entirely too thin," said

"Oh, Bill! oh, Bill! that's too shan,
"Gentlemen, what do you take me for?" roared Bill. "Do
you mean to say I have lied about this thing? Dod blast
you! just step out of doors and I'll show you who's a liah by
licking you both tur wunst quickern lightning, old Lark and
all the dogs thrown in. Come on, you blarsted tadpole
catchers, you."

all the dogs thrown in. Come on, you blarsted tadpole catchers, you."

The other judges saw that Bill was in dead earnest, so they quietly tried to soothe him into good humor again. After they had got him "onto his base again," old Sol asked, "Both stone dead, Bill? How do you account for that?"

"Why," said Bill, "I suppose when the buck raised his head that that was what the painter was waiting for. I shot very qu ck, and just as the ball bursted his heart all to pieces, he sprang for the deer's throat, fastened his fangs into it, and died with them there, and if you smartles will go out to whar I hung up that ar buck, you will find that ar painter's head still hanging to his throat. He had taken so deadly a hold, that I could not get his jaws off, so I thought I would leave them there to show such smartles as you something you had never seen before. Rot it! I've a notion to lick you both anyway."

anyway."

Bill still kept a little mad. He was not satisfied that the other men had not let him go in and shoot the old she-bear. "If you fellers had let me gone in and shoot that old baah when I wanted to, our dogs would not have been killed or all chawed up," said Bill. "The next time I want to font a baah I'm gwine to do it, whether you white-livered critters say I may or not."

After giving Bill another "snort" of peach and honey and quieting him down a little, the company retired for the night. The next morning all started out for Bill's deer. They found everything just as Bill had said, with the panther's head yet hanging to the buck's throat. They "toted" the deer into camp, struck tent and started for home. Old Tige and some of the other wounded dogs were comfortably fixed in the wagon, and all reached home by midnight.

CROCKETT'S BLUFF, Arkansas. CROCKETT'S BLUFF, Arkansas,

PHILADELPHIA NOTES.

PHILADELPHIA NOTES.

The southeasterly weather of the 20th and 21st of this month, brought an additional flight of snipe to the meadows south of Philadelphia, and it will only require a few days of mellow sunlight to render the birds much less restless than they now are. The meadows never were in better condition for snipe, a little wet, however, for the drawing room and rubber-boot sportsman. Every day some of our local gunners return from their trips showing good results. Very many of the old Philadelphia sportsmen's club are strongly in favor of the griving up of summer woodcock shooting, in fact without a law preventing them, I know of several who have determined this year to allow them to remain unnolested until October 1st.

Quite a number of Philadelphia gentlemen in the past ten or twelve years have crected boat houses along the shores of the Delawara River on the Philadelphia, Delawara and New Jersey sides. These houses are used as a general rendezvous by their owners in rail shooting time as storage places for their skiff, and frequently as sleeping quarters when an early tide is to be caught, or a morning start for ducks is to be made. At present they are being visited for the purpose of getting ready for the shad season, many of the owners being very fond of gilling, and own pleasure nets of this character. New gill nets are now being hung, old nets mended, and in a week or ten days at farthest, we shall hear of the work of these amateurs. It is at these boat houses that planked shad can be enjoyed in all its busciousness, and it is generally the staple diet of the amateur giller, whose fish never go to market. Every boat house is provided with one or more stout oaken planks on which the split shad is nailed inner side out, placed before a fire of hot embers, broiled and hasted with good butter from a neighboring farm until nicely browned, when with a cup of coffee and home-made bread a meal ift for a king can be had, but it must be eaten on the river shore, for nowhere else is it planked shad. So t

AN EFFECTIVE SHOT.

AN EFFECTIVE SHOT.

TROM time to time there have appeared in the columns of the Fordst and Stream statements of wonderfully effective shots made by some "brother sportsman."

Sometimes I have been constrained, when reading these marvelous records, to cry in Scripture language, "I believe, help thou mine unbelief," and at other times the recoil has been so tremendous that I have been hurled into the position of a "doubting Thomas." Henceforth, however, my faith will be undimmed, no matter how many ducks, geese, quail or other game some member of the fraternity claims to bag at a single discharge of his trusty gun, for I, too, have made a wonderfully effective shot, and perchance am the "noblest Roman of them all." In telling the story of this effective shot I shall confine myself strictly to facts, neither expanding nor economizing the truth, for, at all hazards, my ministerial veracity must be, like Cæsar's wife, "above suspicion."

Last fall I was called to go nine miles into the almost unpicion."

Last fall I was called to go nine miles into the almost unbroken wilderness, to see a sick woman. The messenger gave it as his opinion that it would be utterly impossible for me to get through with a horse and buggy; yet I decided to make the attempt, and had Kitty, my high-mettled mare (by the way, she is decided) regun shy") harnessed to a light open carriage. It took me four hours to make the nine miles, frequently having to unharness and make a road through the dense wood or build a bridge over a quagmire. On my return, and when three miles at least from the near-est house, Dan, my dog, flushed a flock of pigeons which alighted in a large oak tree a few rods ahead of me. Of course my favorite "Clabrough" was in the buggy, for I never ride into the woods without it, and, hastily slipping in a couple of shells, I alighted, tied the mare to a convenient tree, and went forward. When I reached the oak I could see but one solutary pigeon (this is the truth), and that upon the very topmost bough, though I had no doubt that more birds were hidden from my sight by the thick leaves upon the tree,

Raising my gun, I fired up through the branches at the one pigeon. Almost simultaneously with the report of the gun, I heard a sound which caused my heart to go pit-a-pat, and I ejaculated "Goodness gracious! but I must have killed two or three thousand pigeons, and they are all coming down through the leaves."

But ("'deed, it's the trufe") only one falling bird greeted my strained vision. The noise, however, continued, and I distinctly heard and distinguished the sound of breaking wood (fact), and like lightning the thought flashed through my mind, "You've killed so many birds that they have lodged and are breaking the tree down upon yon. Run!" I turned to flee, but even as I came to the right about face the mystery of the sounds I had heard was explained.

I saw the mare streaking it through the woods like all possessed: I saw the buggy wheels; saw that the buggy was following after the mare, and yet the wheels were not revolving; there was no very dense mystery about that, though, for the buggy was "tother side uppermost." I followed on. I found the mare wedged in between two trees and unhurt, but the harness was as badly demoralized as a torchlight procession after refreshments. The fender, whiffletree, crossbar and other portions of the buggy were minus. I extricated the mare, bitched her, and sat down on a log. I said, "This is surely the most effective shot I ever made. I feet the need of food; I will return and get that pigeon, roast and eat it. I returned to the oak, but Dan had been thinking also, and only a few, a very few of the bird's longest tail feathers were left.

Whether I shouldered the mare and led the buggy home now how it was, I am not quite clear, but I do know that I frequently dream of that shot, and never without having the

or how it was, I am not quite clear, but I do know that I frequently dream of that shot, and never without having the nightmar

I've had it to-night.

A SHOT NOT SHOT.

A SHOT NOT SHOT.

MANY years ago the undersigned had millions of sport lunting and fishing round about the town of Terre Haute, Indiana, and while much could be written and told in reference to game killed and fish caught, much might also be said of times when game was not killed and fish were not induced to take hold. I am inclined to think there is studious effort on the part of sportsmen who write and talk (the few who are so disposed) to mention only the brighter side of their experiences, and to ignore the incidents and trials that exasperated their souls.

Talk about songs that are never sung, of kisses that are never kissed, of immense sums of money that might have been made—they are as nothing compared to the big fish we have hooked and lost, and inopportune occurrences that have kept us from bagging magnificent game.

You probably know of the great depression of spirits that has followed the discovery that your powder-flask was lost—in the muzzle-loading days—when pigeons were coming over in myriads; you know how thoughts of immeasurable disappointment arise with the view of a man on horseback between you and a flock of wild geese to which you have been groping your way on hands and knees; you probably know how soon life becomes a burden by seeing intervening footprints in the virigin snow when you have been tracking a deer for hours, and near by hear the report of a gun; you possibly know the desolation of spirit that comes, after going ten miles to a favorite fishing-ground, to find that some "Tural roosters" have just hauled a hundred yards seine and raked out every living thing. These are the tooth-aches of memory; but thank the Lord they are only here and there.

The good times are the brightest, and grow brighter, while the misadventures and disappointments serve their purpose, perhaps to point a moral and adorn a tale, to teach us to be more careful, more observing, more expert.

Speaking of turkeys, I was coming down to town from a friend's farm on Otter Creek where I had spent several days hun

field. I had never killed a wild turkey; in fact, had seen but few alive.

"What a splendid shot," I said to myself, "if they were only wild!" Raising my rifle I took sim, and further commented on the beautiful shot I could make, thinking of the likelihood of bringing down two at one fire, and what a jolly thing it would be to take home a nice, fat wild turkey.

They ran along in the position I first saw them two or three hundred yards, showing some distress at my near approach, as some tame turkeys are wont to do, but evidently eager to get into the corn. Three times I raised my rifle and took good aim, wishing I could have such a shot at wild turkeys, and regretting that I had not been able to find any the two or three days before.

Finally the "gang" crossed the road within fifty yards of me and disappeared in a strip of dense woods up the creek. Before I reached the mill a man came up to me and asked with great seriousness:

with great seriousness:

"Why, what's the matter with your gun?"

I held up my pet rifle with some show of pride and spectral "Nothing."

"Why, er—is she loaded?"

"Yes," I replied, a little piqued at the man's peculiar

manner.

"O! you're not after game?" the man continued.

"Yes, I have been, but on the way down to town I don't expect to see much, a prairie chicken or two perhaps, below here. I killed a lot of squirrels yesterday."

"Don't care much about big game?"

"Yes, sir," I said, emphasizing the latter word.

Just then two men crossed the road back where I had seen the turkeys belt armed and intent on business.

Just then two men crossed the road back where I had seen the turkeys, both armed and intent on business.

"Reckon you haven't hunted round here much—haven't practiced much on turkeys and things?"

"No, squirrels have been my best holt."

"Well, that's curious; well, why didn't you give 'em a twist anyhow?"

"Say, mister," I almost gasped, as I heard a crack of a rifle, "were those wild turkeys?"

"In course they was, and busters, too. Bill Gartrell's got one of 'em now, I reckon!" it was too late to repair my loss, and I trudged on home with a regret that twenty-five years have softened but little.

JEROME BURNETT.

A GOOSE AT 750 PACES.

SHOT WITH A REVOLVER.

SHOT WITH A REYOLVER.

I HAVE been for several months an eager reader of the Forest and Streem, and am much interested in several subjects under discussion in its columns, notably the scores of rifle and pistol experts and the comparative merits of breech and muzzle-loading rifles.

I am not ambitious to make my debut before your readers in the character of champion liar of the country, and have taken precautions, as the subjoined depositions will show, to avert it, but the annexed performance, which is substantiated by three persons of reliable character, is so truly won-tiated by three persons of reliable character, is so truly won-tiated by three persons of reliable character, is so truly won-tiated by three persons of reliable character, is so truly won-tiated by three persons of reliable character, is so truly won-tiated by three persons of reliable character, is so truly won-tiated by three persons of reliable character, is so truly won-tiated by three persons of reliable character, is so truly won-tiated by three persons of reliable character, is so truly won-tiated by the persons of reliable character, is so truly won-tiated by the persons of resolvent interesting to sportsmen, and is worthy of record.

The story is this: Mr. Ralph Neasham, Jr., a young man of about eighteen years, a resident of this place, saw in the leid a long distance away two wild geese. He immediately opened fire on them with a .38 calibre, five-shot, double-acting Smith and Wesson revolver, holding the weapon in both hands without rest, and aiming, he thinks, about fifty or sixty feet above the birds. At the first shot one bird flew a few yards and be fired four more shots at it, when the mate flew away and the latter bird began to flutter. An examination of the bird showed it to be shot clear through the body. The distance was paced, and found to be by actual count seven hundred and fifty (750) paces or yards. That this is one shot in ten thousand will hardly be denicd.

For Bidwell, Cal., March 11, 1882.

Personally appeared be

FORT BIDWELL, Cal., March 11, 1882.

For Bidwell, Cal., March 11, 1882.

Personally appeared before me, this day, Mr. Ralph Neasham, Jr., who being duly sworn, deposes and says: "That on March 6, 1882, at Fort Bidwell, Modoc county, California, he shot and killed a wild goose with a .38 calibre Smith and Wesson, double-acting, five-shot revolver, at the distance by actual count of seven hundred and fifty (750) paces. And further that the bullet passed entirely through the body of the goose. [Signed] Ralen Neasham.

Subscribed and sworn to before me, this 11th day of March, 1882.

JOHN M. SMITH, Notary Public.

This is to certify that each of us witnessed the feat of Mr. Ralph Neasham, Jr., in shooting with a pistol a wild goose at seven hundred and fifty (750) paces. The fact as set forth in Mr. Neasham's deposition of this date we know to be correct

[Signed] A. I. Spalsbury, George Wilder.

Subscribed and sworn to before me, this 11th day of March, 1882.

JOHN M. SMITH, Notary Public.

NOTES ON BAY BIRDS.

NOTES ON BAY BIRDS.

MUCH has been published in the columns of Forest And Strieman of great interest regarding show birds, but little if anything has been given relative to the change of feeding grounds and growing screety of the numerous variety of all species of wading birds in sections where the sportsmen a few years since found them numerous, and sought spring and summer enjoyment in their quest. Beginning at Barnegat, where good shooting was once to be had, both during the spring and late sammer passage of all the species, and ending at Grant Egg Harbor, on the salt meadows and bars of which large bags a few years ago could always be made, we find the intervening old haunts and feeding grounds are gradually being deserted by them—not on the account of the scarcity of food, but by their incessant harrassing by greatly increased numbers of market shooters, who take advantage of their first arrival in the spring and the ready sale they have for shipment to the large cities of New York, Philadelphia and Brooklyn.

This warfare is causing the flock in their vernal migration to the north and their return with their young in a very great measure, to pass by unvisited the Long Island, Barnegat, Little Egg Harbor, Atlantic City and Great Egg Harbor feeding grounds, and it is seldom a stoppage is made with a determination of settling down, short of the isolated and unfrequented regions of Townsend's and Corson's Inlets, northward of Cape May. It is known that the beaches south of Peck's are but sparsely settled or built upon, while from Barnegat to Great Egg Harbor the entire line of ocean water front is taken up here and there with summer watering places with their accompanying huge buildings and cottages. These resorts have added their part in driving the burne, migration while standing on the beach of any of the watering places with their accompanying huge buildings and cottages. These resorts have added their part in driving the burne remains the places with their accompanying huge buildings and cottages. These

some of the Captain's sons or sons-in-law for pilots, fine sport would be assured. A letter to the postment of some of the Captain's sons or sons-in-law for pilots, fine sport would be assured. A letter to the postmaster of Berlin, Md., asking for particulars and names of the proprietors of both hotels would, no doubt, secure a reply, as Capt. Coffin might be now either dead or removed. Many of the bay birds to be found at this latter region of late years have passed by the New Jersey grounds without deigning to stop for even aday.

WADS AND WADDING.

WADS AND WADDING.

On the subject of wadding, there is a great deal more importance than is generally supposed. A good many persons seem to think if the powder and shot is all right, it does not matter much what is put between or over them. The difference between shells loaded with good wads and had are easily apparent to any one who has used both kinds. Cartridges loaded by gunsmiths as a rule are very carelessly done, the powder, shot and wads are put in by boys and clerks, who do not know or care how they should be charged. I once cut open some of these which were sold to a friend, and said to be loaded for ducks. They had in them three drams of common FFF rifle powder and one onnee and a half of shot. Over the powder was one paper wad, set so crookedly that shot and powder could touch, while a felt wad on the shot had the paper shell turned down on it fully half an inch. Just imagine hitting or killing a duck at any distance with this load. The usual way is to put two pink two pink edge are the least that should go over the powder, as black edge wads over powder and one over shot. I think two pink edge are the least that should go over the powder, as black edge are not as thick or hard, or three of them should be used. Probably the best of all though is to put on the powder, first a thin grease proof and then an Eley's extra-best white compressed hair wad. This is a much more expensive way, but it will pay in the end. If the cheaper thick hair wads are used a light wad must be put over them to prevent the shot sinking in, as they are not so hard as the extra-best ones. Always have the wadding if tightly, in a twelve-bore one size larger than the guage for paper shells, and two sizes larger for brass. In the larger gauges, such as ten and cight, one size difference in the bore is a good deal, and this rule will not apply to them. In England some of the wads are made in half sizes to make up for this. Over shot a thin wad should be used, especially when the shell is turned down, because if otherwise then the

FOX SCENT ON ICE.

FOX SCENT ON ICE.

THE assertion of "Sancho Panza," in your issue of Feb. 2, that foxes leave no seent on ice is contradicted by "E. A. R." in your issue of March 2. "Sancho Panza" is correct. It is the experience of all observant fox hunters, that dogs can get no seent on crystal ice, unless the day be so mild as to create a dampness or moisture on the surface of the ice. The assertions of "E. A. R.," wherein he states he was eyewitness to scenes of hounds pursuing a fox in full cry over crystal ice for a distance of near half a mile is easily explained in this way. The wind was most likely in their favor, and they took the scent from the air, or possibly from the track on the opposite shore, which is by no means an unfrequent occurence, with a good lead dog, if the wind is wafting the scent back from the direction in which the animal is leading. To illustrate this fact I will cite a few instances: Several years ago a friend and myself made an appointment for a fox hunt and while the dogs were being conducted across the valley to the ridge designated, they became suddenly very restless and uneasy, pulling on their chains and crying pitifully to be released. The valley was composed of open fields, and we could see far in all directions, but could not notice anything that should attract their attention; we attempted to move onward but the dogs would not be comforted; at last we concluded to let them go. As soon as they were released, they ran rapidly to the windward to the distance of a third of a mile where they began trailing a fox track, at least several hours old, many places partly drifted shut.

Some years ago I passed by the roadside an "uccampment of gypsics," and noticed a fine hound chained near the tents. I inquired if she was trained for game and gould be bought. They condidently assured me of her fine qualities for fox chasing and remarked that she had been winding one all day which appeared to be on the hill opposite the camp, between which there was a large mill dam intervening. I assured them I w

I have seen trusty dogs hunt the banks of ice-bound streams for miles on either side to get the place where foxes came off the ice; but never in my long experience in hunting did I ever see a dog able to get any scent on crystal ice when the thermometer stood at the freezing point. It is a fact also proven by observation, that dogs will scent the track farther then they will scent the animals. We have all frequently heard say of dogs cutting on game. They do not cut on the scent of the animal, but the scent of the track, I could cite various instances where I bave seen dogs drop out of the pack and cut diagonally for some other point on the track when the fox was circling, but in every instance they were attracted by the scent of the track and not by the scent of the animal. I know this, for I have seen the fox at the same time that the dogs left the trail and cut for some more adjacent point. When tramping thickets for rabbits, I have frequently found them sitting unconcealed, where dogs had passed close by without scenting them, and although the dogs might be a considerable distance away at the time when the the dogs from its bed, the dogs would be at once attracted by its scent and begin hunting for the track.

It is customary to hear of game holding its scent. This is an impossibility in the sense in which it is mostly understood. An animal may prevent dogs from scenting them, by crouching close, and laying heavily on their feet. Also

as an impossibility in the sense in which it is mostly under-stood. An animal may prevent does from scenting them, by crouching close, and laying heavily on their fect. Also, birds by flying into cover and making no tracks. The seem is emitted from glands in the fect in either case, and that is the secret of no track or little seent. Scent.

HARRISBURG, Pa.

Harmsburg, Pa.

Sanling for Coots.—New York, March, 1882.—Editor Forest and Stream: One provision of the proposed new game law of this State prohibits sailing for coots. Among the objections to such a law are these: I. Most of this shooting is done on Long Island and in Connecticut waters, and the people of Eastern Long Island annually derive a revenue of thousands of dollars from sportsmen who go there for this sport. This law would cut off that revenue.

2. There are very many men who have neither time nor means to go off on Long Island expensive shooting excursions. This coot shooting island expensive shooting excursions. This coot shooting island expensive shooting excursions. This coot shooting is the best, and indeed the only recreation of the kind left for them. It is surely unjust to deprive us of this sport.—J. W. B. [The reason given for prohibiting the sailing for ducks generally—the provision does not apply especially to "coots"—is that by chasing them continually with boats, they are permanently driven away and forced to desert waters where they would otherwise remain until forced away by the ice. The usual way of shooting coots and the most legitimate is, to our notion, line or point shooting, which is not a particularly expensive form of the sport. Sailing for ducks, it is alleged, and truly so, is even worse for the waters than where it is practiced, than battery shooting. In the latter the birds can alight and rest away from the feeding ground, but when sailing is allowed they have no rest. The boat can follow them everywhere, and if a bunch of birds are seen on the water, whether they be coots, oldsquaws, broadbills, blackduck, redhead or geese, the boat will try to run down on them, thinking that possibly "thistime" they may wait long enough to give the gunners a shot. So the birds are harried and at last driven away.]

Wuy Ayunda C. The Beliver Forest and Stream: The Herald of March 18 says: "An unusually large number of woodcock have come on from the South this season and located in the grounds adjacent to the ordinary summer shooting covers in this latitude. There they will remain until they have hatched out their young. Reports from Connecticut and New Jersey state that more birds have commenced nesting than for many years back, and the outlook for good shooting is most promising. It would be well, however, for the country sportsmen to keep a sharp lookout for lawless pot-hunters from this city, a number of whom make yearly radis into the country about this time, induced by the high prices paid them by the game dealers for these delicious birds." This will startle sportsmen who thought we had a live game protective society in this city. Is there a game dealer in this city who would dare to buy, or offer for sale, woodcock in March? And are there hotel or restaurant keepers who would offer these delicious birds even to millionaire customers? If fas the Herald reporter seen or known of a woodcock for sale? If the above be true, the days of Philohelu minor are indeed numbered. I am assured by a prominent restaurateur in Liberty street, that there are no woodcock in market.—John Aventy. [We cannot answer all of our correspondent's questions. There is, however, no reason to doubt that woodcock are served in New York in March, or, for that matter, in any other month of the year, provided that anyone wants to cat them].

Wild Animals in the Flood.—A merchant living at New Texas Landing told a Herulit correspondent "that he had purchased nearly one thousand coon pelts within the past three weeks at ten cents each. They were all killed upon an island opposite his residence, upon which the water is only a few inches deep, and every morning the air is still musical with the echo of the hunters' guns. Driven out of the swamps, where the coons' usual food is berries, grapes, etc., they come there at night to fish for crayfish, which are so plentiful in that locality as to form a staple article of food with the people. From the stunted trees and willows they put their paws into the water, which are at once seized by the crayfish, who catch a Tartar every time. Your correspondent dared not doubt the story, as it was told by an old veteran of sixty-five, who stood high in the community and whose integrity was vouched for by the officers of the boat. The deer are everywhere flocking to the uplands, and in the neighborhood of Vidalia and Natchez herds of thirty to forty are frequently seen in the neighborhood of the river bank. The negroes are killing them by dozens, although their slaughter is contrary to the laws of both States. They are in very poor condition, worn out by lack of food and chilled by the cold water. Several herds have swam the river to the hills in the neighborhood of Natchez. But few bears are seen, as they can yet live and find sustenance in the trees. Snakes are driven up to the mounds and highlands of Mississippi in thousands. The cottonwood logs swarm with them. Moceasins, king and black snakes abound. The negroes are in great fear of them and are very careful to give them a wide berth. One very serious result of the flood is anticipated in a pest of mosquitoes which generally multiplies under such circumstances in frightful proportions, seriously interfering with labor and endangering the lives of live stock. The pest of the buffalo gnat has already become a serious annoyance, and should sickness follow in the wak

Look Out for Him.—In October, 1877, a man giving the name of T. W. Studer, representing a New York publishing house and canvassing for illustrated copies of "Birds of North America," visited this place and obtained a number of orders. The work came in parts, and among those who already had them were Messrs. I. D. Ferry and Col. Walter Cutting of this town. Mr. Ferry received a call from Studer, and the latter took thirty-one parts of the work belonging to Mr. Ferry to bind, giving him in return a receipt. The books were to be bound in one volume, half morocco, price §6, payable upon delivery of the book. He left town, after having visited Mr. Cutting and obtaining his numbers for the same purpose, and since that day nothing has been heard of the man or books. Numerous letters sent to the New York firm were unanswered. This morning Mr. Ferry met and recognized the man on the street and had him arrested at once. He was taken to the District Court for trial. He gave his name as T. W. Crowley, and said that on his trip in 1877 he used the book of another agent for the firm, named T. W. Studer, therefore he used that man's name. He was charged with embezzlement, and Special Justice Filley held him over for the July term of the Superior Court in the sum of \$500. He went to jail in default, and has telegraphed for assistance to the publishers who employ him. On his present trip he is soliciting orders for "Animals of North America," published in parts by Henry J. Johnson & Co., 508 Broadway, New York.—Pittsfeld, Mass., Evening Journal.

DEER IN THE LOUISIANA SWAMPS.—Few persons, we imagine, had any idea of the vast number of deer still left in the swamps of Louisiana, until they were driven from their fastnesses by the high water of the present season. In the immediate vicinity of Natchez there have been hundreds, and we may probably be speaking within bounds when we say thousands, of these beautiful animals, which have crossed the river within the space of a few miles above and below this city. Worn and exhausted us they have been, after their long swim across the swollen river, they would have fallen an easy prey to the pot hunters who only hunt for profit, had it not been for the extraordinary exertions of the true sportsmen of the county, and humane people who despise wanton cruelty. On Sunday last, several gentlemen in their Sunday rambles found a number of deer that had fallen into a ravine, from which they found it impossible to get out. With true humanity they went to work and dug a pathway by which the little animals could find their way out of the ravine, helped them to mount to the top of the bank, and sent them on their way rejoicing to the green woods of the country. on their way rejoicing to the green woods of the country. Instances of the same kind of humane feeling have been, we are glad to say, the rule with the people of this vicinity while the disposition to capture and kill the deer has been the exception.—Natchez Democrat.

New Hampshire Notes.—Colebrook, N. H., March 24.

—The winter is with us; snow three feet deep in the woods. Deer wintering very well; none killed by crust hunters. Ruffed grouse abundant; fifty would be a fair estimate of the number that have escaped all hunting within two miles of this village. This area comprises the sunny side of Mt. Monadnock in Vermont, that skill and endurance can climb. I have taken three barred owls from it within four weeks, the last one to-day. After shooting him at long range with No. 7 shot, I set my gun against a tree and started up the one to which the owl was clinging, tut he let go and sailed away down the mountain side, alighting on a beech in fair view. I could not extract a charge of dust shot before I had learned of a new arrival in the form of a butcher bird. Then the fun began. The two rival poach as were trying to settle up their last difference. Only for the noise I should have lost my specimens. When they at last rested, the butcher bird gave vent to a piercing shrick, shaking himself in evident pleasure, almost saying as he turned toward me, "Ain't we having a deuce of a time with him? I think we did; but gave the butcher bird the first charge.—Nep Norton.

Broadbills on Long Island Waters.—"In all my experience," said Mr. Robert B. Roosevelt to a **Ilerald* reporter one day last week. "I have never known of more broadbill visiting the waters of the bay. I have just had a letter from a friend who describes the sport as being wonderful." "What is the cause of this?" was asked. "Principally because the scarcity of oysters in the bay has driven all the boats and baymen to other localities. This is the first time to my knowledge that this state of things has occurred, and the ducks, brant and geese left in quiet possession. When they are undisturbed they bed on the feeding grounds and become quite gentle. Nothing tends more to make ducks really wild fowl than to have a fleet of boats continually driving them up from their resting places. The weather was unusually mild during the winter and the foul did not seek extreme southern waters, as they are obliged to do when we have long and extremely cold weather in this latitude. The result is that the ducks have congregated in the Great South Bay before going north to breed."

A Kansas Resort.—A correspondent of the Topeka, Kan., News says of the Baxter Springs in that State: Spring River has its source in the Ozark Mountains and its whole contour to the mouth partakes of mountainous characteristics. Its waters abound in fish of the fluest quality. Mountain trout, black and speckled bass, salmon, pike, croppie, buffalo and catfish are abundant. The stream is about one hundred feet wide, and very clear and deep. Its current is swift, and it was known to the Indians all over nearly the whole of North America as "Swift" or "Fast" river. The scenery along its banks is really enchanting, and the woods on either side abound in all kinds of game, such as deer, turkey, black-tailed rabbits, weighing ten pounds, pinnated grouse and smaller game. This is a popular place for pleasure hunters and tourists. The climate salubrious, the scenery unsurpassed, the drives pleasant and full of interest, the fishing eplendid, the hunting fine. The Indian Territory is but a mile south of Baxter, and contains many points of interest to the ordinary pleasure hunter.

New York Woodcock Season.—Hudson, N. Y., March 16.—I have been much pleased in reading the arrivals of the different migratory birds, and do not remember seeing our old friend the woodcock mentioned any farther north than New Jersey. We have had the robin, bluebird, and duck with us since the 10th, and on the 4th Mr. Samuel M. Miller picked up a tine large woodcock that had been killed by striking the telegraph wire. Ruffed grouse were not plenty with us last fall. In the early part of the season could go out and start

an old hen with chicks most any day, but by the 1st of September could not find them, and they were not found (at least by the sportsman). What the foxes, hawks, and woodcock-shooters got while they were just old enough to fly upon a raspberry bush will never be known. I am in favor of making the close season on woodcock and ruifed grouse September 1, and tbink by doing this we will have more birds. Hawks, owls, foxes, red squirrels all may kill some, but these are nothing compared to the army of pretended woodcock-shooters that shoot grouse all through the month of August.—H.

Poaching in Caylea Lake.—The Seneca county (N. Y.) Courier says: It is currently reported that a large number of fish are daily caught in an illegal manner from Caylea Lake and the outlet and shipped, both from this station and at Caylea, to New York. The lake near the railroad bridge is full of fykes, and the same is said to be the case in the outlet. It is about time a stop was put to this. If the law is defective, so that our officers are powerless in this matter, it should be amended; but we believe that under the present laws much of this kind of fishing can be stopped. Parties in this village would take measures to have the lake stycked with fine game fish if the above practice was discontinued, but until it is done our local Laak Waltons, who fish in legitimate manner, will have to go to other waters in order to be successful in any degree. It does not speak very well for our two local sportsmen clubs that they do not make any more effort to prevent all illegal fishing in this section of the State.

Winchendon Explains.—Winchendou, Mass., March 20.
—Eittor Forest and Stream: In your issue of March 16 inst., your correspondent "K." takes the Winchendon Gun Club to task severely for shooting partridges out of season, viz. on Feb. 27. That would be all correct if the Winchendon Gun Club were guilty, as alleged. But they are not; therefore his virtuous indignation is all wasted. Whoever gave that item to the Forest and Stream of March 2 did not, for some reason, give it correctly as to game or numbers. The only game to be killed and counted were rabbits, squirrels and foxes, and no partridges were counted and none brought in. The count for my side should have read, "twenty-three rabbits and two squirrels;" nor were there any partridges killed by the other side. The club know what the law is, and mean to help enforce it, not break it.—James Sutherland. SUTHERLAND.

THE MISSISSQUOI MARSHES.—Montreal, March 24.—A few friends here have leased part of the Highgate marshes for six years, with the option of buying at the end of that time. The club has taken the name of the Mississquoi Gun and Pishing Club. They hope to control the greater portion of the marshes later on. At present arrangements are being made to have a small club house built, sow wild rice through their portion of the marsh, and employ a watcher, through the close season at any rate, and probably throughout the whole season, and if arrangements can be made with the other clubs, have barbed wire strung across the bays and mouths of the rivers and sloughs. There is no reason why, if properly protected for a few years, it should not become one of the finest fishing and shooting grounds for miles around—Mississquoi. around—Mississquot.

A Veteran Deer Hunter.—We have received from our well-known correspondent, "Antler," a dressed doe skin, with a pleasant note accompanying it. "Antler" says: It is taken from a doe, one of the last deer of my own killing, and is also one of the last skins of my own dressing, and as I am on the wrong side of 70, it is quite likely to remain the last. The deer was shot with a Spencer rifle, and you will readily see by the bullet holes that two shots were made. The second shot was an act of superogation, (as the lawyers would say) but the deer was shot while running, (not chased by dogs, however) and I never have been quite smart enough yet, to know just how hard a deer is shot while on the run, until he falls. until he falls.

The Texas Convention.—McKinney, Tex., March 18, 1882.—Please say to the readers of your journal that the annual meeting of the Texas Sportsman's Association, will be held at Austin, Texas, from May 29 to June 2 inclusive. A liberal programme will be offered, and plenty of shooting will be had at birds, balls and clay pigeons. Please invite all sportsmen, either in or out of the State, to be present and participate, and we would like for all that desire the protection of fish and game to be there and co-operate with us, as we want to make this the paramount object of the association.—G. A. Foote, President of Texas Sportsman's Association.

West Medford Shooting Club.—The annual meeting and election of officers of the West Medford Shooting Club, West Medford, Mass., took place on Monday, March 20. The following were elected: C. M. Barrett, President; C. F. Jordan, Vice-President; J. E. Ober, Treasurer; W. T. Morse, Secretary; Executive Committee: E. G. Morse, W. F. Symes, J. A. Rockwood. The past year has been a successful one, both in point of increase, in membership and finance.

REPORTS OF FIELD EXCURSIONS, stories of adventure and misadventure in camp, notes on the haunts and habits of game, hints and instructions drawn from practical experience, narrations of the thousand and one new, strange or odd things which the sportsman comes across in his travels—all these are to be found, indexed, in the Seventeenth Volume of the FOREST AND STREAM.

Dunraven's Nova Scotia Troubles.—Halifax, N. S., March 25.—Lord Dunraven has brought a suit for \$5,000 damages against the magistrate who issued the capias under which the Earl was arrested while hunting in the woods of Queens county without a license. His companion, Mr. Jennings, has also sued for a like amount.

EVENING SHADE, Arkansas.—There are some deer and once in a while a bear. Lots of fish and turkeys here. The quail are scarce. I have a pointer bitch, lemon, which is a daisy among the turkeys.—J. G. S.

PUBLISHER'S DEPARTMENT.

CAMP CHARS.—Mr. Thos. H. Chubb. Post Mills, Vt., is advertising a very serviceable and important article in the shape of folding camp chairs. They are neatly packed in crates, one dozen in each, at a long price and are undoubtedly very handy to have ground. Mr. Chubb also pace the real place and ore the control of the properties of the real place and ore the control of the price.

Sea and River Hishing.

It is affecting to see a distant mountaintop, whereon you camped for a night in your youlh, still as blue and ethereal to your eyes, as is your memory of it. It lies like an isle in the far heavens, a part of earth unprofused, which does not bear a price in the market; is not advertised by the real estate brokers.—HENRY D. THOREAU.

THE DEAD FISH.

DURING the first half of the week ending March 25 several vessels arrived at New York and other northern scaports, and reported having sailed through acres of dead fish which were floating on the surface. These accounts came from over a wide stretch of ocean, and seemed to show that a belt of dead fish extended from George's Bank, off the coast of Massachusetts, as far south as Barnegat, on the New Jersey coast, some 300 miles, and from thirty to fifty miles wide.

wide.

The fish were called salmon, shad, red snappers, codfish, and a half a dozen other species, but no skipper had been enterprising enough to bring in specimens, and the knowledge of species possessed by the average sallor is not such as to warrant a belief in his judgment on this question. Throwing aside the question of species the fact remains that a great mortality had taken place among one or more kinds of our sea fishes, and it became a question of more importance to know which fish, or fishes, had suffered, than to attempt to ascertain the cause. Mr. Blackford left no stone unturned to gather what information he could, and Professor Baird's interest is shown by the following letter:

UNITED STATES COMMISSIONER OF FISH AND

interest is shown by the following letter:

UNITED STATES COMMISSIONER OF FISH AND
FISHERIES, WASHINGTON, March 24, 1883.

MY DEAR MR. BLACKFORD: I wish very much you would
gather up all the information you can in regard to the occurrence of the dead fish, and also any indications observed
which may lead to a definite conclusion as to what kind of
fish they were. So far as I can judge from Boston and New
York papers they, in part at least, were tile fish. It is possible, their appearance being almost concurrent with, or but
slightly subsequent to, the great storm off George's Bank,
that the commotion of the waters may have killed the fish
by concussion and started them shoreward. It is a thousand
pities that fishermen and others have not sufficient intelligence or curfosity on such occasions to bring specimens home
and have them carefully examined. The fact that there was
no evidence of disease, but, on the contrary, the fish were
palatable and sound, would suggest that the cause of death
was rather a mechanical one.

** Yours very truly.

Speccer F. Baird.

All kinds of theories concerning the cause of this whole-

All kinds of theories concerning the cause of this wholesale destruction were advanced by fishermen, newspaper reporters, and others, from the changing of the gulf stream to
submarine volcances and the upsetting of fishing smacks,
but these were, of course, mere guesswork. Mr. Barnet Phillips, the accomplished Secretary of the American Fishcultural
Association, in company with Capt. John H. Mortimer, the
well-known sailor-maturalist, started out to interview a skipper who had just come in, and thus relates the result in the
New York Times:

"Gaing on hoard of the lawly Elizabeth Octo, Cantain O.

ins, the accomplished Secretary of the American Fishcultural Association, in company with Capt. John H. Mortimer, the well-known sailor-naturalist, started out to interview a skipper who bind just come in, and thus relates the result in the New York Times?

"Going on board of the bark Elizabeth Ostle, Captain O. Lamb, just from Calcutta, moored in Brooklyn, near the Wall street ferry, the commanding officer having reported the presence of such fish, a series of interrogatories were presented to him. Captain Lamb said that on the 21st of March, when about sixty-five miles off shore from Barnegat, he sailed for forty miles at least through waters filled with these dead fish. Having been asked if he could describe the number of fish in a given area, taking his ship's cabin as indicating the space, Captain Lamb replied that "there would be fully fifty dead fish within that space. The sea was quiet and we were going about from four to five knots an hour, and we sailed for some seven to eight hours, say forty miles, with these dead fish alongside of us. There were milions of them. From my log 1 find that the exact locality was 39 deg. 7 min. north latitude, and the longitude 73 deg. 10 min. west. We had been sailing all the morning north by west, and were well inside of the Gulf Stream. The temperature was 45 deg. We found these fish when we could not get soundings. Captain Lamb had not enten any of the fish, having caught two of them, the man was questioned. "The fish was a curious fish,' the carpenter, who had partaken of the fish, having caught two of them, the man was questioned. "The fish was a curious fish,' the carpenter said. "He had never seen the like before. There was in the crew a Nova Scotia man, and he did not know what kind of a fish it was. I took two, and they were fresh and sound. The gills were red and they bled when opened. The head was curions—different from what I had ever seen on a fish before. One thing I took notice of was a certain lot of yellow spots on the sides of the fish. They would wei

"The back fillow, at Boston from Cardenas, reports in lat. 40.

lon. 71, sailed for ten or twelve miles through large quantities of dead codifish floating upon the surface of the water. The fish were of large size and were visible on both sides of the bark as far as the eye could reach. The barkentine Henry Warner, from Buenos Ayres, also reports sailing for six hours through quantities of dead codifish in lat. 37, lon. 71. Later arrivals report witnessing the same phenomenon, with the exception of the fact that the fish were not codifish at all. Mr. Daniel O. Marshall informs us that a vessel at Philadelphia brought in some of these fish, and that he saw one of about ten pounds weight. The body was motited and the head resembled a bluefish more than that of a codifish. A shipmaster at Boston also reports picking up several of the dead fish, resembling codifish in size, but having a head like a dolphin, with large scales on their sides, and weighing from eight to twenty pounds. The crew of his vessel having gathered a considerable quantity on deck, one was put into the pot and boiled, and it was found to be very sweet and palatable. When taken it was nearly as hard as a rock. The crew continued to use them for food for some time. The creption of the death of the firsh were indigenous to the warm waters south of the Gulf Stream, and were probably driven by a strong current into a colder climate, where they were chilled to death by the cold waters. The fish were found to be in a fresh condition, no decomposition appearing among any that were handled."

It will be seen from the above accounts that the fish were found to be in a fresh condition, no decomposition appearing among any that were handled."

It will be seen from the above accounts that the fish were found to the intervence of the fisher men, on account of its small mouth not admitting a hook, until dredged up by the United States Fish Commission. The surmise of Professor Baird made the suggestion in his letter to Mr. Blackford that they were the tilefish, Lepholatilus chanacleonticeps, a flat fish which is found in 1

by the United States Fish Commission to occur in incredible quantities along the western edge of the Gulf Stream in from 75 to 150 fathoms. The professor thinks that they have been killed by the terrific storm which has lately raged along the south coast of New England, especially off the Georges and Nantucket shoals. All those who have tasted the fish taken when the terrification of the commission of the under the circumstances mentioned pronounce them excel-

HOW IS YOUR FISHING TACKLE?

HOW IS YOUR FISHING TACKLE?

THE other evening I was doing, what all lovers of the rod and reel should do occasionally, that was, looking over my stock of rods, reels, lines, flies, hooks, and all the useful and useless apparatus in that line.

These things want overhauling when you have time to go over them carefully and in detail. You take up a rod, for instance; you remember that when last in use it was too stiff in certain parts and did not spring right. Well, if you are at all handy at such things, you can reduce the stiff part of the rod by the use of a little glass. Scrape it carefully and evenly, and when about right, finish off with saudpaper. In doing this your guides will want to be renewed or fitted on anew, and then the rod will want coloring and varnishing.

Another rod might have been broken in some tussle with one of your gamy friends, or by some stupid blunder on your own part, at which time you felt mad enough to pitch the whole thing into the river, and then throw yourself after it; wiser counsel, however, prevailed, and with the consoling remark that "there's just as good fish in the sea as were ever caught," you went to work and patched it up, so that you managed to get some good work out of it afterward. Well, that rod wants to be properly fixed; and do it now, for when you get ready to go a fishing you will have no time to do any repairing. I can excuse a man for using a roughly patched or mended rod when it is broken "on the tramp," but after that rod has been home all winter, I should call him "is stouch" to start out with it again in that shape.

The lines that were your pride in the past, how are they now? Look them over, run them through your hands; if you strike any rough spot or kink, try if there is not something weak there; then go over the whole length of every line, foot by foot, and test their strength. It is a great deal better to find out now that they are roften finan to learn it to your cost when you are reeling up a handsome fish and see your line snap off when "the trand

Now you have your reels to attend to. Get each one (but only one at a time) firmly in your left hand, then tip the handle gently. How does it run? That one seems to stick! I should think it did. Now get out your serew-driver and pincers, take the reel apart, get a saucer and put some kerosene oil in it, and then with a rag get to work and soak all the portions on which there has been any oil; in a short time you will flud the old gummy oil getting soft. Take a few pieces of soft pine wood, sharpen the ends, and with these go through every cog and socket and clean them out thoroughly, take dry rags and polish every part till they shine like glass, but don't use any gritty substance like punice stone or whiting—nothing but oil and elbow grease.

Now apply a small quantity of fine machine oil where needed, put your reel together, see that everything is in the right place. Now try how it goes. Ah! that is just the ting! She spius like a top. No sticking now, and no rattle to that.

regist place. Now try how it goes. Ah! that is just the thing! She spins like a top. No sticking now, and no rattle to that.

Go over every one the same way. Don't put any more oil on than is necessary to make things run smooth. A little is good; any more is "flippers dappers," as the girl said when she tried to say superfluous.

Now, brother angler, I have probably told you nothing that is new to you. If you are a careful man you have doubtless attended to all these matters; but in my own experience I have found good fellows, fine fishermen, who are sadly negligent in regard to these things, and to this class the foregoing soggestions are offered. But I cannot lay aside all the apparatus of our art without a few thoughts—pleasant memories of pleasant hours enjoyed with them in the past.

Why, there in the corner stands my "Old Reliable" rod. I made it myself; rough looking it may be; no shame to it, for it has done a great deal of work in its day, and is good for more of the same. It has been to the funeral of half a dozen other rods, and will outlive more of them still. In one day, yes, ninety minutes, I took on that rod sixty-two weak-fish and never missed one. I have had dogfish that, when once in the boat, I could hardly hold; have had bluefish away up the scale in weight, blackfish, scabass, kingfish, and burgals of all sorts and sizes come up the line on that rod.

There is my flyrod, made to order for me and sent home while I was lying on a sick bed very near death. When it came I was so feeble that I could not lift it, but it did me as much good as my medicine. It was haid near my bed where I could see it; and often my good wife, while watching beside me, would at my request put it together, just to let me see how it would swing, and then in my ingratitude I would mutter, "Women ain't any good in fixing fly rods."

There's my pet bait rod, good and true every time; what a folly fight I had with the first trout I got on it. I was fishing on South Branch of the Moose River from a ledge of rocks ten or tw

THE TROUT OPENING AT BLACKFORD'S.

THE TROUT OPENING AT BLACKFORD'S.

THE openings of the trout season at Blackford's, in Fulton Market, New York, have become famous the world over. Each year he has exceeded the previous one in the beauty of the display and the extent of country from which le has drawn his exhibit. This year he will reach the climax, in the line of beauty at least, because he has the new market, and will devote his whole space to trout, while carrying on his regular business in his temporary quarters outside.

Among the features of the show this year will be the elegant display of 500 live trout by the South Side Sportsman's Club of Long Island, in large aquaria. The club will also have a live rainbow trout of three or four pounds weight on exhibition, as well as many dead fish. The Suffolk Club, also of Long Island, will make a large display. Mr. Armistead, a famous trout-breeder of Scotland, has promised fishes from that country. Mr. B. B. Redding, Fish Commissioner of California, will send Dolly Varden trout, Satrelius mature, also "McCloud river" trout (rainbow?), Carson river, and Tahoe trout. From Mr. J. Ostreicher, Elcho, and Meacham and Blakesly, Hunboldt, Nevada, will come "Humboldt river trout," Satmo clurkti, and quinnat salmon. Of the S. clarkti Mr. Redding writes that they are the best trout he knows of, and hopes that Mr. Blackford will take pains to display the fish, so that people at the East will know the fish by sight at least. Specimens of fish are expected, also, from the works of the New York Fish Commission at Caledonia. Mr. James Annin, Jr., of Caledonia, N. Y., will, in addition to his display of trout, show trout eggs in process of hatching. The United States Fish Commission will exhibit salmon fry from a week to six weeks old in hatching fars; these are from the lot now being developed at Mr. Clapham's hatchery at Roslyn, L. L., under the care of Mr. Fred. Mather, with which Professor Baird intends to stock certain waters in Now York.

The invitations to the trout opening this year are elegant chroun li

You are cordially invited to inspect all the procurable varieties of trout which I shall have on exhibition and for sale on the first day of April at my new establishment in Fulton Market.

Fulion Market.
The exhibition will be under more auspicious conditions than formerly, as it will not only celebrate the commencement of the trout season, but will be the occasion of the opening of our magnificent stalls in the new market building.
Examples of fishculture from all the leading fishculturists and Fish Commissioners of the United States will be distinguished.

and rish Commissioners of the United States will be dis-played.

On the cover is a hand-which is distributing fish to the waters, and is emblematical of fishculture.

Ladies have heretofore thronged the "trout openings," braying the dangers of the old rickety market and its filth; and with the new building and its clean asphalt floors we expect to see a larger number of them than ever this year to "the heautiful combinations of trout and flowers."

THE FIRST TROUT OF THE SEASON.

THE FIRST TROUT OF THE SEASON.

WHAT an indescribable charm there is about the first trout of the season. What on awakening to the true inwardness of life rests upon that initial fish, be he big, little, or the fruit of worm or fly. The first grouse, or quail, or woodcock no more compares with him than rayless midnight with the vernal noon. It is the epoch of the sporting year in which the soul leaps from the pent up confines of the winter into the glorious freedom of a new day and a new life.

After a long, busy season of inanition—excuse the paradox—in which life has been made up of work and so-called amusement, when the gun and rod hang idly on their hooks, how delightful to have suddenly thrust home the fact that in a few days the trout season will open. What a shaking off of wintry associations—how everything is made ready, even to the smallest details, nothing is forgotten: the split ishot so essential in bait-fishing are stowed away in the little pocket of the old shooting-coat; the drinking-cup is tucked in its accustomed place; the extra leaders, snells, and flies are carefully unraveled and looped ship-shape in the fly-book—and the angler, having arranged everything to his satisfaction, waits in a dreamy, contented (never impatient if he be a true disciple) sort of way for the opening day. On April 1st, at early dawn, we find him with trembling fingers adjusting a fat grub to his hook; before him ripples the stream whose waters have paid tribute to his skill for many years. Still, in spite of past experiences, he has the same old trouble getting ready for the first cast he did twenty years ago. But at last the tackle is satisfactorily arranged, and with beating heart the lure is carefully dropped into the same old 'rifle' and goes dancing down to the head of the same old pool, and quick as a flash, as has happened of before, is seized and borne beneath the overhanging bank. It is but the work of a moment to land him, for there are no big fish in the stream—and the first trout of the season slips into

TROUT FISHING AT SPOKAN FALLS

INTEND to have a time with the two pounders in the Spokan in a few days, and after we move camp will tackle the prairie chickens, as there are flocks of them where the new camp is to be. I have seen a few ducks in the Tule Lakes about here, and the old settlers say there will be more of them later on.

the new camp is to be. I have seen a few ducks in the Tule Lakes about here, and the old settlers say there will be more of them later on.

"Gustavus Snooks" has a near relative living here in the person of a storekeeper. His first exploit was to select the finest rod and tackle in the store, walk to the river, slap his line into the water and immediately hook a two-pound trout. As soon as he felt the fish he gave one tremendous yank, broke his line, snapped his rod in four pieces, and then both feet slipping he violently assumed a sitting posture, demolishing a large silver tobacco box in the back pocket of his breeches, the presence of which saved him from becoming a total wreek, by breaking the force of his sitting down.

Two days after he selected another rod and sallied forth, this time accompanied by his dog, and bound for a beautiful place for casting, which I had pointed out to him. On his arrival he put his tackle together, braced himself firmly, (after, as a wicked man in town avers, carefully folding his coat and placing it on the ground so as to break his fall in case of another two-pounder) and prepared to make his first cast.

In the meanwhile the dog had scated himself a little ways

case of another two-pounder) and prepared to make his first cast.

In the meanwhile the dog had seated himself a little ways behind him, with both ears cocked up and with an intensely inquiring expression of countenance, was closely watching the proceedings. "Gustavus" having "a good ready on," gave a grand flourish with his rod which threw the line back of him, and drove with his forward motion for a big cast one of the hooks in the ear of the dog, who immediately set up a loud ki-yi, and bolted frantically back to town, dragging line and rod after him. "G." was utterly astonished by this unexpected disappearance of his rod, and for an instant starod intently at the cloudless sky above him, probably thinking "it was angels!" When realizing what had occurred, he filled the surrounding atmosphere with big, big ds, and started after the dog. He found portions of the rod and line along the road, and on reaching town discovered the dog on the top of a lumber pile with one hook in his ear and another in his back, wildly pawing his head and howling for relief. ing for relief.
"G." has since very much improved, owing to my able

"G." has since very much improved, owing to my able (ahem) tuition, and now brings in as good a basket as any of his fellow townsmen. Occasionally the memory of former days arise and he mourns the loss of two good rods, and in an absent-minded sort of manner refers to himself as dinged fool and mumbles incoherently about a dinged dog and a dinged hard rock, and is thrown into violent fits of anger if some one innocently asks him how he dented his tobacco

LAWS FOR THE PEOPLE, NOT FOR PIRATES.—The Baldwinsville, N. Y., Gazette recently said: "But there is another thing that affects many, and that is a feeling that the game laws exist, not for the people, but for a party of city sportsmen, who will descend on all our trout streams on the first of April, and carry home all they can eatch of fish of a finger's length or under—mostly under. There is a deep-rooted but unwise feeling among our rural population against all game laws, and this will not be overcome by violent acts. Those whom the city papers sometimes denounce as pirates and roughs, telling baseless stories about their terrible deeds, simply exercise what they regard as a natural right. We helieve still, that if they could test the advantages of some restrictive measures, they would in time be found among the intelligent and strong supporters of laws even more beneficial. Prof. Baird, U. S. Fish Commissioner, makes friends of the fishermen, and they help instead of opposing him. We recommend his reports to the autention of the Journal, and his example to the Syracuse Fisherman's Club." To this the Syracuse Journal, always the friend and champion of law-abiding sportsmen, replies; "Our friend is mistaken in his first conclusion. The game laws are for the people and opposed to the phrates who with nets would rob the people. Every man, woman and child has the right at proper

times to catch fish with hook and line, and if some do not choose to avail themselves of the privilege, they ought not to find fault with those who do. Is the Gaz-tle a better friend of the outlaws who with fist and pistols have defied the law, than of the 'city sportsmen' who observe the laws, harm nobody and secure a little needed recreation? And does it suppose that Prof. Baird 'makes friends' with such fishermen as attempted to take the life of George Crownhart at Oneida Lake? Not much! We believe in laws which provide for an equal distribution of fish and game, that is, one which gives all the people an equal chance, and permits none to rob the majority of their rights. The contest with the pirates can scarcely be caught with a hook, was long and some of the time desperate, but in the end they were beaten, and nany of them are now going to the shores of Lake Ontario to continue their nefarious work. Are these men to be invited by the Legislature to return and continue their robbervited by the Legislature to return and continue their robbervited under the authority of law? If net fishing is to be legalized, it is time to abolish hatcheries and all means for stocking lakes and streams. We cannot believe that either of the three sportsmen's clubs of this city have given Mr. Alvord's bill countemance, and we are equally sure that the Gazette has been greatly misled." times to catch fish with hook and line, and if some do not

bill countenance, and we are equally sure that the Gozette has been greatly misled."

How a Two Pound Pickerel Chased a Young Ladder Forty Rods on Dry Ground.—Several years ago, when recovering from a long and dangerous illness, I went home to my father's, in Maine, for a visit, and to be "nussed up" by the dear old mother. One day I wanted to go down to the Saco River, a quarter of a mile away, and try for a fish, but the nurse said no, I could not go unless some one would go along to pull me out-if I tumbled in. I, had been to the river two days before, and in consequence of a sudden attack of vertigo had fallen into the water and nearly perished. Finally I coaxed my sister, a young lady of seventeen, to go with me, and off we started, each equipped with a bamboo rod. My sister had never caught a fish larger than a fingering trout, and was withal somewhat inclined to be nervous and easily frightened. Reaching the river I sat down on a log to rest, having first put a frog on my sister's hook. Down the bank she went and gallantly made her first east; almost instantly she cried out, "Oh! I've got a bite!" (Pull then," I answered, and pull she did, bringing the open countenance of a two pound pickerel above the surface. Frightened at the appearance of the monster she gave one tremendous shrick and precipitately fied up the bank, forgetting, however, in her alarm to let go the rod, which she dragged behind her with one hand. Of course the pickerel followed right after, for he was securely hooked. As she careful the log where I sat convulsed with laughter, she gave one "lingering backward look of sadness," saw the pickerel coming on at a hand gallop, gave another terrible shriek, and "lit out" for home, still unconsciously clutching the red. Once in about every ten jumps she would look behind, see the fish "faint, yet pursuing," secram, and redouble her endeavors to escape. As best I could I followed on, now alarmed myself, fearing evil effects to the pursued. On the side of the hill, forty rods away, I found the f Locke (Pillsbury, Minn.).

An Epistle to Trout Fishers.—Now, as the season draweth nigh when the disciples of the "Gentle Art" go forth with rod, red and creel, "to entice the mountain trout on engulph into their denticulated nostril a barbed hook, on whose point they have affixed a dainty allurement." Listen to the voice of wisdom speaking from years of experience. When thou goest forth take with thee a variety of bait, for the trout, of all fishes, are the most undecided as regards their diet. When thou casteth thy bait upon the waters, and it should come to pass that instead of falling like a snow-flake where thou intendest it to fall, thou discoverest it dangling from a grape vine on the opposite side of the stream, be not weary in well-doing. And I beseech thee that in thy percgrinations through the rhodocladrous that line the banks of the stream, when thy hook taketh hold on everything within reach, and a great many that are out of it, when thy lancewood tip be broken, and thy line like a fly nct is woven among the underbrush, to remember the third commandment. But if peradventure too much of a sameness in this line should occur, then shalt thou be privileged to say Roully, and when thou sayest it, mean it. Now I exhort you, my brethren, that you do not unnecessarily enlarge either the size or the number of thy catch that thy days may be long in the land and thy end peaceful. Neither angle thou for numbers lest thou be tempted to take those that are good for naught except to count; always bearing in mind that a basket half filled with fair-sized trout is preferable to one filled with fingerlings. And I enjoin upon thee never to catch trout to sell lest thou bese thy self-respect. "Then art thou poor indeed," And finally, my brethren, if you have not already done so, subscribe for the Fonest And Stream, that thou mayest learn what flies to use in the different mouths, and where to purchase the finest tackle, then shall thy children rise up and call thee a second Izaak Walton.—Sancho Panza.

Badly Tied Hooks,—Mill Springs, Ky., March

Walton.—Sancho Panza.

Badly Teed Hooks.—Mill Springs, Ky., March. '82.—The morning of the 4th inst, was so delightful, cher and warm that I readily assented to my little son's proposition that he catch a bucket of minnows and we would go a-fishing. At noon he reported bad access, but at one o'clock, when the mercury indicated 80 deg. Fah, in the shade, we started on our eight miles' jaunt to the river with but half a dozen good minnows in a bucket containing eighteen or twenty. The first cast was made at four o'clock, and when the last good minnow was mangled we had five pike-perch strung, two of which weighed respectively eight and cleven pounds. The roe from the larger weighed 241bs. Two large fish were lost by the abominable indifferent manner in which the hooks had been tied to the gut—and they were purchased of one of the boss establishments of your riparian village. What can be more exasperating than to see that you have a whale, and when landing net is brought to the front and you feel that the fish is almost as good as strung, to experience a general relaxation and discover your lead and float flying through the air as if fired from a catapult? I confess that my feeble disquisitions under above circumstances would not be the proper thing for a member of a Y, M, C, A. And "just to think," that after last year's experience i could be fooled into

trusting one of the darned things when I had a lot of sproats in the same pocket which old Opoldildoc had tied to gimp for me years ago, and tied them to stay. It does seem that the heads of some dolts must be cleft before an idea can find lodgment, and "I'm one on 'em." Next morning the Delugo, which has had a run here equal to the "Black Crook" at Niblo's, was on, and we came in dripping, but with enough fish for all the neighbors, and determined to go again the first favorable day. Just when that will be is considerably mixed, for the night after our return the highest water-marks were submerged, and while I write, three days later, rain is pouring in sluices.—Kentuckian.

pouring in sluices.—KENTUCKIAN.

THE SHAD SEASON.—There is a prospect for an early run of shad on the rivers. In the Potomac it is predicted that eggs will be taken as early as the 10th of April. The U.S. F. C. is preparing for a big season's work on the river. The eggs will be hatched in the old armory building and at the mavy yard, in Washington. The first shad in the Connecticut River is thus recorded by the Hartford Times: The first shad taken from the Connecticut River this year, and the earliest probably for many years, was taken from the pound of Mr. Pease at the mouth of the Connecticut Monday afternoon, March 20, 1882. It proved to be a fine roe shad, weighing 54 pounds and was bought by Mr. Van Vleck, of Blackford & Co., New York, the price being \$1 per pound. The shad was served at breakfast at the Pease House at Saybrook Point, on Tuesday morning, Mr. R. Cornell White, of White's Line to Saybrook, J. J. Dickenson, agent of White's Line, Gilbert Thompson, of Essex, Captain R. R. Miner, of the Columbia, R. Van Vleck, of Blackford & Co., of New York, and Captains George Holton and Westey Pierce, of the stemer Columbia, who were on their way to attend the sales of steamers of the old Hartford line at New London to-day, were at breakfast, and pronounced the shad of fine flavor. They concluded that it betokened an early season.

SIELLING OUT.—"There's going to be a big revolution in the fish business," a Fulton Market dealer remarked to a Sun reporter. "Perhaps you have heard of the Nutritive Society? It's a lot of advanced thinkers that believe in only paying for what they use, and propose putting it into practice. One of them dropped in here the other day and wanted to buy a good fresh cod. I picked out for him a good one at twelve cents a pound. "Now, my friend," he commenced, 'you are making me pay for the head, the backbone, the skin, and two-thirds of the weight of the fish in water at so much a pound, while I only want the nutritive portion." But I didn't see it in that light, and the old chap went off with the fish, swearing that he had been cheated. One of the men here knew him, and said that he kept a grocery in Third avenue, and the next night I walked in and gave him a call. I ordered a quart of peanuts, and as he was measuring them out, I said, 'Don't put in any shells; I only pay for the nutritive portion." He recognized me, and saw I had him, but he stuck to it that meat and fish should be sold on a nutrition basis, while no allowance should be made for egg or peanuts shells."

Enforcing the Pennsylvania Laws.—Hollidaysburg, Pa,—Just after the breaking of the old canal reservoir near this place, warrants were issued for the arrest of several persons charged with the eatching of black bass out of season, and as a result two of the oftenders were convicted and fined each ten dollars and costs. Shortly afterward another man was arrested for taking eight trout from Blair creck, a beautiful mountain trout stream which joins the Juniata above our town, and being unable to pay the fine of eighty dollars imposed, was committed to the county jail for eighty days. A few more examples like this will finish the pot-fishermen around here. The winter here has been so mild that all kinds of game wintered well. While taking a short walk recently I flushed a bevy of quail and one ruffed grouse, who went off like a rocket. Woodcock have begun to arrive, several having been seen in the country, and one was flushed yesterday evening near the market-house, in the center of the town.—T. D.

INCREDILE TALES TOLD BY ANGLERS.—A paper quoting from the Detroit Vive Press, gives numerous fish stories under the above title, among them one of a fisherman in East Florida, who, with half a mullet on a shark hook, eaught a bass after an hour's fight which weighed fifty-three pounds, and was scaled with a grubbing hoe, the scales being as large as silver dollars. The other stories were like those of our old friend Baron Munchausen; but this incident may be seen any day almost on the Florida coast, even to the grubbing hee part of the story. The grouping of these stories under one title reminds one of the old lady who believed the tales of her sailor son about rivers of rum and mountains of sugar in the West Indies, but refused to credit his statement that he had seen flying fishes. The ignorant newspaper man and the ignorant old lady were alike unable to discriminate between the true and the false,—S. C. C.

A GIANT SQUID.—The Sacramento, (Cal.) Bee, says there has been on exhibition for a day or two past, at the stalls of D. DeBernardi & Co., K street, between Third and Fourth, a monster "devil" fish, which was captured in San Francisco Bay. As it lay on a table on the sidewalk in front of the store it attracted much attention, and large crowds collected to view the "critter." It resembles a mass of jelly, with a head about the size of an ordinary washbowl, and from this protruded nine tentacles with suction openings at intervals of an inch or two. The longest of these arms measured fourteen feet. The fish is considered rare eating and was sold to Marreo Maina. teen feet. Th Murco Maina.

Good Ground for Bass.—A capital fishing ground for black bass was discovered last season by Mr. Charles Yogel, of Philadelphia. Knowing bass were plentiful on the Upper Susquehanna, he surmised they might be caught lower down. He made the experiment directly above the bridge at Havre de Grace, with minnow bait, and took numbers—on one day forty odd pounds, the largest weighing six pounds.—Homo.

Lost A Big One.—Mr. A. H. Powers, Fish Commissioner, and party returned yesterday from a week's trip fishing in Canada, on Magog and Massawhippi Lakes. They had cold weather but report fair success. Their largest fish was a maskelunge of fifteen pounds, but like the boy, they "lost a whopper."—X., Plymouth, N. H., March 23.

NEW FISHES IN CHESAPEAKE BAY,—The U. S. Fish Commissioner's steamer Fish Hawk, recently went down Chesa-

peake Bay, and while no shad were taken. many interesting fishes were found. Among them were fitty dogish, Squalus Americanus, and many of the young of the spotted codling, Urophycis regius, which were not previously known in the

Hishculture.

THE DEUTSCHE FISCHEREI VEREIN.

THE DEUTSCHE FISCHEREI VEREIN.

THE reports or circulars of the German Fishery Association are issued as often as circumstances require, and usually number from eight to twelve in a year. They are handsomely printed in quarto form and unbound. Circular No. 1, 1882, dated Berlin, February 10, is before us. This circular is accompanied by fourteen handsome quarto lithographic plates of the fishways of Great Britain, making it a valuable work for reference on this subject. The text opeus as follows:
"As in the pust year giref at the death of President Garfield has encircled the earth, we are impelled by our friendship for Professor Baird to say a few words of condolence." Here reference is made to correspondence between Mr. von Behr, the president of the association, and Professor Baird, which is given in full in the appendix devoted to correspondence. In order to obtain more current knowledge of English fishways, Mr. Brussow, an eminent engineer and member of the association, was sent to that country by favor of the Grand Duke of Mecklenburg-Schwerin. The fruits of his journey, with the thanks of the society, are laid before the readers of the circular in his report, and the chart before mentioned. The question of fish lad ers is one of the most important ones for the future consideration of the society. Our friend, Fred. Mather, writes us: "You know that for a long time! was in doubt about the practical value of the Mic Donald fishway, and that I sought proof of its capacity. Now I consider it the best one which has been invented, and it is rapidly growing into favor." We wish Mr. Mather would give us further particulars.

Our thanks are due Professor Baird for presents of eggs of

offer which as ober interest, and is the particulars.

Our thanks are due Professor Baird for presents of eggs of salmonoids. He will shortly send 20,000 eggs of the lake trout, a valuable species of America, which sometimes reaches fitty pounds in weight. Lately there has been some opposition to our importation of fish eggs, by those who are strangers to the subject. The only influence such opposition has, however, is that perhaps we should be less liberal in distributing such eggs in such multitudes with our willing hands, those which have not been proved to be of value to Germany.

With our best thanks we acknowledge the receipt of 300,000 eggs of the whitefish from Professor Baird, which we will place in the Alpine lakes only in great quantities. These eggs came to Geestemunde in the very finest condition, fine beyond comparison, while among the above mentioned 20,000 lake trout eggs, only 100 were dead.*

The zander (pike-perch, wall-eyed pike, Stizosthedium) we recommend to all our esteemed co-workers in fishculture. The fishery society of Coblentz reports great numbers of large zanders in the Khine, as well as in the Bodensee (Lake Constance). Perhaps the society in Augsburg will distribute these fish, and it is possible that we may have the eggs and fry given to us.

Who wishes from us, before the next spawning time, the im-

given to us.

Who wishes from us, before the next spawning time, the impregnated eggs of the grayling and the hucho (salmo hucho, the hooked salmon of the Danube)? Or who offers to sell us

pregnated eggs of the 'prayling and the hucho (*almo hucho, the hooked salmon of the Danube)? Or who offers to sell us such eggs!

Thus far we have quoted the report proper, which is followed by much correspondence. We have noticed that between Mr. Von Behr and Prof. Raird concerning the death of President Garfield, and this is followed by a report of Engineer Brussow, of Schwerin, on his journey to England to inspect fishways. This, as we have said, is illustrated by fourteen plates, and we may in future translate his report, which would be marred by extracts.

From a report by Prof. Nitsche, Thurand, we learn that on the morning of April 13, Mr. Eckardt, of Lubbinchen, mailed 200 eggs of the pike, Esox havis, which arrived by post at Tharand the next morning with only one dead egg. These eggs were impregnated on the 25th of March and the first fish appeared on April 17. The sac was absorbed by the 24th of May, at which time the greatest mortality took place, and ninety-three were turned out. Mr. von dem Borne also sent eggs of the young fry, which were received in good order.

This circular is one of the most interesting ones which this very active and useful society has issued, and it is pleasing to see that the fishculturists of Germany are not content with being the foremost society of the kind in Europe, but are continually showing evidences of progression. Those who wish to follow their progress further are commended to their circulars. We have extracted only those points which might be of interest here.

*The eggs mentioned were brook, not lake trout; the latter were too far advanced to send and were only a small lot at that. They were hatched the next day after arriving in New York and placed in a New Jersey lake, as mentioned in another place.

THE AMERICAN FISHCULTURAL ASSOCIATION.—The annual meeting of the association will be held at the rooms of the Fulton Market Fishmonger's Association, in the Fulton wholesale ish market, on Monday and Tuesday, April 3 and 4. This building stands next the ferry house and is between South street and the river. The meeting is usually opened about 10 A. M. each day. The only way in which the valuable reports of this association can be obtained is by joining it. It was at one time proposed to offer them for sale, but afterward it was decided not to do so. The membership costs three dollars per year, and those wishing to join it can consult the treasurer, Mr. E. G. Blackford, Fulton market.

BENCH SHOW AT CLEVELAND, O.

BENCH SHOW AT CLEVELAND, O.

We have received a letter from Mr. L. G. Hanna, of Cleveland, O., stating that there will be a bench show in that city in June, and that in addition to the \$500 subscription at the meeting the full amount of the guarantee fund has been raised and that liberal prizes will be offered. A Cleveland correspondent says:—"A number of gentlemen, including Mossrs, L. G. Hanna, Thomas Axworthy, J. T. Wamclink, George W. Short, J. T. Dawley, C. M. Munhall, Charles Gatlenz, A. E. Sterling, J. H. Dalliba, James Wood, G. W. Batler, J. C. Mvers, Frank Robinson, John A. Teal, L. O. Rawson, S. H. Wilson, H. E. Hill, John J. Wightman, and Henry Zinnerman, met at the Weddell parlors, March 2nd, and formed an association, with the following officers: President, L. G. Hanna; Secretary, C. M. Munhall; Treasurer, A. E. Sterling, A soliciting committee consisting of the following gentlemen was also appointed: J. T. Wamelink, J. T. Dawley, Charles Gablenz, J. H. Dalliba, James Wood, G. W. Baker, J. C. Myers, and Frank Robinson. The above committee gave evidence of the fitness for the work assigned them by raising a guarantee fund of \$500 on the spot. A desire to be represented with other cities in this particular interest has prevailed with a number of the above-named gentlemen for some time, and she great success of the recent bench show at Pittsburg acted as a strong inducement for the action taken last evening. The hearty manner in which the call was responded to, and the generous subscriptions to the call was responded to, and the generous subscriptions to the call was responded to, and the generous subscriptions to the call was responded to, and the generous subscriptions to the call was responded to, and the generous subscriptions to the call was responded to, and the generous subscriptions to the call was responded to, and the generous subscriptions to the call was responded to, and the generous subscriptions to the call was responded to, and the safe to say that the above association will be eitee i

AMATEUR TRAINING.

AMATEUR TRAINING.

A FRIEND and I went up the river duck hunting the other day. We had along an Irish setter bitch pup. Last sumers he was taught to retrieve sticks from land and water, which was about the only experience she had received. Arriving at our destination, we built blinds and had the good fortune to drop a number of ducks which Nan retrieved nicely. But the water was very cold and, getting chilled through, she went more reluctantly and finally refused to go into the water at all. Coaxing availed not, whipping only made a bad matter worse. What was to be done? A question of authority had arisen between the dog and her master, the decision of which would probably be the ruin or the making of the pup. Nan crouched shivering and whimpering at my feet, awaiting my next move, knowing what was wanted of her but determined not to go into that cold river again. I hastily revolved all the patent methods of making a dog retrieve. I had read in the Porbers And Struban, but none would fit this case. Suddenly a bright idea entered my mind. I seized the pup by the nape of the neck, and tossed her into the water beyond her depth. As I expected she immediately turned and swam for shore. I shook the whip at her and repeated camphatically "go fetch." She paddled around a few moments, just beyond reach of the whip, and then suddenly wheel ing about started for that duck, which she retrieved in finstyle. A happier dog, when she got to land, you never swe

the humanity not 'to send her in again that evening. Of course it is cruel to send a chilled dog into the water but when one, whose success as a sportsman is not great, drops a fine mallard, he wants that duck and wants it bad, and if he is not able to afford a boat or a Chesapeake Bay dog, why, he must retrieve it with the means he has at hand. I would like some of my brother sportsmen to try the above plan, in a similar emergency, and see if it will not work.

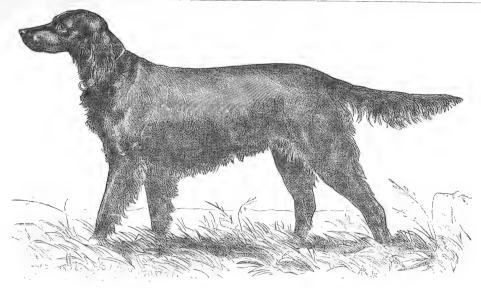

Fonce taught an old and very stubborn dog to retrieve, after other methods failed, by tying him up without food several days, then letting him see me wrap a piece of meat in a paper and attaching it to a float, which thrown into the water. Telling the dog to "fetch," he immediately swam out and brought the float with meat attached to the shore, when the meat was given to him.

I should like to inquire of the dog trainers why a dog shoul be taught to "drop to shot." I have not learned my bitch to drop, and, when a covey is flushed she will watch until the birds go down; then, when the dead birds, if any, are retrieved, she will immediately set off in the direction they have flown, and rarely fails to mark them down more correctly than the sportsman can. A dog with the hunting instinct strong in him, wants to see the game as long as he can. To deprive him of this is to take from him half the pleasure of the hunt, and acts about the same upon him as it would upon the sportsman to envelope his heat and an agumy sack immediately after it ing. Give the dog all the pleasure in the sporty ou can, and he will make a better and more intelligent dog, in my opinion.

For this country my preference is the red Irish setter. The

you can, and ne will make a service in my opinion.

For this country my preference is the red Irish setter. The

DR. WM. JARVIS'S RED IRISH SETTER BITCH "ROSE!

dogs are sometimes rather headstrong, but the bitches are just headstrong enough to make spirited and courageous hunters. They are tractable, make a beautiful appearance in the field, and are trieless workers. When the other dogs seek the shelter of the wagon from fatigue, the red Irish is just beginning to feel in good hunting condition.

I have been interested in reading the voluminous correspondence upon the gun measles. It is my opinion that the guns so afflicted have the measles when they come from the maker, but do not show them owing to the high polish on the inside of the barrel. I have never seen but one gun without the measles, after it had been in use a short time, and that was a Parker, which had been re-bored by hand. My Colt is thus afflicted, but I keep it clean and it shoots as well as if it was spotless. I have tried putting the gun away in a dry place without cleaning, but it rusts. I clean with kerosene, wipe dry and oil with best sewing machine oil. Amateurs.

Manhattan, Kansas, March 14, 1882.

ENTRIES FOR THE NATIONAL DERBY.

THE following entries have been received since my last re-

port:
Fan Carlisle (Bill Carlisle-Nell Carlisle), liver and white ticked English setter bitch, whelped May 24, 1881. Owned by Mr. D. C. Plumb, Nicarar, Canada.
Nellic Buruco-Lit), blue belton English setter bitch, whelped June 18, 1881. Owned by Mr. W. A. Ellison, Ortoka, Temp. Reliable, Gludetone Counter Kern, bluek, and white Pacific.

Mr. D. C. Plumb, Niagara, Canada.
Nellie E. (Bruce-Litb, blue belton English setter bitch, whelped June 18, 1881. Owned by Mr. W. A. Ellison, Ortoka, Tenn.
Pink B. (Gladstone-Countess Key), black and white Raglish setter dog, whelped May 13, 1881. Owned by Mr. W. B. Mallory, Memphis, Tenn.
Prince Al. (Leicester-Dodge's Rose), white, with lemon ears, English setter dog, whelped April 26, 1881. Owned by Mr. A. H. Moore, Philadelphia, Pa.
Prairie Wonder (Prairie Joe-Prairie Queen), lemon and white English setter dog, whelped April 2, 1881. Owned by Mr. A. H. Moore, Philadelphia, Pa.
Prairie Wonder (Prairie Joe-Prairie Queen), lemon and white English setter dog, whelped April 2, 1881. Owned by Mr. R. B. Morgan, Canton, O.
Pegzy Belton (Belton-Bramble), black, white and tan English setter bitch, whelped May 6, 1881. Owned by Mr. Geo. P. Jones, Florence, Ala.
Countess A. (Dashing Lion-Amada), lemon and white English setter bitch, whelped Aug. 10, 1881. Owned by Mr. J. M. Arant, Hickory Valley, Tenn.
Bers A., litter sister to Countess A. Same owner.
Caddy (Ruke-Phyllis), black, white and tan English setter bitch, whelped Aug. 30, 1881. Owned by Mr. A. Branshaw, Dallas, Texas.
Glean (Dush HI.-Countess H.), black, white and tan English setter bitch, whelped April 9, 1881. Owned by Harvard Kennel Club, Boston, Mass.
Sioux (Dash III.-Khoebe), black, white, and tan English setter bitch, whelped July 12, 1881. Owned by Harvard Kennel Club, Boston, Mass.
Sountess May H. (Drake-Countess May), black, white and tan English setter bitch, whelped Spril 12, 1881. Owned by Harvard Kennel Club, Boston, Mass.
Greenwich (Paris-Dawn), black, white and tan English setter dog, whelped July 3, 1881. Owned by L. H. Smith, Strathroy, Canada.

— Owned by Mr. Herbert Imman, New York.
Bizora (Biz-Born), red Litish setter bitch, whelped July 8, 1881. Owned by Mr. Chas. Tucker, Stanton, Tenne Herbert Imman, New York.
Bizora (Biz-Born), red Litish setter bitch, whelped July 8, 1881. Owned by Mr. P. H. Bryson, Memphis, Tenn.

Thank that we will ha

Flease state that entries positively close April 1. The Trials begin Dec. 4, at Grand Junction, Tenn. D. Bryson

THE NEW YORK DOG SHOW.

THE NEW YORK DOG SHOW.

As the time approaches for the closing of the entries for the Westminster Kennel Club's show, there is a perfect rush of applications for blanks, and for the first time in the distory of the club the large supply was exhausted, and they were obliged to order a second edition. The entries are coming in from all parts of the country, and there will also be a number of foreign celebrities present. The celebrated bench show champion and Field Trial winner Gladstone will be on exhibition, as well as many other animals of renown. A large number of ladies' pets will be shown, and the management have taken extra care to provide for their comfort, and will turnish large cages for them that will show their good points to the best advantage. The usual arrangements have been made with the express companies, who will transport dogs for the show free one way.

The following special prizes have been offered in addition to those already published: Mr. J. M. Tracy offers a series of his pictures of field scenes; a member of the W. K. Club offers a special prize for the best poodle over 10ths. weight; Mr. G. & F. Grant will give a silver flask, value \$75, a member of the W. K. Club \$25 for the best setter; Mr. F. R. Hitchcock offers a silver flask, value \$75, for the best fox-terrier; Mr.

John Aspinwall offers \$10 for the best foxhound; a member of the W. K. Club offers \$25 for the best Irish setter dog or bitch entered in the open classes; a member of the W. K. C. offers \$25 for the best pointer dog or bitch entered in the open classes. Many other specials are promised which will be duly announced. announced.

ROSE.

classes. Many other specials are promised which will be duly announced.

ROSE.

WE give our readers this week a cut of the celebrated red Irish setter bitch Rose, imported and owned by Dr. Wm. Jarvis, of Claremont, N. H. She was whelped in 1874, and bred by Cecil Moore, Esq., Ullardmore, Dalkley, Ireland, Her prize winnings are as follows: First, Belfast, Ireland, 1876; second, Cork, Ireland, 1876; first, Bristol, England, 1877; second, Detroit, 1879; first, St. Louis, 1879; first special for best Irish bitch, St. Louis, 1879; one of winning Irish Kennel, New York, 1881.

Rose is full sister to the following "cracks:" O'Brien's Kate, O'Brien's Kitty, McHaffie's Mina and McHaffie's Bella, all noted prize winners. She was sired by the celebrated Palmerston. Rose is undoubtedly the best Irish bitch in this country and as a brood bitch has been remarkably successful, and of the puppies she has produced, thirteen have appeared before the public with the following results, viz.:

Raleigh.—Second in all-aged stake when only nineteen months old: Eastern Field Trials, 1879, second, open class, Pittsburg, 1881.

Lorna.—Vhc., open class, special with Nøreen, for best brace, Irish setters in open class, special with Nøreen, for best brace, Irish setters in open class, special with Nøreen, for best brace, Irish setters in open class, New York, 1880.

New York, 1881.

Lorna.—Second, open class, New York, 1880.

Syren.—Second, open class, New York, 1880.

Syren.—Second, open class, New York, 1880.

Meg.—First, puppy class, New York, 1881, and vhc., open class, Pittsburg, 1882.

Of the remaining three, Nora was once exhibited when only twelve months old, in open class at New York, 1873, and got a c.; and Claremont and Acho were shown in imported puppy class as the Soton, 1879, and got a c.; and Claremont and Acho were shown in imported puppy class as the soton, 1879, and got be a complete a six month's search wrote: "At last, I have got the thing to suit you, and am well repaid for waiting. I have purchased Cecil Moore's Rose,

EASTERN FIELD TRIALS CLUB.—There was a very important meeting of the Eastern Field Trials Club at Delmonico's, Fifth Avenne, last Thursday evening. After discussing the advantages of several localities for the holding of the trials next fall, Dr. Aten stated that he had recently had a conversation with Dr. S. Fleet Spier upon the subject, and there was a probability that the club could have the use of Robin's Island for the purpose. This was indeed cheering news, and the matter was postponed until the next meeting. The Derby and all aged stakes were opened with \$250 to first, \$150 to second, and \$100 to third for each event. These are very liberal prizes and will no doubt bring out a grand lot of entries. The Derby is open to all dogs whelped on or after Jan. 1, 1881. This is quite an innovation, and is most decidedly a step in the right direction. Hitherto the dogs whelped previous to April 1 have been obliged to compete in the all-aged stakes or remain at home, and as the first three months of the year are generally very prollife in purpose, it is but an act of justice to their owners that they should have an opportunity to show their quality in a class where they will stand some chance of success. The entries for the Derby close duly 1, when the content of the period of the members' stakes was postponed until a future meeting. Upon motion of Mr. Leach the running rules were changed so that the withdrawal of a dog should not jeapodize the chances of any other dog in the stake. Mr. Costar thought that the values should be so amended as to require that the handlers should shoot at every bird that they were ordered to flush, using blank cartridges, unless ordered to kill. Dr. Aten moved that score cards should be used at the trials. After some discussion the matter was deferred

until the next meeting. Mr. Chas. P. Stokes and Mr. T. F. Taylor, of Richmond, Va., were unanimously elected honorary members. The utmost harmony prevailed throughout the meeting, and after adjournment hearty congratulations were exchanged upon the brilliant prospects of the association.

DISTEMPER.—"Occasional" writes that he has met with good success in treating this disease by feeding finely-chopped onions fried in grease of any kind. Two medium-sized ones are a dose. He also speaks highly of the "tan vat" remedy are a dose. for mange.

DOGS POISONED.—Mr.F.D.Wright, of Auburn, N.Y., writes that his valuable setter dog Sentry was poisoned a short time ago, and that over a dozen fine dogs of that city have since met a like fate. The person who wifully does so dastardly an act would not hesitate with sufficient provocation to take the life of his fellow man. It some of these scoundrels could be made to pay roundly for their work it would perhaps deter others from committing the crime, for the assassin is ever a coward, and the possibility of punishment would exert a restraining influence upon his brutal instincts.

A FOX TALE.—The Toronto Globe gives us this: Miles Steadman, a farmer who lives on the Kingston road, came to market yesterday with a load of general produce. When he was approaching Scarboro' Heights early yesterday morning, his little dog, which was about twenty yards in advance of the wagon, commenced barking furiously. Presently, from the underbrush on one side of the road, two foxes darted. The dog bounded toward them, and just as it made a snatch at the nearest fox the other turned around and attacked it with great energy. Before Mr. Steadman could run to the rescue the foxes had killed the dog.

TT PAYS.—Granby, Conn., Feb. 11.—Editor Forest and Stream: It may be gratifying to you to know that every beagle I have sold through advertising has been from advertisement in Forest AND STREAM: also that every dollar received for stud service has been for dogs advertised in FOREST AND STREAM. That at least 15 per cent of all my sales are made by the few advertisements I have inserted in FOREST AND STREAM, and no stock has been advertised for over a year. Am selling on old advertisements yet, and when the large number of beagles I breed (had nearly fifty beagle pups on hand at one time) is taken into consideration, it is truly surprising and shows the value of FOREST AND STREAM to breeders. Please state to your readers that I have but one price; and time and postage can be saved by bearing this in mind.

mind.

STEALING AN UNREGISTERED DOG.—Michael Eckert was convicted before Judge Hare, in Philadelphia, March 1, of the larreny of a black and tan Gordon setter, valued at fifty dollars, the property of Byron Bromley. It was in evidence that the dog had not been registered, and counsel claimed that the court could not impose sentence upon the defendant, because an unregistered dog was not the subject of larceny, although it could be recovered by an action in the civil courts. In support of his claim he quoted a decision of the supreme court, in which it had been decided that an action of slander could not lie in a case where a man had accused another of stealing a dog, because the dog had not been registered and was not the subject of larceny. The judge said he did not think a man could appropriate a dog because it was not registered, and, in the absence of a decision directly bearing upon the case at issue, the judge said he would dispose of the matter on moral and common-sense principles. The man expected to receive a reward for the return of the dog. Instead of being a gainer he should be made a loser, and the court would therefore order him to pay a fine of forty dollars and costs.

LAVERACK IMPORTATION.—We clip the following from the "Kemnel Gossip" of the Stock-Keeper: "Our American Cousins" ever to the fore in discovering something spley or out of the common, have, I think, during the present week done an uncommonly good stroke of business in the setter line. Mr. W. Graham, of near Belfast, a well-known and highly esteemed exhibitor and frequenter of our dog shows, has purchased for Mr. Goodsell, of New York, the Laverack setter puppy Belthus from his owner, Mr. Hogarth, Kendal. Belthus is a "blue Belton," and though barely twelve months old is over sixty pounds in weight; all round a very fine dog indeed. I have no hesitation in saying he is the cheapest setter which has yet crossed the Atlantic. He has plenty of pace, an excellent nose, and on the show bench will make the best of them take a "back seat." For my part I am sorry he is lost to the country, for his great size, bone, and general frame must have made him a great success at the stud. He is by Fletcher's Old Rock from a sister to Flash, who is dam of the Birmingham winner at last show, and Belthus was bred by Mr. J. B. Cocketton, of Cartmel Pell, whose kennels have produced many excellent examples of the modern setter.

Belthus won first in the puppy class at Edinburgh in January. Mr. Goodsell informs us that he will not come to this country until after the forthcoming Crystal Palace show, whore he will be exhibited.

HUNTING SCENE.—George Inness, Jr., the well-known artist on animal subjects, has just finished for the spring exhibition of the New York Academy of Design, a spirited and well executed painting of a hunting scene taken from one of the field days of the Essex county hunt. Mr. Inness is now engaged on a similar subject for one of the members of the hunt.

We wish to impress upon the minds of those who send us items for our Kennel Notes, that to avoid mistakes all names should be written in PRINTLETTINS, as we find it very easy to make mistakes where this is not done. We also would like to be informed whether the animal is made or female, and to know the date of birth and the breed to which it belongs, whether polaries, setter or other. A careful state of the nature of the paper will show just what is wanted.

ne notes in this number of the paper win single makes wared.

THE YAWL IN AMERICA.

THE YAWL IN AMERICA.

[COSTINUED.]

The Caprice, as the first New York built yawl, has become a boat of so much interest to cruising yachtainen that we publish herewith an original illustration of her appearance under plain sail, and her log of the cruse to the Yorktown celebration last year.

"Kemp's Yacht Sailing gives a table of the highest speed attained by yachts of different lengths. This table shows seven and a half knots as the highest speed of a thirty-ixx foot yacht. On the only day on which we carried a jib topsail we made at one time over seven

THE YAWL JAMES.

knots, and this without either balloon jib, club topsail or spinaker. Under fore-staysail and mizzen we have the record of five and three-fourths knots. I do not suppose the Caprice will be as fast under some circumstances as she was as a sloop. The English estimate is that this rig comes half way between the cutter and schooner; but that the first comes half way between the cutter and schooner; but ber from fffty-four, in 1804, to 283, in 1873, while the figures for schooners are 207 and 232, and for cutters 574 and 574, showing that the increase in yawls is almost as great as that of cutters and schooners combined.

the increase in yawis is almost as great as that of cutters and schooners combined.

I enclose an abstract of our log on the Chesapeake. It should, however, he remembered that this was a simple cruise for pleasure, and that we could many times have gone further than we did had thero been any motive for go doing. We had no sphaker nor any light sails on board.

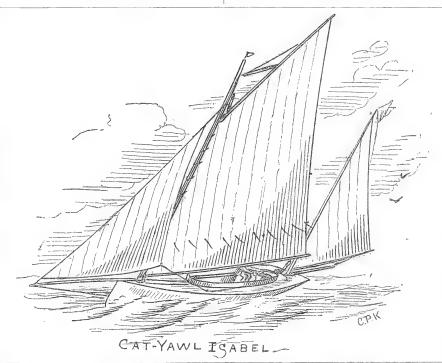

that we could many times have gone further than we did had there been any motive for so doing. We had no spinaker nor any lights alls on board."

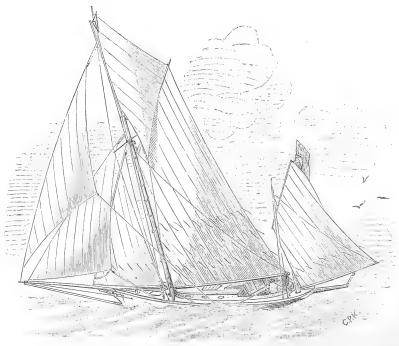

ABSTRACT FROM LOG.

Monday, Oct. 10, 1881.—4:29 P. M. We locked out of the Delaware and Chesapeake Canal and took our place at the rear of a tow of about a dozen working schooners to go down Back Creek to Elk River. After going about half a mile some of the schooners got aground, when the tugboat left us and proceeded with half the tow. After taking down these boats she returned for the remainder, which, the the having risen, were by this time all afloat. 8 P. M. Reached, the life having risen, were by this time all afloat. 8 P. M. Reached, The wind, which was very strong, being from the northwest and favorable, we concluded to proceed under fore-staysail and mizzen. 9:29 P. M. Passed Turkey Point light; wind unchanged.

Tuesday, Oct. 11.—3 A. M. Wind having moderated, set mainsail, beating up to Baltimore. Up to this time had carried nothing but fore-staysail and mizzen. 4:30 A. M. Distance sailed 42 nautical miles of which 31 running free under fore-staysail and mizzen and 9 to windward with mainsail. Time, 8½ hours. Anchored at Baltimore. 2:30 P. M. Weighed anchor and sturied down the Patapseo in a light southwest wind, which soon diled away completely, except occasional southers are some string in strong from southeast, we soon got under way and heat over 10 Rock Point, where we anchored about midnight. Bistance from Baltimore 8 nautical miles.

Wednesday, Oct. 12.—3:45 A. M. Got under way for Annapolis, Wind strong southwest, being dead ahead. Heavy sea, which several times covered bowsprit, completely hiding if from view. All hands wet from spondaift. 1:40 A. M. Rounded buoy off Greenbury's Point. 12:08 1: M. Anchored of Maral-Academy, Annapolis. Distance from Baltimore spondaift. 1:40 A. M. Rounded buoy off Greenbury's Point. 12:08 1: M. Anchored of Maral-Academy, Annapolis. Distance from Baltimore spondaift. 1:40 A. M. Rounded buoy off Greenbury's Point. 12:08

THE YAWL CAPRICE,

Thursday, Oct. 13.—6:15 A. M. Got under way with light westerly winds shifting soon to south-southeast. 9:48 A. M. Possed Thomas Point in range. Light halling head winds. Making but little progress. 6:15 makes graph and the progress. 6:15 makes graph and the progress. 6:15 miles from Annapolis. 6:40 P. M. Wind conding in from northwest got miles from Annapolis. 6:40 P. M. Wind conding in from northwest got miles from Annapolis. 6:40 P. M. Wind conding in from northwest got miles working northward. 1:125 P. M. Making & knots. Friday, Oct. 14.—12:40 A. M. Furled mainseil; wind north by east blowing a gale and sea running very high. 2 A. M. Moking 63 knots mader fore-staysail and mizzon. Point Lockout Light just in sight. Distance from Plum Point 9:45 nautical miles; time 8 hours 5: nlimites. From Cove Point 29:5 nautical miles in 4 hours 17 minutes, mostly under fore-staysail and mizzon. During the day we went ashore to see the country and get provisions. Our anchorage being exposed to the southwest wind, which was strong all the afternoon, we ran up about a mile beyond Cornfield Point, where we unchored in a place almost as exposed, but with more was tree lowward.

Manufay, Oct. 15.—255 A. M. Got under way; who senth. 7:23 A. M. M. Smitt's Point Lights in range. 11:15. Rounded buy of Fleet's Point, and ran into Great Wicomiles River for harbor 12:55 P. M. Anchored in Cockie Creek, near a little settlement of Northern fisherimen engaged in the fish-oil bushless. Distance from anchorage in Potomac 21 mantical miles, time 6!5 hours.

In a sours 19 minutes."

In meanting Mr. Philip Little, of Boston, essayed the on a small boat and reported favorably of her performance. In Merrill, of Boston, had a 15-ton flush deck yawl built by of Chelsca, Mass., from designs sent over by Rutsey. This week herself an excellent craiser, remarkable for both congreat stowage room below, the crew agreeing that they could forecastle in the fleet to compare with their quarters. The fluid speech in moderate winds, but too full in body to be 4 me Baglish idea of a critical risk sessed altogether divorced but abidity and accommodations. These have been attained ith under a flush deep for a greeken degree than in our own

During all this time our cousins across the border had not been idle, he old Alacm of the five had rounded as a five periment of the yawl right. During all this time our cousins across the border had not been idle, he old Alacm of the Royal Canadian Y.C. had cruised a number of easons on the lake, as a yawl, and several other yachts had been middry rigged in spire of the strong-sloop inthenees naturally finding the properties of the mizzon with much satisfaction. A new yawl of 15 tons papeared last year in Belleville harbor, and Toronto Yachtsmen were stonished to see their sloops and luggers handsomely beaten by the tile Trixie of whom we have spoleto on a former occasion. In Halitax a yawl came out in 1879, we believe, and made a cruise about the Lawrence that, her sating being highly spoken of in an account hierarch of the properties of the pr

growth their home waters, being too distant to point a moral way yound their home waters, being too distant to point a moral way yound their home waters, being too distant to point a moral way Last spring hie schoomer Violet, of Boston, we believe, essayed the water was the second of Maine, though how the change agreed with her we do not wo. Then Mr. David Hall Riee, of Boston, a gentleman much given experiment and always open to promising innovations, brought out schooner White Cap as a yawt, this being the largest yacht in nerica which has yet ventured upon the change. Hitherto only opps had sought greater handless in ridding tennestves of overpoor of the mizer of the part of the part of the water handless in ridding tennestves of overpoor to have established a much water field of usefulness for the wit. While no experienced mariner could well question the advanges of the mizzen to a sloop, it was not so clear to most people that isomers ould be benefited by the change quite as much. We have gramintained that, with the yawl in mind, small schooners were ogether a mistake and had really no business to exist, for the yard the equal if not the superior of the schooner in point of handiness, begin with, mut's faster chesper, and safer mor the bargain, as begin with, mut's faster chesper, and safer mor the bargain, as begin with, mut's faster chesper, and safer mor the bargain, as decred a scrivie which is should go om record to his credit. The extrinent he made has year has been found such a success that see-cliourester falkermue contemplate following suit, so that, for one casion at least, yeartismen have set the example to "the trade" and taken the initiative in the introduction or a feature we believe see very generally followed in the lishing and coasting fleets of the taken of the trade in the high of the proper of that dilocit ride which always characterizes fourhous see no further than the end of their own noses; and when, last

I however, completely off the course, to, we can be expected in a yawl, as the rig is, in her owners' estimation, a very decided overment upon the schoener.

Rice's opinion is entitled to weight since he is a practical sailor judges a novelty strictly upon the merits it is shown to possess, viles: "I much prefer the yawl rig to the cutter for handiand economy and think you will hever regret advising its adoption over in schoeners of considerable formage. It was with a fedinave in schoeners of considerable formage. It was with a fedinave in the property of the provider a failure of the provider a failure.

White Cap last full had proved a failure.

White Cap last full had proved a failure.

White Cap last full had proved a failure.

White the past full had proved a failure.

White Cap last full had proved a failure.

You have the facts it seems to me that to allow so incorrect a stement of further uncontradicted would perhaps deter others, who desire yan improvement from doing so. In the first place let mo say the short trial which pressing business ongagements allowed me mike of the yawl rig last October, were so satisfactory as to wara a completion of the original plan of rigging the yach in full the ent season of the plan of the plan of the first words and the steering and had been allowed that only the riguing the to stee the full that the total was the steering and had been allowed to the original plan of rigging the yach in full the figures that it is steering and had been allowed to be decided that only the riguine that is steering and had larged of the expected in the light of the province of the province of the condition of the original plan of rigging the yach in full the form to see that the steering and had larged the original plan of the original plan of right and the steering and had larged the could be expected in the light

weather which as a rule provailed upon the days on which she was sailed. Upon one occasion only did we have anything approximating to the chop sea for which Boston Bay is noted, and then nothing alarming.

satisf. Upon one occusion only the two was carryining approximating to the chop sea for which Boston Bay is noted, and then nothing alarming.

The White Cap was schooner rigged, and while good to windward and a fine sea boat, failed to run free as her model seemed to indicate she ought. My first improvement was fitting her with an iron keel of 14,000 pounds. Next I added to her light canvas, and soon became convinced that her lower spars were sot wrongly to render this of much if any advantage in going free.

The white Cap was not discovered that part of the annusement of sea and weather, I soon discovered that part of the annusement consisted in calling all hands to reef the mainsail in a blow, or furl it when damp after a long day's sail, its dimensions being as follows: on boont 5Mt., hoist 12ft., gaff 24ft. Sometimes the annusement became vigorous. Simply as an experiment if drafted a new sail plan upon the general design of the San Francisco yawl rig, so called, i.e., with a Bermuda driver. The new mainsail of the yawl contains about the same amount of canvas as the former one, not quite. Its boom is a Bermuda driver. The new mainsail of the yawl contains about the same amount of canvas as the former one, not quite, its boom is constituted to the contains of the force of the force of the force of the force and lift.

On the foot, and the jib 27ft.

Now, as to results. I find that my effective lower sail area is diminished, while that of the light sails will be correspondingly increased. Under the four lower sails, with which she has been tried, and, it ought to be said, made up out of the old canvas for the experiment only, and, of course, ditting badly, we find that she will work to washand under all of them, or without the jib, or without the vorce and in the schooler before. The yach is caster on her felm than before, especially going free, and handles as perfectly and holds as colose to the wind when going to windward. It is now all inboard, and three men can reef or furl it nore existly than is a colo

four men at least under the schooner rig. I ought to say that the new mainsail, owing to the long gaff, does not boist any more casily. Some yachtsinen may consider these results a failure in a cruising yacht. I have not yet seen it so, and it shall continue to complete the experiment, and test it fully before conceding that they are correct, is all made some dopartures from yawl rigs of whell I have seen it so, and it is all continue to complete the experiment, and test it fully before conceding that they are correct, is all made some dopartures from yawl rigs of whell I have seen indicated and the seen and connecting it by a stay with the main telephone above the main gaff and gaff topsail. There will be provided also a driver topsail heid in place by, what for want of a better name, I term a gaff spril. It is true that numerous prophets and marine philosophiers and sesthetes have made their predictions and speculations and ideas of beauty heard upon this yawlving since it has appeared in our waters, and so far as I can learn, all adverse to it. It is, therefore, semewhat satisfactory to have so enterprising a journal clinded. I may give the further results, if of valuor meanwhile you may be assured I shall enjoy trying it as quietly as I may be allowed, satisfied if I may not be set down for other than I am, a sailor who enjoys blue water and the practical knowledge of his ship which her practical management can alone give."

In the fall of last year Mr. Clapham, of Roslyn, fitted one of his nonparcials with a yawl rig of his own device, as illustrated in a prevailed that the practical management can alone give."

In the fall of last year Mr. Clapham, of Roslyn, fitted one of his nonparcials with a yawl rig of his own device, as illustrated in a prevail and the second content of the second content of the production of the Roslyn and have one we want device in the independent of the Roslyn of the second content of the seco

THE FIRST YAWL.

Bostons, [If memory serves us right the Caprice was changed to a yawl in the spring of 1881. In that case the Boston yawl was one year ahead and is the first American-built yawl on the Atlantie. But another correspondent reminds us of Mr. Eaton's little three-tonner Coquette imported from England in 1873, as the first of the rig in our waters After experimenting as a sloop she has settled back to the cutter will all the ofhodox kinks.]

all the otherox sums.;

Editor Forest and Stream:
In your history of the rawl you have omitted to mention the little Coquette, brought from England in 1878 by Mr. It. W. Eaton. Stream:

A YAWL IN A PIPER.

Editor Forest and Stream:

This is how several sloop men were converted to the yawl. Your readers know what a regular old sait our worthy commodore is, am his yacht Frolic has figured often in your columns. That she is yawl—well, ca ra sons dire. Only a short time ago the commodore is, and the yacht Frolic has figured often in your columns. That she is yawl—well, ca ra sons dire. Only a short time ago the commodore is, and the she was the she with a few friends aboard. Instead of coming to off San Quentin as proposed, the lovely evening enticed is further. By unanimous vote we set gaft topsail, gave her the fly ing jib as a spinaker, and kept away for Vallejo. During the night he wind flew round to the eastward and blew strong, and by the valuing and blowing in earnest. We got underway with one reef tied down in the mainsul, a reef in the jib and our small jigger or mizzer as you call it in the East, and proceded to beat out of Mare Island Straits. In San Pablo Bay the wind freshened, and before we reached Pinole Point it was evident more reefs would be wanted, se we concluded to the down while the water was still smooth. Now came the eye-opener for our shoop friends aboard, for you know even this point with a southerst gale you know were the summer of the proper should be wanted to the bound of the water was will single the judgest and the same mast, lauled out the earing and tied the points at our less ure, working entirely inboard in the cockpit and on the house top for ward, and the yacht all the time bowling along on her course at a very slightly diminished rate. Before all tan points of the second reef index on the same mast, hauled to the points aft our less ure, working entirely inboard in the cockpit and on the house top for ward, and the yacht all the time bowling along on her course at a very slightly diminished rate. Before all tan points of the second reef muzzle and the sea and wind we wanted.

BIG YAWL.—We learn that a prominent yacht will try this rig is summer, of which more anon.

unis summer, or which more abon.

BIG LOAD.—We have on our desir nearly seventy letters, three plans for yawls, two for cutters, three for lead keels, a can of paint to examine, photographs sent by thoughtful triends, patent row locks, but a dozen cuts for illustrations, and a stack of material, all of which is valued at full worth and will receive attention as early as a press of business will permit,

LAST OF THE AMERICA CUP.

IT is immaterial who is to blame. It is enough to know that the America Cup is no longer a trophy in good repute abroad. It has, to speak plaintly, sunk in the estimation of foreigners out of sight altogether, and no one seems to care a rush who holds the Cup or how often fresh deeds of gifts are served up to a somewhat nativeated

mongenner, and no one seems to care a rush who holds the Cup or how often fresh deeds of gifts are served up to a somewhat nauseated public.

In the language of the London Field, no British yachtsman with be "soft" enough to honor the Cup with a challenge under the funny proclamation recently issued by the New York Y. C. as the custodians of this much abused and bedraggled old grouple of London smithery. One of the very first denands of a challenge of any sort is equal terms to both sides. It requires no extended argument to show that in reserving for one side the right to name a competing yacht a few minutes before the start, according to the weather, and at the same time compet the other side to take his charces without any sucception of the start of the weather, and at the propage is a start of the start, according to the weather, and at the propage is a start of the start of the condition of the deed of gift. We are not inclined to think the club has too such as the New York Y. C. has part forth in fathering this latestedition of the deed of gift. We are not inclined to think the club has passed to a vote without due consideration. We believe that the small knot of gentlemen in the club who understand something about such matters, were either absent or gave the motion to accept no special concern, while the mass of voters, estimable gentlemen enough in their way, but neither sportsmen nor ynchtsmen in any sense of those terms, quietly assented, to get the thing off the docket and pas to more familiar topics and occupations.

So much the worse for the club, and so much the worse for the Cup report of the contractment of would cloud the whole thing in such a mixture that people abrance and near the deep reaches and interpretations attaching. Some time ago we had intimations from the owner of more of the small section and an anisture that proper and occurred to the open of the small section and the such care and basides, yet mother promoceaned to would cloud the whole thing in such a mixture that proper almost

Sandbag haterine, massing as the bound of the hold, or what passes for a hold in such skinning dishes! Is it a wonder the deed of gift provokes adverse comment?

But, shall international racing come to an end because the Cup is without honor abroad? Let us hope not. We suggest that the New York Yacht Club might show it spood faith by adding to the amount of \$5,000, generously offered by the dag-officers, the sum of \$5,000 aking a purse of \$10,000, a prize which might tempt some stranger to try his chances. The pot may seen large to some, but it will take a liberal inducement to attract british yachts three thousand miles away from the rounds of their own country's coast and the pleasant enticements of Nice and other French ports, where more profit and as much glory is to be reaped.

AN ENGLISH OPINION.

AN ENGLISH OPINION.

Editor Forest and Streun;
You are handling the cudgels right manfully against skinnning dishes, and we wish Forder and Stream every success. How anyone can have the face to praise them the dishes up we in Liverpool can't see, and we only wish to eatch them at their best in a heavy nor west breeze from the "Forminy" to the Dar Ship here. I guess the crew would see the wonders of the Lord. You know the sort of wall-sided sees we get here at times. The last now thing in rading tendomers easily see the wonders of the Lord. You know the sort of wall-sided words we get here at times. The last now thing in rading tendomers water. Name, Katie. Builder, Inman of Lyanington. I don't think there is any chance of the Americans seeing a big English cutter or schooner out there this summer. The cup is not worth competing for under the terms as they stand at present. The idea of naming the competing boat on the morning of the race is simply bosh. No man with any sense would accept such a condition. The Madge showed up the frying-pans, but they must remember that she is only a second rate ten-tonner now. Both Buttercup and Neptune can knock Madgo into a cocked hat.

STANDARD FREEBOARD.

THERE are many who think a bulk rule tents to cut dot board. We have no feur in that direction, helieving the cure itself upon further experience. The Tital Wave is often an example of this tendency. It is overlooked, however, trecord has been made in races saided seldom against a yacht size and often as mere "sails over" for want of critries in h The Tidal Wave is a very indifferent performer to windward as

NEW HAVEN YACHT CLUE.—Edilor Forest and Stream: On new club is prospering. Seventy members are on the list, and whope for a full hundred before the season is over. The officers to published in a previous issue, but as your paper is always ready! give credit where due. I blink the names of the incorporations ough give credit where due. I blink the names of the principal yeaching fourmat of the principal yeaching fourmat of America. They not solutions of the principal yeaching fourmat is always ready. The principal yeaching for the principal years and years and years and years and years are principally always and years and years and years and years are principally years and years are years and year

cruise is set down for May 3), and the annual regatta for June 21. Also a two weeks' cruise in August. Signal, blue burgee, with white cross in centre. The club bood will be sent you in a few days—

H. W. V.

TO ABOLISH MEAN LENGTH.—A gentleman proposes to build a
square stern sloop, sift, load line. Upon our recommendation, the
nose will tumble home ram fashion about if, bin., and the stern 2ft.
Sin. above water. Her mean length will be 38ft. Tygin. She will race
with yachts of the usual style, about 36ft. load line. Assuming files
with yachts of the usual style, about 36ft. load line. Assuming files
of overhang in beam and depth, two such boats will compare in size
as the cube of their lengths, or as 6f to 46, roughly allowing for saving
of overhang in one. As sloops will have to sail on even terms with
the new boat one-third larger, where will mean length be then? And
why will it not work fairly between the two? And it it does not sufficiently correctly measure their relative size, will it not be an admission that buk indulively forces itself to the mind as the true basis of
comparison; How will the small sloop like mean length and how
long will trake to converse her owner to the side of Forast axp
Syneam; Abolish the quackery. It is unworthy of intelligent men.

SAN FRANCISCO YACHT CLUB.—Mr. C. G. Yale's lecture on

STREAM? Abolish the quackery. It is unworthy of intelligent men.

SAN FRANCISCO YAOHT CLUB.—Mr. C. G. Yale's lecture on
sharpies, read at the last club meeting, was received with much
favor, as much information was clicited from letters from Mr. Clapham and the experiences of old stagers who remembered having
sailed such craft in their younger days in the East. Mr. Dickey, the
guide such craft in their younger days in the East. Mr. Dickey, the
the power, well could be obed grounds against such boats, as they lack
the power, well could be obed grounds against such boats, as they lack
the power, well could be obed grounds against such boats, as they lack
the power with their favor. Dr. Merritt, of Oschand, is midding a small
however in their favor. Dr. Merritt, of Oschand, is midding a small
however in their favor. Dr. Merritt, of Oschand, is midding a small
cone of 28th length for Lake Merritt, according to the San Francisco
Call. An iron centreboard has been proposed as likely to add to ther
safety. The club is taking energetic measures against the obstruction
of the channel by fishernen's nets, and the discnarge of coal far fato
the harbor. Chispa was beached at a big tide for cleaning, and had
to be floated off by Isahing barrels to her side.

LLOYDE, SURVEYOR,—Mr. Thomas Congroup has succeeded Mr.

to be floated off by hashing barrels to her side.

LLOYDS' SURVEYOR.—Mr. Thomas Congdon has succeeded Mr. Leary as principal surveyor for the United States. His office for the present is at 75 William street. We hope that inspection by Lloyds the street of the United States are succeeded by Lloyds and tree-milling garboards and from fasterings in large yeards, such that the present is at the present of the superincended by some expert. They would then get something like their money's worth at a more nominal outday for supervision. Our so-called "inst-class build" of yachts is shiftless and often attended with danger in sea cruising, and the vessels deteriorate rapidly in consequence.

consequence.

WHAT THEY THINK.—Three letters reached us from England last week in relation to the puerile clause in the America Cap dead, claiming the right to select a yacht the morning of the race according to the weather. This clause should be wiped out or the Cup once more returned to the surviving donor. The clause is a disgrace to those fathering it and an outrage upon American reputation for fair play. Out with it. The likes was never seen in sporting annals. If we can only retain the Cup by such technical chicanery, melt the pot and sell it for what it will oring. The clause is unworthy of a candy sucking babe. Plain talk perhaps, but true as gospel.

sucking babe. Plain talk perhaps, but true as gospel.

A CLOWN AT THE WHEEL —The London Field very truly remarks that the latest edition of the deed of gift of the America Cup contains a stipulation reserving the naming of our yacht till the morning of the race, the same as when Mr. Ashbury challenged, whereupon a stupid New York contemporary nails the statement in plain Eaglish as "a lie," and then a few lines below adds: "For this one race (the race for the cup) the Now York Yacut Chibr can name a yacht on the morning of the race," Can the writter of such contradictory bosh be considered sober?

dictory nosh be considered sober?

CORRECTION.—Mr. A. Cary Smith was not the chairman of the Seawanhaka measurement committee, as reported by error, but Dr. Fiffard, who read the paper explaining the new rule of the club, which was published in a previous issue. The list of tonnages in our contemporaries was wrong. That in these columns was the only correct one. Our contemporaries copy from the Hertutla—'steal' is the real word—and the Hertutla divided by 5,000 instead of 4,000, esteened bottom as following a week later with the same error as a brand of their literary theft.

NEW YORK YACHT CLUB.—Mr. Daniel Cook, owner of the Tidal Wave, has presented the club with a \$1,000 cup, adding another to the growing pile of unclaimed silver at the club's disposition. The memorial cup voted to the Mischief for her victories over the Canadian sloop Atdanat has been presented to Mr. Busk.

FOR CHICAGO.—Mr. Griggs, of Chicago, has bought the English choner Myrtle, 170 tons, and will take her to the lakes after a cruise New York via Madeira and Barbadoes. She is now fitting out at oves.

SEAWANHAKA YACHT CLUB.—Mr. J. Fred. Tams has been appointed fleet captain by Commodore Lee.

Answers to Correspondents.

- D. B., New York. -See last week's paper.
- C. H. S., Manchester, N. H.—Write to Mr. Chas. Zimmerman, St. aul, Minn.
- S. S. S., Brooklyn, N. Y.—"Manton's Taxidermy," price 50 cents. We can supply it.

- S. S., Brooklyn, N. Y.—"Manton's Taxidermy," price 50 cents. We can supply it.

 J. J. A., Phillipsburgh,—For tent write to S. Hemmingway, Wall Street Ferry, New York city.

 Yorxo Fornessas, incoming the control of the Dogs' is the book you want. We can furnish it; price \$3.

 F. S., Erooklyn, N. Y.—Where can I get a book that tells about all dogs and their nature? Ans. We can send you "The Dogs of Great Britain and America," price \$2.50.

 A. C.—What method is employed by rod-makers to fasten on the ferules? Ans. They heat them over a spirit lamp, and nelt gum shelac in them and put them on while hot.

 H. M. F.—Are collie dogs supposed to have as good noses as the various other kinds of sporting dogs? 2. Are they naturally as intelligent and tractable? Ans. I. Yes. 2. Yes.

 Spoarssaw, Portsmouth, Va.—I wish to break my cocker spaniel for field use. What is the best book on the subject. Ans. Dinks, Mayhew and Hutchinson on "The Dog," price \$3.00. We can send it.

 G. B. C., Camden, N. J.—Do you know of a setter dog known as Young Laverack' Can you give his pedigree? Ans. Young Laverack's by Old Blue Prince out of Fairy, and is owned by Mr. J. H. Goodsell, of New York.

 O. I., Boston, Mass.—The books "Sporting Notes in Newfoundland," by Capit. W. K. Kennedy, we are advised have been shipped to us from

- O. I., Boston, Mass.—The books "Sporting Notes in Newfoundland," by Capt. W. K. Kennedy, we are advised have been shipped to us from St. Jonn, but we have not yet received them. Will fill order immediately upon their arrival.
- tely upon their arrivat.

 J. M. S., Dakota, Ia. —1. I have an Irish setter bitch. Will it im-rove the stock or not to breed her to an English pointer? Please vice address of dealer in bird skins. Ans. 1. Most decidedly not. 2. ddress John Krider, Philadelphia.

- address of dealer in bird sking. And English pointer? Please Address of on Krider, Philadelphia.

 L. T. Red Hook, N. Y.—Will you please inform me through your journal, what is the best kind of a muzzle for me to got to put on a terrier while he is being washed to prevent his biting of the proper patent wire-muzzle. Bulwin S. Harris, 177 Broadway, New Cock.

 J. A. W., Cannon, La.—I am desirons of purchasing a pair of A setters. I would like to know what breeds you would give the preference to. Ans. There are several well-known strains from which you can choose and not go amiss. Decide just what you want and purchase those that come nearest to your standard.

 S. M., Huntington, Pa.—Where will a party which is prepared to rough it find the best trout fishing, in Maine, Michigan or Mionesotary We want to find the largest trout and the most of them. Ass. The largest trout are found in Maine, and next comes the Saut Ste Marie in Michigan. We do not think that you will miss it if you decide on the latter, or the Rangeley Lakes.

 H. D. T., Columbus, O.—Will you kindly publish a full description of the toy terrier and give address of a reliable party of whom I can obtain one? Ans. There are several kinds of toy terriers. The black was not the latter, or not be not be needed in the Susquehanna River? Ans. There are several kinds of toy terriers. The black was not been always and the same general characteristics, only of much smaller size. We know of no one who breeds then.

 W. P. M. Baltimore.—What yeur were black bass placed in the Susquehanna River? Ans. The report of the Fish Commissioners of Pennsylvania for the year 1870, p. 17, says: "Some gentlemen in Harrisburg lot loose just five dozen of them, These are increasing,

At Newport, in Perry county, last spring, as has been stated, the boys discovered a number of their dead fry in the fish baskets near there, and brought them up to the village as writes the state of the village as writes the state of the village and brought them up to the village as writes the worder for which genthemen will like this, having paid about a dollar nipece for their progenitors." This is as far back as our information goes.

Cocker, Woodstock, Ont.—I. Is there any work published treating exclusively of the cocker spaniel? If so, where can I obtain it and at what price? 2. If there is none such, which one of the many publications on the dog gives the most extensive treatise on this breed as to points for judging, system of training, etc., and what is the price? Ans. I. There is no such work. 2. "The Dogs of Great Britain and America," price \$2.50. We can furnish it.

America, "price \$2.50. We can furnish it.

Occasionally, Stony Cross, Va.—I am a fox-hunter and would like to breed one of my foxhounds to a beagle bitch in order to improve my pack, by giving them a better nose and more energy, which I am told the beagles possess. But a prominent Northern breeder informs nee that beagle hounds are not to eatch foxes. Will you please inform me way not? Am. The beagle is much too small and short-legged to possess the speed considered necessary for a foxhound.

- L. T., Red Hook, N. Y.—1. In what numbers of Foiest and Stimena are the lists of awards at the New York Bench Shows of 1877, 1876 and 1879; 2. What is the pedigree of Mr. John T. Lawlor's Irish ter-rier Nelly, which was "commended" at the last New York Bench Show? 3. Has the berghund ever been described in the Foiest and Show? 3. Has the berghund ever been described in the Foiest and Show? 3. Has the berghund ever been described in Ans. 1 May 17, Personal 4. What are the points for Judging them. Ans. 1 May 17, 1 Decription of the Property of the Prope
- judging them.

 J. F. M., Brooklyn, E. D.—I have a pointer pup, two months oldcolor, tan, with tinge of brown; nose brown, chest and feet tipped
 with white; has car's paws. Will he change color as he grows of pher
 it. I have your book on "Points for Judging Dogs," but do not know
 the meaning of the word "value." 3. Are there any points by which
 I can judge pup? I do not know his pedigree. 4. What is the best
 I cond for him at this age? Ans. 1. Probably. 2. Value, in this connection, means that when a dog is perfect in any point he is allowed
 the full value of that point; when not perfect he is grated accordingly. 3. Study "Points for Judging." 4. Well-cooked corn or out
 med and sour milk.
- ingy. 4. Study "Foints for Judging." 4. Well-cooked corn or our meal and sour milk.

 W. J. H., Hartford, Conn. 1. Is there anything published on the subject of dog breeding; if so, where can it be obtained and at what price? 2. How can I keep my dog from eating her pups? She now has her first litter, and has eaten one and part of another—would have eaten the whole of it, but was discovered and prevented from so doing. 3. Can pups be raised on a bottle? I have tried it on five, and lost them all; whether I falled to feed them right or they were too weak when I began with them, I don't know. If some of your theans, I would be got at the continued to the property of the continued
Bifle and Tray Shooting.

FOREST AND STREAM TOURNAMENT

FOR THE SHORT-RANGE CHAMPIONSHIP OF 1882.

FOR THE SHORT-RANGE CHAMPIONSHIP OF 1882.

A T a meeting of the captains of teams entered for the above tournannent, held at Zichler's Gallery, it was decided to postpone the match one week, until Monday evening, April 3, at 8 o'clock, as it was impossible for some of the teams to be ready to shoot this week. The entries were therefore left open until Saturday evening, April 1.

No. 1—First team Zettlers.

No. 2—Luzdow Rifle Club.

No. 3—First team Seppenfeldts.

No. 4—Second team Seppenfeldts.

No. 5—Sescond team Zettlers.

No. 6—Second team Zettlers.

GENERAL—My attention having been called to March 1822.

GENERAL—My attention having been called to March 1822.

GENERAL—My attention having been called to March 1822.

GENERAL—My attention and the stream of the British Volunteers and our National Guard, and having been assured that competition will occur, permit me, on behalf of this brigade, to offer your association an earnest support, and if we can in any way assist in carrying your project to a successful conclusion, you will find, I sincerely yours.

General E. L. Molineux, President National Rifle Association.
In connection with the question of the selection of the American team the annexed table will prove of interest as showing what the field of selection in this country is and what it might be. It should be borne in mind that in the majority of the States the organized strength exists on paper only, and that only a moderate per cent, of the men have had any instruction in rifle practice. The years given are those from the report of which the figures are taken, and the lable is one prepared by the Adjutant General of the U. S. Army:

States.	Year,	Total commissioned.	Total non-commissioned officers, musicians, privates, &c.	Aggregate.	Number of men available for military duty (unorganized).
Maine	1881	153	1,556	1,709	97,510
New Hampshire	1881	118	1,361	1,479	33,768

ALBANY, N. Y.—The match at Rensselaerwyck, Saturday, was well attended and the shooting was very fair. A subscription match was shot, five shorts in each score, and the three least scores to contain. The match was won by J. I. Miles, of Greenbush, with 74 out of a possible 75. The best scores wero as follows:

Subscription Match—200 Yards.

(5 5 5 4 5 - 94) (5 5 5 5 5 - 95) (5 5 5 5 5 - 95) (5 4 5 5 5 - 92) (5 4 4 5 5 - 92) (4 5 5 4 5 - 93) (5 4 4 5 5 - 93) (5 5 4 5 5 - 93) (5 5 4 5 5 - 93) (5 5 4 5 5 - 93) (5 5 4 5 5 5 4 - 93) (5 5 4 5 5 5 4 - 93)

SAN FRANCISCO, Cal., March 14.—I send you a score of the shooting of six rounds of 10 shots each, between my wife and Mr. F. S—I give you the names, but my wife requests that names be not pulshed, using only initials. This was shot in the evening, by gaslight, the first four rounds at 15yds., the fifth and sixth at 17yds.; rifle used, Remington, 23-cal. You will see that in the 69 shots here were made 278, possible 330, and 241, possible 330. I also send a sample of the target used.

Mrs C.....

AMATEUR RIFLE CLUB.—The Amateur Rifle Club has been reorganized by its recent consolidation with the Empire Rifle Club, The latter body includes many of the leading short-range and military rifemen of Creedmoor fame. Among its short-range riflemen are T. P. White, D. F. Davids and J. H. Brown, and among its military riflemen are Sargeant Johan and J. L. Paudids, of the Twelfth Regiment. Before the two clubs were united the Amateur Club was every few long-range marksmen in the Empire Club. The officers for the ensuing year are Col. II. F. Clark, President; G. Livingston Morse, vice President; J. W. Told, Secretary; A. Alford, Treasurer; Dr. J. Habirshard, Thomas Lamb, F. H. Holton, Homer Fisher and N. D. Ward, members of the Executive Committee.

The club will hold its opening match at Creedmor on Saturday, April J. It will be a context for three prizes, open only to military ranges to be covered in the international military rifle match, and its designed to afford practice to members of the Lub for places on the American team. Other matches to be contested in April are a short-range match at 300, 900 and 1,000 yards; and a diamond badge match on the same ranges. There will be the competitions for the champion's match, The winners of two of the competitions with be called to shoot in an extra competition which will determine to whom the four prizes are to be awarded. A season match is included.

T W Duffintan

of a contest which will be shot at intervals during the season at 1,000 yards distance, twenty shots per man. The trophies will be awarded to the makers of the highest aggregate scores in all the competitions. The club has opened a correspondence with Major A. Blementhaset Leach, of Dublin, Ireland, who successfully arranged the first international properties of the contest of t

scheme,
FALL RIVER, Mass.—The Fall River Gun Club held its first semimonthly shoot for an elegant silver cup, Thursday, March 23d, open to
ill residents of Fall River and vicinity, at ten glass bals, eighteen
rards, and ten clay pigeons, fifteen yards rise. Cup to become the
roperty of the first person winning it five times. The following is
the score: Balls. Birds. 4414410111 0

4: Campbell 2; Dunlap 2; Holmes 2; Johnson 3; Beadle 4; wins second. COLFAX, lowa, March 21.—The monthly shoot for the club badge of the Spring City Rod and Gun Club, took place yesterday, at twenty glass balls cach, thrown from Card's rotary traps, with screen used and trap revolved. The weather was in poor condition for shooting: a heavy fog lung over the grounds, and the smoke from the guns made it very difficult to see a ball. The members of the club were all present except G. C. O'Reall, who was in Chicago; Capt. Richards, who was unable to be present; Jesse Slavens, who was on the sick list. The boys did nobly owing to the weather; below is the score:

CLAY PIGEONS.—Cheboygan, Mich, March 20.—The Cheboygan
Gun Club held their weekly snoot on Saturday March 18. The wind
blew word their weekly snoot on Saturday March 18. The wind
blew word in the state of the state of the state of the state of the state
rain, which made it very southeast, accompanied by a fine drizzling
rain, which made it very good soores were made, as the
clay pigeons have only lately been introduced into Cheboygan. They
give good satisfaction, and the majority of the club prefer them to
glass balls, as they resemble more the flight of a bird. When they go
with the wind it is a question, sometimes, whether the shot will overtake them or not. The prize for the best score was won by I. S.
Cooper, the vice-president of the club, who made a clean score of
fifteen birds. The scores made in the shoot were as follows: Fifteen
clay pigeons, by arafis rise. First prize, 23bs. shot; second prize,
dbs. powder; third prize, 500 primers.

THE EXTERMINATION OF GAME.

[Editorial in New York Sun, March 27.]

THE EXTERMINATION OF GAME.

[Editorial in New York Sun, March 27.]

THE day when our buffalo, or bison, will become extinct seems to be near at hand. The coming generation is likely to know the animal only as we know the mammoth and the great auk, by seeing preserved specimens in natural history museums. Nor is the buffalo alone passing away. All the other large game of the Western Territories is now slaughtered at such a rate by sportsmen and men who make a business of selling the hides and meat of the animals that they must before long become as rare at the far West as they now are at the East.

Large game is at present most plentiful in Montana and Wyoming. Consequently, the hunters for pelts have made those Territories the scene of their operations, and amateur sportsmen, domestic and foreign, are to be found there in considerable numbers throughout the open game season, which lasts from the first of August to the first of February or March. It is lawful then to kill the game, provided their meat is utilized. But, as matter of fact, the slaughter is done chiefly in order to secure the pelts, and these now being comparatively high in price, the incentive to destroy the buffaloss, deer, elk and antelopes is greater than ever. In the closed season under the law, too, the work of destruction goes on with few checks. The region is so vast and thinly populated there is so little vigor in enforcing the law, and the cost of its execution is so great, that it is almost a dead letter. Even at the East, despite the most strenuous exertions of sportsmen's associations, it has been found impossible to altogether prevent the killing of game out of season, or by methods which are illegal and outrageous. In Wyoming and Montana, of course, the difficulty of protecting it from wanton slaughter, or that done from motives of pecuniary greed, is far greater.

During the shooting season, the Adirondacks are overrun with sportsmen of one sort and another. That mountain region has become of late years the seat of many resorts whic

The poor migratory birds have a hard struggle for life. As a correspondent of Forest and Strueam remarks: "From the time the ducks and gesee cross the forty-ninth parallel in September on their way South, and their return again in May, they are under a constant fusilade, the badly wounded numbering about as many as those bagged; and so with the snipe." The grouse are going the same way. "The work on them is of shorter duration, but fare more effective, for every sportsman of the Eastern States is dumped out on the prairies of the West, and there is a constant banging heard in every township for several months." The amount of game has much decreased in the Mississippi Valley within six or severy years, and soon the condition with respect to it will be the same there as it is in the Northern States to the east of the Alleghanies.

As to the large game, the construction of the Union Pacific Railroad drove it out of Colorado, there being no efficient laws for its protection; and now the Northern Pacific promises to do the same for Montana and Wyoming. Two or three years ago the price of deer and antelope skins there was less than iffecen cents a pound, and of elk skins less than twelve cents. As a consequence, the motive to kill the animals was not great, unless they were wanted for food. The business of gathering pelts was not profitable enough. But since then deer and antelope pelts have risen to twenty-five and thirty-five cents, and elk skins, which had before been of little value, rose last spring to twenty-two and twenty-five cents a pound, \$2.50 to \$7 a hide. Accordingly, it has become profitable to destroy the animals. The writer from whom we have already quoted gives figures to show the rate at which the slaughter goes on since the price of pelts advanced. From the Yellowstone and Missouri rivers there were shipped in 1880 and 1881 the following number of hides:

Buffalo. 1880. 27,700 Deer and antelope 167,000 Elk.	1881. 116,000 143,000 5,200
Total194,700	264,200

ANSWERS TO CORRESPONDENTS.

SPRING FOWL SHOOTING.

THE mild weather of the winter just past has had a widely different effect upon the fowl shooting in the various localities on the Atlantic coast. Along the New England shore and that of the Middle States, the fall shooting in many places lasted longer than usual, and although the birds were not especially plenty, the shooting was fair. On the Chesapeake and in the mouths of the Delaware and Susquehanna rivers, the shooting has been unusually good. The fowl collected there in great numbers, and were not obliged by the freezing of the waters to leave for their usual feeding grounds further to the south. For the same reason, the shooting south of Virginia was very poor. In Back Ray and in Currituck, Pamplico and Albemarle sounds there were comparatively few fowl, scarcely any canvas-backs and but few redheads, geese, and swans. Brant, however, were numerous along the Virginia shore and a portion of North Carolina.

From this same cause it results that in Minnesota, Iowa, Wisconsin, Michigan and Illinois the ducks were abundant in February and March, the waters in many places being free from ice weeks earlier than usual.

Last year almost exactly the reverse of this was the case. The early and severe cold closed marsh, lake and stream in the Northern states, and the fowl were forced south before the advent of winter. The cold was long and severe, and many of the waters where the birds are wont to feed for most of the winter were closed to them. So it came about that the shooting that year on the Chesapeake and its tributaries was unsatisfactory, while, on the other hand, on the waters of North Carolina the birds were very numerous. Never, the gunners say, were there so many canvas-backs in Currituck Sound and to the southward as in the winter of '80-'81, and never so many geese and swans. Next year another good season is expected.

The time is coming, if indeed it is not already here, when some measures must be taken to protect our fowl more efficiently than is now done. From the time the birds reach our shores in the early autumn until the survivors have winged their way in spring to their breeding grounds in the North and West, the boom of the shot gun is ever in their ears. They are shot over decoys and from points, sailed after, slaughtered from batteries anchored on the feeding

grounds, and sculled up to at night with lights. They are fired at with rifles, when bedded out in the broad-water "to keep 'em movin' " and are in every way harassed and persecuted. They have no rest. All this lasts from October to May.

We have for a long time advocated the abolition of spring snipe shooting, and are inclined to take the same ground with regard to ducks. There appears to be no good reason why any fowl, with the possible exception of brant, should be shot after March first, and there are excellent reasons why shooting should cease with the end of the winter. The season when the birds are preparing to undertake the rearing of their young is not the one at which they are most desirable for food. Every female killed at this time lessens the supply of next season's fowl by ten or a dozen birds. The farmer does not kill off his ewes just as they are about to produce their lambs. The sportsman also will be wise if he spares the ducks in the spring.

We have observed that within the last few years a very noteworthy change of sentiment has taken place among the older sportsmen on the subject of fowl shooting. In the olden time it used to be said that you never could destroy or drive away the ducks and geese which then swarmed during the winter in such countless numbers in the bays and river mouths along our coast. But those whose memory can carry them back twenty or twenty-five years can see now a vast difference between what has been and what is. of shooting grounds along the North Atlantic coast, which have been deserted by the fowl, whose bays and flats, once resounding to the gabble of the loquacious throng, are now silent, except for the long-drawn wailing cry of the seagull, bear painful witness to the diminished numbers of the birds. We cannot but fear that a continued policy of slaughter as long as the fowl are with us will be bitterly regretted at some day in the not distant future.

Our Canadian cousins have set us an example in this mat-ter which we would do well to follow, for, in the Province of Quebec at least, certain ducks are protected from January to August, although others, as well as geese and swans, may be shot up to May. In other portions of Canada, the shooting closes March 31.

We recommend this subject to the thoughtful consideration of our readers, and hope that something may be done about it before long. We do not like to look forward to a day when people will be wondering what has become of the ducks, as they are now speculating in regard to grouse.

BLACK BASS IN ENGLAND.

THE question of introducing black bass into England is now being agitated across the water and is argued pro and con. in the sporting papers. The main questions appear to be concerning their gaminess and their rapacity. It is charged that they are not game, and our bass anglers will smile as they read the following from "R. N." in the London Field. He says:

Last autumn I took a three months' run through Canada and the States, and being fond of fishing, and having my interest excited about States, and being fond of fishing, and having my interest excited about biack bass fishing from reading the various accounts of sport in your contemporary, the Forest And Stream, I went fully prepared to give the above fishing a fair trial, and shortly after my arrival in 'tanada I got a party of four up to go with me on a bass-fishing excursion. We chose the Suable river where it joins Lake Huron. We found plenty of bass, running about 1lb. to 2lbs. weight; a green color as they came out of the lake, and black up the river. They would not take the fly, but were easily caught on the worm and minnow. I considered catching them to be poor sport, as the tackle had to be strong, owing to them either having a soft mouth or walloping about, getting rid of five hooks at once. There was one man who caught in three days over four hundred fish, but he never played an inch, had a strong rod, or pole, as they call it out West, strong line, about three feet gut, and a fair-sized worm hook. At each cast he hooked a fish, lowered his rod, and stepped back with a tight line, and trailed the fish out on the flat beach. I consider bass-fishing about equal to pike-fishing, inferior to perch-fishing, and not to be named the same day with trout-fishing. beach. I consider bass-fishing about equal to pike-fishing, inferior to perch-fishing, and not to be named the same day with trout-fishing. I should certainly not advise any one having a good trout stream, or even a good pond, to bother with the cultivation of the bass. In a sluggish, deep river, where trout would not frequent, or in a dam, deep and still, with muddy bottom, they might be worth cultivating. They would certainly give more sport than roach, carp or dace. During my stay in America I caught several hundred, and I never saw a single one leap clear of the water. I had splendid sport in Lake Superior among the great lake trout, catching them up to 14bs. I also got speckled trout weighing about 1lb., pickerel, maskalonge, and suckers, but I came away with a decided impression that there are no fish in America equal, for gameness or sport, to our brown or and suckers, but I came away with a decided inpression that they are no fish in America equal, for gameness or sport, to our brown or white trout. I had not an opportunity of fishing for the latter, but I understood they were the same as ours, and very numerous in the rivers, at Bay Chalcurs, St. Johns, etc. If the bass would feed on the "American weed," they would be worth their room, if they never

Another writer in the same paper, who signs himself

"Koorb," says: I fished at Alexandra Bay, on the river St. Lawrence, some four

years since, for black bass in September, and I must say I thought years since, for black bass in September, and I must say I thought the sport, like everything else American, "all cry and little wool." To my mind they played very similar to a pollack in the sea, and had nothing like the dash of a trout. I had a very intelligent fisherman, and from what I gleaned they rose to the fly in the summer when heavy in spawn. Is this so? If it be, then, like other coarse fish, they are in best condition in winter.

are in best condition in winter.

I caught several very game sporting fish, which the fisherman called the warlike pike. It was superior to the pickerel both in sport and for the pot; I took it to be some kind of cross with the pickerel.

This, coming as it does from men who talk of the pleasures of angling for bream, barbel, and dace, is exceedingly good. The fish mentioned are such as would never be noticed by an American angler above ten years of age, and yet, outside of salmon, trout, pike and perch, are the main fishes angled for by the English angler. Even so good an angler as Franicis Francis thinks the perch may be better than the black bass. We would call his attention to the fact that we have the identical perch, Perca fluviatilis, called "yellow perch," to distinguish it from others, which grows with us from half a pound to a pound and a half, and it is hardly mentioned as a game fish. Our boys angle for it; and in ponds where no other fish are found, we have taken it with a moderate degree of satisfaction, but it no more compares with the black bass in game qualities, than the fierceness of a house cat does to that of a Bengal tiger.

If English anglers are content to sit in a punt and fish with worms for grovelling bottom fishes and call it sport, they have the privilege; but the American demands fight, and a fish that does not test his tackle to the utmost, is pronounced tame and uninteresting. Izaak Walton is not the type of the angler of America. He enjoyed to sit quietly in the shade and watch his quill go down and contemplate nature and moralize on its beauties. We have tried to make Americans take this view of the pleasures of angling, but they do not seem to care for it. Many rush from business to the lakes or streams and want a shark-like fish to strike within thirty seconds, or they find it dull. Of course, all are not so; but this is characteristic of the people. Even "R. N." acknowledges that the black bass is superior to roach, carp, or dace, and this, from one who looks with disfavor upon everything American, is surely a slight commendation.

Concerning the fishes of the two countries, we can say that

we think that the English angler knows but two first-class game fishes. These are the trout and the salmon, and but few are so situated as to enjoy their taking. Therefore they magnify the lazy pike, which we only esteem for his avoirdupois, which offers some resistance, and the perch, which we perhaps undervalue because it is a small fish.

Our English friends may or may not introduce the black bass into their waters; it is a matter which does not materially affect us either way, but, leaving out the salmon and the trout, they have no fish to compare with it.

THE FISHCULTURAL ASSOCIATION.

ON account of the time of our going to press, we are unable to give your till able to give more than a synopsis of the proceedings of the first day of the eleventh annual meeting of the American Fishcultural Association. The meeting was rather small in numbers, but the papers read were of great interest, and the proceedings were as important as at any previous one. A change in the mode of election of officers was made, and in future the two chief ones, which are largely honorary, will be held by one person for one year only.

The new President, Mr. Geo. Shepard Page, has long been identified with fishculture and with the association. He was one of its first members, and to him is due the honor of first suggesting that the National Government appoint a Fish Commissioner. Not only did he suggest it to the association, but he went to Washington and urged it.

The association honored itself in placing the names of some prominent foreign workers in fishculture on its small list of honorary members. Mr. Page named Prof. Thomas H. Huxley, Inspector of Salmon Fisheries of England. Mr. E. G. Blackford named Mr. John D. Jones, of Cold Spring, L. I., who has so generously donated the use of his valuable grounds to the New York Fish Commission. Mr. Fred. Mather named His Royal Highness Fredrick William, Crown Prince of Prussia and of Germany; Herr von Behr, President of the Deutsche Fischerei Verein, and Herr von dem Borne, of Berneuchen, Germany, all of whom were elected.

The Executive Committee decided to hold the next meeting in Boston on the first Wednesday and Thursday in September next. Prof. Baird was invited to arrange for a general meeting of all fish commissioners about the same time. This, if fully attended, would add much to the influence of the association, and broaden its membership.

The Sportsman Courist.

LOST ON THE RATON MOUNTAINS.

LOST ON THE RATON MOUNTAINS.

To show you that life here in this corner of Colorado is not a perpetual Fourth of July excursion. I will try to describe a little experience that I had hast January. It had been snowing a little every day for a week, I had hunted white-tail deer every day, and was sated. One afternoon I sat alone by the fire in my big adobe sitting-room, wishing that I had an American to talk to, when the dogs commenced to bark in that peculiar tone that means "men coming." I went out, and in a few minutes Messrs. Fulton and Garret Roberts rode up, brothers who live on the Purgatoire River, and who have been till lately engaged in the cattle business. They, like most tanchmen, are quite eccentric. Fulton is a great talker, and tells long stories, interlarded with shocking oaths, but always ascribes this profanity to some one of the characters of his story. Garret is a quiet, stern man of fifty, and was one of the California '19-crs.

The two men veined in their steaming horses, and I, after calling a man to take the ponies, led the way into the house; and produced a small kep holding about three gallons. A friend gave me the 'barrelitio' when he returned from a trip down into Old Mexico. It was filled with wine from the Rio Grande Del Norte. A goblet full will cheer but not incluriate, and it is said that even an excess of the fluid will leave not a pang behind. My cook soon called supper, which consisted of venison, "chile con huevas" (red peppers with eggs), "to'tillas", (thin bread cakes), potatoes and coffee. My present cook is Mrs. Inez Trebinia, a Nauvoo Indian lady who was stolen by the Mesteans while small, and raised by them. She is at least fifty years old, is the color of an old saddle, and has no nose. She is very fond of me, and always calls me padre (father). As I am thirty and she on the shady side of fifty, it seems queer, but I make no remonstrance. monstrance

nonstrance.

After supper Fult, went to the door, and, gazing up at the mountain, said: "I am going over to Waters' ranch to-morrow; won't you go with us and show us the best path across?" I hated to say yes, for I knew that the snow was deep, but the Roberts men are my friends, and I could not

rows, won't you go with us and show us the best path across?" I hated to say yes, for I knew that the snow was deep, but the Roberts men are my friends, and I could not refuse.

The next morning at daylight we were up and had the horses. I saddled a tough little Mexican pony, slung my rife scabbard to the saddle, shoved in my Winchester, the best gun that man ever carried for excursions on horseback, and away we went, up, up, with the snow two feet deep on a level. When we came to a hollow the snow was three or four feet deep, and we had to get off and walk, as the crust would bear us up, but not our horses. They had to wallow across the best they could. Just as we came to the final secunt, a band of white-tail deer ran across the slope in front of us, and I fired with the Winchester as they bounced across the path at about 200 yards off, and down came a flag—the white-tail deer generally puts his tail between his legs like a whitpped dog when hard hit. It was a big doe. She turned down toward us, leaving the band, and after a few bounds I brought her down with another shot. We skinned her, and taking a hindquarter to carry over to Waters, I hung the rest of the meat in a tree enveloped in the hide to await my return, and off we went. In a few minutes we struck the last ascent, and struggled up on foot, with the snow up to our waists. Once on top of the mountain we had an easier time; snow was only two feet deep on the ridges, in the "arroyas" (gullies) it was about five feet. We kept the high-est ground as well as we could, and after a tedious walk reached the path that descends into the Unio Del Gato Park—park of the cat claw bushes—a park of 10,000 acros of the fairest land of New Mexico. Thence we struck a bee line for Waters' house. When we were still a mile from the house we met Waters going to a turkey roost. He told us to go to the house, and said that he would be back in an hour or two. We soon reached the ranch and unsaddled our tired horses with an admiring audience of dogs—foxlounds, shepherd and ou

a sing liftle property within the last four years, and will be rich before four more are past. It is a thorough sportsant and a good fellow generally, as all sportsmen are.

After a night's refreshing sleep and some breakfast, the Roberts men started again on their journey, thanking me for my services; and George and I decided to go hunting. There is a splendid hunting ground on the side of the mountain above the house; so off we went afoot, up hill and down, wading in snow and at times fairly wallowing along. We finally decided to separate, and I went slowly down the side of a deep ravine that furrowed the mountain side. I had not gone far before I saw the track of deer, fresh. I knew they must be near, and cautiously receping along, I soon saw they must be near, and cautiously receping along, I soon saw they must be near, and cautiously receping along, I soon saw they must be near, and considerably below me. They did not suspect my presence, and I slowly sank down build not suspect my presence, and I slowly sank down build not suspect my presence, and I slowly sank down build not suspect my presence, and I slowly sank down build not suspect my presence, and I slowly sank down a flat of and only laif and eyes poked over the edge of the boulder. Three with so the far below me and off to the right, and I knew he must be far below me and off to the right. There was nothing to scare them, and I knew I could ital to my time. The big buck stood facing down hill, and if I shot I might hit him in the rump, and I hade to spoil the house one. Love to lie and watch them when I get a chance. One of the small ones lay down. The big buck stance with his hind foot and turned broadside to my. I should be sooned to be small ones lay down. The big buck stood facing down hill, and if I was nothing to sear them, and I knew for head of the proposition of the mountains rang with the old fellow jumped once and fell. I first two shots at the old fellow jumped once and f

one dead and the other was badly wounded. We searched for him a while, but couldn't find him, and after hanging up his deer whole in a cedar tree, we went home, intending to come up for the meat after dinner with horses and fetch the hounds along. After dinner we were soon on the ground and turned loose Ring and Bell. After a few preliminary circles, Ring pointed his nose straight up in the air and announced that he had found a nice trail with that long-drawn howl that I love to hear so well. In twenty minutes they had deer number three in a tight place. We found him at bay with his hip broken. George ended the performance by killing the deer, and in five minutes both dogs were full of liver and didn't care a cent for deer.

Packing all three on the ponies, we went home and spent the rest of the day playing cusino and swapping yarns.

I heard the monotonous grind of a coffee mill and woke slowly, with aching hones from yesterday's tramp through the snow. It was dark yet, but when Waters poked his head into the bedrroom door and remarked—'Breakfast is ready and it is a splendid day to hunt; four inches of snow fallen during the night," I began to feel better right off; and when I had drank two cups of coffee and eaten a pound of venison steak, I was ready to travel.

"Let's go over to the knoh and kill blacktails," said George. He didn't say hunt, for it's a sure thing that when George Waters, of Unio Del Gato, goes out after a snow that he brings home meat. And off we went on horseback across the valley, steering for an enormous pillar of rock that stands on the mountain slope in plain sight from the ranch door. There are always blacktail deer who use these, as the Texans say; and if you doubt it, go to Waters's ranch and he will help you kill one within half a mile of it any time, and he'll be glad to see you, too. We rode to the first bench of the mountain, and dismounting, pickceted the horses in a bare spot and up we went afoot, along the side of the arroya (rayine), where the deer generally lie under the s

shoot off-hand standing if I shoot now, for if I squat her head will be out of sight. Well, here goes; I aim between her ears and slowly drop the gun a little, see hair before the sight, touch the trigger, and as the gun cracks the arroya is alive with deer; a dozen jump up from behind scrubly cedars and little bushes and bounce around, and I pump the lever at the old buck as he runs straight away up the hill toward where W. is concealed; crack, and his hind leg breaks above the ankle, two more shots and he disappears slowly up the path.

I hear one shot from W. and I know that the buck is disposed of or I should hear more, and so I scramble down one side of the arroya and up the other. I wade up to where George is—about a quarter of a mile. He is sitting on a rock, his feet on the dead buck to keep them out of the snow, and is enjoying a snoke. "Well, I have got him, Dick." We went back to the horses, loaded on our deer and went home. Talk about being tired, every joint in my body ached. My hunting has mostly been horsebuck, while Waters generally takes his afoot, and he seemed surprised when I said I was tired.

When we got home, Parker Johnson, a cowman from Toxas, was at the house, and he and W. had a hunt fixed up for the next day in ten minutes. I inwardly resolved I wouldn't be there, and the next morning at breakfast said that I thought I would stay at the house and help Mrs. W. for the day, as I was tired. Waters grinned and went off with Parker. The clouds settled from the Ratons into the valley, and the snow began to fall by nine o'clock, and I read an old paper and wondered what kind of legs W. had that could stand a week of such work just for pure love of sport. And, occasionally, as the time went by, I regretted that I hadn't gone too, when in came Harley, Waters' son, a boy of thirteen, and said: "Oh, Mr. Dixon! come to the door and hear the houwds yell. They are running something on the hillside across the valley." I went to the door, and clear and sweet came the cry of the old dog and the yell

down and risen again and my back track was obliterated. But I traveled on in the course that I hoped was right. The thermometer goes down to 40deg, below zero up there quite frequently, and there is but little wood. I knew that two Mexicans had frozen to death up there in a storm in May, 1877. It was growing colder every minute, toward night it partially cleared up, and I found myself near one edge of the Mesa. I left the mare on the ridge and went down to the edge, where there is a precipice 200 feet down; and when it cleared a little I could see the Trinchara Valley and Carter Temple's ranch far below me.

I was about three miles out of my way, and ten miles from home. I could hang up my saddle on a scrub oak, leave the mare up there to freeze or wander off and die, clamber down somewhere and get down to Temple's before bettline, or I could stay up on the mountain, find wood, build a fire, and go on next day. No, I would not give up the mare. My heart came back and I went up to where she stood, and started up the mountain toward the going down place.

Just about dark I came to a little canyon, with a sheep corral and a deserted but that was built something like a bird cage, more cracks than house. The corral would give me plenty of wood. The snow was not over a foot deep on one side of the canyon, and the mare could get a little grass by pawing, so I camped. Getting most of the snow out of the but and banking it outside on two sides, I started a big fire on the ground inside, pulled the saddle off the mare, and prepared to put in the night. The little mare would paw around for grass awhile and then come across to the hut and get close to the fire with her lead inside the hole that answered for a door. I alternately froze one side of my body and scorched the other. The wind rose. I made a hollow in a little log, and melted snow by heating stones in the fire. The wind rose, I had hollow in a little log, and melted snow by heating stones in the fire. The wind rose is the bottom of the precipie the sound prepared

"PODGERS" IN FLORIDA.

II.-AT JONES'S ON THE HOMOBASSA.

MONDAY morning found me fresh as a lark after a good night's rest and a splendid breakfast, and ready for the

MONDAY morning found me fresh as a lark after a good night's rest and a splendid breakfast, and ready for the fray.

The gentlemen composing Mrs. Jones's family, consisting of about lifteen enthusiastic sportsmen, began to make preparations for the occupation of the day. Some were going to fish, some to shoot, and some to indolently enjoy a book and a lounge under the shade of the orange trees or in hammocks on the wide piazza. Each sportsman was provided with a boat and a 15th amendment man to row and do the laborious part. Guns, rods and lunch-baskets were passed aboard, and one by one they departed, some up the river, some down, some for the creeks and bayons for ducks, and some over on the island for deer.

I being a new-comer and not familiar with the best ground, Uncle Peter, the most reliable and trustworthy of contrabands, was called from his work to the orange grove and assigned to me as my man for the day. Nothing loth for a change, Uncle Peter soon had the boat ready, and rods and lunch-baskets having been passed in, he took the sense of the meeting by inquiring what kind of fish the boss wanted to catch. It was voted that anything would do, but sheepshead would be most desirable, to which Uncle Peter answered, "All right, boss, sheepshead it is." My rod, a good one, changeable from a striped-bass to an elongated one, was rigged, and a feathered spoon for trolling was soon skipping on the surface as Uncle Peter propelled the boat adong at an easy gait. We had not got two hundred yards from the wharf before there was a strike and fish No. 1 came in "What is it, Uncle Peter?" "Dat ar a black bass, boss." In two minutes I had No. 2. "What's this?" "Pat ar a trout." He was a beauty—symmetrical, spotted, and with a large, round, black spot on his tail, reminding me of the round ball of the olden time painted on the fore topsail of the Liverpool packet ships. Reckon this fellow belonged to the old black ball line. The next was a channel bass; the next a skipjack, and so on, seemingly a different variety an

of the dolphin.

For an hour I continued to haul in every variety, mostly sheepshead, as long as the crab batt lasted. I was ashamed

of the wanton destruction and reeled in my line. Under the patter pulled the boat under the shade of an overhanging moss-draped only, and we drew upon the ample resources of the lunch-backer, after which came the soothing pipe. A delightful breeze, just energia to fast once's face, gently rustled the beaves, and the one so wayed gracefully to rustled the beaves, and the one so swayed gracefully to rustled the beaves, and the change from crowded Broadway, the transition of the bear of the property of the seven of tropical indolence, so speedily accomplished, seemed a dream and difficult to realize. But there hay half a hundred noble fish in the bottom of the boat, there was Uncle Peter dozing and nodding, and there was—Jeruslaem! what a big skeeter getting in his work just on the very tip end of my jolly red nose. "Dead for a ducad" was the verdict on his carcass. With a pocket magnifying glass I examined him anntomically. He had no brickbat under his wing, and therefore was not a migrator from Jersey.

I drew Uncle Peter into a discourse on the incidents of his life. He had lived just there on the Homosassa nearly the whole of it—fifty-one years. The plantation was before the war and during it the property of Senator Ulce, and was then highly cultivated, producing splendid crops of sugar cane and tropical fruits; but during the war, while the Senator was lending all his energies in aid of the rebellion, his cracker neighbors made a raid on his well-filled warehouses, first taking all they could carry off. The family was absent, but Uncle Peter was there, and described his splendid louse, and burned it and the warehouses, first taking all they could carry off. The family was absent, but Uncle Peter was there, and described his seasations when he saw their approach. Hastily gathering the women and children together they escaped into the hammock, where after depositing them the men mustered up course to return to try and drive the banditti off, but they were received with a volley of builds and a return and the re

ARIZGNA AS A HUNTING GROUND.

ARIZCNA AS A HUNTING GROUND.

This section has been entirely overlooked by hunters. It thus far; but I beg to assure you that there is no spot in the United States that offers a better field during the winter months.

The Santa Rita, the Patagonia and the Santa Catalina mountains, all easy of access to this place, are full of deer and bear, and the latter also contains wild turkeys of almost gigantic growth. There are three kinds of bear—the brown, black and cinnamon. The Santa Catalina mountains, which are only ten miles north of Tueson, contain mountain sheep, and, as I have been informed, the ibex; but I cannot vouch for the truth of the latter statement. It also abounds with musk hog, or the Mexican pecarry, California lion and wildeat. The deer in the mountains are the whitetail, such as are common in the Eastern States, though much smaller. The large blacktail and 'burro deem' frequent the table lands, and never go into the high mountains, which as you are no doubt aware, is exactly the reverse of their cousins in Colorado. There the blacktails go in the mountains and keep at the very edge of the snow the year around, while the whitetails seldom venture to the mountains unless driven there. There are two kinds of blacktails, one which in size and looks corresponds with the common blacktails of the Rocky Mountains; the other, the burro deer, as it is called here, is much larger and weighs from two to three hundred pounds. There are also plenty of antelope on the table lands. There is at times very good duck shooting along the Santa Cruz River. There are four species of quail, the "Bob White," the fool quail—so called from its stupid habits of sitting until stumbled over—and the California quail, both the mountain and valley species. The latter are in great abundance.

The winter climate of this portion of Arizona is delightful. Tueson may be reached via the Southern Pacific Railrond from East. Those who desire plenty of game for winter lunting cannot find a more inviting field. Plenty of grass and water fo

LONGFELLOW.

 $D^{\rm EAR} \ {\rm Longfellow, deep \ sorrow \ fills \ my \ heart} \\ That thou, my life-long friend, hast pass'd away; \\ That in this mortal life thou hast no part; \\ All domb the poot's song and lyrisl's lay! \\$

And, lingering still, I conjure up each sceno When we were young, and all of life was new, When in the shade of Brunswick woodlands green Or college-walks I wander'd long with you

Twas in those haunts that first the flaming dart of possy divine sank deep into thy heart;
Then first was swept thy sweet, immortal lyro,
And the young minstrel's hand first struck the wire

That summer day screne I call to mind,
When we our tributes to the dead Past paid,
Numbering those gone, those who remain'd behind, While at our feet thy happy children play'd.

Poet of nature! who so lov'd to paint Earth's fairest scenes—the wind-swept hill, the plain, Heroic virtue and angelic saint, Arcadian haunts and Indian's wild domain,

The flowing river, the majestic woods.

The purpling skies, the lake's cerulean space.
The tossing seas, the pouring forest floods.— Ah! who may seek thy absence to replace?

With reverential step we place thy dust
In Nature's fairest scene, where trees may weave
Their garlands o'er thee, and sweet songs may burst From choiring birds at day-dawn and at eve

Far, wide, for thee, there shall be sad lament In humble but and in palatial dome—
Thro' Old world and thro' New there shall be sent A sorrowful wail from every earthly home

GREENPORT, L. I. ISAAC MCLELLAN

MEMORIES OF A FAVORED DOMAIN.

MEMORIES OF A FAVORED DOMAIN.

Less than twenty years ago, there lived about nine miles southwest of the town from which I am writing, a gentleman named Harrington, who was extremely fond of field sports, and having ample means devoted a good deal of time to their pleasures. He had a good pack of dogs, and could indulge his love for the chase without leaving his own domain, being the owner in fee of more than ifficen thousand acres of land. This large estate bordered for about three miles upon the Pee Dee River, and extended back, in some places, for more than double that distance. The bulk of it was in original forest, of pine, oak, hickory and blackjack, and the dense thickets of the back lands and the close cover which the hill sides near the river afforded, were the favorite breeding places of deer. Indeed Col. H., the proprietor, was often heard to say, that there were raised on his land, annually, fully two hundred of them. Regarding his land as his own, under the law, he vindicated most fully his rights to its sole use and control, by excluding all hunting upon the premises, unless his permission was given. Poaching was occasionally done without the knowledge of the proprietor; but in many cases his keen gamekeeper caught the trespassers in flugrante delicte, and they paid the penalty "by the law in such cases made and provided." Notwithstanding his determination to preserve his game, no gentleman was ever refused permission to hunt, if he asked authority to do so; and when the health of Col. H. permitted, he accompanied the party to the woods and engaged in the sport Indeed, he often invited his friends to meet at his home at breakfast, on a given day, and be his guests during the continuance of the hunt; or if the numbers were likely to be larger than his bachelor quarters would accommodate, they were allowed all the privileges of ample camping ground, near one of the running clear springs which abounded on his estate. The writer has often enjoyed his hospitality, in both ways, and had the pleasure of

estate. The writer has often enjoyed his hospitality, in both ways, and had the pleasure of seeing many a fine deer brought in, some of which were the trophies of his own skill.

For his own convenience in hunting Col. II, had cut numerous straight roads in the back kands, dividing a considerable territory into convenient "drives" of from fifty to two hundred acres. These and the woodland which was inclosed in the outside planatation fence, constituted the hunting grounds, where host and guests often "heard the cry that thickened as the chase drew nigh," and the deep boom of the gun which betokened that some one of the party had been properly located for a shot at the fleeing deer. Unless the game was brought down after a short chase, it took to the river, and thus escaped further pursuit. It was not at all uncommon for the deer, especially if far alhead of the dogs, to swim out into the stream and then down the current for several hundred yards, coming out on the sameside it hadleft. But whether it took one course or the other, there was no further pursuit—the traces of the flight were lost. Years ago the deer were so plentiful in that locality, that good dogs never were known to fail to "start" in many of the drives; but as the woods were thick and the chances only snap-shot chances, it was not always that game was obtained. Besides all this, the deer often exercised their independence of the conventionalities of politeness by refusing to be seen by the anxious "stander," and taking some other direction to make his escape from the dogs.

I recollect one occasion, when a considerable party of us met by appointment at a camping ground on the estate, as well prepared as men could be, with muzzle-leading shot guns, for success in the purpose which had brought us together. We had good guns, generally of twelve and fourteen calibre, and dogs which could not be surpassed. Most of us were good shots at deer, and we knew the country. We had hunted one day, and succeeded in getting three deer. It was agreed, at a counc

for about fifty yards. I hoped that I could see the deer as it crossed this, and by that means be better prepared to shoot when the road was reached. The chances of success were so bad that I really wished no deer to come, and consoled myself with the reflection that my desires would be gratified, for it was almost clear to my mind that none ever used that as a "runway." So I sat down, with my back against a small pine, and commenced thinking over and mentally repeating the opening lines of the "Lady of the Lake," when my attention was arrested by a distant sound of the dogs, which seemed to indicate only that they were on the trail. I looked down the cow path, and very soon heard a noise resembling that made by the hoofs of a deer upon hard ground. Almost instantly I saw a don come bounding up the path and stop just twenty yards from me, with her head directly toward me. A small bush hid me, and, cocking both barrels, I fired the right at her breast. She sprang to the right, and I shot the left barrel at the glimpse as she run through the thicket. After loading my gun, I went to the spot where she stood to see if I had hit. There was a little hair on the ground. I then followed the course which she took, and soon found blood. Proceeding about cighty yards, I discovered that she had stopped for a short while, for there was a considerable puddle of it. But she was gone. After I had gotten back to my stand the dogs came up, and being bewildered by her sudden change of course, took the back track and pursued that until they discovered their error, when they returned and followed her to the river. I learned afterward that a fisherman caught her in the water, and appropriated her to his own use.

Just after the dogs had gone I heard a noise similar to that made by the doe, and looking down the path again I saw a peg-horned buck come dashing toward me. He saw me when he had gotten within almost thirty yards and stopped. As he did so I fred one barrel, but he was out of sight before I could get the other ready. Pretty

fast, we had six deer as our tropmes. The new rewarded morning hunt I over know. During the three days rewarded morning hunt I over know. During the three days we got twelve deer.

After the death of Col. II, his vast landed estate was divided amongst his heirs, and in a few years the owners had converted one large plantation into a number of smaller ones. Instead of one hundred bales of cotton, more than six hundred were grown on the land. The country once occupied by deer became cultivated fields, and now the once famous hunting ground has its glories to live only in memory and tradition. Doubtless it is best as it is; but one must be pardoned for regretting that the inexorable demands of hunau necessity have stricken from existence this baronial domain with its extensive grounds so well stocked with the noblest of all game. But the march of agriculture and civilization is fast destroying the ranges of the larger wild animals, and but few years will clapse before the buffalo, the elk and the deer will become purely historical, and the lovers of field sports will be restricted to the feathered tribe, some of which have their breeding grounds so far removed from the haunts of men, that despite the usual destruction, the propagation will continue to be sufficient for moderate demands.

Wells.

WALTON FALLS AND BLUFF MOUNTAIN.

WALTON FALLS AND BLUFF MOUNTAIN.

I HAYE read the interesting article in your issue of Feb. 16, by Rev. H. L. Ziegenfuss, on "Pisceo and T Lake Falls," and his assertion that the latter place is more accessible from Morehouseville than from Pisceo, is correct.

In the southern part of Hamilton county and west of Pleasant, Oxbow, Round and Pisceo lakes, there is a region which, lying in a range of seven to twelve miles, is, in comparison to the country about the lakes, a howling wilderness. To reach this there are several routes; from Little Fells on the N. Y. C. R. R. or better, from Prospect on the Black River R. R., or from Newport on a narrow gauge read which has been built from Herkimer, sixteen miles up the valley of the West Canada; at any of these places you can get a conveyance to Morehouseville, and with headquarters at that point, can go without much trouble to Pisceo, Morehouse, Sheriff, and Alder Brook lakes along the old Pisceo road; up the east branch of the West Canada creek to Pine and Galses and T Lake Falls, or northward to Wilmurt, Song, Big Rock, Little Rock, Little Bear and Twin Rock lakes, crossing the upper stillwater on the Metcalf River, and at Twin Rock are within twenty minutes walk of Indian River, the outlet of Spruce Lake.

Last summer C. and I left Newport one morning before daylight, our destination was the home of Theodore Remonda, the guide, where we were to meet Horace.

We had been three days making the necessary preparations for the trip, and started out with our "duds" snugly packed in the box of a Courtland wagon, and ourselves sitting on the comfortable seats behind two as fine roadsters as one could ask.

could ask.

We drove to Poland, four miles, the road skiring the banks of the creek, turning to the right; two miles farther on is Cold Brook. Everybody was asleep in the little village as we hurried through. A mile above, the road turns sharp to the left and we begin to ascend the "big sand hill," well remembered by everyone who has been over this route. This "sand hill," is a deep gorge, over a mile in length, through which the road winds, and evidently has been washed out deeper and deeper each year by spring freshets and heavy mins. It is a hard pull to the top, but once there, stop as we did for a "breather," and see if you are not repaid for your labors.

We are on an immense hill, looking into the valley below, the sun is peeping over the tops of the woods far to our right; from where we stand the land slopes gradually down to this

the sun is peeping over the tops of the woods far to our right; from where we stand the land slopes gradually down to the

Black Creek Valley on this side of which is the densely wooded swamp, a famous place for rabbit hunting, which extends from Graysville, half a dozen miles below us; on the farther side of Flack Creek that word was side of Black Creek the road ascends to the level and sandy plateau of Ohio. As a background to this, a dark, blue

side of Black Creek the road ascends to the level and sandy plateau of Ohio. As a background to this, a dark, blue ridge of the Adirondacks looms up, putting a frame, so to speak, around the lovely view before us.

The horses take us at a lively gait across the valley, through Ohio City, a good description of which is given in Northrup's "Camps and Tramps;" thence to Wilmurt Corners, and two miles from the latter place we cross the West Canada and pull up in front of the Sportsmen's Home, kept by Ed. Wilkinson, known to all who have been into this part of the woods. We follow up the creek three miles to Evans, at the forks, where the cast and west branches unite and form the West Canada. Again we cross the stream and, gradually bearing to the left, enter the woods by the Morchouseville road.

road. Morehouse is seven miles from Evans', and passing through the 'Ville, a little beyond were is the quaint old chapel where Father Herbst was wont to hold forth, we enter the woods again, go down a steep pitch, cross the east branch, and drive up to Remonda's door, in front of which Horace was released to the contraction of the co and drive up to Remonda's door, in front of which Horace was asleep in a hammock. At my loud greeting he tumbled out and ran to greet us. "Thought you never were coming," he said. "There's an old friend of yours inside, with his wife and a party of ladies. We've been waiting and waiting for you fellows, and have got a trip all fixed; now you've come, we'll start to-morrow morning." "Well, where are we going?" I asked "Pine Lake, Upper Stillwater, and Walton Falls."

At this juncture a gentleman came out of the house whom I found was indeed an old friend—W. G. Stimson, who now has overcome the many obstacles necessarily encountered in making any improvements in a place so far from civilization and railroads, and has fitted up the old Beaeraft House and

house wish and the not not the
stream widens out and sels back, forming a little bay. We carefully anchored the boat and began whipping, but found there were too many rods, so I stopped. C—chauged to bait, and we left thorace to toss the fly. Surely, from the looks of things, we ought to catch trout here; they are lying on the cold springs in that bay, I know, for Horace showed us a shingle on which was a sketch of a monster he killed yesterday in this very spot, and the sketch was incomplete, because he couldn't find a shingle long enough. Ha! I thought so; a long cast drops a coachman far up into the bay, there is a beautiful rise, and in an instant Horace, with his $5\frac{1}{2}$ -oz. bamboo, is fighting a pound and a quarter trout. Nearer he brings him, slowly recling in until he can handle him easily. As he nears us he does what every desperate trout tries to do, rushes like a shot for the boat. There was but one thing to do—let the rod and trout fight it out; and as Horace gave him the butt, the bamboo circled down, down, until the tip nearly touched the water; then, slowly, the strain lessened, the tip began to straighten, and as he brought the trout up I slipped the landing-net under him, and the next moment he lay gasping on the bottom of the boat.

We caught but eight trout none so large as the first one.

and the next moment he lay gasping on the bottom of the boat.

We caught but eight trout, none so large as the first one. At the head of the Stillwater we "closed up" the boat, as we intend to take it with us to-morrow. At 11 A. M. the next day we started, with Remonda and Charlie Hoffmeister as guides, and at Beacraft's were joined by Stimson, his wife and a party of ladies. For the benefit of parties going in or who desire to go to Walton Falls (the name by which they are known on this side of the mountains, and which, I think, for the sake of the old Walton Club, better than T Lake Falls, I will give the distances by this route. It is four miles from Stimson's to Pine Lake, one mile across that, four miles from Stimson's to Pine Lake, one mile across that, four miles from Stimson's to Pine Lake, one mile across that, four miles from Pine Lake to the Upper Stillwater, and two miles from camp on the Upper Stillwater to Walton Falls, making a total of eleven miles, three of which can be done in a boat, leaving eight miles to walk. The trait is good, very good, I may say, to Pine Lake, and fair the rest of the way, and any one can go there with a guide. Once there, and sitting at the base of the rocks, you will indeed say it's a sight worth tramping a dozen miles to see.

a sight wonth tramping a dozen miles to see.

We reached camp at six o'clock; the guides soon had supper ready, and after a pipe turned in. Next morning at nine o'clock we left for the falls. Horace took the ladies up stream a mile in the boat; we followed the trail and met them as they landed. Rev. Mr. Z. has given so good a description of the falls that I shall not attempt any. I do not think 600 feet an exaggeration of their height; the tall pine tree standing on the top of the rocks actually looked no larger than one of the "browse" cuttings I had in my pillow. There is a deep pool at the base of the rocks, the sight of which would tempt anyone to drop a line, yet no trout have ever been taken from it, save in one instance. Two years ago Remonda was here with a party; tired of looking at the ever been taken from it, save in one instance. Two years ago Remonda was here with a party; tired of looking at the falls they lounged on the banks of the pool. One of the gentlemen suggested tishing. Remonda told him there were no fish there; nevertheless, he rigged up, threw in, and, to the astonishment of all, pulled out a pound trout; the next cast landed one that weighed a half pound, but all the faith-

ful angling that has been done there since that day has failed to catch another fish

to eatch another fish.

The party started for camp, C, and I to fish the east branch down through the still water, which is just wide enough to alford good easting for two. The trout were ravenous, though the water was so clear and the day so cloudless that a long line was necessary to reach them. When half way though the water was so clear and the day so cloudless that a long line was necessary to reach them. When half way down Horace met us with the boat. We had seventy-four fine trout, not large, but genuine brook trout and good sized. Midway between the camp and Walton Falls is Bluff Mountain, an immense ridge of bare rocks which looks as if it had been cut in twain and one-half tumbled down into the deep gorge below. That night, while sitting around the blazing loss Horace broke the silence with:

tain, an immense ridge of oare focks which looks as it it mad been cut in twain and one-half tumbled down into the deep gorge below. That night, while sitting around the blazing logs. Horace broke the silence with:

"Theodore, did you ever hear of a little lake away beyond Bluff Mountain?"

"Yes; but I've never been to it."

"Do you think you could find it?"

"Do you think you could find it?"

"Do not know; but I'd like to try."

"To-morrow," said Horace, "I propose an exploring expedition. Three years ago, in June, I found ice in the gorge at the foot of Bluff Mountain, and I believe it is there all summer. Let's go up through the gorge and from there over the mountain to hunt for the lake."

We agreed to this, and early next morning started. In a short time we reached the gorge and began to clamber over the immense rocks, around which a little brook tumbles. "Keep your eyes open for ice," said Remonda; when about half way up, we heard Horace who was in advance calling, "Come here!" and found him standing at the entrance of a cavern to which we afterwards gave his name as discoverer. "Stand here a moment," he said. A draught came out cold as one gets when the door of an ice house is suddenly opened. "Feel of that water," pointing to the tiny stream—it was icy cold.

Remonda pushed on ahead, crawled out of sight, next

"Feel of that water," pointing to the tiny stream—it was icy cold.

Remonda pushed on ahead, crawled out of sight, next shouted for the axe, and soon appeared at the mouth of the cavern and held in his hand a large chunk of ice. There was no mistake about it and this, too, the 22d day of August. We cut out enough to fill a pack basket, and sent Hoffmeister back to camp with it; all this time a dozen eagles that nest on the inaccessible cliffs, were screeching and circling over our heads. Late in the afternoon we found the lake after a hard tramp, there was no sign of its ever having been visited by human beings. A diligent search failed to discover a trail, a fire spot or an axe mark. From the number of signs it must be a great resort for deer, and all around it were the big, flat tracks of a large bear. We fished it as well as we could from shore, but caught nothing. Named it from its shape Balloon Lake, and hurried back to camp.

The remainder of our stay at Stillwater camp was spent in jack-shooting, fishing and exploring. Any one who cares for these diversions can stay here ten days or two weeks and be busy, if inclined, every day.

We "broke camp," came out and fished Alder Brook, which was alive with small trout.

Since I was fourteen years of age I have spent my vacations in the woods. I know (only too wall) of the every day.

We "broke camp," came out and fished Alder Brook, which was alive with small trout.

Since I was fourteen years of age I have spent my vacations in the woods. I know (only too well) of the crowds going in to the Saranac, St. Regis and Fulton chain, and nowadays the almost universal reply to an inquiry about a lake or stream is "fished to death." It is true, a great many people come here in the course of a summer, yet it is vastly different from the more travelled resorts. Why? Because the majority of parties that come here go to Morehouse, Piseco, Wilmurt, Pine and G lakes, all easy of access and in season afford good sport; few go to Walton Falls, and in all there never have been a dozen parties to Indian River and Twin Rock Lake. It is a hard tramp of twelve miles through the woods to get there, but a gentleman, whom I know well, took sixty pounds of trout from the latter in one afternoon, and caught all of them on thes.

Every summer you ask if any readers of Forest and Stream know of a good fishing or camping ground, that they tell of it for the benefit of others. I am giving this in advance of season, and mind you, don't want to impress any one with the idea that the region is a "sportsman's paradise." Heretofore, parties have made their headquarters at Hoffmeister's, Kassing's, Beacraft's or Remonda's, all good stopping places. I have always stopped at Hoffmeister's. The three boys, August, Will and Charlie are good guides for the Morehouse, Sheriff and Pine Lake routes.

The three boys, August, Will and Charlie are good guides for the Morehouse. Sheriff and Pine Lake routes. Stand some evening at the rare sunset hour on the veran da at Hoffmeister's. Across the valley of the East Branch are Mad Tom and Signal mountains; farther down, the home of Remonda, the guide, nestled among the bare rocks which mark the trail to Wilmurt Lake; look down, far as you can the immense mountain ridge is always before you; to the left, the emerald of the woods is turning to royal purple under the shadows of old Bald Face, and as slowly the sun sinks down behind his rocky head, just so slowly the purple creeps up the valley, along the ridge of Bethune, next to Wilmurt and Signal Mountains and at last to Mad Tom's crest. A ray of sunlight comes from behind Bald Face and darts quickly along the ridge, slowly the purple chases it back to the "old man," and with it sends Mad Tom's good night. The shadows deepen; back in the woods I hear the call of a lonesome bird—darkness is coming on apace.

My first trip in these woods was with the father, quiet, honest John Hoffmeister, who many a chilly night has taken his own blanket to cover me when the fire was out. There, too, have been some who cannot be there now, and the old days come back to me, so that I don't feel at home in any other place; and though Hoffmeister is sleeping in the little churchyard down the valley. I think, sometimes, he comes to the old house and brings his peace, for it has been there with us always.

Wa-moo.

!!!—The New York Graphic, of March 14, contained an alleged illustration of "Duck Shooting on Long Island." It represents a gunner, seated in a battery and surrounded by decoys, shooting one of three ducks which have been deeoyed within range. The intelligent writer of the Graphic remarking upon the picture says: The sportsman in the sketch has evidently struck a "bonanza," and one wonders why he wastes powder when he can get all he wants by simply reaching out his arms. Why, indeed? The Graphic man is not the first who has wasted his powder on wooden fowl.

"Nessmuk's" Advice Wanted.—Minneapolis, Minn., March 26, 1882.—Will you have the goodness for the benefit of an invalid to ask "Nessmuk" to recommend one or two localities "about the head waters of the Delaware and Susquehama," for such cases as he has named Oregon Hill, Pa., in Fordst and Stream for Dec. 29, 1881? If he will kindly do so he will confer a great favor upon a Constant Reader.

Hatural History.

THE DRUMMING GROUSE.

If "Nessmuk's" doubt expressed in his pleasant letter published in your issue of the 16th inst. is well founded, I am a more favored person than I supposed myself to be, Pressman a would expressed in his pleasant letter, published in your issue of the 16th inst. is well founded, I am a more favored person than I supposed myself to be, for I am one of the ten who can truly say that they have seen the "cock grouse fairly in the act of drumming." But I did not dot it just as "Nessmuk" prescribes, though I did look up the drumming log, cleared away the intervening twigs between it and a basswood stump and its sprouts, which made a favorable point of observation, and furthermore "blazed" a line by which I could approach it. I did not "get out of bed on a frosty April morning before it was fairly light," though by so doing I might have seen more. I went later, and hearing the grouse drumming, crept on all four to the cluster of basswoods, following my blazed line, and I saw him execute his drum solo. He was just as watchful and wary as "Nessmuk" says, and after two or three repetitions of the performance, he saw something suspicious and hopped off the stage. He did not fly away nor run straight away, but took a wider circuit, evidently with the intention of getting a look at the unbidden observer. After getting well to the right of me where he could plainly see me, he faded away into the gray of the bush and tree trunks, and I saw no more of him that day. He or some of his family held that same log for many springs, but for two years past it has been deserted. Old age, the tick, or hawk, or owl, or fox, or a charge of shot, has overtaken the actor, and the stage has been deserted. Old age, the tick, or hawk, or owl day for a grouse drumming, at least when they are as wild as they are here. But I did once get a short view of one drumming on a rock, the crest of a ledge covering my approach. It may difference in the sound whether the bird stood on a log or a rock. Come to think of it, brother "Nessmuk," my ears must be dull, for I never could hear a grouse drum a mile away. I wish we might hear him drumming oftener and nearer.

nearer.

To me it seems nonsense to attribute his decrease to the birds and beasts which prey upon him, for they are not so plenty now as when the woods were full of grouse. For two years I have heard but one horned owl, and I take it he is a worse enemy than the hawk, fox or skunk; nor are there any more "pot-huntthan the hawk, fox or skunk; nor are there any more "pot-hunters." For my part, if they will shoot only in open season I would as soon risk the grouse with the "pot-hunters" as with the sportsman who shoots for a big bag. Leaving the treeing dog out, and the dogs that will tree grouse are searce, how many sitting shots will the man get who stalks his birds, compared with him who takes only flying shots over his pointer or setter? One in ten; I think that is a liberal allowance. If one sportsman gets two birds in five shots, he bags four birds to the pot-hunter's one. Which does the most mischief? They tell us that it is impossible for the merest bungler to miss a sitting grouse, so we let our pot-hunter kill at every shot. But every one who has ever targeted a "scatter gun" knows that that is nonsense, and that no shotgun, no matter how straight it is held, will always kill at every ordinary range.

am more hopeful than "Nessmuk," for I believe that the grouse will come again. Not so plenty as they once were, for their coverts are yearly growing less, but I prophesy that years will come in which they will not be so scarce as now. Ten years ago they were almost as hard to find here as they are now. They gradually increased, and almost suddenly in 1875 became plentier than they had been for years. The next year they were gone again. I cannot help hoping to see them again, and am glad for the faith that is in me. I wonder it it has happened elsewhere as it has here, that the wrens have quite disappeared. I have not seen a common house wren for more than twenty-five years, though when I was a boy, which was a good deal longer ago, they were almost as plenty as robins, much more so than orioles, then a rather noticeably rare bird, but now quite common. I have pretty much given up hoping to see the wrens again,

I have pretty much given up hoping to see the wre but I will not give up the grouse yet.

Does the Shrike Kill Young Qualt?—Oskaloosa, Iowa, March 21.—Ellor Forest and Stream: I have read with interest the several articles in your columns under the heading "Enemies of Game Birds." I beg leave to present still another enemy, which, if not an enemy of game birds, is certainly a most deadly enemy of our sweet little song birds. I refer to the tyrant shrike (Edlight bordsits) or, as it is justly called, "the butcher bird." The hawk and the owl are intended that the total of the Company of the surface of the content of the life. I refer to the tyrain sinkle (Contyrio overdis) or, as it is justify called, "the butcher bird." The hawk and the owl are intended by nature to take life. They do it to sustain their own, and their general build, beak and talons, betray their character to all other animals. But the shrike is a clear case of the deception which nature is supposed to despise, for, under an exterior as innocentlooking as that of the thrush, it disguises a nature us ition which nature is supposed to despise, for, under an exterior as innocent looking as that of the thrush, it disguises a nature as bloodthirsty as that of the hawk. It sgeneral form and color is that of a song bird, but its sharp claws and hooked bill are the indexes of its character. So far as my observation goes, this bird lives almost if not entirely upon young and small birds, and this being the case, what tenderer morsel could it want than the young quail as yet unable to fly. I have no doubt (although I do not know) that it destroys many quail annually, at least it seems more reasonable to blame it than the squirrel. I believe this bird is on the increase, as where a few years ago I could only occasionally see one, I can now see one almost any day. It pursues its prey relentlessly, and, when captured, carries it in its claws to the nearest thicket, where it is impaled on a thorn, hence the name "butcher bird." While the shrike does no good, it does any amount of harm by destroying birds which have a better right to live than itself. Its mission on earth seems to be death, and death should be its reward. So, when the sportsman goes forth on his shooting excursions, he should keep an eye open for the shrike, and when he sees a small ash-colored bird with white markings, which seems to be sneaking around on some errand of mischief, he should bang away, at close or long range, as the case may be. No matter whether the bird be flying or sitting, it should be shot down, for the death of a single one may mean an extra bag of quail the next season.—Jeree. [It is, pethaps, too much to say that the shrike does no good, for it undoubtedly destroys many field mice, besides killing great numbers of insects, and, what many of our readers will consider not less important, many English sparrows.]

Rockland, Mercal 27, 1882.—Å dead woodcock was picked up in the adjoining town of Camden ou the 25th of

ROCKLAND, Me., March 27, 1882.—A dead woodcock was picked up in the adjoining town of Camden ou the 25th of February. It had probably flown against the telegraph wire. We have cold weather this month, and others may have perished from the cold.—J. W.

An Interesting Race.—A writer in a recent number of the Cape Ann Advertiser gives an interesting account of a trial of speed and endurance between a frog and a snake which is certainly worthy of record. Most people who spend much of their time in the open air and have their eyes about them have seen snakes in the act of devouring frogs, but to have seen such a race as this, occurs, we imagine, to but few. The account is as follows: I started one warm summer morning, as was my custom, to milk the cows that were confined over night in the yard adjacent to our barn, which was situated at quite a distance from the house, to reach which I was obliged to pass along a road until I reached a gap in the wall at my left. Beside this road ran a brook eight to ten feet wide; from the gap in the wall ran a foot path up a gentle incline to the barn. I had reached a point in this path about midway between the wall and barn, when my attention was drawn to a large-sized frog, coming toward me down the path, making the most desperate leaps. It seemed to my boyish eyes as though every jump must have been at least a rod. But what could make this frog in such haste? He appeared to take no notice of me, but was only intent upon escaping from some impending evil. I stepped one side to let him pass, and as I stood looking after him something passed my feet like a flash, which a second glance showed me to be a large black snake, four or five feet long, with his head carried at an elevation of about a foot from the ground. As you may suppose, I began to get interested, and followed on as fast as I could. When the frog reached the wall he made one bound over it into the road, the snake went through a hole without any diminution of speed, and on they speed across the road and brook. The frog then reached a stone wall of musual height, over which I feared he could not jump, but he made a tremendous leap, and landed in the tall grass on the other side; he did not stop here, however, for the snake was still after him and gaining. After the s

do not know; but the earnestness and spirit with which it was conducted, was surprising to me.

Mokkey Twins.—This climate is fatal to monkeys. Most of them die of consumption. They cannot be successfully bred in this country. The birth of a pair of twins at the Madison Square Garden, in this city, last Monday, is therefore quite worthy of note. The Times reports the event as follows: A pretty faced and intelligent looking little monkey called Minnie, belonging to the Barnum show, pressed a diminutive image of herself to her breast yesterday, and cast half-affrighted glances through the bars at the crowds. "Minnie presented Jock, the father, with twins yesterday," explained keeper Sam Hodges, "Both were females. One never drew the breath of life, but the other, safe and well in its loving mother's arms, will doubtless grow up the pride of its parents." When Mr. Hodges arrived at the Garden Sunday morning he found Minnie with a babe in either arm. One was limp and motionless, but the other was applying itself industriously to the task of extracting nourishment from the maternal breast. Mr. Hodges mounted the stephalder to take away the dead babe, and Jock, the father, who was in the next compartment in "murderer's row," became greatly excited. He almost succeeded in wrenching open the door, and he did succeed in grabbing Mr. Hodges by the hair of the head. He pulled unmercifully, and only by vigorous action in compelling him to release his hold did Mr. Hodges save himself from premature baldness. When he had caused Jock to relax his graps, Mr. Hodges reached into Minnie's compartment and took her lifeless infant from her. She cried like a child at the loss while the tears coursed down her cheeks. She was nearly distracted, and, with her live offspring in her right hand, extended at arm's length, ran into the far corner of the cage. She moaned and whined for a while, but finally dried her eyes when she saw that she welfare as any mother could be. Mr. Hodges said it was the first time twin monkeys were ever born i

when four years old.

THE MASSENA QUAIL.—We have recently received from a valued correspondent in Southwestern Texas, a beautiful specimen of the Massena quail, one of the most brilliantly colored of the North American Perdicide. This species is only found in the United States in the Southwestern States and Territories, its habitat being Southwestern Texas, New Mexico, and Arizona, and to the southward. It occurs as far north as the thirty-fifth parallel. The specimen received is an unusually fine and high plumaged male. The sender says of it: The specimen was killed near Devils River in this vicinity. As far as I have been able to study the habits of this bird, observe that they are generally found upon the high, rough rocky hills and ridges peculiar to this region. They feed about in flocks numbering from four and five to a dozen or more. When first approached they appear to be quite unconcerned and docile, feeding about, uttering a soft clucking, purring note. On seeking cover they lie very close, and are flushed with difficulty. A friend tells me that he actually picked one from the ground where it had squatted and was being pointed by the dog. They are quite plentiful in Southwestern Texas. I have never found them, however, further east than the Frio River, but as far west as I have been, to the Pecos, they are abundant. I have been, to the Pecos, they are abundant.

HABITS OF WOODPECKERS.—Under this title we quoted last week from the observations of Dr. Merriam, as published in the Nuttall Bulletin (IV., p. 1), and said: "In the central district [of the Adirondack region] they really do considerable mischief, etc." This should have read, "In the central district [of Lewis county, N. Y.] they really do considerable mischief, etc."

VITALITY OF MENOPOMA.—Some interesting observations on this subject are recorded in the April Maturalist by Mr. Wrn. Frear, who has been studying this amphibian. He says: One specimen, about eighteen inches in length, which had lain on the ground exposed to a summer sun for forty-eight hours, was brought to the museum, and was left lying for a day longer before it was placed in alcohol. The day following, desiring to note a few points of structure, I removed it from the alcohol, in which it had been completely submerged for at least twenty hours, and had no sconer placed it on the table before it began to open its big mouth, vigorously sway its tail to and fro, and give other undoubted signs of vitality. On another occasion, desiring to kill one of these creatures, which had been out of water for a day, I made a little slit in the back, hoping to be able to penctrate between the cervical vertebre with a stout scalpel, and out the spinal cord. After several trials, in which I succeeded only in breaking the scalpel, I gave up the attempt; but with all my cutting and pushing, it manifested not the slightest signs of pain or irritation, while if I but touched the tip of its tail with my finger, it would make a vigorous protest by lashing its tail and snapping its jaws. I doubt if even the redoubted snapping-turtle could show signs of a more "rugged" constitution.

The Excelsion Geyser,—In his report for 1881. Mr. P. W. Norris, the Superintendent of the Yellowstone National Park, gives an account of the violent eruptions of a geyser which he has named the Excelsior. During a considerable part of the summer of 1881 this geyser sent up to a height of from 100 to 300 feet, sufficient water to render the rapid Fire Hole River, nearly 100 yards wide, a foaming torrent of steaming hot water, and hurled rocks of from one to one hundred pounds' weight around the edges of the crater. When the geyser is not in motion the column of steam rising from the crater forms a conspicuous landmark in the park. An excellent map of the park accompanies the report.

Mountain Goat Specimens.—Apropos of the article in your last issue on the mountain goat, it may be of interest to note that Major Roman, Indian Agent for the Flatheads, has in his possession a pair of stuffed male and female goats with one kid, and that Lieutenant Cooke, Third U. S. Infantry, on a recent hunt killed some dozen of them. The skins were worth at Frenchtown, M. T., four dollars apiece two years ago; from which it is fair to presume that they are not much sought after in the market either by collectors or furriers.—U. S. A.

Free Lectures at Washington.—A bill has been introduced into Congress providing for annual courses of lectures upon mining and metallurgy, applied chemistry, agriculture and horticulture, veterinary science, mechanical engineering, fishculture, entomology, microscopy, electricity, forestry, architecture, navigation and ship-building, meteorology, botany, anatomy and physiology, and geology and mineralogy. The collections of the Smithsonian Institution are thus to be utilized.

Springfield, Mass., March 22.—For the last few days we have had very pleasant, spring-like weather here, and the bluebirds and robins have made their appearance among us; but this morning we find two or three inches of snow, and, in spite of this, the birds are chirping merrily, and will doubtless live to see better days.—C. R. K.

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—One wild cat, Lynx vufus; two leopards, Pelis purdus, both females: two roe deer, Cerus capreolus, one male and one female; one erowned crune, Balearica paronina; two gold linches, Carduells degrans; two siskins, Chrysomitris spinus; the bullindless, Fige parrakeets, Psittenda passerica; two gray-brea-ted parrakeets, Bothurlyanchus monachus; four reed birds, Dolichonyr crysivens; two Java sparrows, Padda oryzirona; two sealy ground doves, Scardafella syuamosa; six gray-headed love birds, Japonis cana; three red-crested cardinals, Parouria cucultata; one big, black-headed duck, Fulguda marria; four American wilgeons, Mareca americana; five red-headed ducks, Fulguda ferina; three mallard ducks, Anas obscans; one golden-eyed duck, Bucphala clinqua; one piral duck, Dajila acutu; one canvas-back duck, Fulguda callisneria, one ruddy duck, Erismatura rubida; and five black ducks, Anas obscavar; all by purchase. One opossum, Didelphys virginiuna; one raccoon, Progon lotor; one European blackhiri, Tardins merda; one screech owi, Scops asio; three red-tailed hawks, Budes borealis; one right of the progenity of the progenity of the control of t

TRIBUTE FROM AN ORNITHOLOGIST.

Washington, D. C., March 27, 1882. Editor Forest and Stream .

Editor Forest and Stream:

I have made my personal acknowledgements to Mr. H. B. Bailey for the copy of the Index to the Bird Matter of Forest and Streem, which I owe to his kind attentions. But that need not prevent me from testifying publicly my sense of the value of this Indox to all those who, like myself, have occasion to consult the published records of North American ornithology. While the work is not faultless—no index of any extent ever was—it answers every prantical purpose, and will be of the greatest possible assistance. Something of this and will be of the greatest possible assistance. Something of this softsort was urgently needed, and Mr. Bailey has a complished his selfimposed task with manifest care, which I trust will be rewarded with
the success it deserves. My copy at once takes its place at my elbow,
where it must remain as long as I have occasion to write about
American birds. Congratulating you upon the fact that the rich
ornithological contents of your paper are made so readily available
by Mr. Bailey's labor, I remain, very truly yours,

ELLIOTT COURS.

Dynamite, Dittmar, Monument, Dog, Bear, Skeleton, St. Gothard.—The public has been more or less interested lately in two explosions; more in that of some dynamite which blew up the Fields-André monument at Tappan, and less in that of a charge of "Dittmar sporting powder" which it is reported, blew up the gun of John S. Duston, at East Newark. It is proposed, in this monumental age, to give one to old Israel Putnam, the man who foared neither British lion nor American wolf. An old man in Rhode Island last week tried to drown a dog, but fell into the water and was drowned himself. When a bear is biting a man, a Boston paper advises: "Don't kill the bear, but give him some powerful medicine which in time will cause his teeth to decay." Some Georgia fox-bunters, when cutting down a hollow tree to capture the fox, discovered in the stump a skeleton, a powder-horn and bullet-pouch. The 8t. Gothard hospital, kept by the monks and their dogs, will not be closed, as was sapiently reported by a New York paper some time ago, said paper having also absorbed from a foreign exchange some very feeling comments on the supposed dispersion of the St. Bernard garrison.

Game Bag and Gun.

AN ARKANSAS BEAR FIGHT.

PART II.—CONCLUDED.

AN ARKANSAS BEAR FIGHT.

PART II.—CONCLUDED.

I' was agreed that all should be ready to start for the on the morrow all were on the road, Old Tige was yet in the hospital (wagon), but all thought he would be as good as ever by the next day. They camped that night in the edge of the highlands, and by noon the next day they had reached their destination—the edge of a wide crock bottom covered by immense oaks, pecans, persimmons and other "mast" bearing trees, through which bears and wild logs could range at will, with superabundance of the richest of food, growing so fat and oily that they would fairly glisten in the sun. Here were wild deer, turkeys, 'coons, possums, squirrels, wild pigeons and "pleasants" without end.

Here lived the native "Arkansawer" in all his glory. Such a thing as money he had never seen, and never cared to see. He knew that a 'coon skin would buy a drink of whisky, and if an extra fine one, two drinks; and that an otter skin would buy for him two or three pounds of powder and a "chunk" of lead. This was all he knew about commerce, and all he cared to know. As for politics, they got together once every four years and voted for "Old Hickory" for President; and when they had a spare "nigger," they sold "it" and entered their land.

The edges of the "krick" valley were bordered by precipitous sedimentary rocks cut into deep gulches and ravines by weather and water. The strata of the rocks were made up of alternate layers of lime and sandstone. In the limestone were numerous caves and holes of all sizes and depths. In these bears and other wild "varminis" had their dens.

The plan of hunting and capturing or killing the bear here is very different from what it is in the bottom lands among the canebrakes. Here, when the bear had left his den for a feed of persimmons, frogs or ants, the bear long takes his region lave found out that they have a "very soft thing" on the average bear, when the dogs have chased him into his cave. They make themselves a large torch of litching" on the average bear,

shoot him, if possible, and if they do not, the dogs soon "tree" him again. This seems very dangerous and requiring great bravery to the uninitiated, but it is not; no one was ever known to be killed or severely hurt in this way.

Our hunters arrived at their camping place. Old Tige got out of the wagon nearly as well as ever. All of a sudden while the men were arranging camp, he up with his head, took a few snifts of air, and burst off through the bottom, barking. The other dogs followed, and soon they were heard roaring through the woods on a bear trail. Bill and Jim wanted to follow right on after them, but old Sol said, "Never mind, boys, the dogs are all right; don't be in a hurry. Let us get our dinners first. If its a baah, and the dogs tree it, we'll soon find 'em." The dogs soon passed out of hearing, but when the men were nearly through dinner they heard them coming back toward the camp, but up the roek. He soon came back saying, "Come on, men, hurry up; they have got him up here in a cave. He is a beauty, too; I cotched a glimpse of him as he holed." The hunters hurried off to where the dogs were barking, and found them at the mouth of a cave about three feet high and six feet wide, a short distance up on the side of the bluff. While Jim went up the precipice or bluff after some dry pitch pine for a torch, Sol and Bill looked carefully to the prining and caps of their guns, for old Sol had brought along his great heavy duck gun and had her loaded "five fingers," with heavy buckshot. Sol wanted Bill to take in the old shotgun to kill the bear with, but Bill said, "Blast your old scattergun; it wouldn't hurt a baah, and if I shot it, it would kick me clean out of the den." The torch was carefully made, firmly bound together with willow withes: and in Jim and Bill started side by side to interview the bear. The cave being all along of about the same width and depth ascended very gradually. When they were in about fifty feet they caught a glimpse of the bear and heard a low growl, a bad sign. They approa

of his kind, two years and a half old, weight from three hundred and fifty to four hundred pounds, and not so fat as to be burdened with it. He was raving mad. He had not got out entirely unseathed. Bill's shot had broken his right fore leg at the wrist. "Load up, Bill," said Sol., "and plug him through the head." Bill felt for his powder-horn and found he had left it in camp. Old Sols was there too. "Giume that flask," said Bill. The flask was emptied at one draught. He then sat his rifle carefully up against a tree, carefully buttoned up his coat—Bill was clothed from head to foot with heavy buckskin—and then handed Jim his heavy hunting-knife. "What are you agoing to do, Bill?" said Sol. "I'm goin' to lick that 'ar baah, and bare handed at that!" "Oh, don't, Bill," said Jim, "I'll go back to camp and get the powder."

"Oh, don't, Bill," said Jim, "I'll go back to camp and get the powder."
"Powder be danged," said Bill, "you just shut up your yawp; you 'uns had your way over in the swamp—it's my turn now. I told you I was not afeard to tackle that old she baab in the cane, and I certainly ain't afeared of a three-legged baah in a corner. You gentlemen just call off them 'ar dogs and hold 'em, and don't you let 'em go under any surcunstances or a couple of you will get the worst drubbin' you ever had in your lives."
"Not if you give the word to let go the dogs?"
"That's what I said, wasn't it—not under no sarcumstances."

ces.

. But, Bill---''

"Shut up your yawp," roared Bill; "call off the dogs, and ce that you hold 'en off." The men saw there was no use o remonstrate. The dogs were called off and Jim and Sol to remonstrate. to remonstrate. The dogs were called off and Jim and Sol fixed them so as to hold them securely. Bill advanced toward the bear. The bear, seeing him advancing, became uneasy and looked for a chance to retreat, but finding that impossible, resolutely "faced the music." Bill advanced carefully to about boxing distance, when they eyed each other for a moment—then Bill let fly with his right. The bear countered with his left and caught Bill's elbow with his claws with such force as to partly swing him around, and then clasped him securely in his embrace.

" Ill fared it then with Roderick Dhu, That on the field his targe he threw, Whose brazen studs and tough bull-hide Had death so often dashed aside; For train'd abroad his arms to wield For train'd abroad his arms to wield Fitz-James's bade was sword and shield. He practiced every pass and ward, To thrust, to strike, to feint, to guard; While less expert, though stronger far. The Gael maintain'd unequal war. And thrice the Saxon blade drank blood; No stituted draught, no senary tide, The gushing flood the tartans dyed. Flurce Budgriek felt the fatal drain. Fierce Roderick felt the fatal drain And showered his blows like wintry rain; And, as firm rock, or eastle roof, Against the winter shower is proof, The foe invulnerable still Foil'd his wild rage by steady skill."

Bill was on his guard, ducked his head instantly low down Bill was on his guard, ducked his head instantly low down on his breast so that the bear could not take that in, and the bear seized one of his shoulders. But his buckskin coat was there, "two-ply" and quilted inside, and his teeth would not cut through. The coat being somewhat loose, the shoulder slipped out, leaving the bear's mouth full of coat. Bill in the meantime was not idle. The bear had his force legs around the man's body, and one arm pinned solidly to his side. Bill was exerting his immense strength to get this arma loose, and turn himself so as to get at the bear. But he found that whipping a bear in a rough and tumble fight was no boy's play. At last in their struggles, both fell to the ground. mo noy's play.

They tug, they strain!-down, down they go, The baah above, Judge Bill below.

They tug, they strain!—down, down they go,
The baah above, Judge Bill below.

Here Bill got a moment's advantage and broke the
bear's hold from his shoulder, and Bill got in a few heavy
blows, but was directly seized by the arm by the bear.
This hurt. Bill struggled long and hard to break this hold.
In the meantime the bear was doing a nice job on Bill's legs
with his hind part, and if it had not been for the great
strength of the greasy buckskin, Bill would soon have had
the worst of the fight. As it was, he was becoming more
firmly convinced that he was in a pretty tight place. At
last in the struggle the bear came square on top. His grip
on Bill's arm hurt fearfully. Bill struggled and squirmed.
But the bear held him solid. A tlast finding that he could
make no headway whatever in turning the bear or loosening
bruin's hold, he twisted his head out to one side and
shouted, "Men, let go them thar dogs!" But no response
came. He waited a moment and then shouted again, "Men,
please let go them thar dogs!" No response. The bear
gave a dreadful tug at Bill's arm. They struggled a moment, then Bill yelled, "Dod rot it, men, let loose them
dogs. I give the word; I'm beked." But old Sol and Jim
were watching the fight very carefully. Bill had bragged
so, and so 'bullied' them, that they had firmly agreed not
to let the dogs go without Bill's life was in imminent
they both sprang to their feet, and then for a time business
went on with a rush. Bill punished the bear fearfully with
fists and kicks. It seemed as if Bill was steadily gaining
the advantage and soon had Bill pinned to the ground
again, and came very near catching him square across the
mouth. But Bill jerked his head up past the bear's head,
when the bear caught him again by the shoulder. Bill had
his right nru loose, and pelted the bear vigorously in the can
with his fist, but with little effect. In the meantime the
bear was putting in his work on Bill's legs again with his
hind feet in real business-like style. This soon began to
tell fearfully on our h

tically to let loose the dogs, again. But his contrades paid no uttention.

At last Bill lost all patience and hissed out between his teeth, slowly and deliberately, "Gentlemen, if you don't be go of them thar dogs, as sure as my name is Bill Jones, if I ever get out of this here tussel alive as sure as there is a God in heaven I'll kill you both." But Jim and Sol, seeing that Bill was in no immediate danger, tauntingly answered back. "Bill, that three legged bash is no old she bear, and you can lick an old she bear in a cane break any day. Who's white-livered now, Bill? That's your fight, not ourn." Bill saw that he was in for it. He took it as quietly as he could for a

few mounents, "to gather his mind," and then "put in his best licks." Soon both combatants were on their feet again, with the bear apparently as fresh as ever, and with seemingly no other thought than to whip or die. Around and around they went in their narrow quarters. Bill saw that it was greatly to his advantage not to have any more hugging, so he guarded against it carefully. But his best blows and kicks appeared to have no more effect on the bear than they would have had on a bag of wool. He was well nigh in despair, and lost no chance to urge the men to "let go them thar dogs." The other hunters watched the battle very closely. At last Bill quit calling to them, and they saw that he had only two thoughts left in this world, which were, to kill the bear, and then kill them, so they concluded that if he got into a tight place again that they would let the dogs. The other hunters watched the battle very closely. At last Bill quit calling to them, and they saw that he had only two thoughts left in this world, which were, to kill the bear, and then kill them, so they concluded that if he got into a tight place again that they would let the dogs. The naimals by this time had become so excited that the men could hardly hold them. At last Bill got in a tremendous kick under the bear's short ribs, which doubled him right up. He followed this with others in the same ticklish place, Jim and Sol both saw at once that Bill was master of the situation, and also saw the fix they were in. They let go the dogs and broke for the woods, knowing too well that Bill would be as good as his word, and that their turn would come next. In a moment the dogs had all seized the bear. Bill continued to kick vigorously, nor did he let up a moment until he was certain that there was no throb of life left in the bear. He then turned, fairly frothing at the mouth, to keep his promise to Sol and Jim, but they had vanished. He looked up the cliff and saw old Sol just vanishing over its brow; he yelled, "Go it you old curse; I'll git you vit

Bill carciulty wrapped himself around the pint of peach brandy, loaded his rifle with great care, sat down on a log where he could get a clear view of the bluffs above, and then said, "Lark, you go up thar whar I killed that baah. Skin him, cut him up and tote him in." Then he patiently resigned himself to watching for his revenge. Lark brought in the bear meat, a load at a time. Night came on with Bill on guard. He found that he must have rest and sleep. He placed old Lark on guard and told him if he saw anything move no odds what, or heard any noise, to wake him at once, or he was a dead nigger; to let him sleep three hours then wake him up. Lark obeyed, and when the time was up woke the bear fighter. Then Bill stood guard so long as he could, and so they passed the night. Bill stood with ready gun all the next day, then the night was passed the same as the night before had been, and the next day came on.

Bill was bruised all over and sprained from head to foot, Some of his bruises were very deep and sore, but his skin was not broken anywhere, thauks to the heavy greasy buckskin, except many deep scratches on his hands and face. The next day after the fight he could only get up or down with Lark's assistance. The morning of the second day was bright and cheerful and he felt better, but his eyes blazed out cruelly as he searched the bluffs for his late companions. Toward the evening, under the softening influences of old peach and plenty of hear's meatand old Lark's screed, niteous look, he began to soften a little, and then when about sundown he caught a glimpse of old Sol's white pinched hungry face peering over the bluff he broke down completely, and called out in a tone of voice that no one could mistake, "Come in, old man, come in, I've been a dod-rotted fool, and I hope I have learned a lesson." Old Sol did not mistake the tone of voice. He knew that Bill Jones was himself again, a giant that a babe need not fear, and he knew that he had been nearly three days without grab, which was "slightly binding."

have told this story as I heard it, with the slight dif-I have told this story as I heard it, with the signt off-ference that as it was given to us by an old veteran in our camp in the White River bottoms. Bill did not wound the bear when it rushed from the den, therefore Bill did not whip and kill bare-hunded a three-legged bear, but a sound, active, healthy, four-legged bear. My excuse for this change is that when I tell a lie in Arkansas, I want to tell one that somebody will believe, so as to not be in fashion. BYINE. CROCKETT'S BLUFF, Ark. 1882.

SOUND LOGIC FROM OHIO.

THERE has been very little shooting in this immediate vicinity the past season. I have been unable to find more than two small coveys this winter, and into these I did not shoot

more than two small coveys this winter, and into these I did not shoot.

The winter of 1881 was very hard on small game. There were heavy falls of snow, and the weather was extremely cold. Before the season was half over, I began to hear of persons finding flocks of frozen birds in the fields. These reports I was slow to believe until verified by responsible persons; and, indeed, before the winter was over I stopped at a woodland bivonae one day, and counted five quail calmly sleeping in the encampment of death.

How many birds were lost in this manner, I cannot even conjecture, but I do know that in the fall of 1879 there was an abundance of birds, and in the spring of 1881 you could range for half a day and scarcely find one.

The ravages of foxes, owls and hawks are to be taken into consideration, but there is still a question in my mind if the loss from cold weather would not be very light if the birds had free access to plenty of food. When there are heavy falls of snow, it practicably excludes birds from feeding, and if this is long continued, the cold weather merely consum-

falls of snow, it practicably excludes birds from feeding, and if this is long continued, the cold weather merely consummates the work starvation has commenced. Would it not be wise, then, for the better protection of birds, to place in sheltered places through our shooting rruges, such food as would meet the wants of our game birds? I think so.

Now, the word "protection," as applied to the game and fisheries in too many sections of Ohio, is farcical.

Every grade of society must have its Moses, and the Ohio Legislature is always in the market.

The last one who has found his mission to be somehow connected with the game birds, has got a bill through the Legislature prohibiting shooting until the season of 1884. If that bill would prohibit, it would then be the correct thing

for the shades of all the cock partridges slaughtered in the last twenty years to arise and call him blessed. But those shades will rest on, and while the sportsman will lay his gun on the top shelf, the pot-hunfer will be busy, and the man with his nets reap a bountiful harvest.

Last winter Hon. H. C. Greiner, of Barry county, introduced a bill that afterwards became a law, authorizing the proper county officials to pay fifty cents per head for each and every hawk killed in any county throughout the State. The only mistake the honorable gentleman made was in not substituting two dollars for the fifty cents as the bounty. If the losses growing out of the ravages of lawks could be

substituting two dollars for the fifty cents as the bounty. If the losses growing out of the ravages of lanwks could be stated in round numbers, it would be almost beyond belief.

Where is there a farm house that is free from the raids of these marauders? Ask any housewife how many chickens she loses during a season and she will tell you: "Oh! I don't pretend to keep count any more."

Now these agents, so destructive to the interests of the farmer, are equally destructive among the game birds; and a person who has never had any experience, would hardly realize how swift and surely these feathery Saracens pillage a country side, when left to make forays, undisturbed. There is no borderland to keep them away. No spot is too sacred for them to visit, and being, as a family, little inclined to the languages, warnings to trespassers are lost on this branch of languages, warnings to trespassers are lost on this branch of

society.

One fall I assumed the guardianship of about fifty members of the "Bob-White" family, and looked after them closely up to the commencement of the shooting season. It was later, however, in November, before I found time to introduce my gun and dog to my young wards, and I well remember what a formal affair it was, so to speak. I got a-field about one o'clock one afternoon; and sent the dog up wind, and no birds. Then I sent him down wind, and still no birds. Then we circled-all for about an hour, and after balancing on the last corner, took seats and figured up on the net assets of the venture. "Some one had been there since I had been zone." That was sure, though not evidenced by

wind, and no birds. Then I sent him down wind, and stift no birds. Then we circled-all for about an hour, and after balancing on the last corner, took seats and figured up on the net assets of the venture. "Some one had been there since I had been gone." That was sure, though not evidenced by things seen or things present, but by birds gone. An old and trusted friend dropped in on the conference just in time to solve the problem.

"My boy," he said, "you have come too late. The hawks have held a pienic here for the last three weeks, and I am now offering a dollar a head for all the birds they have left out of the covey you are hunting. Day after day the war of externination has been going on, and now it is finished." Now, this is not true of our neighborhood alone, for just such things happen in hundreds of localities every year.

What is wanted in this State is protection, and not prohibition. You may prohibit shooting for ten years, but it will not protect birds; for of all persons that shoot, the gun of the sportsmax alone is silent.

Birds must have cover, and during long and severe winters, they must have feed. You can turn horses into the fields when the brooks are frozen up solid and they would likely suffer or perish for the want of water, and yet it is just as easy for these same horses to dig through a foot or eighteen inches of ice, as it is for quall to burrow through two or three feet of snow after food.

Plenty of food is the first or elementary study in protection to birds; plenty of cover is the second; and everlasting retirement of pot-hunters, netters and trappers is the third; an unceasing warfare on hawks, owls and foxes is the fourth, and then, if there is sportsmanilke shooting in season, each fall will find the shooting ranges well supplied with game. Any person can shoot a double barrel gun into a flock of birds, say iffeen or twenty, and sweep them out of existence, but humanity holds such practices in contempt. Ground shooting should be a penal offence. The day is coming when the intel

tion. Band Iron Works, Ohio, 1882.

SUCCESS IN TRANSPLANTING QUAIL.

SUCCESS IN TRANSPLANTING QUAIL.

MANY of your friends appear to have met with indifferent success in their efforts to transplant quail. My own experience has been more fortunate. In January last I ordered of Mr. G. A. Vincent, of Ad Hall, Texas, 200 quail, and knowing the ill-luck which had attended the efforts of others, and believing that it was largely due to mismanagement and careless preparation for shipment, I took pains to send from here the cages in which the birds were to be returned. They were the identical cages in which were received the first invoice of migratory quail ever landed on this continent, and are constructed as follows: Length, six feet; width, two feet; depth, seven inches. One side is fitted with vertical wires, like any bird-cage, and has in front a feed box running nearly the entire length, and a water box filling the space on that side not occupied by the feed box. The other side and the ends are closed, except that holes are bored at frequent intervals to admit of yentilation. The top is covered with sacking instead of wood to prevent the birds from injuring their heads in their struggling. The sacking should be supported to prevent its stagging down upon the birds. Such a box will contain three dozen birds; more ought not to be put in, as crowding is fatal to them.

On the 21st of March Mr. Vincent wrote me from Ad Hall that he had shipped me 145 birds, which were all he could ship owing to the lateness of the season. On the 22d my correspondent at Galveston advised me that they had left there by express. They arrived here on the 28th inst., and I counted out 139 birds, all strong and healthy, except one which had its leg broken and has since died. The rest are apparently healthy and strong; they eat freely of small grains, wheat, buckwheat, etc., and of lettuce and such other green food as we pre able to provide for them at this season.

This is my first experiment with native quail, but so far as I can now see, it is not difficult to transplant them, but care must be taken and n

fed and watered once each day and no more, care being taken fed and watered once each day and no more, care being taken of course to give them enough at each feeding to last them twenty-four hours. Nor should they be visited oftener, provided, of course, that they are in a safe place. They are very timid, and the less they are excited by the visits of human beings, the better. If they can be confined in small parties, not over a dozen in a box, so much the better, as they are less likely to over-run and crush each other. I am greatly pleased with my success so far, and with the care bestowed upon the selection and shipping by Mr. Vincent, to whom I can recommend persons wishing birds for stocking purposes another season.

These birds cost me \$4.36 per dozen delivered here. Not cheap, certainly, but I have known the dead ones sell higher in our markets, and on the whole, perhaps, cheap enough.

RUTLAND, Vt., March 30, 1882.

RIPPLAND, Vt., March 30, 1882.

HISTORY OF BUFFALO LEGISLATION.

A GAIN and again have measures been introduced into the National Legislature looking to the salvation of the roaming buffulo against the wholesale slaughter to which he is subjected. In almost every Congress for ten 'or a dozen years past may be found the record of acts intended to protect the buffulo, but none of these measures have been given the test of practice, for after their introduction they seemed to have found a quick and quiet grave in the pigeon holes of the committee rooms.

In 1871 Hon. S. S. Cox, of New York, introduced a bill reading as follows:

But it enacted, &c., That excepting for the purpose of using meat for food, or preserving the skin, it shall be unlawful for person to kill the bison, or bufflalo, found anywhere upon the pulants of the United States; and for the violation of this law offender shall, hope conviction, before any court of competent judicion, be liable to a fine of \$100 for each aminal killed, one-hall which sum shall, upon its collection, be paid to the informer.

when sum sand, upon its consection, be paid to the minoraer.
This bill was almed against the ruthless slaughter of buffalo by bands of so-called sportsmen, Mr. Cox putting himself on record in these words: "I do not think the killing of buffaloes amounts to game. I would just as soon shoot my mother's cow in the barn-yard as kill buffaloes for sport. There is no sport in such occupation." Although there was the usual amount of talk on the question, the bill failed to become a law become a law.

Subsequently in 1872, Hon. R. C. McCormick, of Arizona, introduced the following:

Introduced the following:

A bill restricting the killing of the bison, or baffalo, upon the public lands

Be it enacted by the Senate and House of Representatives of the United States of America in Cogness assembled, That excepting for the united by the senate and the presenting the states of America in Cogness assembled, That excepting for the united for any person to kill the bison, or buffalo, both and anywhere upon the public lands of the United States, and for the violation of this law the offender shall, upon conviction before any court of competent jurisdiction, be liable to a fine of \$100 for each animal killed, one half of which sum shall, upon its collection, be paid to the informer.

former.

Other bills of the some tener were introduced in the same year by Senators Cole and Wilson. None of these were passed.

Mr. G. L. Fort of Ill., made a special effort to secure legislation on this subject, and on Jun 5, 1874, introduced an act for the prevention of buffalo slaughter into the house, which went to the Committee on Ways and Means. On Feb. 2, 1874, R. C. McCormick, of Arizona, introduced a very similar bill, and this went to the Committee on Public Lauds. On the 5th of January Mr. Fort's bill came back from the Committee with the recommendation for its unanimous passage.

passage.
The first section of the bill provided:

The first section of the bill provided:

That it shall hereafter be unlawful for any person who is not an Indian to kill, wound, or in any manner destroy any female buffalo, of any age, found at large within the boundaries of any of the Territories of the United States.

The second section provided that it shall be, in like manner, unlawful for any such person to kill, wound, or destroy in said Territories any greater number of male buffaloes than needed for food by such person, or for the market. It shall be in like manner unlawful for any such person or persons to assist or be in any manner engaged or concerned in or about such unlawful killing, wounding or destroying of any such buffaloes; that any person who shall violate the provisions of the act shall, on conviction, forfeit and pay to the United States the sum of \$100 for each offense, (and each buffaloes on unlawfully killed, wounded, or destroyed, shall be and constitute a separate offense), and on a conviction for a second offense may be committed to prison for a period not exceeding thirty days; and that all United States though, justices, courts and legal triuming in said Territories shall have jurisdiction in cases of the violation of the law.

The discussion which followed is interesting and instruc-

States judges, instees, courts and legal tribinats in said Territories shall have jurisdiction in cases of the violation of the law.

The discussion which followed is interesting and instructive reading, as an exhibition of how much the average congressman knows about such a subject. The debate was protracted, and as usual the Indian question came in to complicate matters. Mr. Garfield said:

"Mr. Speaker, this bill, as I have glanced at it on the Clerk's desk, is every way right. If there is a single point suggested by any gentleman, it has been satisfactorily answered. But I have understood, and indeed I have heard it said, and said before the Committee on Appropriations, by a gentleman who is high in authority in the Government, the best thing which could happen for the betterment of our Indian question—the very best bring which could occur for the solution of the difficulties of that question—would be that the last remaining buffalo should perish, and he gave this as his reason for that statement; that so long as the Indian can lope to subsist by hunting buffalo, so long will he resist all efforts to put him forward in the work of civilization; that he would never cultivate the soil, never even become a pastoral owner or controller of flocks, never take a step toward civilization, until his savage means of support were cut off; and that his great support, the quarry, if I may use the work out of which he secures the very meat he feeds on, is the herds of buffalo which roam over the plains of the West. The Secretary of the Interior said that he would rejoice, so far as the Indian question was concerned, when the last buffalo was gone.

"Now, if the burbarism of killing buffalo for mere wanton sort has any compensation in it, perhaps it may be this is a compensation werthy of our consideration. I should like to

"Now, if the barbarism of killing buffalo for mere wanton sport has any compensation in it, perhaps it may be this is a compensation worthy of our consideration. I should like to know from gentlemen, especially those in charge of Indian affairs, whether they believe this theory is a sound one, and whether the very processes of civilization are not in their own course sweeping away the ground upon which Indian barbarism plants itself? It may be possible in our mercy to the buffalo we may be cruel to the Indian. It is the only possible objection which can be urged to this bill; and without at all indorsing the theory, I only offer it for the consideration of the House."

Mr. Fort was "not in favor of civilizing the Indian by starving him to death, by destroying the means which God has given him for support."

has given him for support."

Mr. Conger contended the bill discriminated in favor of the

Indian, and was unjust to the settlers on the frontier, who might starve if they could not kill the buffalo.

Mr. Hawley, of Connecticut, said: "I am very glad, Mr. Speaker, to see this bill. I think every man who has any of the spirit of a sportsmen in him must be glad to see it. I mean the real sportsmen, not the men who gallop on horses after the buffalo to shoot them down with as much sense, as the gentleman from New York [Mr. Cox] well expressed it, as a man would shoot down his mother's cow in the barrivard. But the real sportsmen will be glad to have the game law which we have in the older States also in the Western States, not to prohibit the shooting of any class of game, but to protect them during certain periods of the year.

"These men who call themselves sportsmen, but who have not the spirit of real sportsmen, go out in breeding time and kill the animals without reference to their condition, and in a short time would destroy them from off the face of the earth. Such men are not fit to have guns in their hands. The real old hunter of the West is not a man of that sort. Very few then go out to settle in the West who depend on their guns for their subsistence. Yet it is very convenient for settlers and also for parties of soldiers or emigrants to be able to come across a buffalo. I say, then, let us preserve them from wanton destruction."

Mr. Nesmith inquired: "How does the real sportsman kill the buffalo?"

Mr. Nesmith inquired: "How does the real sportsman kill hnffalo?

Mr. Aesimic inquired: "The real sportsman kills the buffalo?"

Mr. Hawley replied: "The real sportsman kills the buffalo when he needs it, for food or for its hide. I do not object to the way in which you shoot them at all."

And so the debate went on. The Indian, the settler, the sportsman and the butcher all came in for a liberal allowance of cloquence; and from among them all the poor buffalo finally came out safe. The bill was passed by the House (ayes 133, noes not counted), and sent to the Senate. Here it was referred to the Senate Committee on Territories, and that was the last ever heard of it.

Two years later Mr. Fort made another effort, and a precisely similar bill was brought before the House Feb. 23, 1874, and passed (ayes 104, noes 36).

This bill reached the Senate, and on the last day of the

This bill reached the Senate, and on the last day of the session was passed by that body after about five minutes of debate on the matter. It falled to get the Executive signature and so failed to become law. It was the best pushed of any of the bills, and its failure gives little promise that any similar act will pass.

WOLVES IN VIRGINIA.

WOLVES IN VIRGINIA.

THE lively little Scolopar vilsonii has come, and we are wiping out our guns after a three months' rest and saluting their arrival with a fen de joie. But as yet it is too cold for the mercurial little fellows to be very abundant. On Wednesday I walked with a friend over two little meadows in this vicinity and found probably fifty or sixty, but they were excessively wild, and fully one-half escaped unshot at. There was nothing to boast of in the way of shooting, but we had lots of fun, and brought back from our walk a little bag of twenty-three snipe, one plover and seven at doves; so if we won no credit at least we lost none. There are still a few bluewing teal and mallard, and we flushed three but got no shot. A few nights ago some of the colored brethern got up an old-fashioned coon hunt, some miles hence near flolston River, and after tracing the coon discovered him in a crotch of a big oak. To save the trouble of cutting the tree down, an old musket was brought into requisition, and at the crack of the gun, down tumbled among the dogs, "mongrel, puppy, whebp and hound, and cur of low degree," not a coon, but a panther not more than half killed. By all accounts the scene for the next five minutes was exceedingly lively, almost too much so for some of the dogs, who are now laid up for repairs, and one old darkey is said to be on the retired list, but his panthership had to yield to superior numbers and was finally clubbed to death. Panthers are excessively scarce throughout this part of the Virginia mountains, but there is one large pack of wolves remaining, not fifteen miles from the railroad, on that part of the Clinch Mountain known as Bromley Ridge. On three sides it rises steep and high from the plain and is perhaps thirty miles long, reaching up into a wilderness, poor and very thinly inhabited. The other side of this long ridge, stretching into the fertile and settled lands, has been chosen for their haunt by this pack of wolves, doubtless on account of the number of sheep conveni

Under the Shadow of White Top, Washington County, Va. March, 1882.

PHILADELPHIA NOTES.

PHILADELPHIA NOTES.

THE rains of March 26 and 27 brought more snipe to the grounds south of Philadelphia; and although we have heard of no large bags having been made by particular sportsmen, almost everyone that has gone on has had his share of sport. The birds are yet wild, unsettled and shifting; and the meadows, owing to late heavy rains, are very wet, owing to the breakage of the banks of the creeks that flow through them. During the short cold snap of the 23d and 24th, one gentleman in the neighborhood of Poplar Meadows, Delaware, found snipe (Wilson's) using some small ponds on the high mainland grounds which were interspersed with dwarf cedars. Being disturbed, the birds returned again and again, and were killed to the number of a dozen or more as they flew in. At some points on the Delaware River below Wilmington more salt water birds have appeared this spring than is usual. We hear of the greater yellow shaubs in considerable numbers about Pennsylle, Pennsgrove and Salem Creek, N. J. This is rather higher up the Delaware than he generally comes in quantities to be spoken of, as his spring tarry is always confined to the greater salt meadows of the coast proper. We reason that owing to the prevalence of overflow at the points spoken of, better feeding grounds have been created for him this spring. His loud note of call can now be heard in many meadows where it was little known before. The little jacksnipe, so often mistaken for Wilson's snipe by beginners, has also been attracted by the same new feeding grounds in more than ordinary flocks within the past week. This is the same bird (some do not know it) that returns with its young to our latification of the trigger lever is brought hone into the policy by this compressed in the bullet, which would be made in the bullet will be baryed for delivery by this compressed in the bullet, which would be residently for delivery by this compressed in the sourier beady for delivery by this compressed in the sourier heavy for delivery by this compressed in the so

tude in August, to be called the hay bird, fat bird and creeker. Then he is found almost exclusively on the sult marshes, and is not the toothsome morsel he will be found while feeding on the fresh water grounds in the spring. I have eaten them in April, when I thought them scarcely inferior to a Wilson snipe. The earlier varieties of shore birds are making their appearance on the New Jersey coast, but we have not heard of but one party who hanker after them. Those of our sportsmen who devote any of their time to them in the spring, prefer to wait until May, when the later comers, the robin-breast and the dorritch arrive. Shooting at Havre de Grace still continues, but the fowl are moving northward. So long as one remains, some gun will claim it as a target. I am glad to say all the amateurs who visit this latter and its neighboring grounds, have "bung up" for the season, and big guns are being brought in to Krider's to be overhauled and put away for next season's work. A Barnegat and Tuckerton bays some brant were killed last week. One good day's shooting was had. Fowl are not numerous though. iougii. Philadelphia, March@9.

THE CORN ON THE COBB.

Editor Forest and Stream:

Editor Forest and Stream:

From an article in your issue of March 23, on Shooting at Cobb's Island, I make the following extracts:

I. "On this sand-bank the snipe were feeding in countless numbers. * * Creeping up on our hands and knees to within forty yards, we sighted along the fluttering mesaleloking floor and pulled trigger. Two long swaths of dead and dying marked the track of the shot. For every one killed there are two wounded, and we have a lively chase in the water after them, for the tide is rising and the crippled birds can swim like a duck, and they soon reach deep water and are safe from us. * * * We gather up the dead and pile them in great heaps."

II. "They * * commenced to shoot the brant in the night time with the aid of lights and reflectors. Whole flocks can be slaughtered in that way. * * A discharge of a heavy gun, and dozens are killed at a shot, many more are wounded, and the others, bewildered and scared, by aimlessly about, and in the morning migrate to distant parts."

III. "Is there any fate too severe for such miscreants? Oh! that they could only be caught and tried by a jury of sportsmen. I wot well what the verdiet would be."

To which of these two classes of hunters—the "snipers," described in the first quotation, or the "branters" spoken of in the second, will the condemnation implied in the third best apply?

Batavat, Ohlo, March 26.

pply?
BATAVIA, Ohio, March 26.

I have read with a great deal of interest the arguments on the grouse shooting question, "Wing Shooting vs. Treeing," and begin to wonder what kind of shooting is necessary to transform a sportsman into a pot-hunter or butcher. In the list number (March 23), is an account of some shooting done at Cobi's Island, telling how snipe were "mown down" on a sandbar, and for every one killed there are two wounded, to be caught by seahawks; how the dead are piled in great heaps (too numerous to count, I suppose). Then follows an account of how some "vile wretches shoot brant at night with a light," to the great disgust of sportsmen. In my estimation there is small choice; but I may not be a sportsman, consequently ignorant of what real sport is, I have shot ruffed grouse from trees, but did it with a .32 calibre rifle. Shot them in the head or made a clean miss; none wounded to die at leisure. Called it sport, too. From some of the arguments used in the articles referred to ("Wing Shooting vs. Treeing"), I must be a pot-hunter, but still believe I am no worse than some of the sportsmen. I am responsible for the lives of a few ruffed grouse and squirrels every year, but never scattered feathers as the writer of that Cobb's Island articled did. Would rather be excused.

Applexon, Wis.

AN AIR-GUN FOR SMALL GAME.

AN AIR-GUN FOR SMALL GAME.

VOU would confer a great favor on the shooting public,
especially on those of us who are condemned to spend a
great part of our time in warm and tropical climates, as here
in the Isle of Malta, if you would ventilate among your gunmakers the idea of a strong-shooting air-tille, that could be
used for target practice indoors, and also for the stray small
game that is always to be found in our gardens and inclosures. In your advertisements, I see mention made of the
Quackenbush air-gun, and also in the London Field there is a
notice of another of the same, which judging from the name
of the patentee, is of German origin. But neither of these
to my idea comes up to what we want, and if you and the
inventors will not be very indignant with me for my presumption. I will sketch out the motif for the construction of
the weapon we want. Let us say a small bore ritle of the
calibre of 20, carrying a bullet weighing not more than 120
to the pound, provided with a breech mechanism, which, by
working a trigger lever similar to those in use with Winchester and other repeating riftes of the same kind, would
compress the air in a large cylinder in the stock into a small
receptacle behind the bullet, which would be raised into
position by means of a carrier block and placed in the barrel
ready for delivery by this compressed air receptacle being
forced up against it when the trigger lever is brought home
into its place.

In short phrase, let us have a magazine air-rifle, reclurging
after every shot, by the action of the trigger lever. I would
demand that the charging and storage air cylinders should be
made of bronze, or better still phosphor bronze, and thus be
strong and at the same time not liable to get out of order from
rust. A weapon of this kind would be most invaluable as a
means of keeping our hands and eyes in accord and in readiness for the more serious work of shooting big game with
the sporting rifle.

A young imitator of Buffalo Bill went into a photograph

SPRING DUCKISHOOTING.

SPRING DUCKTSHOOTING.

I AM glad to see that Forest and Streem has taken up the subject of spring shooting, and I sincerely trust that your opposition may meet with as much success as did your raid on the "skimmers." To read weekly of the thousands of ducks and snipe that are destroyed on their way to the feeding grounds is, to say the least, very discouraging to canadian sportsmen, who have contributed their quota toward the preservation of these birds by passing a bill prohibiting spring shooting. And it is a matter of surprise that a body of as sensible and unselfish men as our American brothers are, as a class, cannot deny themselves that which ought to cease to be a pleasure and has become a wanton waste.

ought to cease to be a pleasure and has become a wanton waste.

Every sportsman who spends a part of his time each fall on the marsh must notice the yearly diminution of ducks, and that favorite spots that once were "alive with snipe" now yield but a meagre bag. And unless some sensible steps are taken this state of things will continue until a good day's sport will be numbered among the things that were.

Our quail have wintered well, and if not followed by a very wet season for the youngsters, we will have splendid sport next fall. They seem to be on the increase, if anything, in spite of their many enemies, among which the "Zulu" gun is perhaps not the least, as it is generally in the hands of a "pot shot," the price ranging from \$2 up to \$4.50. I suppose the difference in price is in the quality of the metal. However, I think the "close season" is pretty generally observed, at least among professing sportsmen.

LONDON, Ontario.

THE DESTRUCTION OF LARGE GAME.

THE DESTRUCTION OF LARGE GAME.

THIS part of the country, embracing Montana and Wyoming, is generally considered the best game resort in the United States, and nowhere have I found as much large game as in Montana and Wyoming. Twelve years ago lieft the "States," a mere boy, and joined the "Big Horn Prospecting Expedition" to strike it rich somewhere in the Big Horn Mountains, but all we found were plenty of Indians and an abundance of large game of all descriptions. Being naturally fond of hunting and trapping I stopped here and hunted and trapped on pretty nearly all the streams of the Upper Missouri, Yellowstone, Snake River, and Wind River. In 1870, '71 and '72 buffalo, elk, deer, antelope hides were very near worthless here, and traders didn't care about buying them, except Indian-tanned buffalo and buckskins. In those years game was very abundant everywhere, hunters only killing what they could sell mear government forts, mining camps, etc., or what they used for themselves, and paying their attention mostly to trapping beaver, otter, minks and martin.

Since then times have changed wonderfully. The country became more and more settled up, hides and skins commanded a remunerative price, and a good many hunters "went in" to killing game, such as buffalo, elk, deer, antelope, mountain sheep, etc., just for the hides alone, leaving the carcasses to rot or for the wild unimals to feed on. In consequence game has become scarcer and scarcer every year, and while there is plenty left yet, I fear as soon as the Northern Pacific Railroad is completed it will be a "ground-hog case" concerning the game at Montana and Wyoming. They either have to leave or be mercilessly shot down during the winter time when they can't help themselves.

Game laws are practically a dead letter as long as hides and skins command a good price in the "States," and as long as the traders are allowed to ship hides and skins. The only way to put a stop to the wanton destruction of game thus slaughtered for the hides alone is to scize all the

large game between Feb. 1 and Aug. 10. OLD TRAPPER. BOZZEMA, Montana Ter., 1882.

In a Portland, Oregon, paper we find this: "I have been out on the desert a little south, seeing for myself the process of hunting the mule deer. Hunting here at this season is the principal business of all that can muster a good gun and energy for the hunt. When I was at Pineville, late in November, deer skins were almost everywhere in sight in the town, and they were being brought in by every kind of conveyance, from every direction, seemingly. This was early in the season and must have been only the beginning of the season of selling pelts. Intelligent hunters estimate that 20,000 deer skins is not an over-estimate of the number delivered there up to the middle of Deeember. Two brothers named Martin have the name of making the largest delivery of any one firm of hunters. I have heard their sale stated at 5,000 pelts, and from that down to 4,000 pounds, which at four pounds each (about the average weight) would be 1,000 skins. The 4,000 pounds were sold at forty cents per pound, making \$1,600, as the result of a season's hunt, I suppose. The men from four homesteads in this vicinity have killed about 400 deer. The brothers Rube and Joe Claypool had nincty-nine killed on the 2d of this month. They had been away from home twenty-four days."

New Brunswick Notes.—McDonald's Corner, N. B., March 29.—The first flock of Canada geese seen in this section, arrived at Jemseg Creek, the outlet of Grand Lake, on the 12th of March, and have remained there ever since. Another flock settled in the Washademoak Creek on the 25th inst., and is still in that vicinity. Ducks of some sort (sheldrakes, I think) have frequented the latter body of water during the entire winter whenever it was open. They must have gone to the Bay of Fundy during the intervals in which the creek was frozen over. The ice in the rivers, except in a few places where the tide wears it out, is so solid that teams are driven over it everywhere, and it will probably be some time before migratory birds arrive in any great numbers. If spring shooting were stopped here there would not be ten geese killed in the lower counties of the province in a year, for they seldom stop on their southward journey, and if they do they keep out of range of anything but a rifle. A good many whisters are killed in the spring before the ice melts in the lakes, when they are compelled to feed close to the banks of the creeks. Some enjoy this sport more than any other, and truly it is very exciting and requires considerable skill. Some time when I have more leisure I tell you "how we do it."—L. I. F.

Account Not Square to Date.—A New Bedford, Mass., correspondent sends this note of a little occurrence in the Third District Court of that city: James Fish pleaded guilty to having in possession and selling ten woodcock, in violation of the game laws, which prohibits the killing, having in possession, offering for sale, buying, or selling such birds, whether taken in this commonwealth or not, between Jan. Ist and August 1st, under a penalty of \$20 for each offence. Mr. Fish asked the court to be as lenient as possible, but was told that no discretionary power was allowed a magistrate in the premises, and prisoner was fined \$20 and costs. It is understood that the complaint is made in the interests of the Sportsmen's Club of this city. After paying his fine Mr. Fish went out, remarking, "That settles for woodcock up to date." But it did not: for this man bad been killing woodcock right along, and had brought them in six or eight times. These birds must have been started and shot from their nests. No doubt but there are other parties doing the same thing, and we are making efforts to eatch them. Had we a Sportsmen's Club here it would be quite an easy matter, but there is none, and few care to take the brunt of the matter. Our feeding grounds for woodcock are unsurpassed, and although this thing has been going on for years there is always fair, or even good woodcock shooting hereabouts. If we can protect them, I have no doubt that this would be one of the very best localities in the country. So many trout streams and springy grounds can be found in no other locality that I have ever seen. If there are other localities that can surpass this in woodcock, I doubt if there is one where a meaner act can be shown, or meaner men can be found that these who shoot woodcock furing their breeding season. Will some of our former Springfield friends score us one for this?—Game Protectiox.

South Carolina Notes.—Graniteville, March 25.—Our shooting is about over for the season; still one may have fine sport for two weeks yet if a hot sun is no objection; as for myself I would rather, as a rule, forego the pleasure for the few remaining weeks, than to tramp with the mercury at eighty degrees. The season for 1893 has been remarkable for the scarcity of quail. The very early season bade fair for plenty of birds, but later on the dogs could find comparatively few, not enough in this immediate vicinity to make a day's sport. The dry weather may have had something to do with this. In some parts of the country sportsmen report this same searcity, while others say they have had all the shooting they desire. But I have noticed that in those places where game has been plenty rain has prevailed to a greater extent than in this part of the country. North Carolina has furnished some fine sport as usual. At Rock Hill (near the North Carolina line), I met Mr. McMurdo. He boarded the train at this point, or route for Charlotte, and later for his Virginia home. Mr. McM. had three setters with him; they are of the Dash H. stock and were in fine form, and had given a good account of themselves in the field. Mr. McMurdo has a pin-fire gun, by E. M. Rilley, he bought years ago second-hand in the old country. He says this gun suits him exactly. He likes the old under grip and has no objection to the "pin-fire" It is a terrific hitter.— Dick Swiveller.

DICK SWIVELLER.

ACCIDENT FROM DAMP SHELLS.—"Mr. Frederick Whaples of Newington met with a serious accident on Wednesday while shooting. He was using a breech-loading gun. He had snapped a cartridge, and not exploding, he removed it with his right hand, when the cartridge exploded, tearing off the thumb and forefinger of the right hand and the thumb and three fingers of the left hand. Nearly the entire charge went through the left hand. He was attended by Dr. Comings of New Britain." I clipped the above from the Hartford Daily Courant of the 24th inst. I am myssif under the care of Dr. Comings at the present time, and he assures me that the accident happened as above reported, but that the injury will not prove so severe as at first feared. Mr. Whaples tells the doctor that the cartridge "hung fire," and that the accident occurred in consequence of the cartridge having been kept in a damp place, so that it had gathered moisture. This is the second time that I have sent you the record of injuries resulting from this cause, and I think all sportsmen should be on their guard against the use of damp shells.—

J. W. T. (New Britain, Conn.)

"Sport and Game in Newfoundland,"—Your correspondent "Terta Nova," writing on the above in your issue of the 6th ult, uses the term "barachol" which he spells as often pronounced barrachoix, or I might say has anglicised. "Tis strange what misnomers are often given by English speaking people when translating another language. In New Brunswick there is a place on the Bay Chaleurs near Bathurst, known to the French population as Petit Rocher or Little Rock, which is strangely converted into Little Russia. When I first came to Canada I was at a loss to understand the meaning or derivation of the term "barachoi." I knew it must be some provincialism or patois, as there is no such word in the French language. I have not met with any definition of it in any Canadian work. But after some time I arrived at what I consider to be the real meaning and origin of the term. I found that in every case it was applied to the lagoon which exists at the mouth of all rivers having an outer sand bar or barre-à-èchoir—a bar to stand on. Hence I believe the origin of "barachoi."—Philip Viber. (Perce.) "SPORT AND GAME IN NEWFOUNDLAND,"

Ducks and Snipe in Illinois.—Meredosia, Morgan Co., Ill., March 29.—Duck shooting has been better here this year than it has ever been known. Mallards are still.here by the thousands and feed upon the corn which, owing to the now flooded condition of the bottom lands of the Illinois River, has not been gathered up to date. It is fair to assume that good shooting on duck will be had up to April 12, or whenever warm weather sets in. It has been rather cold the latter end of the month and vegetation is fully as backward as during any other ordinary season, although February has been unusually mild. The fields look still as brown as in January. Snipe shooting for this reason is very poor and only a few wild birds, old hardy males, have thus far made their appearance. I shot cloven yesterday and saw but twenty all told. I am advised also that but few have thus far been shot in the Mississippi bottoms, which are but forty miles west from here. The snipe hunter wants to come here from the 5th to the 20th of April, if he wants to have good success.—C. L.

THEY "GET TIRED,"—That is what the Germantown Tele-graph says is the matter with some of the game protective societies. Right. Pluck, spunk and perseverance in well-doing are the needful elements of success in game protection.

ALABAMA.—Burksville, Ala., March 27.—Our quail shooting season, which closed March 15, will be long remembered by sportsmen in this section as the best we have had for many years, thanks to our protective game law, which is beginning to shed its benign influence. Snipe were abundant here from February 10 to a few days ago; they are leaving us in sadness now, but the plover brings moderate consolation; and when he hies away we will live in hopes of that most exciting of all field sports—wheat-field dove shooting.—A. E. C.

THE CAW CAW SHOOTING CLUB of Milwaukee has leased and purchased both shores of the east end of Puckaway Lake, near Marquette; also about two miles of both shores of the Fox River where it leaves Puckaway Lake; also about two miles of Grand River and marshes near what is known as the Hickory Point. The purchases and leases secure to this club the shooting on about 5,000 acres of land and overflowed marsh.

Texas.—San Antonio - Within fifteen miles as fine Texas.—San Antonio.—Within fifteen miles as fine quali-shooting can be had as can be found on this continent. They lie well to good dogs, and a good hunter can fill his game pocket in a few hours. I have seen them in the streets, of this town. Two years ago Mr. Patterson turned 500 quail loose not a hundred yards from this courthouse.—ALMO.

Woodcock in Massachusetts.—Ashfield, Mass., April 8.—The woodcock have arrived in good force. The first were observed the 20th of March, since which time their courtship has progressed finely within easy view of my buildings.—Ruffed Grouse.

Wisconsin Prominitory Law.—A bill has passed the Wisconsin Senate forbidding the killing, taking or selling of woodcock, quail, partridge, grouse and prairie chicken, for a period of two years.

Nova Scotia pays bounties of \$3 each on an average of 6871 bears per year.

Sea and Biver Hishing.

Like every other ancient faith, the angler's firm belief that fish re-Like every other ancient faith, the angler's firm belief that fish refuse all food with rain impending, has now been scattered to the
wind and clouds. The opinion of many ages was that having by instinct surer knowledge, than all mankind by science get, of the things
that shall occur to-morrow, these finny sages fear to spoil their relish
for the coming treat of worms and slugs and grubs, more buscious
than the fattest "native" to unvitiated tasto. All these will
fall into their hands to-morrow; let them fast to keep the feast.

It is now denied by men of science—scornful of all reasoning boyond their own—that a trout surpasses them so immensely in the
science of meteorology, of which they are bound to confess that
they know nothing. And feeling some reasonable doubt of that denial,
they add the insilious remark (engendered by their own "inner con-

they add the insilious remark (engendered by their own "inner consciousness") that even if the fish knew what was coming, they would never keep their mouths shut by reason of their knowledge.—R. D. Blackkone, in Christowell.

FISH IN SEASON IN APRIL.

Brook trout, Salvelinus fontinalis; salmon, Salmo salar; lake trout, Christivomer namayeush. This list may be in conflict with the laws in some of the States.

EASY READING LESSONS-VII.

FOR THE LITTLE READERS OF THE FOREST AND STREAM,

WHAT is that we see down by the Stream? Is it a Man? YY Yes, it is a Man. What is the Man doing? He has a Fishing Rod in his Hand and he is looking up into the Tree. What does the Man see in the Tree? He sees a Leader, two Flies and about twenty-five feet of Line. How came the Leader and the Flies and the Line in the Tree? The Man saw a Large Trout rise at his Fly and he gave a Fearful Jerk and thought he had the Trout, but he has the Tree. Is the Man pleased with what he has got? Oh, yes! he is much pleased, but we will not go near him.

AMONG THE BLACK FLIES.

AMONG THE BLACK FLIES.

OME people do not believe in black flies; they say that it's all a bugbear, meant to scare the green ones. To some such I have shown my scrap-book, in which I have pasted a few samples labeled "The Terror of the Woods," and they laugh at the little wretches and say, "Pshaw! you don't mean to tell me those little bits of insignificant things can bother a man? I don't believe it." I simply say to such, "just give them a fair trial once, and go into the woods without a tar-oil bottle; my impression is that you will acknowledge that they are a power—for evil.

I have met them in all sorts of places, and in all sorts of weather, but on a close, sultry day, when there is no breeze stirring, I think they can get in about as much agony to the square inch as anything that flies—barring punkies.

Some years ago, a party of us were going down Raquette River, bound for Tupper's Lake. It was a lovely day, and we seemed to have all the surroundings that were necessary to make us feel joyous and happy; the scenery was something beyond my powers of description; the beautiful river rippling along, the overhanging trees that formed a rich canopy overhead, the beautiful views that were constantly opening up to our eyes, the solemn stillness—a most perfect picture of solitude, but not of loneliness. Added to all this, the trout, for which we were trolling, seemed to enter into the spirit of the party, and did their best to cheer us by taking our bait, and giving up their lives to satisfy our wants.

taking our bait, and giving up their lives to satisfy our wants.

And well did we enjoy the treat. We ran on down the river until we reached what is known as "The Riffles," and the fish were doing so well that we turned back several times and made the most of the game. A large rock in the middle of the river had stopped and held an immense sawlog in its progress down stream, and just at this place we picked up trout every time we passed. One of our party determined to set up in business on that rock, he took his bait rod and some bait and was landed there, and full of great expectations he set to work to capture the big fish that were supposed to be lying in wait for his tempting lure. We all went on down the river, leaving him alone, full of hope, big with anticipation. On our return, we were surprised to see him engaged in the most violent exercise. He was dancing and throwing his hands into the air, and thrushing around like a maniae. We could not account for it—his head was sound; his flask was in one of the hoats, so it was

not caused by his potations, and we finally concluded that he must have captured the "boos trout," and his success had touched his head slightly. As we got nearer to him, he shouted, "Come and take me off, or I'll jump overboard;" and we pulled up to the rock and found him surrounded by a swarm of black files that defied all his efforts to drive them off; his hands, neck and face were streaming with blood, and he was completely demoralized—used up.

We took nim, all bloody as he was, into our boat, bathed his wounds and poured on oil and rubbed it in afterward, and played the Good Samaritan to him; and he finally recovered, but never after asked to be left alone on a rock. (By way of a parenthesis, let me put in here: If you ever get caught by the black files without your tar-oil bottle, just dip your hands into water and keep all exposed parts of the skin constantly wet, and they cannot touch you. But the standard remedy is a mixture of three parts of sweet oil and one part of oil of tar; the addition of a small quantity of oil of pennyroyal is, I think, an improvement. Use this freely on all exposed parts of the person, externally, of course, and they will let you severely alone.

By the way, our party had a good laugh at an exquusite from Philadelphia who stopped at our camp on his way through. His siyle was very nobby—"got up regardless, six the boys say—an elegant tight-fitting suit of clothes, such as "sporting men" wear for a promenade on Avenue V. stylish Derby hat, with very small brim; shoes with hob nails as big as your finger, and a liberal allowance of lugzage, "you know." White making his call the black flies began to come around for breakfast, and soon became troublesome. "What do you call those things? I never saw any before; they are very annoying," said he. "Oh, those are only black flies; they don't bother us," we said. Finally, they made it so hot for him that he asked if nothing could be done to keep them away. We told him of the tra oil, and offered some. "Oh, I can't use that beastly stuf

woods.
On Big Tupper we saw a thing done that at the time made On Big Tupper we saw a thing done that at the time made us laugh, and has often raised a smile since. At Bog River Falls, at the head of the lake, we found a lone fisherman busy easting the fly. Close beside him a smudge was burning, giving out a great deal of smoke. A cast—a rise—a strike—and he began to reel in. All seemed to go smoothly until he got his fish close to the rock, then, instead of holding on to his rod, he grasped the line and pitched his rod upon the rock. Well, he saved his trout, but he spoiled his real for in riching it down it landed giving in the swedter. ing on to his rod, he graspea me me and provided his rod, for in pitching it down, it landed right in his smudge and stuck there. We, being some distance out on the lake, saw the whole movement and the danger to his rod, and called out to him, but he quietly attended to his fish and then turned around for his rod, to find it almost burned through and his line destroyed.

Most of us lay down rules for ourselves. My rule in all cases (barring accidents), is to keep my rod in my hand until I have the fish either in the landing net, or in my hand. Then it may be laid down if desirable, but not in a smudge.

J. R., Jr.

South Carolina Notes.—Graniteville, March 25.—Bass fishing is in order here now. The old fisherman of forty years is getting his tackle ready for the "trout" (large mouth black bass) and by main strength and a good deal of luck will get some of the small ones, say of four, five and six pounds. The nature of the bottoms of the ponds here does not admit of fly-fishing; the numerous snags, roots and sunken tree tops offers a safe refuge to a fish once struck. In fact the fish has so much the best of it. I have thought it useless to provide myself with a bass outfit. Some large bass have been taken at the Langley pond from time to time; the largest I have seen was sixteen pounds and a fraction. We had an idea once of freezing in a block of ice one of these large specimens and presenting it to Prof. Baird, time; the largest I have seen was sixteen pounds and a fraction. We had an idea once of freezing in a block of ice one of these large specimens and presenting it to Prof. Baird, but found the cost considerably more than anticipated. My friends Mr. W. E. Wright and his wife have recently returned from Florida, en route for New York, are stopping with us a few days. Mr. W. gives glowing accounts of the bass-fishing in Prairie Lake, three miles south of Gaines-ville, Pla. In one morning's fishing, using live bait, he took nearly fifty pounds of fish from five to eight pounds weight. His anticipations of a fish feast in the shape of boiled or broiled bass were not realized; the noble fellows were consigned to the frying pan in small clunks, thus reducing them to the ordinary level of a pan fish in taste and almost in looks. Mr. Wright relates a remarkable story of tame fish that can be seen any day at Greecove Spring. A person may go near the edge of the water, and by stamping a few times on the boards of the dock, they will swarm in hundreds, the variety being catfish, and some of enormous size and ugliness. Visitors took pleasure in feeding them and see them crowd and fight for the food thrown to them.—Drok Swiyeller.

TROUT OPENING ATEFULTON MARKET.

O'N the morning of the 1st of April the new Fulton Market was opened to the public for the first fime. Only the Beckman street side, where the fish dealers congregate, was occupied, and even here the place was not entirely finished. The elegant fittings of Blackford were a surprise. mission. The clegant medigs of blackford were a surprise, and the large mirrors, aquaria, the glass refrigerator and the fancy woods carved and paneled were greatly admired. It is said that \$10,000 would not cover the cost of his new fish

and the large mirrors, aquaria, the glass refrigerator and the fancy woods carved and paneled were greatly admired. It is said that \$10,000 would not cover the cost of his new fish palace.

It was the opening day of the trout season which brought the visitors, and Mr. Blackford devoted his slabs entirely to this fish, leaving his other business ontside at his temporary quarters. The display was large, and beautiful festoons of flowers hung above the piscine gems and reflected back their beauty. A net and creel filled with flowers hung in its center, and a "red snapper." the Latipanus blackfordi, done in carnations, was on his office table, a gift from a lady. Brook trout in rows, divided by green mosses, were to be seen, brought from the following places:

A. Rackow, Foster's Meadows, L. I.; J. Annin, Jr., Caledonia, N. Y.; E. B. Sutton, Babylon, L. I.; S. S. Club; J. II. Howie, Clear Water, R. I.; R. Burgess & Son, Bennington, Vt.; C. A. Starkey & Son, Troy, N. Y.; W. L. Gilliert, Plymouth, Mass.; W. H. Robinson, East Patchogue, L. I.; J. Raynor, Freeport, L. I.; J. N. Bennett, Stamford, N. Y.; N. C. Miller, Brookhaven, L. I.; C. McNab, Riviere du Loup, Ont.; E. H. Dickerman, New Hampton, N. H.; B. B. Redding, Carson, Nev.; G. F. Parlow, New Bedford, Mass.; Bisby Club, N. Y.

Frem the New York State hatchery Mr. Seth Green sent the following: Brook trout, rainhow trout, hybrid between brook and lake trout, land-locked salmon, lake trout, and the two species of black bass, the latter alive in an aquarium, among which was a small mouth of three pounds weight. Mr. W. B. Redding, of the California Fish Commission, sent rainbow trout, sent by Mr. Livingston Stone, weighed ten pounds; if was from near the United States Hatchery on the McCloud River.

the named tout, seek of JRI. In magnitude to the latter that there you the McCloud River.

The South Side Sportsman's Club of Long Island sent 200 lbs, of live trout, and 1,000 lbs, of dead ones, and a live rainbow trout of five pounds.

Mr. J. Reynal, of White Plains, N. Y., sent a live carp of twenty-two months old, which weighed four pounds, and Mr. G. Ricardo, of Hackensack, N. J., showed a fine tank of live smelts. Gen. R. U. Sherman, N. Y. Fish Commissioner, sent fine land-locked salmon from Bisby Lake.

Among the distinguished visitors we noted Gen. Stewart L. Woodford, Col. McDonald, the Virginia Fish Commissioner, Sent fine land-locked salmon from Bisby Lake.

In Mondford, Col. McDonald, the Virginia Fish Commissioner, Gen. Stewart L. Woodford, Col. McDonald, the Virginia Fish Commission; the Rev. Henry Ward Beecher, Josh Billings, Rube Wood, the champion fly-caster; ex-Governor Myron H. Clark, Commissioner of Public Works Thompson, Gen. Newton, Judges Moore and McCue of Brooklyn; Henry Havemeyer, ex-Alderman Jordan L. Mott, Allen Campbell, Comptroller of the city, Rev. Emory J. Haines, Jukge Dinkel, John N. Babcock, of Syracuse; John E. Develin, Geo. Shephard Page, Charles Hallock and wife, Thomas Clapham, the yacht builder, and many others.

Fishculture was represented by a few brook trout fry from the State Works at Caledonia, and Mr. James Annin, Jr., of that place, also showed eggs and fry Mr. Fred Mather made an exhibit of eggs and fry of Penobscot salmon from the batchery in his charge at Roslyn, L. I., which were sent by Mr. C. G. Atkins, of Bucksport, Me., by order of Prof. Baird.

A feature of the exhibition was a working model of the

Baird.

A feature of the exhibition was a working model of the McDonald fishway which remained for the inspection of the fishculturists at the meeting on Monday and Tuesday following. Taking it as a whole, it was the most beautiful trout display ever made. Middleton and Carman also made a fine display of trout and live goldfish in globes, and the new market was gay with decorations in honor of the "angler's pride."

OUR TROUT SEASON.

"HE season at the heads of both branches of the Delaware, THE season at the heads of both branches of the Delaware, which are but eight miles apart, opens with the thermometer at 22 deg., a Western gale blowing great guns, a snowstorm raging, and every lake and pond in our vicinity for twenty square miles covered with ice. Trout might be got, but not by your humble servant, for he doesn't fish through the ice or walk along snowbanks to find them in the rapids. Thanks to the enterprise of John N. Bennett, John Griffin and the kind attention of Seth Green, all of our streams are now well stocked, and we have a splendid showing of California mountain trout at this place, in our ponds and streams. d streams.
You know I write fiction as a trade, but I think of retir-

and streams.

You know I write fiction as a trade, but I think of retiring soon. I want to resign in favor of "Chasseur" and "Byrne." They can beat me to death. My imagination is "nowhere" when they come in on "whaling yarns" and "bear stories." Go it, boys! *Revenums au moutan.

The sage advice of J. R., Jr., in regard to overhauling fishing-tackle is so gravely given that I have been trying to it is a state of the s

The fishing here may be decent by May 1-I hope so-but

The fishing here may be decent by May 1—I hope so—but the butt end of winter is on us now.

When I can honestly dip a line and make a catch worth reporting, the Forest and Stream and my many friends shall hear the story.

Our hatching-house and ponds, run with great success by glorious John Bennett, were represented in Blackford's opening by two dozen one-pound trout hatched only three years ago in Bennett's cellar, an account of which I gave in the Forest and Stream at the time. He has now a large number of small fry sporting in his main hatching trough and the pond adjacent.

Eagle's Neer, Stamford, N. Y., April I.

Eagle's Nest, Stamford, N. Y., April 1.

number of small fry sporting in his main hatching trough and the pond adjacent.

Eagle's Nest, Stamford, N. Y., April I.

WHAT FISH LAWS ARE FOR.—A correspondent of the Spracuse Journal makes these sound arguments against the poachers and the editors who take their part: "You were exactly on the target in your reply of the 24th inst., to the comments of the Baldwinsville Gazette, upon the protection of lakes and streams. The Gazette scenus to think the game laws were enacted for the special pleasure of a few city sportsmen. Let me say if the worthy editor of that paper will step out of his sanctum and get the candid opinion of the respectable citizens of Baldwinsville, he will find what is here asserted is true, that in no section of this county is there a more decided feeling that the game laws are wise in their provisions and should be enforced, than in his own village. The principal object and intent of the 'Fisherman's Club' of this city, was and is to prevent, so far as it may be able, the wholesale destruction of all kinds of fish in all waters of this county, and in none more than Sencea river, flowing as it does within sight of the office of the Gazette, and for no persons more than a class of citizens found in all cities and villages having neither time at command nor money to spare to go to distant waters, as most of the members of the 'Fisherm's Club' of go annually. Neither this 'club' nor its individual members want or ask or expect exclusive privileges; they only ask that neither they nor the public shall be robbed by a class who, as a rule, care nothing for the rights or pleasure of others. If the owners of land through which run suitable water for trout will 'board' their streams and enforce the game laws enacted in part for their benefit, they will not only have trout in abundance, but will be satisfied that these very laws, so derided by the Gazette exactly fill the bill. In short, if you want trout, take care of them as the law provides, and then neither city sportsmen nor others will take th

PLAY."

TENNESSEE FISH NOTES.—Nashville, March 27.—Accounts from many portions of the State are most favorable to an unprecedentedly rich angling season. Fish are not only more abundant than for years past, but the late floods drove them far up the smaller tributaries, and then they are caught above dams. Mr. Will Ervin creeled seventeen fine bass last week out of Sallie's Hole, a noted fishing place of Mill Creek. A party of gentlemen went to South Harpeth, but reported the waters too clear, but fish in vast numbers. Col. J. B. McEwen writes from Franklin to Col. Geo. F. Akers that the season will soon open most auspiciously. Close to town good creels are daily made by the boys, and a pot-hunter with hook and line gathered in five bass weighing in the aggregate twenty-five pounds one day last week and sold them in market. Captain Frank Green reports his carp as doing remarkably well; he says his pond is swarming with young fry. The Cumberland Angling Club propose importing a large lot of salmon trout to place in their pond near the city. It is shready pretty well stocked with black bass and white perch. Our fish market has been rather poorly supplied lately, but few foreign varieties being brought in, and now that no sinning is allowed in this State, every one must be the catcher of his own fish.—J. D. H.

own fish.—J. D. H.

Permussion for a Day's Fishing.—The editor of the London Fishing Gazette tells the following story: Whilst on our way the other day with an angling friend to the river we intended to fish, he added pleasure to the enjoyable walk in the fresh sunlight morning air, by relating some of his angling experiences. Amongst others, we remember the following, which was new to us, and will be so, we think, to most of our readers. Parson F—had got permission for a day's frout-fishing, and one fine afternoon made his appearance on the water. The keeper came by after a time and duly examined his permit, and wished piscator a good afternoon. "Good evening," said the parson, and went on fishing until dark. Next morning found him early on the water hard at work, and when the keeper came along and asked to see his permit he produced the same he had shown him before "But," said the keeper, "this only gave you permission for one day's fishing, you are having a second day." "Not so, friend," quoth the parson, "refer to Genesis chapter i,v,5, and thou wilt find that the evening and the morning were the first day!"

A Big Sterrgeon.—Niagara Falls, Ont., March 31.—A Hamilton correspondent says that Mr. J. W. Kerr, fishery inspector, has just returned from Niagara, and reports a very large number of sturgeon taken out of Lake Ontario at that point. One particularly large fish was caught last week by Mr. Robt. Taylor, a fisherman, on a night line. It weighed 150 pounds. The sturgeon was 8 feet long and was caught with a large fish hook. Mr. Taylor weighs pounds

himself, and succeeded in landing the fish alone. The length of the skiff in which it was brought into the town of Niagara is 16 feet. When dressed it weighed 71 pounds; the head weighed 31, the fat weighed 29, the skin, fins and entrails 19. The fish was sold in Buffalo, N. Y., at 54c, per pound, realizing \$3.90. Suppose that sturgeon had hauled the man overboard, wouldn't he have made it lively for him?

Salmo Confinis.—Our correspondent "Stanstead," of Buckingham, Quebec, writes: "The trout that E. S. M. mentions, in your issue of the 16th, is a Salmo confinis, and the gray trout are same as so-called 'Silver Lunge' of Magog Lake, and are Cristivaner managensh." The S. confinis, of DeKny, has never been found by any other naturalist, and is believed to be a name given by him to one deformed specimen of the nanagensh. There are but two lake trouts now known to naturalists, the sisconet and the nanagensh. The former inhabits Lake Superior and some of the lower lakes, and the latter is the common lake trout which goes by many local names, and differs greatly in color. The Smithsonian Institution would much like a specimen of S. confinis, if it can be found.

Salmon in New Hampfon.—Plymouth, March 23.—There should be a good chance for salmon fishing on this the Pemigewasset and Merimack Rivers this spring. I do not know whether they will take a fly as far up as this or not, but I am afraid that by the time they get up here water will be so clear that they will not rise. I have tried them, but have not been able to raise one, although I have whipped a pool for an hour in which I could see them; but then I have done the same in the Restigouche for a day at a time, without a single break. I think the best ground will be between Concord and Manchester, and at Goffs' Falls. If you wish, I will let you know when the fish come at Lawrence.—Hodye.

ONE OF THAD NORMS's HAUSTS.—Some years ago the head of tide water of the Schuykill at Pairmount was a good ground for all our varieties of fresh-water fish, and Uncle Thad Norris could be frequently seen there angling for perch and such. It was here he used to catch no occasional shad and pearl minnow. Now all the fish caught there taste of the villainous coal tar and other abominations, with which the water is impregnated from the gas works and coal oil refineries situated on the banks of the river at several points. Roach and perch are by no means so plentiful there as in the past.—HOMO. past.-Homo.

West Vinginia.—A correspondent says: I am afraid the dry season last year has had a bad effect on the fishing prospect for this. I hear from a district in West Virginia, where I have often fished and thought of fishing again this year, that many trout died last summer from the extreme heat and the low water,—C, C.

Hisheulture.

THE AMERICAN FISHCULTURAL ASSOCIATION.

FIRST DAY OF ELEVENTH ANNUAL MEETING.

THE AMERICAN FISHCULTURAL ASSOCIATION.
FIRST DAY OF ELEVENTH ANNUAL MEETING.

INTE hour appointed for the meeting in the rooms of the Directors of the Fulton Market Fishmongers' Association was 11 A. M. on April 5, but the President not appearing the members waited an hour, and then by request the Vice-President, Mr. George Shepard Page, called the meeting to order. Mr. Page made some remarks upon the regular attendance of some of the old workers whom he was pleased to see present. They were men who not only kept themselves informed upon all progress in fishculture from year to year, but made it a point to know of its progress from week to week. He was glad to see that there were evidences of progress on every hand, and on inspecting the fishes in the market he had noticed that shad are begining to be plently from all the rivers, a result which he attributed largely to the efforts of this association, as it was largely through its efforts that an interest in fishculture had been awakened and a fishery commission for the United States created. The trout exhibition which the members had just seen illustrated the extent of fishculture. Trout were being largely cultivated in all favorable localifics, and might yet be supplied at a figure which would place them within the reach of people who cannot afford to buy them now. Within the memory of members present the first black bass was trunsported over the Ballinore and Ohio Railroad from Wheeling Creek to Cumberland in the tank of a locomotive tender and turned into the Potomac. They have gradually been introduced East, until within the past ten years they are common in Maine and are protoned. They have gradually been introduced East, until within the past ten years they are common in Maine and are round in plentiful numbers on the fish stalls of the intorior towns. He remembered that in 1869 thirty-one black bass were planted in a lake in Maine, and their processy is to be seen to-day in a hundred lakes and streams of the State. They are replacing the helection of th

markets in some seasons as now as eigent to point.

The Secretary was then called on for a report of the last meeting. He read the amendment allowing of the election of honorary members, and the action was approved. Mr. Mather then offered the following:

Resolved, That in future the following order of business be adopted in the association:

IST DAY.

Opening remarks by the Fresident.
Report of Secretary on last meeting.
Proposals of new members.
Reading of papers and discussions.
Election of new members by acclamation.

Recess.
Election of Officers for ensuing year by ballot.
Rending of papers and discussions.

Proposals of new members.
Reading of papers and discussions.
Reading of papers and discussions.
Election of new members by acclamation.

Election of new memoers by accummand.

Recess.

Report of Treasurer.

Reading of papers.

Adjournment.

Mr. Evarers proposed to amend the section relating to the election of officers by making those which are largely honorary, as the President and Vice-President, vacant after one year and those holding them incligible for the same office until after an interval of one year. This amendment was accepted and the resolution was carried.

The following persons were then proposed. Prof. Alfred Maver, Stevens' Institute of Technology, Hoboken, Lieut. H.

S. Mansfield, U. S. Navy, Col. M. McDonald, U. S. Fish Commission.

Upon the opening of the afternoon session, Mr. Müller nominated Mr. George Shepard Page for President, and upon a ballot he was cleeted. Mr. Blackford said that Mr. Page had done much for fishenlune in a quiet way. It was his suggestion that the United States appoint a Commissioner of Fisheries, and as a result we have the splendid corps under direction of Professor Paird. Mr. Mather then named James Benkard for Vice-President, and he was elected. Upon this Mr. Page remarked that it had often been asserted in the press that trout can not be raised at a profit for market, but that the South Side Sportsman's Club, of which Mr. Benkard is President, will in addition to leaving all that the members wish to catch, market 4,000 pounds, which will sell for Si,000.

For Treasurer Mr. Blackford named Mr. Evarts, and Mr. Evarts moved that it be made unanimons. Mr. Barnet Phillips was then elected Corresponding Secretary, and Mr. James Annin, Jr., Recording Secretary. The following gentlemen were elected as the Executive Committee: Messrs. Fred. Mather, G. Brown Goode, Seth Wecks, Benj. W. West, J. B. Ferguson, C. B. Evarts, Dr. W. M. Hudson.

Messrs. W. L. Gilbert, of Plymouth, Mass.; Brastus Corning, Albany, N. Y.; H. P. Schuyler, Troy, N. Y.; John I. Agnew, Charles Banks, and Benjanin Wood, of New York, and C. W. Smiley, of the U. S. Fish Commission, were elected members.

Mr. Annin read a paper on "Raimbow Trout," which was Upon the opening of the afternoon session, Mr. Miller nominated Mr. George Shepard Page for President

Mr. Amin read a paper on "Rainbow Trout," which was followed by a long discussion, and the meeting adjourned.

LAVERACK PEDIGREES.

WE give below the decision of the Kennel Club committee regarding Mr. Llewellin's protest of the dog Comet, with his reply to the same.

COPY OF LETTER FROM KENNEL CLUB.

COPY OF LETTER FROM KENNEL CLUB.

SIR—I beg to enclose £1, the amount of your deposit money, re Comet. I also forward you a copy of the Kennel Club committee's resolution on the subject.

"The committee of the Kennel Club, having very carefully considered the subject, and after a thorough perusal of Mr. Laverack's own letters on the matter, and corroborative evidence produced by Mr. Llewellin, decline to aftirm the correctness of Mr. Laverack's pedigrees or his pedigree tables. Nevertheless, whereas certain dogs have been generally known, both in Great Britain and America as pure Laveracks, whereby the term has nequired a certain recognized and conventional menuing, and whereas Prido of the Border, and all the other ancestors of Comet have been labitually so described, therefore the committee is of opinion that Comet was entitled to compete in a class limited to pure Laveracks, and that Mr. Bowers was acting within his strict rights in showing the dog in such a class."—Yours faithfully.

R. Ll. Purcell Llewellin, Esq.

R. Ll. Purcell Llewellin, Esq.

TO THE COMMITTEE OF THE KENNEL CLUB.

GENTLEBEN-I am in receipt of your letter containing the statement of your decision re my protest.

Lalso beg to acknowledge your check for £1, in repayment of my deposit, which I paid in on first entering my protest, in accordance with your rule, and which deposit, owing to the character of your decision, you have returned to me.

The definition of "pure Laverack," now made by the committee, has been made since I lodged my protest, and was made on March 7, i. c., three months after the date of the Alexandra Palace show, at which show they instituted a class for "pure Laveracks," without at that date in any way defining the term.

Alexandra Palace show, at which show they instituted a class for "pure Laveracks," without at that date in any way defining the term.

The fact that they gave no definition of "pure Laveracks," proves that at that date they accepted the commonly understood definition as universally recognised by setter breeders, and were therefore bound to hear the case under it, and no other. It is plain that if a new definition had not been made subsequent to the date of my protest, and during the progress of the inquiry, it would have been impossible to retain Pride of the Border as "pure Laverack." What was commonly understood by the term "pure Laverack" is well known, and has been stated in an editorial note in The Field of March as follows:

"The question really is (irrespective of Mr. Laverack's veracity), not whether they are pure setters, but whether they

nas been stated in an Cuttoria note in The Feat of March 4, as follows:

"The question really is (irrespective of Mr. Laverack's veracity), not whether they are pure setters, but whether they are bred from one brace of setters (Ponto and old Moll)."

It does not matter in the least to me whether the new Kennel Club definition, or the old and commonly understood one, of the term "pure Laverack" is accepted; but, inasmuch as I brought forward the matter of the Laverack pedigrees for the purpose of the general improvement of the races of sporting does, so soon as I became possessed of a complete line of evidence, and, further, as I have been attacked for allowing my dogs to trace to pedigrees which you have adopted, and which you now decline to affirm the correctness of—although in allowing them to appear in your Kennel Club Book under the authority of the remark, "by rigidly excluding or pointing out all doubtful pedigrees" (see Preface, vol. i., Kennel Club Stud Book, you have actually affirmed the correctness of the pedigrees—will you, therefore, in the next volume of the Stud Book, enhody the statement you have now made to me, and through that medium convey to the public the knowledge which I have given you of the fact that Mr. Laverack knew of a difference in purity of blood between his Dush and Mols and all others he, in the spring of 1832, had in his kennel; and further state that his kennel contained at that time Pride of the Border, Blue Prince, the red ones, Mystery, Ruby, and others of the litter which was stated to be by Jet out of Duches, and quote Mr. Laverack's words, "We cannot come at the genuine pure breed now Moll is gone," and the quotation in which he gives the history of the red ones, and lits explanation of the color?

The Kennel Club, as the publishers of the only Kennel Stud Book, are responsible to the publishers of the public expects that the Kennel Club agree in this opinion I shall consider my the words and the public whe contented.

If the Kennel Club agree in this opinion I shall con

Sess reflecting on pengrees in Introduction in the pengrees concerned.

If the Kennel Club agree in this opinion I shall consider my protest has fully answered its purpose. If, on the contrary, they do not, I, for one, shall in the future decline the responsibility of adopting their errors, which would fall on me by the fact of allowing dogs bred by me to trace to their Stud Books, and am fully prepared for any possible depreciation to my kennel which might arise thereby.

R. Li., Purcell LLEWELLIN.

SOUTH ORMSBY HALL, Lincolshire, March 14.

We give herewith the further correspondence on the subject. Mr. Llewellin writes to the London Field:

Siz—I regret to see that you have allowed some unknown American to introduce personalities into this discussion.

All that is known of Mr. Herzberg is that he is the owner of some setters, which he advertises at the public stud as "pure Laveracks," and which owe their origin to Pride of the Border—Hine the lachrymar!

The charges he brings against Mr. Buckell and myself prove what he himself would be capable of. I resent his reflections on Mr. Buckell, whose disinterested admiration for all good dogs is beyond Mr. Herzberg's comprehension. It is hardly necessary for me to inform your readers that Mr. Buckell is a gentleman, and that his relations to me are not as insinuated by Mr. Herzberg's reference to my breed of setters is made with the object of misleading. The real facts are that my name was bestowed upon them by no others than Mr. Herzberg's own countrymen some years ago, after a conference on the subject, held by the owners of the best setters in his country, and that he knows very well.

Every statement in this person's letter is either made with intent to mislead or is absolutely false. His reference to Mr. Buckell, to myself, to the pretended concealment of the color Carlowitz, all are absolutely false. His reference to Mr. Buckell, to myself, to the well-known Druid. It is a question between Mr. Herzberg and the compiler of the Stud Book, and not for me.

Carlowitz was "publicly exhibited" by me in this country, and won—a fact which is recorded on the same page, which Mr. Herzberg quotes to prove concealment of color, and which fact he has suppressed.

We now count to what he considers his pièce de resistance, and, judging by the pains he is at to lead up to it, and the important air with which he brings it forward, it is plain he trusts to it to completely demolish my position on the case. I refer to his statement relating to Carlowitz's color, and on this formiable fact (as he seems to regards if

old bitch Countess was not by Dash II. out of Moll III. Therefore this fact, so far from telling against me, actually adds to the chain of evidence I had already put in in support of my case.

Perhaps Mr. Herzberg had better first learn the correct pedigrees of the dogs he has in his own kennel, and advertises so largely at the public stud, before he meddles with what is beyond him; and when he has thus gained this elementary knowledge, it would be better for him to write fact than to quibble about the construction of sentences.

Mr. Herzberg, and the rest of those who have written in support of the purity of Pride of the Border, belong, it seems, to an unfortunate class—they are theorists, who have gone so deep into the abstract that they have lost themselves, got out of their depth, and cannot distinguish between theory and practice. Whilst bety think they have succeeded in displaying the superiority of Lavarack setters, they have, indeed, all the while been breeding and displaying animals which ewe what goodness belongs to them to the fact of their cross blood. These gentlemen are unfortunate, too, an attempting to prove purity for Pride by his success at the stud.

They urge, in virtue of the success of Pride and his descendants at the stud, that it is an established fact that pure bred ones are the best sires, and now that they think they have established that the goodness of these dogs is in consequence of their purity, they want to turn round and prove that their purity is in consequence of their goodness, the clearest ease of an argument is the assertion of a certain writer of articles on do si in a contemporary—who puts him well for many the supposed to be derived from them.

An American writes of the "revenees" of the produce of Pride of the Border, and their goodness as proof of their purity. And another writes that Pride never got liver and whites by Pride, some of which, moreover, had topknots on their purity. And another writes that Pride never got liver and whites by Pride, some of which, moreove

Sourn Crassav Hall, Lincolnshire, March 1.

Upon which the editor remarks: "It seems to us that the discussion on the breeding of the Laverack setter is altogether useless. The question really is (irrespective of Mr. Laverack's venicity) not whether they are pure setters, but whether they are all bred from one brace of setters (Ponto and Old Moll); for no one supposes that Mr. Laverack resorted to inpure setters for his crosses. Manifesty, if so bred, they are very much in-bred; but they are no more pure (quodud the English setter) than if Mr. Laverack had used an outcross in every alternate generation. When first they were tried in public no one contended they were good because of this in-breeding, but in spile of it; and until their goodness was publicly proved, their alleged breeding was generally considered to be against them. The question discussed by Mr. Purcell Llewellin is one really of the advantage or disadvantage of close in-breeding, and has no relation, in our opinion, to the value of the Laverack setter, which must stand or fall on its own merits; and would in the estimation of most people be increased, rather than diminished, if proved to be more free from the ill-effects of excessive in-breeding than it would otherwise be, if admitted to be descended from one brace."

Mr. Herzberg has realied to the foregoing letter as follows:

mitted to be descended from one brace."

Mr. Herzberg has replied to the foregoing letter as follows: Mr. Herzberg has replied to the foregoing letter as follows: Mr. Hewellin, with the manner of a grand seigneur who is well known over all the world and a part of Wales, tries to wave me aside by calling me a "person," which is bitterly severe, and informs his readers that "all that is known of Mr. Herzberg is that he is the owner of some setters which he advertises at the public stud as pure Laveracks."

I must confess that it was weak in me to yield so far to the wishes of some friends, as to advertise my dogs for a few months, and I also admit that it was a foolish credulity in me to imagine that Emperor Fred and Aldershot were pure Laverack, for the fountains of pedigree have been so troubled by Mr. Llewellin and his friend Mr. Buckell, that nothing can be considered pure with any certainty that comes near them—I mean near the fountains.

I wish to state right here, that it was Mr. Buckell, not I, who introduced personalties and criticisns of grammar, construction and eyeglasses into the controversy.

I am quite willing that my lotters shall be compared for coursesy and fair treatment with those of Mr. Llewellin and his James, and I can assure the latter that whether the great

MR. JOHN S. McINTOSH'S RED IRISH SETTER "BIZ."

West sends cheap food, weather reports, etc., to England, or dogs and racehorses, she will send the best she has in the shop, for we aim to build up our markets by representing our goods for exactly what they are. I have only to say, in this connection, that my disire to get at the truth is very great.

So far, neither Mr. Liewelliu nor his supporters have satisfied me that they are influenced by the same motives. They seem to have agreed among themselves on a dogma, and are distorting the text to sustain it.

Mr. Liewellin, in his letter, delights to say! "It has been roved," when he should have said in his own case: "It has been asserted." But this is a peculiarity of dogmatists.

Mr. Liewellin, and an advertise the same attached to a breed of dogs as a cheap road to notoriety. "His reference to my (Liewellin's) settors is made with the object of misleading. The real facts are that my name was bestowed on them by no other than Mr. Herzberg's own countrymen some years ago, after conference on the subject, held by the owners of the best setters in his country; and that he knows very well."

I know nothing of the kind, neither does Mr. Liewellin; on the contrary, quite the reverse.

It is not necessary to imitate Mr. Liewellin by calling this statement "false". Here are the facts as to the naming of the dogs, and all about the Yankee sponsors who are supposed by Mr. Liewellin—in all the simplicity of his guileless heart—to have met in national conventions for the purposes. Under dato of March 30th, 1873, Mr. Liewellin, all more clearly identify the breed with Mr. Liewellin settor to Liewellin ill more clearly identify the breed with Mr. Liewellin's matter, but know it is Mr. Buckell's sincere wish this change should be made (and it is well known to all that Mr. Liewellin's kennel, and when used will be found much better han the name by which the breed is now known. I am not simply stating my own opinion and feelings with regard to this matter, but know it is Mr. Buckell's sincere wish this change should be made

Under the same date, Mr. Burgess writes: "I have just received a letter from Mr. G. T. Teasdall Buckell, proposing to change the name of the strain of dogs, emanating from Mr. Idewellin's Kennel, from the Field Trial to Llewellin's Breed."

Of course, Mr. Llewellin knew nothing about his friend Mr. Buckell's efforts to make him famous, for the modesty that ever attaches to the truly great and good, would have led him to protest against a celebrity, achieved by the ingenious process of what we call "log rolling" on this side of the pond.

Mr. Smith and Mr. Burgess at once began advertising their dogs as "llewellian setters"—both gentlemen try to make it pay—and other owners of the same breed acted under the same admirable coaching, and followed suit.

These are the facts; it remains for Mr. Llewellin, if he were ignorant of them, to confess it, and to retract his charge against me, or to stand convicted of false accusation. I will not insist on applying to Mr. Llewellin's assertions the legal principle "false in one false in all," but will continue to treat them with a show of respect that he has not accorded to my inquiries.

Now we on this side of the water, not in the "Llewelling," have only the same means of knowing about the pedigrees of dogs in England, that Englishmen not in the aforesaid ring have, viz. the published records—the Kennel Club Stud Book—a complete file of which I have.

In this record every owner writes out the pedigree of his own dogs. I may also say that I read the English and American sporting papers regularly, and that I have long been in correspondence with gentlemen in England, who are interested in English setters.

Until recently I had every reason to believe that Mr. Llewellin indorsed was accepted as truth in England. His recent severy owners writes out the pedigree of his own dogs. I may also say that I read the English and American English setters.

Until recently I had every reason to believe that Mr. Llewellin indisprotes of the server and the condition of importance to import

as Mr. Llewellin gave it in the Kennel Club Stud Book, Vol. I., No. 1,489. Her record has been undisputed for twelve years, and Mr. Llewellin must give us some greater proof than lis bare word before I, for one, can accept his "I proved, etc." If the grand Countess be an outcross, then outcrossing should be encouraged; but it is not a question of merit, but of veracity, so let Mr. Llewellin give us the proofs on which he changes his long-sustained opinions. But not being a Mr. Buckell nor Mr. James, whose bread and butter may depend on indorsing the ipse dixtit of Mr. Llewellin, I must hold the latter to what he has written in the K. C. Stud Book. I refuse to accept his assections without the additional evidence that would convince a juror sitting in judgment on the case. Mr. Llewellin says the Dash-Molis, Dash-Lills are pure, and adds that the liver and whites are impure. The dam of Carlowitz, Countess, is a Dash H.-Moll HI, bitch. The sire of Carlowitz, Pilkington's Dash, is by Dash H, out of Pilkington's Lill the dam of Mr. Llewellin's Lill. Here for Carlowitz we have the Dash-Molis, Dash-Lills, pure according to Mr. Llewellin's standard, save the recent har sinster in the pedigree of Countess, as a bar that is not yet accepted by that intelligent College of Camine Heraldry, the English Konnel Club, and so I refuse to accept it, even though "an Oxford M. A." says I should.

Mr. Llewellin forgets much of what he has said, though a man with his mental peculiarities should have a good memory, as I may prove hereafter, and much of what he writes as i shall proceed to prove now. Neither I nor my friends would think of using Mr. Llewellin's business letters in this controversy, though they are in no sense private, if he had not reflected on the character of a dead dag, and if Mr. Buckell had not called in question the oath of the poor kennelman Rogers.

That the admirers of Mr. Llewellin's setters may know what they are getting—at big prices—here, and I presume in England, I insert the following letter. I give it

South Ormsby Hall, April 26, 1880.

Mr. A. H. Moore, 1711 Spring Garden street, Philadelphia, Pa., U. S. America:

DEAR Sir!

Library

Deart Siri!

I have your letter of April 12th. I think you misunderstood me altogether. I am not a dog dealer. I do not keep dogs with the object of profit nor is my object that of breeding for sale; as I see most of your Kennel clubs do, which appear to be to me (like our Kennel club here of which I am Nor a member I rejoice to say) simply companies of dog dealers. I am a man of large Estate and wealth and breed and keep a kennel for my own pleasure, and with the ambition of producing better than other people, ambition not money is my object. I do not depend on the few hundreds of pounds per annum that my culls fetch me for income, my annual income is thousands.

annum that my cuits seven me for mounte, my annum mounts is thousands.

I do sell dogs it is true because I breed largely in order to carry out my theories of improvement, consequently my kennel becomes frequently overstocked. What am I to do? I must cither sell them or shoot them. Those I sell have always been culls, invariably reserving those that are better for

mays usen cans, invariably reserving those that are better for myself.

I do not wish to part with any of those bitches you mention as they are amonest those I reserve for myself, but as I before said in reference both to them and Wind'em in reply to your former letter; of course some one may offer such a sum that I may be templed to part with one, but as I have plenty of money it must be such a sum, as would be worth not only my thinking about but adequate to represent the value of such dogs—as they have not their match in the world. Their relatives may be in existence but their relatives do not mean themselves.

Under any circumstances I would not decrease.

themselves.

Under any circumstances I would not dream of parting with more than oxe even if thousands were offered. So now you understand me—those who know me know that when I say a thing I mean it and I tell you this to save you endless trouble and letter writing

Yours truly
R LL PURCELL LLEWELLIN.

"A man of large estate" and his "annual income is thousands." Well, I must confess I thought he was worth—less. There are so few rich men in this country that whenever we come across one we fall right down and worship him. We win our dollars here by a combination of strong arms, brave hearts and clear brains, and I presume Mr. Llewellin got his pile in this way, and I congratulate him; but taking the above letter as a specimen of his takents, I am inclined to think that he did not weary his brains in securing his fortune.

And so "Mr. Herzberg's countrymen" met in convention to give Mr. Llewellin's name to a lot of "culls," Did he tell the Yankees who honght his dogs that they were the refuse of his kennel, and that he was in a dillemma as to whether he should "shoot them" or sell them; I doubt if this gentleman, who assures us he is "not a member" of the Kennel Club nor a breeder for "profit," did anything of the kind. With a tine sense of Cambrian thrift he kept his opinion to himself, and pocketed his dollars after he had sold his "culls," and I may add, sold the Yankees also. Really, this is paying us back for sanding our cotton.

Mr. A. H. Moore is said to be very wealthy, though no one would suspect it from his letters or his manner. He owns the litter brother to Count Wind cm, and he will sell the creature dirt cheap, and he will point out to the purchaser the fact that Roderick, Wind'em's brother, has one of the most positive colley tails that ever wagged behind an unattractive dog. Mr. Moore's kennel, on which he has spent "thousands,"

will soon be rid of its last Llewellin "cull" and all the progeny

will soon be rid of its last Llewellin "cull" and all the progeny of the same.

Do the members of the Kennel Club know the contempt in which Mr. Llewellin holds them, or can his sneers at them be explained by the fact that gentlemen in England, as here, are apt to use black-balls when an objectionable name is up? As to our own Westminster Kennel Club, that gives an exhibition annually in New York (and I can say the same of the clubs scattered throughout the country), it is composed of gentlemen, many of them of "large estate," and with incomes of "thousands," and whenever they self dozs, which they prefer to shooting them, they represent them for what they are.

Though not a professional doz-trader, Mr. Llewellin admits that he may be "tempted" to part with "a dog not a cuil;" but as he has "plenty of money, it must be a fabilious sum "worth his thinking about." Well, if a man trades here, we call him a trader, irrespective of the price he puts on the article sold. If he can get thousands for a thing that is not worth hundreds, we say he is "a mighty sharp fellow," and I take it Mr. Llewellin siteks to the question, and gives facts to prove his statements, I shall treat them with respect; but Knowing what I do, I shall not stand insult when it is in my power to counter harder than he can strike.

E. A. HERZBERG.

BROOKLYN, N. Y.

THE RED IRISH SETTER BIZ.

THE RED IRISH SETTER BIZ.

WE give our readers this week a sketch of the Red Irish Setter Biz, owned by Mr. John S. McIntosh, of Pittsburg, Pa. Biz was whelped June 12, 1878. His bench show yimings are: First in puppy class at both Pittsburg and New York, 1879; first in open class, Pittsburg, 1881; first in champion class for all setters, and special for best dog of any breed at Franklin, Pa. 1881. His field trial's record is: Equal first with May Laverack in the Pennsylvania State Field Trial, Members Stake, 1881, and special for the best frish setter competing at the same meeting. Biz is a very handsome upstanding dog of the true Irish type and color. He is a grand dog on the bench, as his winnings attest. He is also the best Irish dog that we have ever seen in the field, and we shall long remember the wonderful speed and graceful style exhibited by him at Grand Junction last December. The cut is from a sketch of the oil painting executed by Mr. J. M. Tracy, and is a capital likeness.

THE NEW YORK DOG SHOW.

THE NEW YORK DOG SHOW.

THE entries are coming in fast, and I think the show will far exceed any show ever given in the world.

In addition to the special prize list already published, the following have been given:

Thomas F. Ryan, of New York, offers \$25 cash for the best pure Laverack setter stud dog, to be shown with his progeny, the progeny to be under 12 months.

Thomas Morrell, of New York, offers a handsome piece of silver plate for the best collection of sporting dogs owned by one individual, number and quality to be considered.

Miss Venic Thompson, of West Swanzey, New Hampshire, offers an elegant silver cake-basket for the best Gordon setter in the show.

E. A. McFarland, of Philadelphia, offers a silver cup for the

Thomas Morrell, of New York, offers a handsome piece or silver plate for the best collection of sporting dogs owned by one individual, number and quality to be considered.

Miss Venie Thompson, of West Swanzey, New Hampshire, offers an elegant silver cake-basket for the best Gordon sotter in the show.

E. A. McFarland, of Philadelphia, offers a silver cup for the best English setter dog, with the best field trial record.

F. K. M. Rehn, of New York, offers a silver pitcher for the best Irish setter dog.

P. T. Cunningham, of New York city, offers a silver soup tureen for the best English setter dog.

P. T. Cunningham, of New York city, offers a silver champagne bottle-holder for the best pure Laverack setter dog. Donor does not compete.

L. P. Martin, of New York, offers \$20 cash for the best bull-terrier dog or bitch in the show.

A cable message was received this morning from Mrs. Lungton, of England, a very noted exhibitor, saying she wished to make entries.

Many entries have been received from prominent ladies in the city, also from Philadelphia, Pittsburg and Baltimore.

A special prize has been given for the best caniche poodle, as there are quite a number of those dogs here now. They were first imported by Mrs. Lordlard.

We publish below a complete list of the special prizes which are offered for the forthcoming show. Although their intrinsic value makes them well worth the winning, their chievalue will consist in the tokens which they will represent of the beanty and worth of the winners.

The Westminster Kennel Club offers prize medals suitably engaved for dogs that have run and been placed in any of the field trials that have been held in America: A, best pointer dog: B, best printer blech; C, best English setter dog; D, best English setter blech; C, best bleck and tan setter; In v. exhibitor; I, best kennel Lib offers prize medals and the setter blech; C, best bleck and tan setter; and the set of Sensation; F. best kennel Lib offers 25, cash, for the best pointer dog or bitch, of any age, entered i

dog Chief.
The English prize.—DD., Messrs Williams & Powell, of Liverpool, England, donate one of their fine guns, value, \$250, to be given to the best English setter puppy, under twelve months.

Westminister Kennel Club's Extra Specials. Medals for —EE., best rough-coated St. Bernard puppy; FF, best smooth-coated St. Bernard puppy; FF, best smooth-coated St. Bernard puppy; FF, best smooth-coated St. Bernard puppy; GG, best greyhound puppy dog or bitch, under twelve months; HH, best Chesapeake Bay dog or bitch; II., best black caniche poodle.

JJ., A fancier of greyhounds offers solid silver cup, to be awarded to the best greyhound ofg or bitch that has taken a first prize at Springfield, New York, St. Louis, Philadelphia, Battimore, Boston, Detroit, St. Paul or Pittsburg, the owner of the winner to receive the cup and offer it for competition at subsequent bench shows, on the same conditions.

A gentleman of New York offers gold medals, value \$25 (entries to close before opening of show for classes KK. to OO,) for —KK., best matched pair of English setter segardless of sex), color and quality to be considered, excluding champions; LL, best English setter log, under two years old; MM, best English setter log, under two years old; MM, best English setter log, under two years old; MM, best English setter grow, the progeny to be considered together with the dam in judging). English setters of pure Laverack pedigree (champions excluded). NN, best dog; second best dog, silver medal, value, \$10; OO., best bitch, gold modal, value, \$25; second best bitch, silver medal, value \$19; PP, a fancier of collies offers for the best kennel of five collie puppies, under 12 months, owned by the exhibitor, a silver medal. Special prize for large dog. QQ, cash prize of \$25 for a dog that measures 3 inches at the shoulder, standard measure, to be entered in the classes for mastiffs, St. Bernards, Newfound, and, so deerhounds. The dog that wins this prize must also obtain a prize if his regular class.

The awards made in the regular classes are eligible to compete in the special classes, and aff they should not already be entered on the catalogne, they can be during the first day of the show. Should sold more and prize be co

DOGS AND SHEEP.

In the issue of Forest and Stream for March 23 is an article on "Dog-Haters," signed "O. W. R.," in which occurs this query: "If sheep-raisers are troubled with dogs, why do we not 'see them to the fore with their own grievances stated over their own signatures?"

The nutrities of their course howe that the miles of the course howe that the miles of their course how the miles of the

over their own signatures?"

The putting of that query shows that the writer of it is very unfamiliar with the needs and demands of sheep-growers in

not 'see them to' the fore' with their own grievances stated over their own signatures?"

The putting of that query shows that the writer of it is very unfamiliar with the needs and demands of sheep-growers in this country.

I am a farmer, live in Monroe county, N. Y., and own sheep. Fortunately I have hitherto escaped with but little loss by does. I am not a "dog-hater," and have owned many of those animals, and like a good dog as wil as any one, though not now keeping one. The farming of my town is of a mixed character, though chiefly grain and potatoes are raised. There are comparatively few flocks of sheep in it that are kept the year round. If I were to ride around and ask forty farmers this question: "Do you keeps flot of sheep—breeding owe—all the year round?" thirty of the mould answer "No," and twenty out of the thirty when would answer "No," and twenty out of the thirty when would answer "No," and twenty out of the thirty as well as not, and make a hundred dollars clear on lambs are the butcher, but I am afraid of the dogs." There is that fear and anxiety of loss by the dogs in their minds which deters then is there any good reason for taking this view? Let us see.

I do not think that for many ears one has passed in which more or less sheep were not killed by dogs in this town. Last year was a good one—for the dogs. One man, living less than a mile from me, was feeding a flock owethers. The dog came into his banvard and for one raid is whethers. The dog came into his banvard and for one raid is wetthers. The dog came into his banvard and for one raid wetthers. The dog came into his banvard and for one raid wetthers. The dog came into his banvard and for one raid wetthers. The dog came into his banvard and for one raid wetthers. The dog came into his banvard and for one raid wetthers. The dogs came into his banvard and for one raid wetthers. The dogs came into his banvard and for the safe he shut them up each orbit in the bank of the capability of growing wool on the safe he shut them up each orbit in

CROSS-EXED DOGS.—Editor Forest and Stream: Please advise the owner of that cross-eyed dog not to get discouraged, as, if of recent occurrence, it will probably get better in time. If he will blindfold the well eye with a piece of sticking plaster for a day or two at a time, it will force the squinting eye to look straight. Should an operation be necessary a skilled occulist should be consulted.—E. E. N. (Chippewa Falls, Wis.)

CLEVELAND DOG SHOW.—Cleveland, O., April 1—Editor Forest and Stream: We wish to claim June 6, 7, 8 and 9 as date for the Cleveland Bench Show Association Show. We will give not less than 81,200 in prizes. We have secured Mr. Chas. Lincoln as Superintendent, and have engaged the Rink on Euclid avenue as the place to hold the show. We propose to have a first-class show in every respect. We will have 81,200 in bank next week as a guarantee fund to pay our prize list. Same has all been subscribed.—C. M. Munhall, Secretary.

EASTERN FIELD TRIALS.—The meeting of the Eastern Field Trials Club next December bids fair to be very successful, at least, so far as the number of contestants is concerned, as we hear of a large number of animals that will be entered for the different ovents. Nominations for the Derby are promised sufficient to assure its success, and the same may be said of the all-aged stakes. We trust that the members stake will receive the attention that its importance demands. This should be the most interesting event of the meeting, and the members should see to it that nothing is left undone to the credit of the club than to see a goodly number of its mem-

bers come forward and, with generous rivalry, contest for the honor of winning the prize. The arrangements for this stake are not yet complete, but the gentlemen who have the matter in charge are fully competent, and will be sure to perform their duties in a satisfactory manner, and it only remains for the members to take hold of the matter and by liberal support insure its success. We are confident that by such action not only would their enjoyment of the meeting be greatly enhanced, but that the influence and prestige of the association would be vastly increased, to say nothing of the resulting good accomplished in popularizing the sports of the field.

COCKER SPANIEL PRODUCE STAKES,—The following additional entries have been made to the Cocker Spaniel Produce Stakes; Dr. J. S. Cattanach, of New York, enters liver and white bitch Queen Vic. first New York, 1881, by Witch ex-Madge, served by Mr. Goff's Dandy. Dr. J. S. Niven, of London, Ont., enters imported black bitch Dolly, whelped June. 1877, by Lort's Jock ex-Lort's Bobtail, served by Hornell Spaniel Club, of Hornellsville, N. Y., enters liver and white bitch Prin, by Witch ex-Princess, served by their Bob III. Any person desiring information respecting this Produce Stakes, will please send stamped, directed envelope to me at 458 West Forty-third street, New York.—Jas. Watson (Secretary A. C. S. C.

MEASUREMENT.

MEASUREMENT.

Editor Forest and Stream:

The measurement question is one of those which "will not down;" and although your exceedingly clear and convincing arguments in favor of cubical contents, t.e., actual size, have not borne such fruit as they ought to have done in and about New York, despite their having been stated with a clearness which would make them casy of comprehension by a child, yet I have no doubt whatever that success will eventually crown your efforts. There is not the slightest reason to believe that you have not been understood, or that the great body of yachtsmen who do not allow the ignorant and prejodiced to doubt fair test between yachts -especially those of widely differing models—is a competition based on actual size. The true reasons of the adherence to length measurement are doubtless to be found in the selfshiness of vested inferests and the conflect declarations of the "practical" school of old fories. Add to these powerful influences that of "particition," and the riddle is solved. The cutter—a foreign invention—proved too fast for her American competitors, so sho must not be allowed to repeat her victories; hence the enactment of solvenity, in fact, that sie would be obliged to compete with vessels of double her actual size or thereatouts, and consequently with little or no hope of success on such a course as New York Bay, unless in the very heaviest of weather. Cunningly devised as are these measures to prevent the superiority of the cutter being further manifested, those who can read between the lines will plainly perceive the modives which inspired those who have adhered to them, as well as the new clubs which have adopted them. However, if the English fifteen, will be a superiority of the cutter being further manifested, those who can read between the lines will plainly perceive the modives which inspired those who have adhered to them, as well as the new clubs which have adopted them. However, if the English fifteen, will be a superiority of the cutter being further manifest

THE FIRST YAWL.

THE FIRST YAWL.

Billior Forest and Stream:

My attention having been called (I believe that is the customary phrase) to an article in your paper of date of March 9, in which my name is mentioned, I beg your kind indulgence while I cudeavor to correct one or two errors into which your correspondent has fallen. The article in question, "The Yawl in America," purports to give the history of the yawl in America, and states that the honor of owning and saling the first yawl built in America, "purports to give the history of the yawl in America, and states that the honor of owning and saling the first yawl built in America, "purports to give the history of the yawl in America," and states that the honor of owning who used one built here in 1853. This is an error, and had they yawl who had the yawl in the property of the yawl in the property of the yawl in my possession a sketch of Edwin Moody, by the artist Champney, long since dead, poor fellow, taken 600 board the Phanton on Fiddler's Reach, Kennebec River, August, 4816." The Phanton was a yawl, 2216, long, with raking square stem, and with flush deele running to a bulkhead about amidships, with doors and companion side, making a comfortable cuddy. She was built in Beston and run along the whole New England coast as a cruiser from 18516 1849 or later. At the time the sketch in question Moody, captain and owner, then about 18 years old John Foster, Fitz Henry Lee, and Benjamin Champney, was on one of these jaunts of hers. The honor, therefore, belongs to Moody, unless some one can go back of '43.

The Phanton was a keel boat, and I think the only one over owned by him, there being no stanneher centerboard man in the country than himself. The rig was the same as the Enid as represented in your paper, with the exception that the driver was a spri sail, and the manifest of the sail through the country than himself. The rig was the same as the Enid as represented in your paper, with the exception that the driver was a spri sail, and the manifest in the board of the sai

at last got the hang of it, and was soon able to invite Mr. Yale to take a cruise to Angel Island with me.

The behavior of the little craft under short sati in a sea and weather that brought the big fellows to natheail and jib settled the question that brought the big fellows to natheail and jib settled the question and the property of the propert

ted herseif octic. San and perfectly reliable craft of her size ever flew is a flag.

If orgot to say that on both Petrel and Sweetheart the mainsail and driver were leg of mutton, as both were intended to be and were handled in all weathers by one person, therefore all complications aloft were rigidly excluded. The Petrel was never received, and the Sweetheart but once while rigged as a yawl, the occasion being a blow that compeled a sloop of twice her length to anchor under Angel Island for shelter for three hours, as her captain did not under to venture across, having several lad es aboard. For my part, I can sent on the proper of the perfect of the property of the perfect of the perf

Editor Forest and Streum:

In your recent article about the James the date was wrong. The pilot I bought her from was named McKlibbon. I purchased the boat between 1852 and 1851, and he had used her in his business for some time previously, and had built another on the same plan, but 18 feet long, with sharper and finer ends, which suited his purposes better, and had discarded the James. I am under the impression that boats are plan, but a boat specific planes, and the same plan, but I been same planes, plan to the same planes, and the same planes, and the same planes are planes, and the same planes are planes, and the same planes are planes and planes. The same planes are planes are planes and planes are planes and planes are planes and planes. The same planes are planes are planes are planes are planes and planes are planes. The planes are planes are planes are planes are planes are planes are planes. The planes are planes. The planes are planes are planes are planes are planes are planes are planes. The planes are planes are planes are planes are planes are planes are planes. The planes are planes are planes are planes are planes. The planes are planes are planes are planes are planes are planes. The planes are planes are planes are planes are planes are planes. The planes are planes are planes are planes are planes. The planes are planes are planes are planes are planes are planes. The planes are planes are planes are planes are planes are planes are planes. THE STELLA MARIS.

THE STELLA MARIS.

NOT long ago we published information concerning this new type of canoe. This week we present an illustration of one of her class built by Mr. Rushton, of Canton. There is a ceaseless searching among men of the paddle after the best combination of qualities in a canoe, just as yachting men are engaged in a continual strife of give and take with nature in the struggle to combine opposing forces in such proportions that the best 'mill round' yachts may be produced. It was the proportions that the best 'mill round' yachts may be produced. It was the proportions that the best 'mill round' yachts may be produced. It was the proportions that the best 'mill round' yachts may be produced. It was the proportions that the best 'mill round' yachts may be produced. It was the proportion of the yachts of some other of equal consideration, is a type which naturally appeals to a very large section in America. While the cancels of the seaboard or along the shores of the great lakes will insist upon the highest performance as a sailer and resorts to beards, keels, shotbags and reefing gear, the shores of the great lakes will insist upon the highest performance as a sailer and resorts to beards, keels, shotbags and reefing gear, the shores of the great lakes will insist upon the highest performance as a sailer and resorts to be end of the produced and the sailer and resorts to be end of the produced and the sailer and the produced of the produced produced and the produced of the produced of the produced of the produced of the must be compact to be produced of the produced of when on a wind. Strong but not heavy; a good enough broadside off when on a wind. Strong but not heavy; a good enough sea-boat without too much sheer to make her hand on the paddle. She must be, if fact, and the produced of the produce

by a regular "factory" of a size and completeness which astonishes the visitor. Canton, litherto an almost unknown initiand town, has become famed across the seas as the center of one of the most thriving establishments of the kind. In fact, Rushton has become Cantain and the control of the special development of the sport in America, we may state that Rushton carries in stock something like 150 cances, and sells them like hot cakes every spring, and with a score of hands cannot keep pace with the demand. Labor-saving machinery of all kinds has been introduced and cances are now set up and fluished off wholesale, in fleets at a time, though each one receives that personal care and supervision which has given to Rushton's work such an enviable reputation. His "factory" consists of a main building three stores high effect of the store of the second of the second store ships. Bell ong and 50 km december of the second store of this and other processes. The first story is devoted to the receipt and storage of lumber, dressed and undressed; also for oars, paddles, keels, paints, and for material for boxing. The second story is given up to general work. In one wing is a steam-boiler and fixtures, with machines for ribbing the boats by Rushton's patent method, and also appliances for beading timber to suitable forms. In the other wing are the offices, drawing-room, and sleeping apartments. The third story is used for storage and finishing of boats, painting, varnishing, and so the second of the wast patenting to the suitable forms. In the other wing are the offices and finishing of boats, painting, varnishing, and the second of the control of the second of the wast patenting to the public input his enterprising builder and successful business man. To Mr. Rushton's personal interest in behalf of canceing the spot owes no little of its present popularity and the deep root it has taken with the masses of our population.

DANFORTH STOVES.

DANFORTH STOVES.

Editor Forest and Stream:
In your edition of March 23, 1832, I thad article signed "Saucepan." I undertake to reply, not for paper controversy nor advertisement, but for the number of letters received from vanoeists, yealtsmen, "Saucepan" must learn that baking and broiling require intense, proceedings of the process
Diltor Forest and Stream:

Your paper having a reputation for fair dealing, you will probably allow me to say, in way of comment on the recent and reiterated to the wall by cutters and keels, that I have reason to know there never was a greater demand than at present for yuchts of the very lightest displacement and centreboards of the most approved American type. The demand for sharpies is now so great that I could not accept the work offered without carrying on a far more extensive business than at present I am inclined to be bothered with.

As to sharpies being now seeworthy and only life for fourthous and a complete the start of th

handed. Agobisian's Should feel wounded, and again charge me best "good bounded, and again charge me best "good bounded, and again charge me best "good bounded, and again charge me but in good bounded, and that this is written in the matter at sea in our little boats. Mine will be ready on one month's notice.

Lest "A Yachtsnam" should feel wounded, and again charge me with ingenious advertising, I wish to add that this is written in the interest of Corinthian cruising, and that he and I can settle the mathematics of our little books. Jine will be ready on one nonth's notice.

Last summer I was warned to keep out of print on centreboards, or "the boys (with keeks, you know) would use me up." Well, did they?

Thomas Clarham.

We hardly agree with Mr. Clapjann, our experience and ob servations leading to different conclusions. It is likely enough that there always will be a demand for boats such as Mr. Clappian takes a specialty of. For river work, shoals, hunting and issuing, his light drafts are excellent in their way, and being cheap into the bargain, there is a specialty of. For river work, shoals, hunting and issuing, his light drafts are excellent in their way, and being cheap into the bargain, thing, however, from regular yachting purposes. While keels were along their in bad odor a few years ago. Mr. Clapham and others cannot shut their eyes to the fact that practically no centreboard yachts are built any more in the East, about iniety per cent. of the yachts launched around the Cod this year being keels. In the New York Y. C. in 1886, out of a fleet of forty ash, only six were keels, that it, ifference is the search of the

find this latter class steadily on the increase, and believe that before long the great body of American yachtsmen will accept our views on the subject, that by far the best sport is to be found up and down the coast and at see, and that legitimate yachts should be built for that purpose, instead of the child's play in the Sound. It is for the turther ance of seagonic yachts and yachtsmen that Forest and Strakm has ance of seagonic yachts and yachtsmen that Forest and strakm has the Sound on a traff. The other kind may as will drift up and down the Sound on a traffic the strakm of the Sound on a traffic the strakm has the Sound on a traffic the strakm and the Sound on the Sound of the Sound on the Sound on the Sound on the Sound on the Sound of the Sound on the Sound on the Sound on the Sound on the Sound of Sound on the Sound of S

COUTSIDE LEAD.

DUTSIDE LEAD.

Editor Forest and Streum;

Tind in the Olympion, one best sporting paper here in San Francisco, a statement that Mr. Hyde Bowie had become a convert to your ideas, on outside ballast. He certainly does contemplate putting on more lead outside, but to my knowledge Mr. Bowie has long ago on one of the first to the statement of the s

YAWLS FOR THE LAKES.

Ellior Forest and Streen:
I fully concur with you concerning the usefulness, etc., of a yard if g for the lakes, especially for Lake Eria, where (here) we have so much fresh wind and plenty of it. We are as you know, at the mortheast end of Lake Eria, and our prevailing wind is southwest, so we have the full sweep of the breezes from a distance of 250 miles, consequently we have some "seet" on all the time. Then too ingoing anywhere up the lake our work is invariably to windward. So we must have something better than the baggy jib and big boomed mainsail.

we must have something better than the baggy jib and big boomed mainsail.

The prevailing rig is the schooner, both in yachis and small "hookers," both Canadian and American. They are considered more handy than the sloop, owing to the common necessity of quick work in reducing sail, we having a good many squalls.

I desire to extend to you my congratulations and thanks for the good done for the yachting fraternity in keeping up your vigorous work for the cause of reform.

The sentiments expressed in the good old Forest and Stream are fully concurred in by me, and I always look forward for my paper to see what good news you put in.

We certainly advise the yawl for the lakes, especially for "hookers," shermen and working boats. It is handler, safer and faster for theom 'in Butfalo, and all hands will follow as fast as provincialism wears away. The yawl is much superior to the small schooner in every way.

AMERICA CUP.

WE have received several letters concerning the cup. As the latter is to all intents and purposes "a dead cock in the pit," no good ends can be served by surrendering our space to further displaced by us upon the New York Y. G. exactly where it belongs. It was pointed out in this journal that clauses arrogating privileges to one side and refusing the same terms to the other were unfair and attended with mischief. In accepting the reiteration of such clauses in the new "doest of gift" the N. Y. Y. C. braved public opinion to the contrary, and a trophy which might possibly have become the emblem of many a future international victory has in consequence been robbed of all of grand matches won in the past the Cup still has its historic interest and worth. As a challenge to yachtsmen of other nations it is in very poor repute. It is idle attempting to whitewash the blundering of those responsible, for however casy we may try to let ourselves down, foreigners cannot be caught with empty words, but judge by the cold facts it the case. There will be no more challenges for the America Cup. That is all there is to it.

PROFESSIONALS.

Billiar Forest and Stream;

Will you please furnish us with a detailed definition of the word processing processing the processing of the word processing the processing the processing over this word for namy years, and as we are thinking of giving several races under the Corinthian principles, it is very necessary to fully understand the meaning of the word. You will greatly oblige many of the Philadelphia yachtsmen.

A "professional" sailing master is one who handles a yacht for wages or profit, cither upon a special occasion or as a means of gaining a livelihood in whole or in part. In general, "professionals" include all those who work for wages or profit in or shout boats. Strictly, anyone engaged or having been engaged directly in building or hand it has even been been considered, however, and it is a good plan for each club amouncing Corinthian races to give its own definition as to who shall be accepted as an amateur. This should be strict and precise to admit of no doubts.

ro who shall be accepted as an amateur. This should be strict and precise to admit of no doubts.

FLUSH DECK AT LAST.—Capt. Wm. McCormick's fine ship has been launched at East Boston. She has the honor of being the instance of the same than the small flush deck sloop in America. We have no doubt all Eastern yachtsmen will eventually come to the same thing. The new sloop is a vertable frigate, handsome and smart in appearance. She is rather stand flush frigate, handsome and smart in appearance. She is rather should be shorted to the same thing. The new sloop is a vertable frigate, handsome and smart in appearance She is rather should be shorted to the same than the depth and more than the draft and outside weight of a cutter. Her rig will be sloop, though we hope to see doubte head sail tried on her next season. This yacht is 30t, on deck, 33t, on loud line, 13tl., Her rig will be sloop, though we hope to see doubte head sail tried on her next season. This yacht is 30t, on deck, 33t, on loud line, 13tl., Sime extreme beam, 7th. 5im. draft. Has six tons, si-kx to-ns of iron way down on the bottom of the keel! That is where it will just talk. This year 10th. Has it on floors, cutter fashion, deck at that. Mass-laft, howspiri outboard 13tf. 6im. bodom 31tl., gaff 2ft., hoist 3ft., topmast 28tl. Notice the length of the gaff and the business-like topmast which the owner proposes to have go up and down as easy as his pennant, The arrangements of this yacht below are simply astonishing. They include large stateroom aft, cutter-fashion, a winding companion "stairs" between separate builkheads, big calcon, separate builkheads, big calcon, separate of the part of the

KATIE GRAY.—Editor Forest and Stream; This well-known tentonner, of Belleville, Ontario, which swept the board on Lake Ontario for several years, was not so successful as usual last year. The difficulty was that she could not be kept clear of water; so, thinking his favorite craft rotten, her owner had her opened up recently, with the a stupid workman had, in shifting a chain pile on the man to be four years ago, placed it between two frames, thus causing the whole top years ago, placed it between two frames, thus causing the whole top years ago, placed it between two frames, thus causing the whole top years and frames are as sound as ever, and the needed alterations and repairs will at once be made. It is expected that the yacht will retrieve her reputation this season.

EXPERIENCE AND YAWLS.—Editor Forest and Stream; Some five years ago I learned to appreciate the good points and general bandlages of the rig, and have tried in a minuter of instances to get as the local "talent" thought they knew bottor; because sloops were such a success (1) in New York. The way I first learned the value of the rig was this; Ever since I was a youngster I took to the water like a duck, and have owned and sailed all sorts of small sloops and schooners, principally the latter, and it was on our long cruises and dark hights when having to ree fit at thought thow much more handy those English fellows have their yawls rigged.—V. (Buffalo.)

BEVERLY YACHT CLUB——Pairler Furrer and Stream: Races of Beverly Y. G. fixed as follows: July 8, off Nahant, first championship match, July 20, off Swapping Stream (19, open regatta, Swampsout, open regatta, Swampsout, open regatta, Swampsout, open regatta, There will be one special race at Monther third championship match. There will be one special race at Monthemat. There will be one special at Marthelmand.—It was the special at Ma

JIAVERHILL VACHT CLUB.—Haverhill, April 2, 1882.—Editor lorest and Stream: The following is a list of our officers: Commoore, Wm. M. Dresser, Vice-Commolore, J. E. Devoy: Fret Captains, E. Collins: Secretary, C. H. Skacy: Treasurer, G. D. Ayer; Mirch, J. Doan, Trustees—J. E. Mendowcroft, E. P. Tenny, G. A. oxbory. Reguta Committee—J. C. Goodwin, N. G. Knowles, A. O. corlay.—S.

Toxbory. Regatta Committee—J. C. Goodwin, N. G. Knowles, A. O. Perley.—S.

DEPTH VALUED.—Editor Forest and Stream: I sailed a beauty cathoat last year, and had my experience in rough water. Thanks to your well written articles on entress, I have beamen how to lany a more able boat, and have just bought one, depth, etc., to my lking. I will endeavor to get some points on our market boats here, and give them to you. They are fast and very able.—O. (Boston).

ELECTION.—Editor Forest and Stream; At the annual meeting of the Acquackanonk Rowing Club of Passate, held at the above place, the following officers were elected; G. Higbie, President; W. J. Cooper, Captain: H. E. Wadsworth, Lient; E. C. Biele, President; W. J. Cooper, THISBIE.—We hear that this Boston yacht will try they ward yig this summer, and hope to report later concerning her. Her owner writes us: "I shall plut on large jib and driver, and see how her speed compares with the old mainsail. I nm satisfied it is the rig for comfort and safety."

Rifle and Tray Shooting.

NEW YORK GUN CLUB.

NEW YORK GUN CLUB.

THE spring meeting of the New York Gun Club will take place to-day and Priday, April 6 and 7, at Bergen Point, N. J. First day—10 A. M. Visitors' Sweepstakes at \$10 each; 10 birds: handicap riss. First prize, cup, value \$50, and cash \$100 second prize, \$50; fourth prize, \$35. Entries to close at 11 A. M. on the day of the shoot. Same day,—"They of war," A match between two teams selected by choice from the competitors present by two captains to be smeared on the ground by the executive committee of the New York Gun Club; first choice to be determined by lot, and then each captain between two teams and the strength of the New York Cun Club; first choice to be determined by lot, and then each captain between the second the second to the second

SOME SCORES.

THE popularity of gallery-shooting has been pretty well tested in New York, where a number of first-class indoor butts have been dited york, where a number of first-class indoor butts have been dited york, where a number of first-class indoor butts have been dited york. The first preserved in the propertion of the preserved in the preserved of the preserved in the preserved of the preserved. The range which is but one feature at this resort of evening recreation combines the results of experience in such matters with the best mechanical skill and care in construction. The targets are proportionately reduced for the range, so as to make it equal to shouting 230 or 390 yards. A notable feature of this range—a characteristic of few other its perfect ventilation, and its consequence—in the presence of the range and the presence of the range and presence of the severe and unprecedented test of 1,400 shots fired in rapid succession, and no smoke or odor could be detected at all outside the gallery fiself, and not even within, except for a few moments after the cessation of the shooting. The secret of this is, of course, the peculiar provision that has been made for the constant current of air, which at once conveys and the presence of the range and the provision that this range remains to be noticed. When it becomes necessary for the person in attendance to visit the targets, an automatic appliance classes a bullet-proof door behind him, which is only opened when he has returned to his former station. Hence an accident to the attendence, the presence of the range, and under whose superison it was constructed, deserves the thanks of all lovers of rifle target practice, for placing at the disposal so complete a set of factures for the indugence of their favorite form of anuscement.

Out of the multitude of records on file at the gallery we select a few

tures for the indulgedor of their favorite form of uniusement.

Out of the multitude of records on file at the gallery we select a few as follows:

200 yards reduced target, off-hand.

L. V. Sone, D. A. Davis, Wm. Hayes and Fred Conlin, made 50, possible 50, in ten shots. J. B. Blydenburg, in five consecutive targets, made three full scores and two 48, possible 50, Dr. O. Additor, F. P. Brown, Charles Heizman, M. F. Raditery, L. W. Sidley, R. H. Berger, Fred. Hessier and L. C. Ivory, made 94, in possible 50, Dr. O. Additor, F. P. Brown, Charles Heizman, M. F. Raditery, L. W. Sidley, R. H. Berger, Bred. Hessier and L. C. Ivory, made 94, in possible 50, Iran shots. Harry 6, Ellsworth and T. Filz, made 47, in possible 50, ten shots. Harry 7, Lockwood, made 46, in possible 50, ten shots. Wilson McDonald and Henry A. Gilderslever, made 45, in possible 50, ten shots. Harry 7, Lockwood, made 46, in possible 50, ten shots. Wilson McDonald and Henry A. Gilderslever, made 45, in possible 50, ten shots. Wilson McDonald and J. W. Morton, made 34, in possible 53, seven shots. K. K. Cooke, O. H. Blackmar, A. W. Colwell, William Miller, Dr. Bradford and J. W. Morton, made 34, in possible 53, seven shots. Credmoor targets, and rest permitted. John Shields, made 50, in possible 50, ten shots. Sankichi Talagi, nadd 45, in possible 50, ten shots. Captain Thomas Doolittle, three-full scores, seven shots. Wm. O. Bush, A. Salvini, E. W. Carpenter, John H. Matthews, John D. Clark and W. C. Poppe, each one tulk score, seven shots. E. D. Newstardt, C. P. Gatchy and Dr. J. W. Guntle, made 33, in possible 35, seven shots. E. M. Famileid and Geo. A. Lewis, made 33, in possible 35, seven shots.

Captain Thomas Boolittle, made 50, in costile 50, seven shots. W. Dudley, made 31, in possible 35, seven shots. Theodore Bailey, made 33, in possible 35, seven shots. Theodore Bailey, made 31, in possible 35, seven shots. W. Dudley, made 31, in possible 35, seven shots. Theodore Bailey, made 31, in possible 35, seven shots. Theodore Bailey, the sho

shots, Flarcy Shooting, Ritle and Pistol.

J. B. Blydenburgh, made 24, rossible 35, tive shots, rifle picked from floor and fired at the word. Wilson McDonald, rifle, made 16, possible 50, at the word. Sir. Henry Hanford, rifle, 33, possible 50, time. By minutes. Captain Thomas Doolittle, rifle, 33, possible 35, on a line, target bullsey by 14. E. M. Carpenter (322, possible 262) rifle, 129 shots making 93 bulls, 31 centers, 1 inner. Chas. F. Jones, pistol, 45, possi-

ble 50, ten shots. Wm. M. Chase, pistol, 50, possible 50, ten shots. Wm. M. Chase, pistol, 35 bullseyes in thirty shots, Frank H. Lord, pistol, 49, possible 50, ten shots. Pierre Lorrillard, Jr., pistol, 16 shots in one minute, 63, possible 80.

BOSTON, April 1.—It was very disagreeable at Walnut Hill Saturday, the wind blowing cold and strong from the south and southwest. The 500 yard range was occupied for the first time this season, several of the members practising with their military rites at this distance. The best secores are appended; $\frac{\text{Creedmoor Match}}{4 - 5 - 5} = \frac{5}{5} = \frac{5}{$

A NEW Maine Map.

THE HEADWATERS OF THE

Aroostook, Penobscot and St. John RIVERS.

THOMAS SEDGWICK STEELE,

Author of "Canoe and Camera,"

This is the latest and best map of the great canoeing region of Northern Maine. It comprises the country described in Mr. Steele's book, "Canoe and Camera," and the forthcoming volume, "Paddle and Portage." It embraces a portion of CANADA on the north and NEW BRUNSWICK on the estof Maine, and is an invaluable guide for the sports-

man and tourist in that wonderful country.

The chart is 20x30 inches, printed on Government survey paper and mounted on cloth. Sent postpaid on receipt of price, \$1.

ADJUSTABLE CHAIR MANUFACTURING
601 Broadway, New York,

The Parker Gun.

MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent poortunity of testing their power beside those of every exhibitor in the world, and they came off concerns over every other maker. Their highest award comes to them from a country whose reputation or this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have on more laurels than any other gun when brought in competition in the field or at the trap. At Convention, the PARKER won the Pierce Diamond Badge and the Forest and Stream" Badge for the best average over nearly 200 competitors. Send for Catalogue.

Show Rooms: 97 CHAMBERS ST., N. Y. PARKER BROS., Meriden, Conn.

RALPH'S

Upper Chateaugay Lake, N. Y.

(ADIRONDACK MOUNTAINS.)

Opens May 1st. Salmon-trout fishing usually begins between the 1st and 10th and lasts three or four weeks. As an indication that the fishing will be especially good this season, large numbers of these "lakers" are now being taken with sunk bait through the ice. Bait and ify fishing for speckled trout will be good by May 15th, and lasts the season through, a peculiar advantage of these waters over any other. Hotel enlarged during past winter to three times its former capacity. More easy of access than any, place of like attractions in the wilderness. Just a night's ride from New York and not the first of the control of

H. L. Leonard's Split Bamboo Rods

WITH PATENT WATERPROOF AND SPLIT FERRULES.

No. 1 SHOWS WATERPROOF CUP IN FERRULE (PATENTED OCTOBER 26, 1875). This prevents any moisture from reaching the wood, and the Ferrule from becoming loose. The constant wetting and drying of the bamboo must rot the wood, and make other makes of rods less durable than Leonard's.

No. 2 SHOWS SPLIT FERRULES (PATENTED SEPTEMBER 3, 1878).

This split thoroughly strengthens where the ferrule is joined to the wood, which is the weakest part of a rod, and where so many of other makes of rods (bamboo especially) break. Mr. Leonard has yet to hear of a single instance of breakage at this point since in the PATENT SPLIT FERRULE has been applied. We consider this the GREATEST IMPROVEMENT if at has been introduced in rod making since rods have been made.

No. 3 SHOWS SPLIT FERRULE WHIPPED WITH SILK AS IT APPEARS ON THE ROD.

A GAME MAN.

M UCH is said of game birds, beasts and fishes in the columns of Forest and Stream, but "Uncle Reub" Wood. the veteran fly caster, thus told us of the game qualities of one of the genus *Homo:*"I do like to see a game man," said Uncle Reub, push-

ing his broad-brimmed hat on to the back of his head and removing his cigar for a moment, "a man that has clear grit, and who don't weaken at the first sight of a squall, and I'll tell you of one that has lots of sand in him.

"We were fishing way up in Meacham Lake, in Franklin county, N. Y.; you know the lake well, it's where Jim Geddes is going to take the trout eggs for Fuller to stock the water; and it was twenty-five miles from a telegraph. We had gone in for a three weeks' fish, and among the party was Isaac G. Johnson, the large iron founder of Spuyten Duyvil Creek, New York city. We had been in about a week, when in came a special team with a telegram for Johnson from his son. It read: 'Come home right away, there are nine hundred men on a strike.' We thought the sport was all up and looked at Johnson. He only said, 'I'll sleep over it and answer in the morning.'

"The morning was a fine one, and I was up when Johnson rose and looked out on the lake at the trout rising just as pretty as you ever saw. We said nothing while he wrote an answer to the dispatch. When he had finished he read it, and it said: 'Let'em sweat, will be home in two weeks;' and I believe you could have heard us yell for ten miles. I don't know what you think of it, but that's what I call a game And Uncle Reub resumed his cigar, and his clear eye looked out of the window as though he expected to see the trout rising between the street cars on Park Row

WEBSTER AS A SPORTSMAN .- At the meeting of the New Hampshire Fish and Game League, the other day, Dr. Henry Wheeler, of Manchester, told the members that he could bring before them a man who distinctly remembers how Webster came to his place one day, and wished for a companion in a hunt after woodcock, but as no one could accompany him he went alone, and was seen on his return to have eighty woodcock. The next day Dr. Wheeler's friend accompanied him and they shot sixty birds.

THE LARGE GAME OF THE TERRITORIES.

BILL now in the hands of the Congressional Committee on Territories provides for the suppression of the wholebutchery of large game in the Territories. In other words, the bill, if made a law, will go far toward the remedy of a flagrant wrong. It demands at once the attention and the indorsement of Congress.

The facts in the case have been rehearsed in these columns, and are familiar, but will bear repetition. Briefly they are these: A ruthless, unceasing slaughter of the large game of the Territories is being carried on year after year by the skin-hunters, i. e., men who kill these animals for their hides alone, leaving the carcasses to rot on the ground.

The numbers of noble game thus slain aggregate hundreds of thousands yearly. The numbers of hides of deer and antelope alone, shipped from the Yellowstone and Missouri regions, in the last two years, as shown by carefully collected statistics of the butchery, were as follows:

STATISTICS OF DEER AND ANTELOPE BUTCHERED FOR THEIR HIDES, THEIR CARCASSES BEING LEFT TO ROT. 1881.

Total......143,000

To the figures given for 1881 should be added 5,200, the number of elk skins shipped in that year from the Yellow stone. The statistics here given may be taken to represent about seventy-five per cent, of the animals killed in this region, or for 1881 alone, a total of 185,250.

And still the unholy carnage goes on. Our private advices from the Territories lead us to believe that the hide hunters have been very busy during the past winter in Northern and Middle Wyoming. We learn that a great many hides have been shipped from Rock Creek, on the Union Pacific, and that more are coming in every day.

These are the facts. What do they mean? The answer has already been given in these columns.

They mean, and can mean, but one thing. That as surely as effect must follow cause, so surely will a few years of this ruthless slaughter suffice for the extermination of the grandest game that ever existed on the earth, viz., the prong-buck, the whitetail and the mule deer, the elk and the mountain

These are the facts. What is the remedy?

It is the mature belief of those who have given to the subject the most careful and intelligent consideration, that the only adequate measure to avert the impending total destruction of the large game is to stop its butchery by the skinhunters; to restrict its killing to the supply of immediate necessities for food only, and to prohibit absolutely expor-tation of meat and hides from the Territories.

This, we repeat, is the sole remedy practicable and suffi-cient; and it is just such a provision that is embodied in House Bill No. 3,811, now in the Committee on Territories. It is entitled "A Bill for the Protection of Wild Game in the Territories of the United States." It forbids: 1. The killing of large game, except for necessary food and supply of domestic market. 2. Exportation from the Territories of these animals or their skins. 3. Traffic in the same. It provides for the apprehension, trial and punishment of those who violate the law.

The respectable and thoughtful people of the Territories are looking to the National Government for such a law. After years of apathy they are becoming aware that for the sake of the petty sums derived from the sale of the hides of wild game, they are permitting one of the most attractive features of their sections to be done away with, and are allowing themselves to be robbed of what should be a source of revenue to their treasuries and to themselves. Govern-ment interference is needed. The area covered by our Territories is so large and so thinly settled, that the local governments can do but little to check the evil.

The preservation of our large game is a subject that con cerns the Nation, not simply the people who dwell where the game is found. Each year the uninhabited portions of the Western mountains are visited more and more by parties from all sections of the country. These localities are becoming the favorite resorts and resting places for the exhausted or the invalid. The game must be preserved as well for visitors as for residents.

The presence of large wild game in the mountains is a resource of any section, the value of which may be calculated in dollars and cents. At the present day, when it is so much the fashion to hunt, fish and camp, nothing can render a tract of country more alluring to a considerable class of the community than the belief that it contains large game. The people who visit the wild regions of the mountains desire,

whether they be sportsman or not, to see game, or to believe that they are in a region where it may be seen. These tourists are desirable as spending money and increasing trade, and are in many respects useful visitors to have come into the unsettled regions of the West. If people will kill only enough for their absolute necessities in camp, the supply, depleted though it now be, will last for very many years. But the skinhunting must be stopped. It is certain that unless some measures are taken, and that speedily, for the protection of our large game, a time will come before very long when it will be impossible for the traveler anywhere in the mountains to keep the camp in meat.

THE MATCH TARGETS.

THE circular from the Secretary of the National Rifle Association here shows that the understanding on this side the water is that the match is to be fought on our Creedmoor targets. Whether that is thoroughly understood on the other side does not appear in any of the correspondence as published. The conditions sent over by the sub-committee of the British Council, were singularly deficient in this respect, and in them no distinct mention is made of the sort of target to be used in the match.

There are three sorts of targets to be used in the match. There is one for the 200 yards range; another used at the 500 and 600 yards ranges, while another target again is to be fired and the soo, and 1,000 yard points. This last target is the same on both sides of the Atlantic. It is the old 6x12 feet target-slab made so familiar to the general public through the international small bore matches already held.

The mid-range and short-range targets in use here and at Wimbledon differ very materially. To make these differences plain, we give the following table of the standard subdivisions:

AMERICAN.
Target 4x6 FEET—200 Yards.
Bullseye circular, 8 in. in diam.
Centre, 26 " "
Inner, 46 " "
Outer, remainder of target. Target 6x6 feet-500 & 600 Yards. Target 6x6 FEET—OW & OW 1414S.
Bullseye circular, 22 in. in diam.
Centre, " 38 " "
Inner, " 54 "
Outer, remainder of target. English.
Target 4x4 FEST—200 Yards.
Bullseye circular, 8 in. in diam.
Centre, "12" Centre, " 12 " Inner, " 24 " Outer, remainder of target.

Target 6x6 FEET-500 & 600 Yards. Bullseye circular, 24 in. diam. Centre, "30 "" Inner, "48 "" Outer, remainder of target.

Because of these differences it is now impossible to make any satisfactory comparison between the records made in the two countries. The English volunteers will certainly go on two countries. with the Wimbledon target subdivisions in their practice, and if our riflemen use the American scheme of marking, it will be impossible to determine the relative team merits.

It makes little difference on what sort of a target a team may practice, provided only that its drill be careful, and the men learn to pull well together, but the question of target to be used in the match must be settled sooner or later, and the more promptly it is attended to the better. Of course the teams in the match will shoot on similar targets, but just now we are puzzled to know precisely what that target is

MINNEAPOLIS GREYHOUNDS.—In our columns last week mention was made of a beautiful greybound puppy presented to Mr. R. M. Conway, of Virginia, by the Hon. King, of Minneapolis, Minn. Mr. Conway writes us in high praise of the animal, which promises to share the excellent qualities of the Minneapolis greybounds, a breed, our corre quality. Some years ago, Dan Mace, the famous driver of trotting horses, took some noted flyers to Minneapolis, and when making a fast mile on the track, it is said, one of the greyhounds of this breed led the trotter the entire mile, and frolicked in, a winner. The spectators became so enthusiastic over this exhibition that they purchased the hound and presented it to Mace. The famous driver afterward declared that he found in Minnesota only one thing which for speed would surpass his flyer, and that this he had brought away We know of no man who can better appreciate the qualities of a good dog than our Virginia friend, and we are much pleased that he should have come into possession "Minnesota."

We publish on another page the suggestive paper read before the New Hampshire Fish and Game League, by Mr. W. W. Colburn, of Springfield, Mass. The review of the progress of field sports in New England is certainly encouraging to those who have been most instrumental in bringing about the changed repute in which field recreation is now held. The best possible illustration of the correctness of Mr. Colburn's conclusions was the simple fact that such a

GEORGE SHEPARD PAGE.

WE present our readers this week with a picture of the new President of the Δmerican Fishcultural Association; and such portions of his life as an angler and fishculturist as will be of interest.

Mr. Page was born in Readfield, Kennebec county, Maine, on July 29, 1838, and in 1845 his family moved to Chelsea, a suburb of Boston, where he was educated in the primary, grammar, and high schools.

At an early age he manifested that interest in matters piscatorial which has since made him so well known among American anglers and fishculturists.

In 1857-8 he visited St. Anthony, Minn., and was one of the early visitors to Lake Minnetonka, in which famous lake he captured many large pike. In 1860 he made his first visit to the Rangeley Lakes of Maine, by invitation of his cousin, Hon. Henry O. Stanley, Fish Commissioner of the State, and here took his first trout, which weighed two and a half pounds, from the apron of the upper dam. During this trip he caught a seven-pound trout, and observed the spawning habits of the fish. A pair of large trout had a nest which he watched for several days, and even approached and stroked them gently without alarming them, so intent upon their business were they. The Rangeleys were then in an almost unknown country, and Mr. Page wrote them up in the daily press and recommended them to his friends, and the public and kept up his visits from year to year. In 1862 he moved to New York city.

In 1863 Mr. Page brought down brook trout of five to pounds and presented to William Cullen Bryant, Henry J. Raymond, George Wilkes and Genio C. Scott. These fish created a sensation among anglers, many of whom denied the genuineness of the species, until Agassiz pronounced them to be true brook trout. In 1867 Mr. Page or ganized the Oquossoc Angling Association, of which he was president for ten years, and which built what was then the finest angling club house in America. In the same year he took 30,000 eggs of the Rangeley trout, packed them in moss and transported them to New Jersey, where he hatched them-the first instance that we know of where eggs of wild trout were taken and transported 500 miles. In 1867 he took the great ten-pound trout-which for upward of ten years was the largest Salmo fontinalis on record, and which was stuffed and exhibited at the Centennial Exhibition at Philadelphia, and subsequently at Blackford's annual trout openings. This male trout, which weighed probably twelve pounds when captured (it weighed ten three weeks after), and a female of eight and a quarter were transported alive from Maine to his ponds in New Jersey.

Black bass were first introduced into Maine by Mr. Page, who took thirty-one live ones from Newburgh, N. Y., to Winthrop, Me., in 1869. In the same year he carried brook trout eggs to England and France. Those taken to England were hatched at South Kensington by Frank Buckland, and those to France at the Jardin des Plantes, Paris, under the Société d'Acclimatation. These are believed to be the first eggs of American trout which crossed the ocean.

In 1870 Mr. Page was made an honorary member of the Société d'Acclimatation, Paris, and corresponding member of the Deutsche Fischerei Verein. In this year he discovered an account of the "Dry Impregnation of Fish Eggs" in a Russian paper, which he caused to be translated and published in the New York Citizen, this being the first announcement in this country of that process.

In 1872 he attended the second meeting of the American Fishcultural Association at Albany; and introduced a resolution asking Congress to appropriate money to erect a salmon hatchery on the Pacific coast and to undertake shad hatching on the Atlantic rivers. He was made chairman of the committee to present the same to Congress, and upon doing so asked for an appropriation of \$10,000. This was granted and \$5,000 more added; Prof. S. F. Baird being then appointed commissioner. Commenting on this at the time, the New York Citizen of June 22, 1872, said: "Fishculture is again indebted to Mr. Geo. Shepard Page for an important service. Last year through Mr. Pages' efforts, the great advantages of the dry impregnation of fish eggs became known in this country, and this year through his exertions an appropriation of \$15,000 has been made by Congress for the introduction and restoration of shad and salmon to American waters."

In 1874 Mr. Page was elected Vice-President of the American Fishcultural Association, and built a hatchery on Bema Stream, Oxford county, Me. For the three years previous he had caught and liberated many adult trout in the Rangeley Lakes with their weight and the date attached to them on platinum tags, and in 1873 one was taken by the artist Thomas Moran, which had gained one and three-quarter pounds in two years.

In 1874 he transported black bass from the Delaware River to the Passaic, in New Jersey.

In 1877 Mr. Page directed the construction of trout hatching works at the outlet of Rangeley for restocking those waters.

In 1881 Mr. Page suggested to Prof. Thos. H. Huxley, Inspector of Salmon Fisheries of England, the introduction of the American shad into England.

On April 1, 1883, he was elected President of the American Fishcultural Association.

The subject of our sketch has been in active business since he was twenty years old, mainly dealing with the chemical products of coal tar. His house has extensive chemical works in the United States and in France, with important connections in London. In this department of research he has invented several useful articles, and has taken out some valuable patents. He introduced into this country the method of creosoting for the preservation of wood. He is a member of the American Gas Light Association, the American Chemical Society, and the American and the New York Pharmaceutical Societies.

Mr. Page has figured largely in Christian, philanthropical, reform and temperance associations. He is Vice-President of the Howard Mission and Home for Little Wanderers in this city; and was one af the four original founders of the New Jersey State Temperance Society, of which he was president for seven years—a staunch cold water fishculturist! Sunday school work has also claimed a share of his attention and he has been a superintendent and teacher for twenty years, being a member of the Congregational Church. When abroad he represents the Smithsonian Institution, by appointment of Professor Baird.

Mr. Page is a great advocate of education. He believes that it should be free, non-sectarian and compulsory. When he made his home at Stanley, N. J., in 1867, there were no schools within two miles of the village. He immediately established one, employed teachers, and furnished books, furniture and other appliances. Later he built a fine school house and expended several thousand dollars for the benefit of the children of the poor during ten years. In 1870 he delivered addresses at Manchester, England, at the invitation of the National Education League, in Free Trade Hall, and elsewhere, in which he described the free school system of the United States, for which he received the thanks of the League for his assistance in securing the enactment of the present free, unsectarian and compulsory education law.

We have dwelt largely upon his angling and fishcultural career, but his laurels are not solely those of an angler.

GEORGE SHEPARD PAGE.

During a tramp of two hundred miles in October and Novem ber, 1877, from Rangeley Lakes in Maine, to Lake St. Francis in Canada, and return, he shot a magnificent caribou American reindeer) which weighed 600 lbs., and stood nine feet from the ground to the tip of his antlers. The latter were three feet long and had twenty-seven prongs and branches. The head is now a prominent decoration of his hall. A graphic account of this hunt appeared in our columns and was copied into many papers. It was on this trip that at the French Canadian village of St. Vital du Lambton, he met with Urban Therriault, a lineal descendant of the Acadians, whose ancestor, warned in season, escaped from Grand Prein 1755, carrying an infant son in his arms, fleeing through the forest from Nova Scotia to the St. Lawrence. Mr. Page secured the autograph of Mr. Therriault in the pocket copy of Longfellow which he always carries on his angling and hunting tours. On his return he called upon the poet at Cambridge and described the interesting discovery, to the delight of Mr. Longfellow, who added his autograph to that of the Acadian.

SPARE THE TREES,

IF we have the most perfect code of game and fish laws which it is possible to devise, and have them ever so thoroughly enforced, what will they avail if there is no cover for game nor water for fish? All the protection that the law can give will not prevent the game naturally belonging to a wooded country from leaving it when it is deforested, nor keep fish in streams that have shrunk to a quarter of their ordinary volume before midsummer. The streams of such a country will thus shrink when the mountains, where the snows lie latest and the feeding springs are, and the swamps, which dole out their slow but steady tribute, are bereft of shade.

Here is a field for missionary work, and by such work alone can this evil of tree-murder be checked. No law can be enacted that will oblige landowners to spare the trees which shade their ledges and swamps, but it is possible that they can be made to see that it is to their interest to do so. The thin soil of a rocky hill, when deprived of its shelter of branches, will be burned by the summer sun out of all power to help the germination of any worthy seed, or to nurture so noble a plant as a tree through the tender days of its infancy. But it supports only uscless weeds and brambles, Once so

denuded, it will be for many years, if not always, unsightly and unprofitable. Some swamps may be, at great expense, brought into tillage and meadow, but nine times out of ten, when cleared of the lusty growth of woods, they bear nothing but wild grass, and the streams that trickled from them all the summer long in their days of wildness, show in August only the parched trail of the spring course.

August only the parched trail of the spring course.

Our natives have inherited their ancestors' hatred of trees, which to them were only cumberers of the ground, to be got rid of by the speediest means; and our foreign-born land-holders, being unused to so much woodland, think there can be no end to it, let them slash away as they will.

Who has not seen in Yankee land, ledges and steep slopes that can bear nothing but wood to any profit, shorn of their last tree, and the margins of streams robbed to the very edge of the willows and water-maples that shaded the water and with their roots protected the banks from washing? Who has not known a little alder swamp, in which when he visited it on the first day of the season each year, he was sure to find a dozen woodcock? The first day comes some year and he seeks it as usual, to find its place only marked by brush heaps, stubs and sedges; and for the brook that wimpled through it in the days of yore, only stagnant pools. The worst of it is, the owners can seldom give any reason for this slaughter but that their poor victims were trees and bushes.

It is strange that the Yankee, with his proverbial thriftiness and forecast, should, when it comes to the proper and sensible management of woodlands, entirely lose these gifts. Why can he not understand that it is more profitable to keep a lean or thin soil that will grow nothing well but wood, growing wood instead of worthless weeds? The crop is one which is slow in coming to the harvest, but it is a sure one. and is every year becoming a more paying one. Furthermore, it breaks the fierceness of the winds, and keeps the springs from drying up, and is a comfort to the eye, whether in the greenness of the leaf or the bareness of the bough. Under its protecting arms live and breed the grouse, the quail and the hare, and in its shadowed rills swim the trout. If we would have these we must keep the woods a-growing. No woods, no game; no woods, no water, and no water, no fish.

THE HERBERT MONUMENT.

A S we have already stated in these columns, the Greenwood Lake Association proposes to erect in the Warwick Woodlands a monument to William Henry Herbert, best known to sportsmen as ''Frank Forester.'' To-day we print a letter from the Secretary of the Greenwood Lake Association, in which he invites other societies to join with his own in the project.

In connection with this letter of Mr. McDowell is published an account of a former Herbert memorial scheme, undertaken six years ago, at which time the "Frank Forester Memorial Association" was formed. The movement of 1875–76 was a success and a failure, just how much of each may be learned from the history as told in the account referred to.

It was certainly successful in securing the result for which it was primarily formed. Although the actual work of placing a stone over Herbert's grave was performed by others, none the less must the credit for the deed rightly be accorded to the members of the "Frank Forester Memorial Association," for it was they who impelled the citizens of Newark to the action taken in the matter.

The results of the subsequent efforts of the association show that it made a mistake when it adopted the ambitious scheme of a costly monument to be erected in Central Park. To touch the sympathies of men with the story of Herbert's unmarked grave, and to enlist their ready aid in making reparation for the negligence of family and friends, was an easy task. The response was natural and immediate. But the public was not willing to put thousands of dollars into a monument, the cost, character and purpose of which were to it matters of mystery. Indeed, the Memorial Association itself appears to have had no very definite conception of what it wanted to do, as witness the vague and glittering terms of its appeal. This circular failed to have the desired effect, even though bearing the names of many of the most prominent sportsmen of the day. Nor, while the funds already in the treasury of the association were enough to have erected the headstone "neither costly nor imposing," did they go far, when devoted by the committee to the endeavor to collect the thousands more needed for the "memorial work of art, worthy the genius of this Centennial year of American Independence."

The plain facts appear to have been that in 1875 and '76 the regard entertained by the public for William Henry Herbert was sufficiently strong to put a headstone over his grave; it was not strong enough to build for him a costly monument of granite and bronze.

Long Island Shooting.—The season just closing has been one of the best in many years for wild fowl shooting in the Great South Bay. The shooting is about over, we understand. We hope that the day is not far distant when the birds may be allowed to make their spring journey without disturbance. It is pleasant to notice that the remarks against spring shooting, which we recently expressed, appear to have the hearty concurrence and support of many of our older and wiser heads. If sportsmen do not exercise some self-control they will suffer in the future for their greediness.

The Sportsman Tourist.

FIELD SPORTS IN NEW ENGLAND.

The following paper was read by Mr. W. W. Colburn, of Springfield, Mass., before the Fish and Game League of New Hampshire, at its meeting at Nashus.!

The following paper was read by Mr. W. W. Colburn, of Springfield, Mass., before the Fish and Game League of New Hampshire, at its meeting at Mashuz.]

THE annual meeting of the Game and Fish League affords an excellent opportunity for sportsmen of New Hampshire, at its meeting at Mashuz.]

THE annual meeting of the Game and Fish League affords an excellent opportunity for sportsmen of New Hampshire, at the confer with each other on matters of common interest; to take an inventory of the various items that enter into the present account of field sports; to note the tendency or drift of public opinion in regard to sportsmen and their practices; to mark the recent improvements in the implements and accessories now deemed essential to the success and enjoyment of shooting and angling, and to observe carefully the outlook for the future of those who reckon field sports among their avocations, and who consider a day, now and then, in the open air, with dog and gun, or rod and reel, as not misspent, but devoted to rational, healthful, and honorable recreation. Accordingly, I have selected as a subject for brief consideration, 'The Status of Field Sports and the Outlook for Sportsmen in New England.'

At the outset, I notice that field sports, especially the shooting of game birds on the wing and over dogs trained to find and to point them, tave grown rapidly in favor in this country during the last ten years. This indicates a radical change in the general sentiment of New England. Not many years since it was not deemed reputable to spend much time with dog and gun. The practice of shooting and angling was formerly viewed wholly from the financial standpoint, and, as it did not pay directly in dollars and cents, was condemned and associated with the shiftless and thriftless 'me'er do weels' who often showed an excessive fondness for this unpopular and unremunerative sport. Now it is quite the reverse, and among the wealthy and fashionable young men of our large cities it is entirely earegle to take vigorous exercise i

Nunt.

What is the outlook in regard to legislation in the interests of sportsmen? On the whole it is as favorable as one could reasonably expect it to be when he considers all the circumstances bearing upon it. Legislation is of little avail, except as it accords with public opinion. If all who shoot or trap birds were unanimous in their belief that game birds should be captured only in the three fall months, and would support their belief by their practice, there would be no need of legislation for the protection of game. There is evidence that public opinion is becoming more favorable toward restricting the time for the legal destruction of game. The majority of those who shoot for sport keep the game law, although it may not in all respects accord with their own views. There are some who violate the law under the temptation of high prices offered by market men for early birds, and others anticipate the legal opening of the scason by a few days or weeks and pleud self-defense, fearing that the market-hunters will leave nothing for them if they await the legitimate season. This commercial and selfish sprit is antagonistic to true sportsmanship, but fortunately this spirit is suicidal, and its impolicy is becoming every year more manifest. Spring shooting should be abolished, and three months are long enough for the open season for any game.

The outlook in the direction of the accessories and conveniences in shooting is eminently satisfactory. Dogs of high breeding and fine training are abudant and can be What is the outlook in regard to legislation in the interests

shooting should be abblished, and three months are long enough for the open season for any game.

The outlook in the direction of the accessories and conveniences in shooting is eminently satisfactory. Dogs of high breeding and fine training are abundant, and can be purchased at lower prices than formerly. The numerous bench shows and field trials in this country during the last eight years have done much for the improvement of our dogs, especially of the two varieties that are indispensable companions and coadjutors of the wing shot, namely, pointers and setters. Much is now being done in the interests of the lively little cockers, which will be found useful in working the thick coverts which are the favorite haunts of the woodcock at some seasons inNew England. The fox hound deserves attention, and more account should be made of fox hunting. Foxes are numerous in the Eastern States, and the pursuit of them would afford good sport. By the formation of clubs, and the establishment of subscription packs on a small scale, the chase might be made a social amusement, and contribute more than it now does to the sports of winter. Guns of good quality as to material, proportion and workmanship, are now offered at prices within the reach of limited means. The last dozen years have wrought changes in the manufacture of guns in this country and England. The pistol grip, rebounding locks, patent fore ends, large firing pins, low hammers and invisible hammers are among the novelties of the last few years, and most of them are improvements and will remain. The invention of glass balls for trap shooting is worthy of notice. Clubs for the purpose of shooting these balls have been formed all over the country, and are good training schools for wing shots. Ball shooting is also free from many objections that lie against pigeon shooting.

All who have enjoyed hunting our noblest game bird must have lamented the rapid decrease of the ruffed grouse in many parts of the Northern and Eastern States during the last five years. There h

eggs by red squirrels.

No one of these alleged causes will satisfactorily account for the sudden and widely prevailing scarcity of these birds; but each has doubtless contributed its share in the work of destruction.

It is evident to the most superficial observer that the first-named has been constant and constantly increasing with the

increased popularity of field sports. It was noticed last fall in the western part of Massachusetts that grouse were more abundant among the hills and nountains than in the valleys. This fact supports the theory of a disease among the young birds on the low grounds, or that cold storms about the last of May or the first of June may have destroyed them, although I am not aware that the storms at that time of the year have been any more severe than in former years when the young grouse survived in large numbers. There is no doubt that red squirrels destroy the eggs and young of many small birds, but that they have had any large share in the destruction of the birds in question over the large area from which they have nearly disappeared, is scarcely credible. These squirrels, according to my observation, have been much less plentiful in New England during the last five years than they were in former years when grouse were abundant.

Although the woodcock have been hunted in season and out of season, they still come to us in fair though diminishing numbers each year. There are many localities in the Northern States where a few scattered broods are raised and remain unmolested through the summer. Many breed so far to the north as to be beyond the reach of sportsmen and market hunters, and are undisturbed except by their natural enemies. But when the "flight" time comes, they are obliged to run the gauntlet of the myriad of guns that are in the field in October and November. If they can escape the murderous fusikade to which they are exposed on their journey southward, many of them can find a safe retreat during the winter in the Southern States, large areas of which are comparatively inaccessible to hunters. If the time for shootfield in October and November. If they can escape the murderous fusilade to which they are exposed on their journey southward, many of them can find a safe retreat during the winter in the Southern States, large areas of which are comparatively inaccessible to hunters. If the time for shooting the woodcock in all the States should be limited to two months, and sportsmen would not be too desirous to make large bags, the prospect would be good for a fair number of these beautiful birds from year to year.

The beautiful passenger pigeon has become a rare bird all sportsmen are interested in its preservation. Wholesale netting in many States has nearly exterminated the pigeons in some localities and greatly reduced their numbers in others. If they should be protected for nine months in the year, as they ought to be, the close time covering their breeding season, there is no reason why they should not become fairly plentiful again, even in New England.

The experiment of introducing the migratory quail of Europe into this country remains in uncertainty as to its success, as it did one year ago. There are some who believe that the birds which were liberated here, or their offspring, are still alive, and that their migrations are already established. Many are still skeptical, and assert that the evidence of the success of the experiment is not decisive.

For one, I am glad that the attempt has been made, and hope that further trials will be made in this direction. The suggestion made by Mr. Win. M. Williams, of Springfield, Mass., that the birds be kept over one winter in confinement and let loose early in the spring so that the young birds may mature early enough to migrate southward before cold weather, is a good one, and worthy of adoption.

I regret to learn that the movements made during the past winter to bring our native quail (Ortga virginiarus) from the south have not been so successful as former attempts have been. If proper care is taken in caging and sending them and they are carefully housed and protected

ON AN OLD TURNPIKE.

PART I.

"I love it the better the older it grows For its quiet beauty and homespun air, Still blossoms, in corners, the sweet wild rose; And the birds are 't 'ome in its hedges there

And the folk one meets have a gentle look, As of those who never a sorrow knew: While, below the willows, a dreamy brook Runs soft and clear, as if fed with dew."

Runs soft and clear, as if fed with dew."

OF all who wait the oncoming of spring, I doubt not the angler and pedestrian are heartiest in its welcome. They, perfore, have hibernated and only in retrospection, or in anticipation have for long months followed their wonted recreation; and the exultant streams and tuneful groves find response in their now bounding hearts. Although winter may o'erleap his bounds and make the first weeks of spring very unlike its poetical and whilom gentleness, there are signs of the approach of balmy breezes, of verdant meadows and of budding tree and flower; so, with a spray of "fussy willow" in the hand, the child of nature may wave early and loving greeting to the coy maiden whose coming calls the violet and anemone from their hiding-places to grace and make memorable her progress through the land.

a spray of "nissy willow" in the hand, the child of hature may wave early and loving greeting to the coy maiden whose coming calls the violet and anemone from their hiding-places to grace and make memorable her progress through the land. Let us go forth and set ourselves face to face with nature while she is in her fresh and virgin beauty; ere the sun and shower and omnipresent decay make havoc with the delicate adornments that give promise of a lush summer-tide, and glowing harvest-home.

There are only two ways by which to enjoy, truly and fully, the country-side—the first on one's own legs, with no impedimenta, and subject only to one's own will and pleasure; the second, astride a good horse in close sympathy with his rider, and subject to no untoward pranks to distract his master's communion with the kindly spirit of nature, with which he holds tryst.

To enjoy the by-ways of field and wood, perfect freedom to halt or to advance, is absolutely necessary, and endowed with this blessing, with health and a good conscience, what unalloyed pleasure the wanderer a field may have "without money and without price!"

Clad in comfortable walking-gear, then, let us for a few miles, follow this old Turnpike—erstwhile a famous thoroughfare, from the coast into the peaceful bucolic regions of the midliand counties. It has been long deserted by ordinary travel, and few are the habitations to be seen for miles and miles of its length. The ruts are overgrown with turf, the stones in the pathway are covered with moss, and the alder and birch, here and there, are growing luxuriantly where the galloping stage-horses once made the dust fly from their hoofs. Is it possible, do you ask? "Tis the truth, my friend, that along this sequestered way the mail coach, the baggageman the pleasure-carriage, and the "up-country" team once bowled or jogged to the music of the guard's horn, the rattle of harness, and the merry talk of the passenger. Yonder cellar-hole was once covered by an old-time coaching-jun, and thereabouts were the shed

old days, which only the hoary-headed ones now wot of

old days, which only the hoary-headed ones now wot of from personal experience.

Think how gallantly the laden coaches were driven up to your threshold—'tis of stone and the only remaining relic of the rambling superstructure which, erstwhile, gave food and shelter to "man and beast"—the coachmen, in their course, showing their skill (as coachmen would do in those days) at "feather-edging" the slow wheels of the farmer's eart, or the sturdy post of the gateway! See the long line of passengers filing into the grateful warmth of the spacious inn, bearing each the burthen of a light or heavy heart! The spot seems haunted. There is a "poetry of the past" about this once busy spot which is bewitching to the contemplative and imaginative mind. But we may not tarry longer here; there are pleasant spots to see and flowers to cull ere we turn from this neglected byway into the pretentious highway of the present time.

Here, of all places, is the spot in which to pause and listen to the sweet sounds of awaking nature. Bird and insect

Here, of all places, is the spot in which to pause and insect to the sweet sounds of awaking nature. Bird and insect life, on such a day as this, is abroad on swift wing, and the songs which fill the air have a sweetness which the peace-tulness of the air intensifies and prolongs wonderfully. Not a trace of humanity can be seen on either hand, and one is ladd to since

a trace of numanity, led to sing:

"I am out of humanity's reach. I am out of numerical steach.

I must finish my journey alone,
Never hear the sweet music of speech—
I start at the sound of my own."

Never near the sweet music or speech—
f start at the sound of my own."

The cows, grazing in yonder field, betoken that a farmstead is not far off, but they seem contented with the foretaste of their season's browsing, and, at this moment, one
might esteem them as free from the care (and in too many
cases the abuse) of man as are yonder blackbirds, singing so
merrily. How restful is a lush neadow and a grazing herd to
the weary eye! The green grass, the feasting kine, with their
dun, piebald or black sides glistening in the sun; an old wall
in the foreground, and in the far distance a gently-flowing
stream, hard-by a goodly growth of wood, form a pretty
picture, and 'tis never so pretty as in early spring-tide, with
the balm of spring's air and canopied with the sky of spring.
Mark yon steep hill bereft of woody shelter. It is a blot
on this lovely spring day and our innocent "outing." The
hand of man and the ax has been lain heavily thereon, and
the violets, in profusion, were wont to bloom, and the
graceful fern waved in the breeze as in mockery of the
sturdy boughs, their shelter. How changed is all now! We
cannot well avoid the place, so let us hasten by and more
leasurely saunter in the vale beyond. Here are flowers, in
spring's perfection spread, and they are beautiful to see. Sit
down and muse awhile in this flower-strewn spot. Share
with bird and bee this brave show of beauty and innocense,
and drink deep of the tiny, perfumed cups still glistening
with the dew of night. Here Herrick night have written:

"What, were ye born to be

"What, were ye born to be An hour or half's delight,
And so to bid good night?
Tis pity Nature brought ye forth, Merely to show your worth, And lose you quite!

"But you are lovely leaves, where we May read how things have
Their end, though ne'er so brave;
And after they have shown their pride
Like you, awhile, they glide Into the grave.

To be sure the above was written to the "blossoms" of trees, but it seems, for the nonce and here, just as appropriate for these fragile bits of color, so coy, so sweet, so pure; smiling back to the sky, nodding in the breeze, and fading, like all mundane things, be they large or small, just as they begin to impress the susceptible heart with the depth and sweetness of Divine love and goodness. The lush life to be seen in the new leaves is pleasant to the eye, and their manifold forms and shades of green contrast very prettily. Here and there are tiny tendrils reaching forth for a support, and in their supplications seem pitiful. How blithesome is the note of the bobolink, and how saucy he looks, perched on yonder swaying twig! When the grass is high he loves to swing in the meadow, and his song then has an exultation in it, as if joy itself were pent up in his gay body and in spasms comes rippling from his throat. These hedges are famous haunts of the song-sparrow and of the catbird, and so seldom are they disturbed that they are "free of speech," as it were, and merely look upon our intrusion coming as the tardy listeners to their wayward notes. To be sure the above was written to the "blossoms" of trees

merey took upon our intrusion coming as the tardy listeners to their wayward notes.

Just where we now stand was once a toll-gate, and that ruin was the tollkeeper's shelter. Not even his ghost demands our pence, and we pass on, unchallenged save by the discordant scream of that fugitive bluejay, whose presence is oftener associated with the season of the falling than of the bridding leaf.

oftener associated with the season of the falling than of the budding leaf.

Beyond that quaint "turnstile" is the only house we have seen, and even it seems more like a ghost of a house than a comfortable inhabitation. Comfortable? Ah! time and neglect have fought against it—have gnawed into it, and have buffeted it with wind and weather till comfort must have forsaken it long since. It stands in a goodly spot and in its prime must have presented a pleasant picture of old-time home life to the passenger who passed its door, or to the guest who was set down thereat from the dusty coach or the modest chaise. The surrounding and outlying fields give no promise of a generous yield, for the soil is hungry and its need o'er long neglected. "Tis a scene in nature's luxuriance of a hand to hand struggle for a "bare existence;" yet, in its poverty, it is beyond expression picturesque and inturance of a nant to limit struggle to a "bare existence; yet, in its poverty, it is beyond expression picturesque and not utterly dolorous in its decay. Nature is striving hard to cover the wounds of time, and noss and lichen and clinging vine blend with the brown wood of gable and roof.

That child, with a bunch of violets in her hand, is the one bit of human cheer the place presents, and a painter might "go farther and fare worse" for a subject for his deft hand to ketch and color.

sketch and color.

sketch and color.

We will here turn and retrace our steps, trying to find some new delight that our dazed eyes o'erlooked in coming thus far to meet the spring, who

* * * * * "hast been a wanderer long, On many a fair and foreign strand; In calm and beauty, sun and soug, Passing from land to land."

CRUISE OF THE NIPPER.

IV .- SHE COMES OUT.

WHOEVER makes a lone cruise in a light cance through

WHOEVER makes a lone cruise in a light canoe through the Adirondacks will be nearly certain to take in Long Lake. He can hardly avoid it. He will do well to give to it as much time and attention as he can afford. No one tourist can even approximately go over what I may call the Long Lake region in a three months' cruise. There are more than fifty snug nooks and camping spots on the shores of the lake proper. There are twelve small lakes and ponds easily reached by easy carries from the main lake. The quiet, shady, peaceful, tonely retreats that may be picked up and occupied by the way-wise tourist are beyond computation. It is true there is a settlement, a hotel and a post office on the west shore of the lake. Also, a road. But an hour's paddling takes you quite away from civilization. You can choose your ground where to camp, and be utterly alone for a month, or an entire season, if you choose.

Paddling across the lake from Kellogg's, one-half mile brings you to the inlet of Clear Pond. About the mouth is grand fishing for pickerel. A little more than a half mile below is the mouth of Big Brook, also an excellent fishing ground for pickerel, and you may take the much despised but toothsome bullhead, or catty, in plenty. You may go up either of these streams, with a few carries, to Little Tupper Lake, going through Mud Pond, Little Slim and Slim Pond, with Stony Pond at last. And all the way you may select camping grounds that ought to more than satisfy any man who is seeking healthful rest and sylvan life.

I had formed an adverse opinion of Long Lake. I had thought it too civilized. Too many guides. Too much landlordism. Too much cost for the accommodations. Every day that I was on Long Lake, the hotel detailed employes to go around the village with guests, to quarter them in private houses. Why so few of them found quarters at the old and time-honored house of Sabattis, was because the house of Sabattis was soo prolific of young half-breeds. There were nine of them when I was there. One little blue-eyed dea

It was on a bright August morning that I paddled across the lake from Kellogg's, with a notion of going to Little Tupper, via Clear Pond, etc. I had heard all the guides' stories about the introduction of pickerel to Long Lake. How Lysander Hall, and a guide by the name of Shaw, had been prosecuted for crusting deer, and in revenge, had brought pickerel from the "eastern side," If so—and I think it is—they "builded better than they knew." At that time the lake trout were almost a myth. To-day I can take more pickerel and other toothsome fish than a camp of six hearty men can eat from day to day.

Now, my sporting friends, will you heed a little logic from the standpoint of fifty years' experience? You work eleven months in the twelve at desk or bench. All through the year you are looking to an outing; a chance to get away for one, two or three weeks' vacation. You know, and I know, and we fill know, that you need it and descree it. But why in the name of all sense and reason should you boast of "bags" and "baskets?" About how much, on an average, do you require as animal food? Say, in twenty-four hours? If you kill more, why and wherefore? The man who brags to me of "bags" and "baskets" just tempts me to "shoot him on the spot."

With my hand on my mouth, and my mouth in the dust

wherefore? The man who brags not loags" and "baskets" just tempts me to "shoot him on the spot."

With my hand on my mouth, and my mouth in the dust, I admit that I shot thirty-six deer in a season. I deserved to be hung for it. Again, in Eaton county, Mich., I killed seventeen deer. With these exceptions, I have never killed more than ten or twelve yearly. And yet my conscience squirms. Why should I ever have killed a deer that I did not need for immediate use? Why, in the name of heaven, was I looking for market prices and quotations? Well, I was young. I knew no better. To-day, the mother doe or the spotted fawn can pass me on a runway as safely as my own mother.

Last summer, among the duffle that I took into the North Woods was my favorite single-barreled.

own mother.

Last summer, among the duffle that I took into the North

Woods was my favorite single-barreled hair-triggered rifle. With it I have driven the nail five times in succession at the distance of one hundred feet. At one hundred yards the distance of one hundred feet. At one hundred yards the deer would be lucky that got away from me with a standing shot. Now, when the season opened, I could have had an open standing shot any morning when I chose to seek it.

I took in just twelve bullets.

I took in just twelve bullets.

I brought the entire twelve home again. I did not load the rifle once last summer. There was no occasion. At Mr. Lamberton's camp, at Ed. Arnold's, at the Pratt camp, at Sam Dunakin's, and other places, I could get a piece of venison when I ne-ded it. What earthly excuse had I for sending a bullet crashing through the bones and quivering fiesh of a bright-eyed, graceful denizen of the woods? And so the old rifle rests by the ingle-lug, and I only take it out once a month to keep my shooting up in offhand practice, which is, after all, the only rifle practice worth talking about. And just here and now I want to put in my oar on offhand shooting. Offhand shooting is not done by sticking a hickory wiping-rod in your left pocket, extending the other end, and gripping rod and barrel together to steady the hund. It is not done by twisting your body out of all grace and comeliness to get a "hip-rest." It is done by taking a firm, free stand on both feet, drawing the rifle to a graceful and natural position, with both elbows free of the body, getting the best bead you can, and cutting loose at the right instant. That is offhand shooting. As for all rests, they are well enough in sighting a gun, but once sure that your sights are plum centre, take no nore resting shots. It may be good civil engineering, but is unworthy the notice of American rillenan. This by way of digression.

At the mouth of Big Brook I tried the pickerel, with light tackle and an Soz. rod. With a two-oared skiff and strong

rilleman. This by way of digression.

At the mouth of Big Brook I tried the pickerel, with light tackle and an 80z. rod. With a two-oared skiff and strong tackle I would have lain just inside the lily pads, and cast outside into clear water. With a 16lb. canoe and a light trout rig I thought it wiser to lie off about 40ft, in clear water, and cast toward the thick mass of lily pads, hoping to stop any fellow I might hook before he could get into a bad tangle among the lily stems. It worked very well at the start. A lively bright-sided little fellow of a pound and a half took the lure handsomely, almost at the first cast, and got the canoe to the fringe of lily leaves that covered the water like a carpet before I could get him in. I laid off

again and soon had the mate to him. The sport was fine. I began to wake up. Paddling up a few rods, off the deepest part of the inlet, I began to cast with a bigger bait and deeper trolling. And then and there I saw a huge pickerel driving straight at the lure, and in the morning light showing distinctly as though lying on the beach. I might easily have jerked the hooks away and saved my rod; but I was in the humor for a racket, so let him snap his huge, sharky jaws over hooks, bait, and more than half the strong wire snell, which he did, and turned with a heavy swirl for his mysterious cavern among the lily roots. I gave him the butt, (I think that is the correct term) and the brave old rod took the form of a loop for a few seconds, then the top joint broke down to a right angle, the canoe commenced a lively waltz into the lily pads, and the next minute I was sitting in the canoe holding a line in my hand that ran to the bottom—straight up and down—the broken rod dragging overboard, and a wrathy angler trying to raise a big pickerel by the handline dodge. It didn't work well. Somehow he seemed to have collateral security on the heavy toad-lily roots at the bottom. First he would ereep slowly away with a yard or two of line, then I would as slowly get it back inch by inch. I gathered loose line, got a long bight, and passed it under a rib of the canoe, hauling taut and making all fast. Took in the old rod, filled a pipe, and made a "dead set" at patience.

Once, under similar conditions, I saved a twenty-two pound maskalonge in High Bank Lake, Michigan. I thought I might tire out this fellow, but he was not to be had. I spoke of light tackle. The rod was light, made by Heyling of Rochester. It was a beauty in '60: in '82 it may have been a little dull and dead. The line was the taper, waterproof, in common use at present. The wire snell and hooks had been tested at forty-four pounds. For two mortal hours I sat in that eggshell, irving all sorts of dodges to start my customer. Then my patience went by the board.

pounds; certainly more than eight. He weighed enough to wreck my tackle and rod.

I gathered and stowed the wreck of rod and line. I was not so very sorry. It was quite an experience, and a partial excuse for backing down from a trip I was physically unfit for. I paddled across the placid lake to Kellogg's, and asked for mail. There was none. I was glad of it. No news is good news. I had a set of tin dishes, that I think can hardly be beaten. They were made without handles, or wire in the rims, nesting together, and filling all requirements of boiling, frying, and baking. The old shanty tent, that had often sheltered me and a couple of friends through a rainy night, and only weighed four and one-quarter pounds, that could be put up on an emergency as quickly as I could cut a twelve foot pole; this and these I gave away, reserving a single dish in which to make coffee.

Once, I would not have believed I could pass "Owl's Head," without ascending it to the uttermost peak. Now, I said, the view of a mountain-top from the bosom of a placid lake, is much finer than a view of many lakes from the top of a cold, windy, cheerless mountain.

I was getting weak—demoralized, may be. I paddled up Long Lake, took the carries slowly and wearily, and brought up at Leavitt's, late in the afternoon of a model August day. Even as I went over the carries, Charles Parker, with his wife and boat, was lurking near the trail; and his Nemesis, in the person of Warren Cole, was also on his very heels. When Parker launched his boat at the second carry, Cole was there, and ordered a hatt. Parker dodged behind his wife, and tried to get off. Cole shot him. The public know the rest. Going up the carries, I was passed by two guides, with their boats and parties. One of them carried a boat that struck me as being the best guide-boat of the Long Lake model I had seen in the North Woods. It would carry three persons with baggage, was finished in oil and vannish, and weighed forty-eight pounds. Had it been put together with white cedar strips in

suited me. The table was excellent, as I have always found it. And an open camp with a fire in front is breezier, freer, healthier than any indoor arrangement for sleeping. I pre-empted a corner of the "guide's camp," mended the old rod, and spent days paddling around the rocky shores of mainland and island, tly-fishing for bass. They nearly always rose to a red ibis or brown hackle, though here, in Pennsylvania, we can hardly coax the small-mouth to notice a fly. With us, he runs entirely to crayfish and dobsons. I shall come to understand his various ways in various waters—about as soon as I solve the grouse problem. It was on a bright morning in August that I let go, and started for Third Lake, leaving my dunnage, save a light knapsack, to be taken charge of by "Slim Jim," who had gone across to the Saranaes. The morning, the lake, the scenery, all would justify a younger man in a little enthusi-astic description; and it was not altogether lost on me. Buss were jumping all along the rocky shores, a brace of hounds—although it was out of season—were sending the deer along the high ridge to the southward at a killing pace, and I met two guide boats with parties who had been out all night, floating. Each party had a deer, and I was pleased to see that they were both bucks. I reached Brown's Tract Inlet before the west wind commenced to blow—as it does about every fair day—and, going up that very crooked stream, again saw the disappearing fish among the lily pads; the same that had puzzled me before. But I was too weak and listless to try them without bait or fly.

appearing fish among the nly pags; the same man had puzzled me before. But I was too weak and listless to try them without bait or fly.

Half way up the inlet I came near getting cut down by a seventeen feet Long-laker. She was coming down at a rapid rate, and just as I was rounding one of the numerous short bends, her sharp iron prow came in sight at steamhout speed, pointing directly at my midships. The old whaling instincts came to the surface at once. I yelled "starnall," dropped the paddle, seized the cut-water of the threatening boat, and held her off with all my strength. The guide behaved finely. At the first sound of my voice he dipped his oars deep, and backed for all the ash was worth. But she was a large boat, coming down-stream under strong headway, with three men and baggage, and not to be stopped instantly. But her headway was deadened. She came on until her stem pressed leavily on the side of the frail canoe, bending it inboard. I was pressed and crowded as hare among march grass and bushy tangles of middly vegetation; then she stopped, receded; the guide dipped his oars and dashed away. I was faint, but her on with all my strength. The guide behaved finely. At the first sound of my voice he dipped his oars deep, and backed for all the ash was worth. But she was a large boat, coming down-stream under strong headway, with three men and baggage, and not to be stopped instantly. But her headway was deadened. She came on until her stem pressed heavily on the side of the frail canoe, bending it inboard. I was pressed and crowded as hare among march grass and bushy tangles of middly vegetation; then she stopped, receded; the guide dipped his oars and dashed away. I was faint, but the canoe was safe. No word was spoken. But that guide

has impressed me as a cool capable fellow. Getting your canoe crushed in a lonely forest is quite as bad as being "put a-foot" on the Western plains, through losing your

broncho.

Though my entire load—cance and knapsack—was than 26lbs.; the carry from the inlet to Eighth Lake trying, in my weak state.

than 2010s.; the carry from the infect to Ergunt Lake was trying, in my weak state.

Alva Dunning had loaned me the key of his camp on the Eighth, and I rested there a couple of hours, taking a lurch from his stores, and leaving the key hidden at the root of a stump as agreed on. The Eighth was a beauty on that bright, warm day. There was not a human being save myself about the lake. The water, lying as nature made it, was ruifled into breezy waves, capped with white. But for the quavering cry of a solitary loon and the gentle lapping of the water on the island shore, there was no sound, and the next relay would take me to Seventh and Sixth, with backwater and dead timber lines, decaying vegetation, nauseous smells, and all the curses that come of destroying forest lakes and streams for man's selfish greed. [N. B. Does it ever occur to the average guide that he has a better moral right to explode a can of dynamite under one of these dams, than a selfish monopolist has to poison the air that men, women, and helpless children are forced to breathe and drink'] To say nothing of the destruction of fish, the converting of a beautiful sheet of water into a scene of desolation that will say nothing of the destruction of fish, the converting of a beautiful sheet of water into a scene of desolation that will ast long after the porcine instigator has rotted in that wil last long after the porcine instigator has rotted in his grave and his ill-gotten gains are scattered by his pampered worth less offspring. "The evil that men do, lives after them." As it ought.

Let me pass quickly over the desolate Seventh and Sixth. Let me pass quickly over the desolate Seventh and Sixth. They were of course worse than when I cruised up the "Chain." The air at the foot of Sixth was sickening. One year before the Sixth would have been a pleasant location for an all summer camp. At the foot of Sixth the gate was up, and a broad sheet of white, foamy water was rushing like an arrow toward the Fifth. Of course this affected the five-layer below.

lower lakes.

I found the camp at the foot of Fifth lowered by the rush of water, for which I was sorry, for there was heavy thunder and an ominous looking cloud in the southwest. But the distance is short between Fifth and the "Stormy Fourth," as Colvin calls it. And the outlet was rushing like a milltail. I jumped the canoe, and the only use I had for the paddle was in holding back and dodging dangerous obstructions. In less than five minutes I was on Fourth Lake; and as I saw the black, whirling cloud and listened to the heavy, stunning peals, I thought it as well to put on a little extra muscle for the Pratt camp, half a mile below. As I rounded the point on which the camp is located, I saw Tom Jones and another gentleman—stranger to me—with Dick Cragoe, their guide, sitting on the porch, watching the coming storm. Dick, in accordance with North Woods etiquette, came down to "land" me, and it struck him as a good idea to also house his own boat. And hardly had we made all snug when the tornado swooped down on the lake. It was sublime. I have been in a white squall in the tropics, in a pampero off the Argentine coast, and have seen the terrific electric storms of the West. But I never saw so heavy a sea kicked up on an inland lake at such short notice. In two minutes the water was dashing up the sloping landing to the door of the boat-house; sharp, steep, white-crested waves were chasing each other like racchorses; the gale tore their spumy tops off and sent them whirling to leavard in a white mist of blinding spray; tall trees a century old were seized by the hair of the head and dashed to earth, while the zig-zagging of lightning and the heavy bellowing of thunder were just the adjuncts to make the scene perfect. When the storm was at its fifercest Dick Cragoe lad his hands full to free, with mop and broom, the sitting-room from water that drove in under the door. lower lakes.

I found the camp at the foot of Fifth lowered by the rush

juncts to make the scene perfect. When the storm was at its fiercest Dick Cragoe lad his hands full to free, with mop and broom, the sliting-room from water that drove in under the door.

In twenty minutes the storm had howled and whirled itself away to the northeast, the sun came out warmand mellow, the air was a delight, and the lake subsided to a placid, sleepy roll, as quickly as it had risen. It was a model evening for a cruise, and the Pratt camp organized for a thirteen mile row down to the Forge House, (foot of First Lake.) I paddled out for Third Lake, and was soon passed by the strong pull of Dick with his party. Fred Hess, another guide, came out from the Fifth, where in a thicket he had been dodging the storm. Two other guides, "Slim Jim" and Fred Rivett overhauled me soon after. They too had been dodging under their boats in the wood, between Fifth and Fourth Lakes. It was nearly dark when I halted at £d. Arnold's. His hostelry was crowded to its utmost, and his grounds were jubilant with lively parties and well-paid guides. It was pitch dark when I arrived at Perrie's on Third Lake. The camp was overrun with boarders, parties, and guides. There was not spare sleeping from for a cat. He assured me that he had been sleeping for a week on tables, chairs, trunks, any place where he could get a few hours' nightly rest. A. G. Buell, who owns the Third Lake House, had a newly made fragrant bark camp, and was alone. He invited me to stuy with him during my sojourn on the lake, and divide any sport or work that might turn up. As I like cooking and he detests it, we managed to make the arrangement very satisfactory. For a few days I fished, frogged, cooked, picked berries, climbed hills, paddled and doctored. All in valn. I grew weaker day by day. I was getting to the point where the grasshopper becomes a burden. I had sought the wilderness for health. I had lost instead of gaining. I had found many others with a similar record, and also many who claimed to have been decidedly benefited.

I had planned a cr

Perhaps at some time in the near future, I will have a word to say regarding the cost, healthfulness and pleasure of a trip to the North Woods, as compared to a tour among the mountains of the Upper Susquehanna.

Matural History.

WINTER NOTES.

The Winter of 1881-2 in Lewis County, Northern New York.

BY C. HART MERRIAM, M.D.

THINKING that a brief summary of the peculiarities of

the past winter in Lewis county might peculiarities of the past winter in Lewis county might prove of interest to some of your readers, I have condensed, for their benefit, the following notes from my journal:

In Northern New York the winter of 1881–2 has been remarkable for its mildness. Not only has the temperature averaged much higher than is usual at this season, but there has also been a marked absence of those rapid extremes of the region in the property of this region. has also been a marked absence of those rapid extremes of temperature which are so characteristic of this region in winter. This is best shown by an outline of the climatic conditions during each winter, and it is hardly necessary to observe that in this latitude the winter embraces four full months, and generally laps over at both ends.

DECEMBER.

The last month of 1881 was, in many respects, a most extraordinary one, and, taken all in all, resembled an average April more than any other month. During the early part of December there was some fair sleighing on the hills, but none in the Black River valley. Rain fell almost continuously on the 18th and 14th, and left bare ground throughout the county. From this time on, the weather was particularly suggestive of early spring. Between Christmas and New Years there were so many heavy rains that the rivers and streams overflowed their banks as in our spring freshets. At the close of the month the temperature fell in the morning of the 31st, the rain had changed to snow, and at night four inches covered the ground. The mercury did not fall below zero of the Fahrenheit scale (17.77 C.) during the entire month, and only reached this point once—on the night of the 10th (a clear, cold night, illumined by a light aurora. I counted twelve meteors in half an hour that evening). The highest temperature was 45deg. Fah., and was attained twelve.

twice. Crows remained here in considerable numbers throughout the month. I shot an adult male butcher bird (Lanius borealis) on the 3d, and saw a handsome black rough-legged hawk (Archibuteo lagopus, sanctipohannis) as late as the 21st. Snow buntings (Plectrophanes nicolis) were first seen on the 11th. on the 11th.

JANUARY.

on the 11th.

JANUARY.

January closely followed December, as is customary about this time of year, and this sequence of events covers the points of resemblance, near and remote, between them. The fact is, that pretty much all our winter seems to have been crowded and compressed into the one month, and it was not big enough to hold so much, and part escaped, and the result was that no one complained that January was not wintery (you may leave off the y if you like) enough. The thermometer recorded a minus temperature for five consecutive days, as well as for several that were not consecutive. As early as the 4th of the month the mercury got down to —18½ deg. Fahr, and the highest noon temperature that day was 6deg. below. But this was only preliminary. Jan. 23, the Fahrenheit tube showed a temperature of —20deg, at 7 A. M., —11deg, noon, and —25½deg, at 10 P. M., and next morning (Jan. 24) of —31deg, (or 35deg, below, centigrade) at 7 A. M. These temperatures are by no means low for this section of country, and almost every winter the mercury falls to or below —40deg. Fahr, in our neighborhood, and it (the mercury) has been known to freeze. Still, the balance of this particular winter has been so warm that even—31 deg. Fahr, seemed quite chilly.

There was not a foot of snow on the level at any time during the month—nor indeed during the entire winter. But the wind kept pace with the temperature, and storm followed storm, and gale followed gale, till what little snow did fall was piled up in drifts alongside fences and in other suitable spots. On the 11th inst. aloud six inches of snow fell during a gale from the west, and it lay in drifts across the roads on the hills six and eight feet deep!

During the severest and most tempestuous weather, I noticed the red-headed woodpeckers at work amongst the beeches, with no diminution in their numbers. Crows were seen from time to time, and flocks of snow-buntings (Pleetro-phanes nivalis) every few days. The only other birds seen in January were the chickadee (Parus at

(Picus pulsesons and P. villosus), and partridge (Bonasa umbellus).

Black and gray squirrels (Sciurus carolinensis, var. leucotis) were "out" except during the severest weather, and on the morning of January 25 I saw seven grays and one black picking beechnuts together from the trees about our house. They were often persecuted and driven off by the red-headed woodpeckers (Itelanerpes erythrocephalus), who evidently regarded them as trespassers upon their feeding ground. I have previously called attention to their habit of pestering squirrels, and mentioned an instance where I saw a pair of these handsome birds knock a full-grown black squirrel from the top of a high elm tree (Bull. Nutt. Ornith. Club, Vol. III., No. 3, pp. 125-6, July, 1878). Red-squirrels (Sciurus hudsonius) were common throughout the month. Skunks (Mephitis mephitica) were out a few times when the weather moderated.

FEBRUARY.

As already observed the change from December to January As already observed the change from December to January was sudden and great, but not so marked was it as the difference between January and February. Never before, "within the recollection of the oldest inhabitant," has a February in Lewis county been so mild and springlike, and in every way unwintery as the past. During the middle part of the month warm rains were of frequent occurrence, and left almost no snow along the Black River Valley. Even on the hills, plots of bare ground were so large and so numerous that sleighs were of necessity abandoned, and wheeling became the only means of terrestrial navigation. This state of things continued till the 20th, when a snow storm commenced, and within forty-eight hours a foot of snow covered the ground. This made excellent sleighing for a few days, but it settled, melted and evaporated, till in a week's time little was left.

little was left.

This unprecedented mildness of the weather had, as would be expected, its influence upon the mammals and birds to be found here. Both skunks and 'coons (Procyon totor) were roaming about nights during nearly the entire month, and even chipmunks (Tumias striatus) and woodchucks (Arctomys

monax) were seen at various times. Black and gray squirrels (color varieties of the same species) were out almost every day, stealing beech nuts and running away from the redheaded woodpeckers, that chased them with commendable perseverance and energy. Indeed, the redheads evidently perseverance and energy. Indeed, the redheads ovidently claim, as their exclusive monopoly, the privilege of gathering beech nuts from the trees in winter, and attack with great

claim, as their exclusive monopoly, the privilege of gathering beech nuts from the trees in winter, and attack with great tury all intruders.

Flocks of snow buntings (Pletrophanes nivalis) have been common all the month. In one of them I saw true Lapland longspurs (P. lapponicus) on the 15th. Horned larks (Eremophilue alpeatris) were first observed by me on the 12th, and were seen nearly every day afterward. Several were sometimes found together, but they generally went in pairs, and were commonly met with in the fields and on the fences bordering the roads. Often they would run along for some distance on the snow and ice and mud in the road, in front of one's horses, before taking flight. They are not at all wild, and usually sit quietly on a fence rail while wagons are passing. They make a harsh, squeaky noise that can be heard at quite a distance. It sounds very much like the noise made by a sliding barn door when the wheels squeak. In driving about the country one often hears this note, and finds its utterer perched on some rock or fence post near by. To us in Lewis county there is something peculiarly attractive about the horned lark. It is only six years since it was first observed in our section, and it must be that the novelty of its appearance here has not yet worn off.

Small flocks of tree sparrows (Spizella moniticola) were noticed at different times on and after Feb. 8. Robins were seen in the Black River Valley as early as the middle of the month, and occasionally afterward, but were decidely rare.

noused at different times on and after Feb. 8. Robins were seen in the Black River Valley as early as the middle of the month, and occasionally afterward, but were decidely rare. A few yellow birds (Astrogatinus tristis) were here on the 18th and 24th. They wintered in the evergreen forests along our eastern border. I saw a couple of male bluebirds on the 28th.

MARCH.

So far as temperature is concerned March has been unusually mild, and it has lacked the sudden and rapid extremes which generally characterize it in this climate. The thermometer has only been as low, even as zero, of the Fahrenheit scale (17.77deg, C.), twice during the entire month ()deg. F. on the 13th, and 2deg. F. on the 25th). The highest noon temperature in the shade was 50deg. Fah. (March 2 and 27). There were seven days during which the mercury remained above the freezing point of water for the entire twenty-four hours, and ten days during which it remained at or below this point, ()deg. C., 32deg. F.). The average noon temperature (taken in the shade at 1 P. M.) for the entire month was 34deg. Fah., and the average temperature for the whole twenty-four hours for the entire month was 26deg. Fah.

March brought with it a flood. Rain commenced falling before midnight the last day of February, and kept on continuously and without intermission till the following night. How much water fell I do not know, but, with the snow which it melted and carried off, it created a general flood. All low lands bordering our streams and rivers were overflowed, and in many places huge masses of icc were heaped upon the roads and meadows.

nowed, and in many places huge masses of ice were heaped upon the roads and meadows.

We had several snow storms in March, but at most a couple or three inches only fell at a time, and the ground has been mostly bare during the greater part of the month. There has not been enough snow for really good sleighing for a single day of twenty-four hours in the entire month, and the wheeling has been execrable. Of blustering storms and gales we have had no lack, and in this respect alone have we had a verifable March.

Chipmunks have hear component and most had a longer than the same component and most had a serial based on the same component and most had been component and had been

have we had a veritable March. Chipmunks have been common, and woodchucks have been seen from time to time. I am inclined to think that our boreal visitors, the snow-bunting, (Piectrophanes airutis) enjoy a little warm weather occasionally, for they have been particularly abundant throughout the month, and I saw a flock as late as the 28th. Horned larks (Eremophika) were common until the 25th, since which date, for some unactivities of the same statement of the same common until the 25th is not which date, for some unactivities. our boreal visitors, the snow-bunting, (Peterophanes airoits) enjoy a little warm weather occasionally, for they have been particularly abundant throughout the month, and I saw a flock as late as the 28th. Horned larks (Exemophila) were common until the 25th, since which date, for some unaccountable reason, I have seen none, and I have been constantly on the road, too. A partridge (Bonast umbellus) that has remained about our house for several years commenced drumming on the 25th. Robins were seen every now and then, but did not really become common till the 25th. The little colonies of the red-headed woodpeckers that have wintered with us commenced breaking up into pairs about the middle of the month. On the morning of March 3, during a piereing northwest wind. I saw a flock of thirty pigeons (Extopistes migraturius) flying westward. Large flocks of them were seen on the 21st and 22d, and at other times by other parties. March 5 I saw a small flock of male red-winged blackbirds, (Avelwas pheniceus) and on the 10th a flock of thirty-two, also all males. They have been observed several times since. I saw two meadow larks (Narvella magna) on the 27th, and three more on the 31st. Did not happen across any crow blackbirds (Quissellus) till the 28th, but they were probably here some time prior to this date. Juncos (Inneo-hyemalis) were first noted March 28th, and immediately became very abundant. White-throated sparrows (Zonotrichia albicolis) appeared with them. During the night of the 28th the south wind brought with it an influx of song sparrows (Melospiza fuscilation) on the 31st. Sparrow hawks (Paleo sparcerius) and read-shouldered hawks (Dateo lineatus) were first seen by me March 29th. The latter had probably been about for a week or ten days, for I had several times heard people remark that they had seen a 'hen hawk' lately, and I have not seen a red-tailed hawk (Buteo borealis) ver. I can but believe that both species have been here for some little time, but they must have been on the road every day, and ha

March 30 I explored a small stream, turning over rocks and dredging the bottom with a scoop net. The only things found were a few white grubs, a middle-sized crayfish (Cambarus) and a couple of young salamanders about an inch and a half long, with external gills. I believe them to be Ple-

thodon erythronotus, but they are too immature for positive identification.

GENERAL SUMMARY.

GENERAL SUMMARY.

The station at which the temperatures mentioned in this paper were taken is Locust Grove, and the entire communication pertains to the middle district of the county, and does not include its eastern border, which lies within the confines of the Adirondack region, and is characterized by a very different fauna.

To recapitulate: We find that the past winter, in Northern New York, has been one of unusual mildness, and that at no time has more than a foot of snow covered the ground, while much of the time a large portion of the surface has been absolutely bare. There have been many heavy rains, so that the total precipitation has probably not fallen short of the average.

The mammals that were to be found in the middle district

the county throughout the entire winter are: The common fox (*Vulpes vulgaris*). Least weasel (*Putorius vulgaris*). of the county throughout the entire winter are:
The common fox (Vulpes vulgaris).
Least weasel (Putorius vulgaris).
Lemine (Putorius ermineus).
Skunk (Mephitis nephitica).
Hairy-tailed mole (Scapanus brewert).
A shrew (Vosorae sp.—).
Flying squirrel (Sciurus errolinensis, leucotis)
Red squirrel (Sciurus hudsonius).
Gray or black squirrel (Sciurus carolinensis, leucotis)
Red squirrel (Sciurus hudsonius).
Jumping mouse (Zapus hudsonius).
Jumping mouse (Zapus hudsonius).
Common rat (Mus decumanus).
House mouse (Mus musculus).
Deer moouse (Hesperomys leucopus).
Long-eared mouse (Erotomys rutitus, Gapperi).
Meadow mouse (Arvicola riparius).
Muskrat (Fiber zibethieus).
Porcupine (Erothizon dorsatus).
Northern hare (Lepus americanus).
Besides the above, the raccoon (Procyon botor) was "out" in December and again in February. Chipmunks were seen as late as the middle of November, and came out again in February.
Voodchucks (Arctomys monax) disappeared, as is their custom, about the 20th of September, but were seen again early in February, since which more and more of them have appeared on the surface.
The birds that have wintered in the middle section are:
The chickadee (Parus atricapillus).
White-bellied nuthatch (Sitta carolinensis).
Snow-bunting (Pletrophanes aivalis).
Crow (Corvus frugivorus).
Buejay (Cymnocitta cristate).
Hairy woodpecker (Picus pubescens),
Red-headed woodpecker (Picus pubescens),
Barred owl (Strin nebulosa).
Saw-whet owl (Vyctale acadica).
Screech owl (Seps asio).
Great horned owl (Bubo virginianus).
Goshawk (Astur atricapillus).
Partridge (Bonasa umbellus).
A few snowy owls (Ayetas scaudiaca) were killed in October and November, but I have not learned that any were seen

Partridge (Bonasa umbellus).

A few snowy owis (Ayetea scandiaca) were killed in October and November, but I have not learned that any were seen after November 13. Nor did I see a single butcher bird (Lanius boradis) between the 3d of December and the 1st of April—saw two males April 1. It is noteworthy that certain species that frequently winter with us have not been seen at all during the past season. Among such may be mentioned the red-bellied nuthatch (Sitta canadensis), pine bullflinch (Pinicola enucleator), pine linnet (Chrysomitris pinus), and the common redpoll (Ægiothus linaria).

There was as much snow here the middle of April last year as during the most of March this year, and the following table shows the difference in the time of arrival of a few birds for the two seasons:

for the two seasons: March 18 March 20 March 16 Junco. Red-shouldered blackbird. Meadow larks.

Woodcock and Telegraph Wires.—Rutland, Vt., March 31, 1882.—The first woodcock of the season was found underheath the telegraph wire yesterday with a broken wing. It seems to me unusually early for them to appear in this latitude; is it not so? By the way, who can explain the reason why woodcock above all other birds are so fascinated by telegraph wires? They are found every season in considerable numbers, killed or crippled by having flown against the wires, but we hear of no other birds suffering from the same cause. My plant of quail are doing finely in their cages, only one has died so far, and the rest seem perfectly healthy.—Verde Monte. [One reason for the great destruction of woodcock by telegraph wires as compared with birds of other species, is the fact that they migrate by night and fly one, so that they are especially exposed to danger. Still, other birds suffer, though probably not to any serious extent. A case is on record in Forest and Streem of a swan being killed in this way during foggy weather. Those species which migrate by night are often so killed; among them robins, swallows, martins, sparrows and other small birds. Dr. Coues reports that on the Western plains, where telegraph wires have been newly erected, many species of birds are thus killed; among them shore larks, lark buntings and meadow larks].

WITH THEIR TAILS IN THEIR MOUTHS.—Several years since I owned the fishing privilege of a fine trout pond in Connecticut. The pond was some twelve or fifteen feet deep and covered one and three-quarter acres. The latter part of one winter, in a time of freshet, and while the water was covered with a heavy body of ice the dam suddenly broke, allowing the water to rush out in a body, sweeping away with it all my trout, and leaving only a swift running brook where the pond had once been. An examination of the meadows over which the torrent of waters had swept, revealed large numbers of dead shiners and minnows, but never a trout. I suppose while these little fish were destroyed by the swift rushing water and debris, the more active and sagaicous trout were able to escape without harm. When the ground had settled in the spring the dam was rebuilt, and now comes the curious part of my story. When the water again flooded its former bed, large numbers of cels floated to the surface, all dead, all curled up like hoops, and nearly all with their tails in their mouths. In cases where the tail was not in the mouth it rested against the head or was near the with their tails in their mouths. In cases where the tail was not in the mouth it rested against the head or was near the mouth. Whether they pass the winter in this way or had just put themselves in this form as they began to feel distress from the gradually hardening mud in which they were imbedded, I leave it for those familiar with the habits of eels to say.—F. T. (Providence, R. I., March 24, 1892.) [We should be glad to hear from the "cel-sharps"].

EARLY BIRDS IN MAINE. - Our birds have been arriving EARLY BIRDS IN MAINE.—Our birds have been arriving from the South earlier than usual this season. Besides the first arrivals noted in March, the blue snowbirds, robins, bluebirds, purple finch, rusty grakle, fox sparrow, song sparrows, and yellow rumped warblers, of our common birds, I saw a fly-catcher April 2, and two warbling vireos. April 6 I first observed the osprey, Canada tree sparrows, white-throated sparrows, hermit thrush, and white-bellied swallows. It snowed here during the night of April 6, and there are yet quite deep drifts of snow to be seen in the fields and roadways. Also saw a snake April 6. Two ringneck ducks, rare visitors to Maine, were shot near this city March 31.—Everett Smith, (Portland, Me., April 7, 1882.)

Red-Headed Woodpeckers in Maine,—I observed three Red-Headed Woodpeckers in Maine,—I observed three birds of this species near this city yesterday, and within the last few years specinens have been taken in Maine cach scason. They were not uncommon in the autumn of 1877 in Cumberland county, but I know of no instance of woodpeckers of this species (M. Oythrocephalus) having been observed in this State until within a dozen years or less. It is probable that it may breed here now in isolated instances. A specimen has been taken east of the Penobscot River in Maine.—Everett Sattin, (Portland, Me., April 4, 1882).

Game Ban and Gun.

A GREAT MAINE BEAR HUNT.

A GREAT MAINE BEAR HUNT.

I AM to-day in receipt of the following letter from Hon. Henry O. S. Stanley, Commissioner of Fish and Game of the State of Maine, which may be of interest to your readers: Dixpello, Me., April 14, 1882.

My Dear Cousin—A famous bear hunt has been the excitement in this section for the past two weeks. He has just been killed after having been followed steadily night and day for fifteen days. All the hunters and a large proportion of the population took part in the pursuit. On the last morning I ran into him on the Gateo Hill within a mile of the village. If I had supposed the beast was within ten gun shots I should have been on the watch and could have easily shot him, as I was within fifteen feet of him when he started. I had been talking with another hunter for several minutes before he ran. We were at a station expecting that he was on the other side of ing with another hunter for several minutes before he ran. We were at a station expecting that he was on the other side of the mountain and would be driven out by the parties who had been close on his rear. He was killed at noon in the adjoining town of Carthage, Oxford county. He was an enormous brute, being seven feet in length, and measured nine inches between his ears. His long run, following a winter's hibernation, left him very thin.

I am engaged most of the time in the oversight of the fish hatching houses and the distribution of eggs, young fry and fox-hunting. As to the latter, the results are not equal to preceding seasons, as I have only killed seventeen.

HENRY O. STANLEY.

fox-hunting. As to the latter, the results are not equal to preceding seasons, as I have only killed seventeen.

HENRY O. STANLEY.

Mr. Stanley sends me some additional details concerning this remarkable bear hunt. Bruin was started by some woodmen near Webb's River, not far from Dixfield, a town of some 500 inhabitants. The news arriving speedily in the village a large number of men and boys, armed with rifles, slot guns, muskets, fusees and pistols, abandoning shop, farm and school, started in pursuit. Business was suspended, except the sale of powder and shot. The women and children were gathered in groups talking of nothing but the bear crusade. The more expert hunters soon struck his trail and followed it for several days over a large part of Dixfield and through the adjoining towns of Mexico, Roxbury into Byron. Scores of men joined the chase, and bruin had considerable business on his paws, (although his pauses were few) as ten fresh men took up the hunt and crywhen one fell out exhausted. Several times he was closely surrounded in dense thickets where he had taken refuge, and the army of braves were sure of their prey, but when brought to bay he rushed forth with such ferocity that the line of hunters was driven back and broken, and the fierce animal escaped. A hunter by the name of Babb followed his track closely for seven consecutive days, having traveled over 200 wiles. Some of the parties carried fish horns which were escaped. A number by the name of Isabb followed his track closely for seven consecutive days, having traveled over 200 miles. Some of the parties carried fish horns, which were used as signals and to start bruin from his hiding places. Certain malicious persons, however, averred that they were used for the purpose of keeping his majesty at a safe dis-

used as signals and to start bruin from his hiding places. Certain malicious persons, however, averred that they were used for the purpose of keeping his majesty at a safe disance.

Besides Mr. Stanley many of the most prominent citizens of Franklin and Oxford counties joined the chase, the excitement waxing greater and greater as the bear was driven near the villages and towns. His tracks were frequently very distinct, measuring about the size of a No. 11 boot. An Oxford county hunter fired at him when but twenty feet distant. The bear disappeared in the brush unharmed, the hunter disappeared in the opposite direction, going at a lively pace toward the settlement.

In Byron ursus was headed and prevented gaining the dense wilderness extending clear over the mountains to Canada and turned roward Dixfield again, where he had probably a long occupied den. He was believed to be an old "ranger," who for years had raided on the sheep and lambs of the farmers, and even killed and eaten several large calves and destroyed many a bee hive in his search for honey. It was hoped that he would take to his abode in some calve or old hollow tree, where he would have speedily fallen a vicium to fire, bullets and buckshol. He was driven right through the village of Berry's Mills in midday, taking possession first of a grist mill and then of a school house. The teacher did not have to dismuss the scholars. When they heard the fish horns, shouts and uproar and saw the hear coming, they made a hasty exit by doors and windows. For a half hour bruin "held the fort" and kept school at the same time. The women and children barricaded the doors and windows of their houses, and from the upper windows waited the arrival of their husbands, fathers and brothers, who were on the trail of the monster, which actually had possession of the entire village. From Berry's Mills he struck out over Spruce Mountain, in Weld, and spent the night, but didn't rest any. His vindictive enemies swarmed in the woods and raised the echoes with the fishhorn s

The story of the "fifteen day bear hunt" will long be remembered in Northwestern Maine.

It is quite surprising that a score of these wild beasts were not driven from their haunts during this remarkable hunt. But they probably had not awakened, or if awake, prudently kept quiet in their secret retreat. This section of Maine has long been noted as a resort of the black bear. Many are killed annually. One of my guides, Stephen Taylor, formerly the school teacher in Byron, has killed twenty-seven. His brother-in-law, Addison Young, of Byron, who has also acted as my guide in the Maine woods, has killed twenty-two. All these within fifteen years. They followed an old bear cleven days before securing him. An elegant black robe in my library reminds me of their bravery and skill. Another sleigh robe was formerly the outer covering of an immense creature killed by the great chief of the Rangeley bear hunters, who has destroyed over forty of these wild animals in twenty years. Notwithstanding the large number killed they are actually increasing. Last fall the frontier farmers suffered terriby from their depredations, and earnest petitions were sent out for hunters to come to their relief. When we reflect that this "happy hunting ground" for the noblest large game east of the Rocky Momatains is within thirty hours of New York city, what better incentive is needed to induce a goodly number of the sportsmen to go to the relief of the despoiled tiller of the fields, and at the same time achieve a record far brighter than can be secured at a glass ball or even a pigeon tournament? I am going after a bear; who will join me?

SOUND SENSE FROM WISCONSIN.

SOUND SENSE FROM WISCONSIN.

DESIRE to refer to some of the obstacles that seem to lie

I DESIRE to refer to some of the obstacles that seem to lie in the way of efficient game protection, and hope to provoke suggestions and remedies from the whole line, as the evils to be cradicated, the prejudices to be uprooted and the estishness to be combatted need the moral force of the entire army of conservative sportsmen.

In the score of years just passed the great West has especially felt the trainp of civilization. The white hunter and trapper has followed the red, and the soldier has cleured the way for the husbandman. This irresistible and ungovernable tide, sweeping onward, has sacrificed the abundance of nature's stores without stint, and has strewn the pathway with the evidences of slaughter and improvidence.

Westward, northward and southward this destructive ad-

Westward, northward and southward this destructive advance is still reaching out, and, regret it as we may, it cannot be stayed, and neither the red man nor the game can stem the tide or impede the advance, while the resorts of the one and the haunts of the other are needed in the great modern fabric, and they must make on.

and the haunts of the other are needed in the great modern fabric, and they must move on.

With scarcely an exception, the classes of animals and birds that most interest the sportsman in no way assimilate with the elements of progress that accompany the march of evillization, and hence wherever the tide turns toward them they must either go or be annihilated.

The enterprising husbandman of the West is not satisfied with his possessions while a marshy place remains unreclaimed or a thicket is found to be uprooted, and the majestic grouse and the sprightly quail are deprived of the last clump that offers shelter or food.

The draining of marshes reduces the volume of water in lakes and rivers, and the migratory water birds find the familiar chain of lakes and ponds they were wont to follow on their spring flights northward contracted and disconnected, and the bountcous supplies of food and unlimited shelter destroyed and the limited areas under range of numerous breech-loading guns that relentlessly deal death and destruction until the season has sufficiently advanced for the shattered flocks to find sustemance and rest far to the northward beyond the line of settlements.

The destruction in, the timbered sections and the general

tered flocks to find sustenance and rest far to the northward beyond the line of settlements.

The destruction in the timbered sections and the general clearing up of all portions adapted to agriculture has also materially reduced the number of birds and animals heretofore so abundant therein.

Legislate and contrive as we may, the elements of destruction that accompany civilization cannot be stayed or combatted; they are inevitable.

The great problem, therefore, for the sportsman is to retard and control that which cannot be averted, and by precept and example aid in limiting the destruction to the inevitable advance, and I beg the indulgence of the fraternity while criticising many things that have the element of time to sanction a practice that seems open to censure.

The jealousies of sportsmen and the animosities of the market hunters must be reconciled, and the improvidence of one and the greed of the other controlled.

and the greed of the other controlled.

Legislation must contract and limit the season at the period Legislation must contract and finit the season at the period most affecting the market-hunter's interest, and more conservative practices in killing must be urged among respectable sportsmen, until it shall not be considered sportsmanlike to kill, take or destroy beyond the necessities of the occasion, and success shall not be measured by the number of lives destroyed nor the sole enjoyment centred in catching and believe.

market-hunter needs the strong arm of the law tight.

The market-hunter needs the strong arm of the law tight-need about him, and too many sportsmen need the clevating and ennobling influence of the gospel infused into them. The aristocratic millionaire, able to run pelace hunting-cars from the Atlantie to the Pacific, desolating with dogs and guns any section he takes a fancy to drop down on, re-gardless of propriety or necessity, should carry a missionary. Clubs that claim respectability and are sending out annu-ally large delegations that seour fields and forest streams day after day like a swarm of locusts, bringing to bag everything that shows tail, fin or feather, need the benign influence of true sportsmanship.

true sportsmanship.
State and club conventions that meet and banquet and rail at the pot-hunter, and resolve that game shall be protected, etc., and then in an informal session over the champague and cigars, this one recites how during his last season's hunting he succeeded in killing fifty birds in fifty scason's infinite in succeeded in kining intry brites in minutes, when he had no earthly use for more than a dozen; and then another while in the Luke Superior region filled one of those "approximate twenty pound baskets" from a single pool, without thinking that he could not possibly use them, but had glorious sport, and the extreme satisfaction also, of sending skyward to the buzzards smells of greed and improvidence—all these need the regenerating influence of a

influence of a surface of the preservation we talk of, and here is the ground to estimate preaching and practice, and instead of the salutation "how many did you kill," measuring the success or failure of the sportsman, let us adopt something more appropriate while we advocate preservation and protection, rather emulating in reconstitution of the sportsman in the preservation and protection, rather emulating in reconstitution and protection.

It may hardly be considered sportsmanlike, yet I have sometimes hoped to see the day that is fast approaching, and in some places is even now at hand, when the man that only finds his pleasure measured by destruction, will return empty-handed and disappointed often enough to lay aside the rod and gun he has disgraced, and drop from the ranks.

This annihilating spirit must be controlled to make laws useful and effective, as, if unrestrained, we have hunters enough to obliterate all traces of game within the settled portions of the country in a few years more, even with a season limited to thirty or sixty days in each year. Even the nobility are not exempt from this spirit of wholesale slaughter.

Read the record of the catch of salmon in the Provinces. Do the scores dilated on look like preservation? Does it appear that they could make use of, and is such a record more creditable to them than to ordinary mortals without royal blood or hereditary titles?

Sacer as we may at the ragged half-breed with a string of insignificant fingerlings, and the uncouth backwoodsman with a loin of venison to exchange for necessaries, they are kings compared with such nobility, and are entitled to far more consideration, as they only appropriate from mature's stores to meet their necessities, and they stand morally and lawfully justified.

I can hardly believe that the millenium is at hand, yet I hope to see the day when a change in the tone and practice of men and papers devoted to field sports shall be apparent, and that the time may not be so very far distant when the integrity of a sportsman's good intentions shall be called in question and his record impeached when accompanied by evidence of improvidence and slaughter that is now often paraded for emulation in columns that ought to countenance and incluence stand second to no single combination of interests that can be brought against them in the matter of legislation, and by precept and example this body can exercise a moral force that shall render butchery odious, and so

CARROLL'S ISLAND DUCK-SHOOTING.

CARROLL'S ISLAND DUCK-SHOOTING.

THE following letter from an old member of the Carroll's Island ducking club will doubtless be interesting to fowl shooters, certainly to Philadelphia sportsmen, who have long since learned to accept whatever is related of the movements of fowl by any of this association. It is surely time to take urgent steps for the stopping of night shooting not only at the points spoken of by our correspondent, but all along the New Jersey coast. Nothing tends to decrease the numbers of ducks in any locality than their disturbance at night on their reeding grounds, as well as by the adoption of "the double box." liding place on the flats since the invention of breech-loading guns. It is surely more skillful and more sportsmanilike to stop a "high flying" duck as it passes over a point, than to kill one coming right up to within twenty or thirty yards of a "battery" anchored directly on the feeding grounds and surrounded by an immense flock of two or three hundred modern imitations. The point our correspondent raises against American made shells of large gauge we have no doubt will be remedied. Thus far our manufacturers have not paid the attention necessary to shells for this class of shooting. Their shells for upland shooting excel the English nake. Our correspondent virties: The wild fowl shooting in the fall months was considered unusually fair, and although there were less ducks killed on the flats at Havre de Grace than has been in former years, at all the clubs and private points the shooting was unusually fine. The falling off in the quantity of ducks in the flats is unquestionably owing to the persistent, unlawful practice of night shooting with large and small guns, carried on by a few lawless men, und, if permitted to continue, this will soon make wild fowl shooting about the waters of the Chesapeake at hing of the past. How strange it is that the residents of Lurve de Grace and the hundreds of others who get a good living from the keiling of which fowl, on to make energetic effort

pounds, are also used. And here comes in a word about "paper shells" as manufactured in this country. The industry has increased enormously, and it is fair to say that the paper shells made in this country for field shooting—Nos. 12 and 14—are as good as any foreign article, and much cheaper. Now, why cannot they make an equally good No. 8 or 4 shell? You will see on the boxes in which these shells are packed the notice in big letters, "Those shells can be re-loaded." I would like to see anyone re-load a No. 8 Winchester Union Metallic shell after it has been fired once. When you draw them from the gun after firing, they are but the semblance of what they were. They are shrunken, shrivelled into an ungainly shape, and blackened with gas and powder. The U. M. shell, the No. 8, frequently bursts at the base, while if not being dangerous, is unpleasant for those of weak nerves and bad for the curs. In wet weather the American shell, being made of paper that is not sufficiently calandered or of proper quality, absorbs the dampness, and if they chance to get wet, they easily break in two. This should not be. We should be able to make the best paper shell in the world. And they can do it if they will only try.

GOSSIP OF A '49ER.

GOSSIP OF A '49ER.

RECEIVING so much pleasure from your columns, I am tempted to add my mite to the enjoyment of others, and enjoy wandering back in memory and feeling to the scenes of other days. I have never in many experiences caten possum, hot or cold. That has been a lost opportunity. But once, when after the Golden Fleece, I dined at a table where cayote was the main dish, and the occasion of the gathering. My hosts were Frenchmen, and the cook was a Frenchman. I was prejudiced, and as the dish is not common, need not give an opinion. On the voyage as an Argonaut, I was tempted with a piece of albatross, the fishiness of which was tempted with a piece of albatross, the fishiness of which was neutralized, ah! intensified, with garlic; a French cook, too. The famous cook of 'Frisco's Delmonico in '49 and '50. No opinion required, I trust. Colonel C. when young and inexperienced, was invited by Lew R. to dine at a New York hotel, French bill of fare. C. called for a dish, upon which R. looked at him with quizzical surprise, understanding both French and C's, repugnance to that particular dish. But C. understood the quiz, and ate the food with cool and apparent relish, and had the satisfaction of being told by R. that he was "a hero." Last fall at a distant "paradise of sportsmen," with a sound stomach and determination to accept the inevitable, I was enabled to preserve an outward and inward control, upon being told at the end of a meal, that we had supped off muskrat, but my fellow guest regretted the unblissful knowledge. My opinion is that muskrat, cold, could be, and might be tender, juicy, and palatable. Our's was hot. I feel some of Colonel C's, "heroism" yet.

Pheasants, partridges, grouse, synonymously sitting standing, walking or running, are certainly shot in any pose. On the wing, shot at mostly, since I have discovered the exciting thrill of giving the bird about nine chances out of ten, I never, never shoot at a ruffed grouse until it is on the wing, but every time I drop one, I am profoundly a

lave known I had hit it. Laimed at its level and speed only. I always shoot at a possibility, and that was the only game I saw during a long day's hunt, but that one shot was a compensation.

Two of my friends received a charge of shot in their feet by ground pheasant shooters, the aforementioned Colonel C. being one of the unfortunates, and a mutual friend, Lew G., being the shootist. Poor C. has gone. A better soul never gave zest to a dinner, a fish, or a hunt; he was a thorough success on the first; on a fishing trip he would find one of nature's cool retreats and remain there with the lunch. On my last hunt with him, he compelled me to accept his very fine gun, insisting that it would be useful in my hands; "the never had, and probably never would shoot it off;" I prize it still, as a remembrance of the sport I have had with it, and of him who enjoyed nature and good fellowship—"With him no boast of bog or creel."

Lew G. still lives. He was a necessity to our party; he was, and I have no doubt, still is upon the other side of every statement, question, or fact, and sustained his position or opposition by shrewd argument or persistent assertion, with that apparent perfect conviction of truth, with which he also could exceed every remarkable story he would hear. In response to one of a wonderful flight of wild pigeons, he told of the migration, ferrying, and sailing of squirrels he once witnessed "while upon a steambout trip down the Ohio River; there were thousands of squirrels crossing the river upon chips and pieces of bark, tails up as sails, to catch a favoring wind. The boat hands placed a plank across the bow at water level, and scooped up squirrels until the boat was filled with them." I always supposed something was done with the squirrels so scooped. It was not essential. Lew could go a few chips better upon occasion, and a bark, too, as he did when he assured us that he had cured a friend who was dying of consumption, by feeding him upon dog fat; "his friend was living in the same town; we could

RUFFED GROUSE IN VERMONT.

RUFFED GROUSE IN VERMONT.

I AM glad so many are interested in our noble game bird, ruffed grouse, and seeking to discover the cause of their growing scarcity. The mountains of Central Vermont furnish abundant feeding grounds, and the rough, wooded hills and thickets of evergreen makes their capture extremely difficult. Yet each year they are growing more secree. A few years more at the present rate of decrease and there will be none left. When the country was new, pigeons were very plentiful here. They are gone. It is time we compare notes and do what we can to save our grouse, lest they go also. The red fox does his full share toward exterminating them, by breaking up nests, killing the female on the nest, and killing the young before they can fly.

A meaner animal than the fox preys upon them, too—the market hunter. Spending weeks every year killing them for the misrable shillings they will bring in Boston market, finding the nests that he may capture a whole brood of partially grown young, killing in season and out of season, only restrained by some fear of the law.

Cannot we have a law providing a severe penalty to any who shall send this bird from the State?

Should the sportsmen here find such a man like "Judge Bill" fighting a "bash" single-handed, rest assured they would "hold the dogs" and pray for the success of the bear.

SOUTH ROYALTON, VI

THE HERBERT MONUMENT.

Editor Forest and Stream

Editor Forest and Stream:

Thanking you for your co-operation in the building of the monument to Wm. Henry Herbert, we would like to ask through you that suggestions of an appropriate design for the monument shall be sent in to the undersigned at, as early a date as possible.

Those favoring us should bear in mind that the monument will be located on the top of the Bellevale Mountains, where it will be in view from a large area of country.

It has also been suggested that in addition to the contributions from individuals that each one of the sporting clubs of Great Britain and America should be invited to contribute a stone.

tone.

The Warwick Woodlands furnish a very beautiful sandstone, but this would not be so visible in the long distance as marble would be.

As soon as sufficient designs are received the contributors will be invited to meet on the spot where the monument will be located, and appoint a committee to make the final selection and decision.

W. O. McDowella

No. 120 Liberty Street, New York.

No. 120 LIBERTY STREET, New York.

The fact that Herbert's grave, at Newark, N. J., had no headstone was brought to the attention of the public in 1875 by a correspondent of the Rop And Gun, who, in the course of a description of a visit to Herbert's grave in Mount Pleasant Cemetery, said: "No stone marks the grave where Forester sleeps. The sportsmen of America should not permit this longer to be said. Whatever may be the verdict of the world regarding William Henry Herbert, the sportsmen of the country * * * should take the name and memory of Frank Forester into their safe and sacred keeping." He then suggested "the erection of a suitable monument to Herbert's memory, the fund for the purpose to be made up of contributions by individual sportsmen and sportsmen's associations, and to be known as the 'Forester Memorial Fund.'" "This monument," he added, ''need be neither costly nor imposing. No matter how plain or inexpensive, so that it be in harmony with the surroundings," And he thought that there were hundreds and thousands of sportsmen who would contribute to the fund.

with the surroundings." And he thought that there were hundreds and thousands of sportsmen who would contribute to the fund.

These suggestions found a ready response among the readers of the Rod and Gyn. Numerous letters on the subject were received and published; and in the issue of December 4, 1875, the editor of that paper suggested that a committee of those who were interested should meet at the Astor House. Accordingly, on December 18, a number of gentlemen met together, among whom were Messrs. George B. Raymond, William Humphreys, editor of the Rod and Gyn; Thomas Picton, George B. Eaton, Greene Smith, N. Rowe, and Julian Scott. The last five were appointed a committee to devise a plan for carrying out the scheme of collecting a fund for the Herbert memorial. The title adopted was the "Frank Forester Memorial Association."

The association's next meeting was held at the Astor House December 20, when the committee brought in a report recommending that a lot be secured in Greenwood Cemetery, whither Herbert's remains should be translated; and that an appropriate monument should there be erected. This report was accepted. A Newark gentleman then informed the meeting that an association in his city had raised a subscription to place a tombstone over Herbert's grave; and that the proposed removal to Greenwood would be strongly opposed by the citizens of Newark. A second and permanent executive committee was then appointed to carry out the provisions of the association, its members being: Messrs. Charles II. Raymond, D. L. Beckwith, G. B. Eaton, N. Saltus, Julian Scott, Charles E. Tilley, Thomas Picton, Charles Hutchinson, Colonel Skinner, George B. Raymond, L. C. Bruce, and William Humphreys. The further work of the association was under the direction of these gentlemen. The turf journal represented by Captain L. C. Bruce and the Rod And Gyn were appointed joint treasurers of the fund.

The "Newark Herbert Association" went on with its

fund.

The "Newark Herbert Association" went on with its work, and in the following May placed over Herbert's grave a memorial stone. It was fashioned and inscribed in strict accordance with the directions given by Herbert shortly before he killed himself; and bears the following inscription:

"FRANK FORESTER." By the Newark Herbert Association.

May 19, 1879.

WILLIAM HERRY HERBERT,

of England,

A GED 51 YEARS. "Infelicissimus." Born April 7, 1807, London. Died May 17, 1858, New York.

The erection of the stone at Herbert's grave was the object for which the "Frank Forester Memorial Association" had been formed. Now that this work had been done by others, there were two courses open to the association; one to return to the donors the contributions already received, the other to modify the form of the proposed memorial. They decided to adopt the the latter course; and accordingly in January, 1876, they published a circular in which it was stated:

EXECUTIVE COMMITTEE ROOMS, ASTOR HOUSE, NEW YORK. January, 1876.

EXECUTIVE COMMITTEE ROOMS, ASTOR HOUSE, NEW YORK, January, 1876. }

To the Sportsmen of America:

GENTLEMEN—For over seventeen years the memory of Frank Forester, that most talented, practical and instructive of authors upon American game and field sports, has requently, to repair this omission in reverence and in gratitude, has been organized the Frank Porester Hemorial Fund Association, in whose behalf this appeal for financial aid and sympathetic co-operation is addressed to the felends and admirers of that distinguished and thoroughly national sportsmen. The original intention of the association had been the translation of the remains of Frank Forester to Greenwood, and the erection over them of a durable monument. Obstacles beyond possibility of removal, and an assurance that prominent citizens of Newark, his burial place, will care for his grave at their own expense, compel a partial deviation from the association's first intention, still without the abandonment of its cardinal object.

It is at present designed not only to perpetuate the memory of the talented and unfortunate author, but to contribute as a distinctive class of citizens toward commencuation of a memorable incident in our Nation's existence. Encouraged by spontaneous expression of sympathy from sportsmen dwelling in every section of our common country, the association has determined to accomplish its original purpose through creation of a memorial work of art, worthy the genius of this Centenial year of American Independence, to oe located in the Central Park of New York City, there permanently to remain an enduring monument of the patriotism, artistic tasto.

liberality, and gratitude of the sportsmen of America fraternally united.

The Central Park is undeniably the most appropriate place wherein could be placed a memorial tribute or trophy of sporting implements and objects, executed in bronze and granite by a sculptor of adequate ability in that style of art, rendering his work effective and worthy the admiration of a true sportsman, to insure the permanency of the structure for universal exposition. The proposed memorial, unique, imposing, characteristic and representative of the fine taste, moral culture, social position and intellectual tendencies of the American sportsman, must be entitled to the most extended publicity, and where can that aim be better attained than within a park, the heart of the great American metropolis, oftentimes frequented by 30,000 visitors in the course of a single day?

The precise shape, fashion and form to be assumed by the contemplated Forester memorial cannot at present be definitely determined, as its ultimate completion depends upon the aggregate of contributions. Consequently, it is with this view of creating a work of high art in indestructible bronze, worthy of our common country, of the man we seek to honor, and of the class of clizens we individually represent, that every sportsman in the land is invited to contribute his mites of that this generation may bequeath to its successor a piece of artistic excellence eliciting their admiration and commendation.

ation. Confidence that the work can be accomplished is guaranteed through precedents furnished by the Central Park alone. Therein Americans have placed memorials to Morse and Fitz Greene Halleck. Germans to Humboldt and Schiller, Caledonians to Sir Walter Scott, while the ladies of New York have in preparation massive testimonials in memory of Washington Irving and other local celebrities. It is unfair to presume that the fraternity of American sportsmen can fail to equal, if not outvie, the liberality of isolated literary clubs, particularly when it is designed to perpetuate to the world at large the memory of the most eminent sportsman of this, or of any other, age or cline.

particularly when it is designed to perpetuate to the world at large the memory of the most eminent sportsman of this, or of any other, age or clime.

The funds already received, amounting to about \$175, were accordingly expended by the committee in the publication and distribution throughout the country of this circular appeal, subscription blanks, etc. The change of programme met with little public favor, and failed entirely of financial support. At a meeting of the association at the Astor House May 1, 1876, the vice-president stated that although several thousands of the circulars had been sent out there had been or replies to them. The president stated that many letters had been received by the officers of the association, complaining of its dilatoriness. The president abos asid to the meeting that one correspondent, who was not, however, a contributor to the fund, had charged that the executive committee had indulged in eating and drinking at the Astor House at the expense of the fund. "It was well that sportsmen should understand," the president added, "that there were no personal expenses of the kind whatever, and that the Astor House proprietors had furnished the room free, out of sympathy with the cause." Mr. Raymond expressed his regret that the circular appeal had failed of its object, and upon his motion Major Beckwith was appointed a canvasser to personally solicit subscriptions. That gentleman's personal appeals to the sportsmen of the vicinity of New York were unattended with success, his report made to the association at a meeting held June 9, 1876, showing an expenditure for expenses greater than the receipt of contributions, and at his own suggestion his farther services were dispensed with. This was the last neeting of the "Frank Forester Memorial Association," and the memorial project was abandoned until again taken up by the Greenwood Lake Association, and brought to the notice of the public in our issue of March 23, last.

NOTES FROM WORCESTER, MASS.

NOTES FROM WORCESTER, MASS.

On Thursday, April 6—Fast day—lots of glass balls and clay pigeons were smashed by the members of the Sportsmen's Club and their friends, at the club's grounds, near Lake Quinsigamond. Invitations were extended to several clubs in neighboring towns to spend the day with us, but nothing was beard from them officially. We did hear incidentally that a delegation from Ashland would be with us on the evening previous to the shoot. Our Marlboro friends, who are always welcome, informed us that a 'bus load would come. It was then rather late to arrange for a large party, and next morning when forty shooters with large bags of ammunition walked in upon us it looked just a little as though some lively work must be done else our friends would be compelled to carry some of it home. All were good-natured and ready to lend a helping hand, and very soon another trap was in place. Friends who came to look on were pressed into service as scorers, pullers, etc., so that we managed to get along fairly well, and all seemed to enjoy themselves. We should, however, have been better prepared and the shoot would have been run more smoothly had we expected so many visitors. The day was favorable for shooting, and the sport commenced about 9 A. M. and continued tilf dark. A splendid turkey dinner was served at Swan's and plenty of hot coffee in the club house all day.

The Worcester Rifle Chub and the Shrewsbury Rifle Club have consolidated and will hereafter be known as the Worcester Rifle Association. They will practice at the Pinc Grove range in Shrewsbury, and will soon erect two new double sash targets for shooting 200 yards. They will also remove the new elub house at Lovell's Grove to the range in Shrewsbury. The new association held an all day shoot Fast day, at which thirteen members participated. The shooting was at 200 yards off-hand, and 400 and 500 yards in any position. They expect to have a 1,000-yard range in Shrewsbury and it is hoped that some of the matches between the various clubs in th

port been correct.

It is, however, a little queer how those partridges got into

It is, however, a little queer how those partitions the case.

The story of that hunt and supper reached Worcester several days before it appeared in the FOREST AND STREAM, and, as told by two reliable gentlemen from Winchendon, didn't sound a bit better than the report which was publised, the partridges being the same. As the report was dated Winchendon, it is to be presumed that the slanderer

lives there "or thereabouts," and we shall leave it to them to look, him up and see that he is punished as the case to look | demands

demands.

I would like to offer just one suggestion and drop the matter, viz; that the club hold their next annual hunt in October. They can then have a much larger variety of game at the supper table, and besides it will look so much better.

Westerson Many April 7 1889.

K.

Worcester, Mass., April 7, 1882.

PHILADELPHIA NOTES.

ARGE flights of redhead and blackhead ducks visited Barnegat and Tuckerton bays last week; and I am told traveling flocks are still passing these grounds. This agrees with the reports that come from Havre de Grace, the Gunpowder and Bush rivers, and other points in the Chesapeake Bay, that the fowl are fast leaving and almost entirely gone to the northward. A few days since two of the writer's friends, one from Newark, N. J., and the other being quite near Barnegat, having gone to the latter place in hopes of

friends, one from Newark, N. J., and the other being quite near Barnegat, having gone to the latter place in hopes of having brant shooting, "struck" these flights of redhead and blackhead ducks and had rare sport. The birds were all on the move, bound north, but paid visits to these decoys, the wind being favorable in the line of travel.

I bear direct from both Barnegat, and Tuckerton, that brant have all disappeared, except a few poor cripples that can't get away. Snipe have lately come to our "stamping" grounds south of Philadelphia, on the New Jersey and Delaware sides of the river (whenever the meadows are suitable to them) in increased numbers. The weather has been favorable, and the birds have not been so wild. Good bags are daily made. Those who have been to the Slaughter tavorable, and the birds have not been so wild. Good bugs are daily made. Those who have been to the Slaughter Neck, Prime Hook, Poplar Woods, and Mitton Creek marshes in Delaware, return with splendid sharings. Most of the suipe killed by the gentlemen who have chosen these last named places as their grounds were found at Milton Creek. We will now have uninterrupted shooting until the snipe are off in pairs for the north and northwest to breed. What a pity it is to feel we are killing in April and May many birds with eggs in them. Yet we do it because the law allows it.

Next mouth the residents of the rural portions of Phila.

many piros with eggs in tuem. Ict we do it because the law allows it.

Next month the residents of the rural portions of Philadelphia will be again troubled by the hordes of boys who have become affected with the bird-collecting mania, and who, with specimen and cane gun in hand hang around every orchard or piece of woodland which may be frequented by the numerous species of warblers which pass through our latitude from the 1st of May until the middle of March. There are but few of these youngsters who know one variety from another, and still fewer who do not sell many skins to the milliner. Everything from a tit to a thrush that comes within range is shot at and pocketed. If charged with illegal shooting, these boys answer, "We are collecting for scientific purposes." Dr. Twaddell, of Weat Philadelphia, knows full well how intolerable this nuisance is becoming. His woods and orchards being favorite and Philadelphia, knows full well how intolerable this muisance is becoming. His woods and orchards being favorite and inviting spots for all the warbler tribe, as well as those of youthful collectors, he is overrun with such popgunners from the, first appearance of the early coming black and white creeper until the resident varieties begin laying, and then the eggs are wanted for scientific purposes. There are many more gentlemen who make a similar complaint. Can't something be done to qualify collecting for scientific purposes?

poses?

But few anglers of Philadelphia started for the trout streams of Pennsylvania the beginning of the season; but this week will take all who are not fond of snipe shooting to this week will take all who are not fond of snipe shooting to try the speckled beauties. One friend, a resident quite near Pine Creek, Pa., has already fished with fly a favorite pond situated on the course of this stream and took some good fish. Your correspondent has promised himself a repetition of last year's trip to these waters, of which you shall have particulars. The first of April, 1881, came in with a little snow on the ground; I remember I had my overcoat on. When I made my first cast, my line fell "all in a heap." Trout were rising and so off came my overcoat. Homo.

RIFLES AND RIFLE BULLETS.

TO SHOOT ROUND BAILS FROM A BREECH-LOADER—BREECH VS. MUZZLE, ETC.

OME of your correspondents seem to be puzzled with the problem of shooting round balls from a breech-loader. Others seem to have had good success with them, but there are several calls from the unsuccessful ones for information as to how to do it

To be able to shoot round balls is often very convenient, especially for small game and target-shooting at very short range. But to tell any one how to do it is often a very puz-

To be able to shoot round balls is often very convenient, especially for small game and target-shooting at very short range. But to tell any one how to do it is often a very puzzling matter. I suspect the truth of the matter to be that to make them shoot as well from the breech, as the longer balls is quite as often a matter of pure fortune as of skill. In all the rifles I have tried there seems to be a certain amount of 'bit it' which seems accidental, for the same conditions that make good shooting with one rifle will fail with the next one of the very same calibre.

I have never succeeded in getting round balls from a breech-loader quite as accurate as when shot from a muzzle-loader, although about one in seven or eight go a little wild in spite of all I can do. But I can make the rest go close enough for all close shots. The trouble appears to lie first in the want of sufficient bearing on the barrel. I have tried in valut to make the cone work from the breech. I here mean a cone, not a conical ball, but a true taper from but to point, such as was sometimes shot from the muzzle-loader, and which had no bearing except what was given by swedging into the barrel with the guiding starter; not over \(\frac{1}{2}\) of an inch of bearing at the most, and generally less. To overcome this difficulty a round ball should be chosen a size or two too large, and swedged till it has about 1-5 or 1-6 of an inch of cyllndrical body. But perhaps the first thing you then learn is that this won't do. Perhaps it is too large, perhaps too small, a very slight difference in size often making a great difference in accuracy.

Often a bavey leather wad would made a difference. Or

difference in accuracy,
Often a heavy leather wad would made a difference. Often a heavy leather wad would made a difference. Or perhaps the shell will need cleaning at the mouth, and hot tallow poured in upon the bullet. Or perhaps the ball will need hardening with tin. Upon one thing you may depend, viz., that hardening will not hurt it. The harder I make them the the more accurate I find them. They must also be them the the more accurate I find them. They must also be as perfect in shape as any balls. Bullets bought in gross like buckshot will seldom do, as too many are misshapen. Many of these will fail even when loaded from the muzzle. You may have to try all these things with various modifications and alterations, and still fail, with full charges of powder, because the rifle is cut with too quick a twist and too hollow a groove for such swift bullets, with such short bearing. I have never had a failure that I could lay positively to such cause, for I never tried them in exactly such a rifle. But such might be the case. Round bullets must also be loaded with much care about getting them perfectly straight in the shell. The neck left by the moulds should be cut off squarely and put downwards and in the centre. But remember that the main thing is to try, try and keep trying until you succeed. If you do not succeed in the end with hard bullets, well swedged to a very tight fit, it will no doubt be because the rifling is too shallow and quick in its twist for such swift balls with so little bearing. It is best with any rifle to begin with very small charges, dropping a bit of square or round stitch in the shell so as to partly fill it, and pouring a small charge around it. Seat the ball as near the end us possible. Patched balls work better in general than naked ones. But here again arises a new puzzle. Balls pushed into the shell with a patch beneath them, as in a muzzle-loader, cannot be relied on. Two or three may go well and deceive one. But a dozen or fifteen shots told a very different tale with every rifle I ever tried; and this even when the rifle was cleaned after every shot. And by the way you must be careful, or every way of loading may thus deceive you, as many of the balls will go true in most any case. Especially is this so if the rifle be a good one. Beware how you cry, "Bureka."

By shooting over a ground where you can easily pitch up the patches, and pitching up the patch for examination after every shot, you will soon find that the main difficulty is the stripping of the patch or a part of it from the ball.

As a rule, neither of these happens to the whole of the hatch if a heavy wad or two be put beneath it. It will happen only with a part of it. But that is generally enough to ruin accuracy. Some of the patches will be found to have taken the rifling so close to the edge in places, that part of the ball must ha

plainly shows that the edge must have caught, turned back-ward and rolled back between the main part of the patch and the barrel.

As this almost never occurs with a muzzle-loader even when quite dirty and when the patched ball is pushed directly upon the powder without a wad between, it is fair to assume that the difficulty occurs at "the shoulder."

By "the shoulder" I mean the place where the ball crosses the edge of the shell and passes into the grooves. A nameless correspondent of Forest and Strream says I write "as if a rille had a bulb at the bottom like a thermometer for the ball to wallow around in." I have no doubt this gentleman is by nature a kind and gentle being, whom a frenzy of indignation at my atrocious heresy about breech-loaders has bereft those keener perceptions which depend upon a serence nuruffled soul. One whose finer sensibilities are outraged by the vile insinuation that a breech-loader is not the tiptop type of earthly perfection, something worthy in every respect of the gods themselves, can scarcely be expected to reason calmly. But when such insinuation comes from one who has used a breech-loader for many years, who uses one still and would use nothing else, then, at then, the mildest breast necessarily is lashed into a fury that permits no reasoning at all. One renegade is worse than ten Turks. The vilest of all traitors is he who goes with us nine steps of the way and then splits off on the tenth. He is infinitely worse than the man who takes not a single step with us but differs in principio, in tota and aid infinitum. And is it not a religious duty to barry such a wretch? For whom were the hottest fives of the inquisition heated! Not for the infidels who differed in tota, but for the heretic who differed on the one hundredth point after agreeing perfectly on the other ninety-nine. Upon whom were Claverhouse and his dragoons sent out with red right hand and whetted sabre? Upon the Jew, the Catholic or the infidel? Not at all. Only upon the dissenters who differed in a hair's bre in a hair's breadth or two from the Church of England. All this is proper enough. The man who differs entirely knows no better. He is to be judged according to his opportunities. The liberal soul can tolerate him. But the wretch who has the opportunities, who knows his whole duty, yet doeth it not, he is the wretch indeed.

Therefore it is that this gentle being, whose name I know not, doth so rage against the heretic who thinks a breechloader must necessarily have at the bottom a wallowing hole for the bullet

for the bullet.

for the bullet.

Now, the aforesaid heretic, who is so fallen from grace as to think that the sporting rifle of the present not quite so super-gloriously reriect as it may be in the future, begs leave to intimate with fear and trembling that to have the effect of delivery, a naked ball a little untrue into the grooves or stripping or cutting a patch, it is not necessary that there should be a widening of \(\tau^{\frac{1}{1}}\) for an inch in the barrel where the cartridge joins the grooves, any space at all between the grooves and the edge of the eartridge, or any sharp or square edge at all where the barrel opens into the chamber. You may take a rifle in which you can push a ball gently down

the cartriage joins the grooves, any space at all between the grooves and the edge of the cartridge, or any sharp or square edge at all where the barrel opens into the chamber. You may take a rifle in which you can push a ball gently down from the muzzle into the shell, and through a hole in the bottom of the shell push it back again without knowing (if shell and barrel be kept clean and smooth) when the ball crosses from one place to the other. In my double rifle I can run a tight leather wad down, passing it into and out of the shell without feeling any shoulder or widening. The same when running a patched ball down.

There is, nevertheless, a difference between the shell and the grooves that tells heavily on a ball crossing at high speed from one to the other. Of course I do not mean that it always tells heavily. But unless much care is used it will do so often enough to make your shooting unreliable, such as an average of once or twice in five shots. This difference is particularly striking in loading a breech-loader from the muzzle. Although I can feel no change in my double rifle yet, unless I fill she shell flush with a wad and let the ball rest there without ramming, it will not be accurate. If the ball remains wholly above the end of the shell the rifle will, at thirteen yards, shoot into the same hole; but if the ball, either from insufficient filling of the shell or from ramming get only half way into the shell, it shoots the same as if put clear in, to wit, wild for three or four shots out of ten. Hence, there is a place there which affects the bullet in passing quickly, and I care not whether it be called a shoulder, or a bulb, or a wallowing hole.

While I think of it I would also apologize to the aforesaid gentleman of the outraged sensibilities for using the word "come" so carelessly as to make him think I meant a "conical ball," thus further harrowing his heart strings with the assertion that a cone cannot be accurately shot from a breech-loader. I meant a cone, tree-taper from butt to point, a

While on this topic this heterodox individual would further apologize to the aforesaid orthodox gentleman for taking it for granted that the said orthodox gentleman knew how the ball in a muzzle-loader was patched and loaded. The said heretic might have known that no orthodox gentleman would sully his fair purity of soul with the slightest knowledge pertaining to such an abomination as a muzzle-loader. Like the immaculate who said he was proud to say that he never had read Shakespeare, such a one must keep his virtue untainted even by the knowledge of evil.

The surest way of obviating this difficulty, that I have found, is the use of a patch of buckskin put around the ball like a collar. With this I can make the round ball shoot very near perfection from my double rihe. I have picked up many of the patches and found no sign of stripping or rolling over on them. It seems to be too thick along the edge to do either, yet soft enough to be compressed tightly around the ball, and thus obviate the general difficulty of too thick a patch. To do this requires, however, great care in loading. Selecting soft buckskin of about the thickness used for gloves of medium thickness, I cut a collar that will go around just once inside the shell. Putting a solid wad upon the buckskin collar well oiled is set around inside. The ball is then put in, using care to get it straight, and the shell then passed into a retaining tube or loader of strong iron the size of the gun chamber, so as to keep the shell from bulging. The ball which fits very tightly is then driven in with a rammer, having a counter sunk head so as not to bruse the ball. The upper edge of the buckskin, which is always cut 14 or 14 inches wide is then twisted around. Care must be taken to have the buckskin always of the same thickness and length.

ness and length.

To show how extremely capricious this round ball is when loaded from the breech I give the following facts: For a long time I used parchment in the above way, finding it works very well, but not so reliable as the buckskin, which is as nearly perfect as I can shoot any ball from a shell. But if the parchment were either too thick or too thin, too hard or too soft, it was liable to strip or roll over two or three times out of ten. A piece of short sack smeared with hot tallow and being about the same thickness as the buckskin when compressed between the ball and the shell, loaded in exactly the same way, with the utmost care and with the edge compressed between the ball and the shell, loaded in exactly the same way, with the utmost care and with the edge twisted over much better than could be done with the buckskin, made the most miserable work I ever saw, scattering about five shots out of ten all over a foot square, at only twenty-five yards. On picking up these patches about half were found rolled over as you would roll one under your hand and cut all to pieces, yet the gun was cleaned at every shot. A piece of fine linen smeared in the same way and doubled around the ball worked very well, though not as well as the buckskin. On the whole, I think it safe to pronunce the accurate shooting of round balls from the breech a thing impossible to reduce to rule, but one to be found out only by repeated trials.

Some of your correspondents seem to have hard work with

only by repeated trials.

Some of your correspondents seem to have hard work with round balls loaded even from the muzzle. As I had tried only three breech-loaders in this way, I did not say that all would work well when so loaded, but the presumption is that all rifles not choked if bevelled a little at the muzzle, will shoot well, so if care be used not to push the ball too far down. Very shallow grooving and quick twist might of course make it inaccurate with large charges of powder. I can, however, assure any one of this, that you can load from the muzzle in one half the time that you can load a round ball in a cartridge so as to be sure that it will go straight. So that when there is no haste I find an actual saving of time and trouble by loading from the muzzle

roaming from the muzzle

Some of your correspondents have been so inbued with a spirit of charity toward the aforesaid heretic is to temper justice with mercy. Some have been carried by it even to the verge of temerity. I was amazed at the following paragraph from "C."

(Thus carried to the control of the

Thus even in the best breech-loaders there seems to be "Thus even in the best breech-loaders there seems to be room for improvement in the chambering and arrangement of the cartridge, and it is evident that the superior accuracy of the muzule-loader which I have mentioned is merely owing to the manuer in which the ball rests in the barrel,"

Mr. E. A. Palmer, though apparently disagreeing with me actually sustains me. He says he has found the same difficulty of which I complain, the ball being seated below the graners. He says:

Hesays

"Now I don't want it understood that I think that "Now I don't want it understood that I think that a breech-loading rife using naked bullets or even patched bullets if loaded and handled in a slovenly manner will compete successfully with a good muzzle-loader, for it will not. The crust of burned powder at the mouth of the chamber

bullets if loaded and handled in a slovenly manner will compete successfully with a good muzzle-loader, for it will not the chamber from the successfully with a good muzzle-loader, for it will not the chamber from the control of the chamber from the successfully with a good muzzle-loader, for it will not left partly in the shell."

Note these last remarkable words, "the bullet in no case be left partly in the shell." Now look my article on the rifle of the future over again and see if this is not the sum total of all my heresy, to wit, that a rifle in which the ball is started below the grooves is not as good (all else being equal of course) as one in which the ball is started in the grooves, and the special poins in that article to say that by muzzle-loader I meant a rifle in which the ball is sented in the grooves, no matter whether it had a movable breech-block or not. The breech-block has nothing to do with the question. By breech-loader I meant one in which the ball is sented in the cartridge. I was compelled to use these two terms in antagonism to avoid constant circumbocution.

Mr. Polmer says be is surprised that I should have allowed this thing to bother me a moment. It bothers me because I can find no quick and efficient way of putting in the ball for a hunting rifle. Placing the ball in the barrel as he suggests will do very well in target shooting, but for hunting a ball must fit so tight that it cannot possibly slide with jarring or falling, etc. Especially is this so for a double gun. I know half a dozen ways of putting in a ball ahead of the cartridge so that it will fit tight enough with safety. But they are all as slow as pushing in from the muzzle, and some are even slower than that way, or else they strain the breech action of a snap action gun. What I want is to awaken makers to this defect. They will quickly enough devise the remedy. Instead of being lulled asleep by the soft voice of flattery as they have been, and feeling savage at a poor heretic for awaking them for nothing, they want to

ball long enough to hold a steady flight for that distance can

ball long enough to hold a steady flight for that distance can be loaded by the muzzle-loaders peculiar way of patching without wrinkling the patch too much. It might be so cut as to do it, but for perfect accuracy at 200 yards a very long bodied ball is needed.

"F. J." asks how a breech-loader can do close work at 300 yards agoinst a muzzle-loader that will shoot exact fifty yards? For precisely the same reason that a .22 gallery rife that will lit a dime every time where the old Henry rife will hardly hit a quarter or a half dollar will be beaten at any target by the Henry at 300 yards. The difference is in the sustaining power of the ball. The light ball cannot hold its flight like the other. At even 200 yards a long ball four times the weight of the round ball will be steadier than one only twice the weight of a round ball. It will be less affected by wind and less by trilling variance in density or in amount or strength of powder. For this reason no long range scores counted in the usual way, counting alike all shots on the bull'seye without reference to their nearness to the centre, can prove the perfect accuracy of the rifle in starting its bullet. They may prove great accuracy in starting and great sustaining power but nothing else.

To test the starting accuracy, rifles should be shot at only twenty or thirty yards and in quite still air; even then if round balls are used, they should be tried with telescopesight, with a fine tack or pin-head for a mark. The sight should then be set a little off, so that the balls strike an inch or so from the tack in a piece of cardboard, or something that will leave a cleare-deed hole. A large number of shots should be fired, and the diameter of the hole cut by the series should be fired, and the diameter of the hole cut by the series should be the test. This is even better than string measure, as a distance where the differing density of balls or the wind, light, etc., could have no possible influence, the balls would strike so very close together as to make string

would strike so very close together as to make string measure quite difficult to take.

The following scores were made by a ten pound muzzle-loader. Having been made in matches they are records, They may be easily verified by writing to San Francisco, if any one doubts them.

Ist. Dr. E. H. Pardee, of San Francisco, account to the property of the same property of

any one doubts them.

1st. Dr. E. H. Pardee, of San Francisco, against Mr. Warron Loud, San Francisco, Feb. 1866. Distance 220 yards (forty rods) match for \$1,000. One hundred shots each. Dr. Pardee's winning score measured from centre of bullet hole one hundred and thirty-one and \$\frac{4}{2}\$ inches,

Forther's winning score measured from centre of bullseye to centre of bullet hole one hundred and thirty-one and \(\frac{1}{2}\) inches, an average of about 1\(\frac{1}{2}\).

A fac simile lithograph of this target plainly shows that but for the wind (which is always strong and variable at San Francisco, especially when a match lasts as did this one for two days) Dr. Pardee would certainly have made a string of seventy-five or an average of \(\frac{1}{2}\) of an inch. It must also be remembered that this shooting was done sixteen years ago, when wind, light, etc., were less understood than now, and when there were no such delicate arrangements for sights as now. It was also made with the bullets then in use for muzzle-loaders, rarely over double the weight of reund ball and which could not sustain themselves as well in the wind as those now shot at such distances from breech-loaders. The correctness of this view is plainly shown by the targets of the two following matches, which were made about ten years later, when wind and light were better understood and when he doubtless had better wind gauges, etc.

2d. Dr. Pardee against an English gentleman—Mr. Reedfor \$750\), shot in San Diego county, Cal., 1875. Twenty shots each—same distance etc. as No. 1 (220 yards or 40 rods)—string of Dr. Pardee from center to center, four and one-quarter (10\(\frac{1}{2}\)) inches, an average of about \(\frac{1}{2}\) of an inch. Match between same parties, distance and money as in No. 2. Ten shots each. String of Dr. Pardee from center to center, four and one-half inches (4\(\frac{1}{2}\)), or an average of less than half an inch from the exact center at 220 yards.

Examination of these targets would convince anyone that if the marksman had been shooting at a distance where wind, light, etc., required no allowance for—say at thirty yards—that 130 successive shots would have passed through the same hole without widening it \(\frac{1}{2}\) of an inch after the first shot, certainly not \(\frac{1}{2}\).

that 130 successive shots would have passed through the same hole without widening it \(\gamma^2\text{in}\) of an inch after the first shot, certainly not \(\gamma^2\text{in}\) utility as to the nonsense that has been talked about shooting both with shotgun and rifle. Absurd stuff has been talked about the old muzzle-loader. But it was about what could be done with it at long distances or at short distances offhand. What it would do in proper hands with dead rest, fine sights and at a distance where its light halls were unaffected by wind or by a trifling difference in density, or where the light made no difference in aiming has, I fully believe, not only never been exaggerated, but has been even unsuspected by the majority of those admiring its accuracy the most. The above matches can be as fully verified as any of the international ones.

Now, is in out a shameful commentary upon human reason that to prevent misconstruction of what I write, I am actually compelled to add that I do not give the above to show that we should all screw an immovable breech plug in our rifles? Is it not disgraceful that I am driven to say in most explicit terms that I give the above only to show what a rifle may do when the ball is left in the grooves instead of being put below them, and not to prove that the man who makes another rifle that is not immovably closed behind should be drawn and quartere. Wothing but blind, absurd, unreasoning idolarly of the breech-loader on account of its unquestioned convenience, utility, long-range power and other vast advantages over the muzzle-loader, could ever make folls look as they do upon anyone who ventures to even name a muzzle-loader in any connection on the, same day with the inviolable idol.

T. S. Van Dykke.

SAN DIEGO, CAL.

A Loon on the Starboard Bow.—New York, April 7.—
Editor Forest and Stream: In the last issue of Forest and
Stream, two writers quote from "Chasseur's" article on
"Birds at Cobb's Island," and compare his remarks on
slaughtering bay birds with his demunication of the brantshooters who hunt with jack lights. Let me make another
quotation from "Chasseur's" article, and see how it looks
standing alone: "The ride in the boat to Cherrystone takes
about two hours, and is pleasant and exhilarating if you
happen to have about a hundred shells loaded with No. 4
shot, for the ducks, loons and coots are in myriads in the
hay, and are so lazy that they won't fly until the steamer's
prow cuts its way through the flock. It is beautiful sport,
and the best practice an manteur can have. Shooting down
at them from your elevation in the bow as they fly across
the prow, you can see when the shob hits; in the water, and
can thus practice alming and perceive the laws of shooting
ahead of game, the velocity of the bird's flight, and especially
discover that a tough loon is as hard to kill as a cat. Fox
and myself got our hands in on our way, and made some
handsome fancy shots. All the ducks killed are picked up by

passing schooners."? (the italics and question mark are mine). Now, Mr. Editor, any person who has spent much time along the coast knows that it is very rarely that a duck is picked up by a schooner. Imagine a three-master scudding along under close reefs before a sou'wester. Suddenly the captain's voice roars out: "Hard down the helm—loon on starboard bow!" Seems to me this advice about carrying along a hundred shells to shoot ducks with while sailing down the bay is hardly proper for the younger sportsmen in whom Forest and Stream is trying to instil the true virtues of sportsmanship.—MARK WEST.

"THE CORN ON THE COBB."-Warrenton, Va. HE CORN ON THE COBE."—Warrenton, Va., April 6.—
Editor Forest and Stream: Regarding a communication about
my letters from Cobb's Island, signed "H. P. U.," I can only
say that so long as he don't know the difference between
shooting brant in the night time and a flock of snipe in the
day time, then it is wasting time and patience in trying to
explain. This much "H. P. U." is informed—that no sportsman wastes his ammunition on a loon or a coot.—Alex. Hun-TER ("Chasseur").

THE NEW HAMPSHIRE FISH AND GAME LEAGUE met at Manchester April 4. The meeting was a business one, as all the conventions of this society have been. The time was taken up with the reading of papers and of discussions of game and fish matters. We print elsewhere Mr. Colburn's address, and the report on fishculture. The annual address was delivered by Rev. A. H. Quint, D.D., of Dover. The officers elected were: President, John B. Clarke, Manchester. Secretary, Charles L. Richardson, Manchester. Treasurer, Frederick Smyth, Manchester. Vice-Presidents, Marcellus Eldridge, Portsmouth; Luther Hayes, South Milton; E. B. Hodge, Plymouth; W. W. Fletcher, Concord; V. C. Gilman, Nashua; W. S. Shurtliffe, Colebrook; John Clement, Troy; W. M. Weed, Sandwich; M. A. Haynes, Lake Village; Gilbert P. Whitman, Manchester.

Minnesota.—The Pioneer Press says that "the Minnesota State Sportsmen's Association will have an epitome of the game laws printed for the benefit of those who wish to join the association. With these will be printed excerpts from articles on game protection published in the Pioneer Press during the past three months, drawing special attention to the value of our game in drawing strangers to our borders. Birds that cost our visitors from \$14 to \$17 apiece to obtain must be worth protecting. This money is not spent in our big cities, but in little villages and country towns, where \$100, a week's bill of a small hunting party, will start out from the hotel and livery stable and travel half around town paying off bills as it passes from hand to hand. Our game birds are the goose that lays the golden eggs. Let us not kill the goose by an in and out of season pursuit."

Illinois Wildfowl.—Bluffs, Scott county, Ill., April 2.—Mallards are leaving fast, and bags of sixty to eighty birds each have dwindled down to from ten to twenty. Snipe are very slowly coming in, and are very wild and in good condition. By advices from Hannibal, Mo., and Centralia, Ill., both of which places are excellent snipe grounds, I learn that the birds there are also very scarce, and only very small bags are made. It appears that the great overflow of the Mississippi this spring has seriously damaged the best grounds. The Illinois River here is one great lake of about five miles in width, and the waters of the river are falling very slowly as the high water of the Mississippi backs up the current. I am assured that the best snipe shooting here, a hundred miles north of St. Louis, is generally had between the 10th and 20th of April.—C. L.

Masachusetts Association.—At the annual meeting of the Massachusetts Fish and Game Protective Association at Boston, on Friday evening, April 14, the old board of officers were unanimously re-elected, as follows: President, John Fottler, Jr.; Vice-Presidents, Hon. Thomas Talbot, Hon. Daniel Needham, Walter M. Brackett, Esq., Theodore Lyman, Esq., Edward P. Brown, Esq., T. T. Sawyer, Jr., H. T. Rockwell, Esq.; Treasurer, James R. Reed; Recording and Corresponding Secretary, E. S. Tobey, Jr.; Librarian, E. M. Messinger. Executive Committee-Ivers W. Adams, W. S. Hills, Arthur K. Roberts, F. R. Shattuck, C. T. Jenkins. Committee on Membership—L. Prouty, F. Tuckerman, E. Delano. ernian, E. Delano.

WILD TURKEY HUNTING.—Belleville, Ill., April 5.—A very good way, or rather the best way, to hide from a turkey, if you see them approaching you while hunting them, is to get in front of a tree, stump, or anything else that you would be likely to get behind to hide yourself. They never think of looking in front of anything to see if there is any one there. They are always on the lookout for the hunter to be behind the tree or stump, or whatever it may be.—C. H. A.

Nashville, Tenn., April 1.—With the exception of snipe, there is no game at present in season. Several respectable bags have been made of them, though they are in poor condition, and scarcely pay for the trouble and labor of going for them. A live ofter was brought into the city on Friday; it was taken a few miles below the city. On arriving here with it Johnny McEwen the hatter at once purchased it, telling the boys he would make a hat of it next winter.—J. D. H. NASHVILLE, Tenn., April 1.—With the exception of spine

Massachusetts—Beverly, April 4.—To-day Mr. Geo. F. Hinkley bagged two snipe, which are the first birds reported shot in this section this season. Very few geese or black ducks shot thus far, and "old gunners" think it doubtful about there being many this spring. Woodcock were reported with us about the 20th of March, and in greater numbers than is usual at this season of the year.—Farms.

DEER IN LOUISIANA.—New Orleans, April 5.—Continued reports of the slaughter of deer reach me from the overflowed districts. Now that the deer are so weak and poor, they offer but little resistance to the man who, for the hide, goes forth to violate our State laws. Papers throughout the State are calling on officials to make arrests.—Edward Odell.

Washington, D. C.—I am glad to report that, through having our police supplied with the law relating to the killing and exposure of game for sale, we do not see "woodcock" and other game birds exposed for sale out of season in the markets, as in years past.—A. B. B.

Tennessee,—Sandersonville.—I use a 12-bore, 32in. barrel, 81b. gun, and find good satisfaction with 4dr. powder, 11oz. shot, shoot over a brace of setters, and agree with "Mark West" on the ground shooting question. Partridges are growing scarce around here, rabbits and squirrels plenty.—WM. W. G.

Philadelphia.—Friday and Saturday last were ade for the snipe. John Brown and Harry Gatzner PHIDADELE AND THE STREET OF TH Delaware would not keep, so warm has been the weather.

AMERICAN PARTRIDGE FOR PERU.—President Arthur has nominated James R. Partridge of Maryland to be Envoy Extraordinary and Minister Plenipotentiary to Peru.

SNIPE.—Mr. J. H. Von Lengerke and a companion recently killed eighteen snipe in a day's shoot on the Jersey meadows.

Sea and River Hishing.

North. * * * * I doubt if any person can be really humane in heart unless really sound in head. You hear people talk of angling as

Shepherd, Fools-fools-waur than fools. It's a maist innocent Shepherd. Fools—fools—waur than fools. It's a mast innocent, moral and religious amusement. Gin I saw a fisher gruppin' creeffu' after creeffu' o' trouts, and then flingin' them a' awa among the heather and the brackens on his way hame, I micht begin to suspec' that the idiot was by nature rather a savage. But as for me, I send presents to my freen's, and devour dizzens on dizzens every week in presents of my freed s, and over duzzens on duzzens every week in the family—maistly dune in the pan, wi' plenty o' fresh butter and roun' meal—sae that prevents the possibility o' cruelty in my fishin', and in the fishin' o' a' reasonable creatures.

NOCTES AMBROSIANA

FISH IN SEASON IN APRIL.

Brook trout, Salvelinus fontinalis; salmon, Salmo salar; lake trout. Christivomer namaycush. This list may be in conflict with the laws in some of the States

BLACK BASS IN ENGLAND.

HAVE read "R. N's" and "Koorb's" remarks on the black bass. I entirely disagree with them as to the game qualities of the fish, but when they refer to the superiority of perch fishing, you seem to overlook the fact that perch in England are very large, being frequently caught weighing 2½ to 4½lbs. They are usually eaught in rivers, and are of course gamier than their species taken here in the lakes, not to speak of their superior strength and the quantities which course gamer than their species taken here in the lakes, not to speak of their superior strength and the quantities which can be caught. Bass, as every one knows who has tried for them, are exceedingly capricious, so much so that while I am most enthusiastic as to their game qualities, I never can quite make up my mind whether "le jeu vaut la chandelle."

G. W. K.

One cannot blame our English friends for looking well into the character of a fish before introducing it, we would have done well to investigate their sparrow's character before bringing the little missance here, and as this is their own funeral, we ought not to advise them too strongly. The writers which you quote from the London Field are, as you say, a little "funny," and talk like men who have never taken a black bass. They are evidently Britons of the "hide bound" kind, who look with defective vision at everything outside of their own microscopic island. They would decline to see anything good come out of America, except perhaps in that part which is still "loyal."

JOHN. Boston, Mass.

I know the kind of fellows who wrote the Field articles under the names of "R. N." and "Koorh." They occasionally come here in great plaid suits and a glass screwed in one eye, and "want to see those bloomin' black bass, ye know." Not being anglers at home, they mistake in trying to pass for them here. We have some English gentleman come here to fish, (and I can tell the genume article as soon as I look at him) who know what good fishing is and how to enjoy it, and they all think well of the bass. As a class they like to fish for the big pike, or pickerel as we call it, and it is hard to convince them that one mascalonge is worth a dozen pike to fight or to eat, unless they strike one. They are getting rare now, and we take fifty pickerel to one mascalonge. We see all classes of people here in the season, and quite a number of the plaid suit fellows. I am told that they do not wear such clothes "at home," but think them the thing for America. I suppose that our friends across the water see queer specimens of Americans in the loud commercial drummer, who may pretend to be an angler over there, and talk about what he knows nothing of. In this manner we judge individuals and nations by their lowest specimens, but when a man goes back to England and says that a black bass is not game, he don't know what he is talking of. Why, he might as well tell me that my old rooster "Clip," who has won eleven battles, ain't game. ain't game.

ALEXANDRIA BAY, N. Y.

AMONG THE FISHES OF FLORIDA.

AMONG THE FISHES OF FLORIDA.

On a Friday evening of a few days gone, from the cares of business, myself and Mr. O'Neal, an ardent and keen angler, found bodging at the hospitable home of Mr. Geo. Ladd, on the banks of the St. Marks River, Florida.

Partaking of an excellent supper we worked up an ebony salt cruiser to sail us over the salty waters, the coming morrow, in whose briny waves we proposed tackling the cunning sheepshead, chunnel bass and sea trout. Having succeeded we then put our tackle in order, swopped a few fishing incidents overflowing with great truths of wonderful catches of monsters of the 'bubbling deep,' and then cuddled up in a soft, downy bed to woo the drowsy God.

At five o'clock we were awakened by a yell that would have thrilled the duill, cold ear of death, uttered by O'Neal in the eestacy of his joy, at the prospect of a day's fishing. Plumped out of bed, seizing the festive youth, joined him in a hilarious jig over his report that "not a single cloud obscures the glory of the morning sky, and the winds from the south are stealing softly northward through the orange and banana trees, scarcely ruffling their leaves." Breakfast sunnounced, we sat down, our appetites increased by the grateful perfumes from delicious broiled mullet and fried

perch. Ye gods! what a glorious meal! Ended. Our boat is quickly loaded. O'Neal takes the bow, pole in hand, at the end of which, swinging to three feet of line, is the glittering buit concealing its barbed books, with which he hopes to catch the unwary bass as we glide down,the swiftly flowing waters of the river. Myself seated in the stern, gun in hand, ready to send the death-dealing shot into any kind of game that dares to come under our vision. Our sable sailor seizes the oars, and with one stroke of his brawny arms sends the boat onward to the sea over the waters of the dark flowing river.

in hand, ready to send the death-deating shot into any kind of gaine that dares to come under our vision. Our sable sailor scizes the oars, and with one stroke of his brawny arms sends the boat onward to the sea over the waters of the dark flowing river.

The scene, how beautiful! The sun is just rising from his home in the east. His unclouded rays are stealing as softly through the dark foliage of the forest trees that line each bank of the river as the footsteps of Time. In the tail oaks myriads of noisy crows are holding high carnival. The nimble squirrel laughs gaily at us from his hiding place in the merry green wood. Thousands of songsters of varied plumage herald the new-born day with their sweetest notes, while high over head the graceful osprey swims the ambient air on easy wing, and screaus indignantly at us as we glide over the bosom of the waters, whose fluny tribes he deems his own. Graceful magnolias, bay trees, cabbage-palmettos, with their long, waving, fan-like leaves; tall pines clustered around the long-limbed live oaks, whose wide, spreading banches stoop and softly kiss the murmuring waters sweeping by. But O'Neal has no eye for the beauties of nature just now. His gaze is firmly fixed on the glittering bauble gliding through the swift waters.

We round a bend of the river. Just as we sweep by comes with a rush a four pound bass, and plunges at the tempting bait, is impaled on the cruel steel, and is soon floundering in the bottom of the boat, while O'Neal's eyes beam with delight over his capture. Again the alluring bait is trolling through the waters; we noiselessly glide by an old treetop. O'Neal unguardeally looks at an old saurian swimning carelessly ahead of us, when there came a strike—and such a strike! It sounded like an exploding bombshell. The monster misses the hooks, and the bait goes high in the air, accompanied by O'Neals heels. The boat bottom catches him. Our shouts of laughter greet the veteran as he regains his equilibrium. "Confound you! you couldn't have done better," h

THE AFRICAN POMPANO.

THE AFRICAN POMPANO.

YOUR New Orleans correspondent writes of pompano in that city of the weight of thirty-five and twenty-eight pounds, which sizes are so unusual, even unprecedented, for that fish, that one may perhaps be permitted to doubt the species—especially as the specimens do not appear to have been submitted to scientific examination.

The cavalli, or crevalle, Cavana defensor, Cuv. DeKay—are allied species, so nearly resembles the pompano, Trackly—notus carolinus, Bothorleans pampanus, Cuv., as to be easily mistaken for it by a casual observer. In the loose and confused way of naming different fishes in different places, the names pompano and cavalli are often confounded, and men talk of killing pompano in the Indian River with a fly, when what they have caught were cavalli.

min of Kumug pompano in the Indian River with a fly, when what they have caught were cavalli.

The cavalli has the snout more pointed; its color is olive green and silvery above; golden yellow with blue and purple below. It goes in schools near the surface, takes any bait eagerly, is very rapacious in its habits, in this resembling the education of the state of the metable, the desh being oily, and streaked with black and white like that of the mackerel.

The pompano has a truncated snout; color when first taken, blue and silver; afterward pale blue above and golden yellow beneath; first dorsal with six spines; second dorsal soft-rayed. Both species have small scales and deeply-forked tails, and similar brilliancy of color.

The pompano seldom exceeds three or four pounds in weight; is a bottom fish which feeds chiefly on mollusks, and very rarely takes a bait; it is usually taken on the ocean beach with the east net.

Its great distinction is its value on the table, surpassing that of all other species in Southern waters; a combination of richness and delicacy difficult to describe but easy to re-

that of all other species in Southern waters; a combination of richness and delicacy difficult to describe but easy to remember. No one who has ever compared the above two species alive, or caten of them when cooked, can ever controlled the species alive. found them.

The supremely delicious pompano should not be degraded

The supremely delicious pompano should not be degraded by having the rank-fleshed cavalli called by the same name. The name of the inferior fish, "cavalli," or horse, was given to it by the Spaniards in reference to the swiftness and agility of this ocean rover. Call the new giant African cavalli if you will, but confine the name pompano to the unapproachable sovereign of the seas.

Perhaps the attempt to induce people to call things by their right names is useless, and the names trout, bass and chub will continue to be used in different places for the same fish. In your last number, a writer discourses about catching fifteen mackerel, meaning, doubtless, bluefish, which again in Rhode Island is called horse mackerel.

Manuerra, Ga.

erel. Marietta, Ga.

Marietta, Ga.

A few years ago the U. S. Fish Commission received a single specimen of a fourteen pound pompano from Mr. Blackford, of Fulton market. It was found to be an African species, Trackypotus gorcensis, common about the Canary Islands. The next year several were caught and they are now not rare in the market of New York. We think the fish has come in some numbers, perhaps to stay, and, in the article alluded to, suggested that it be distinguished as the "African pompano." We do not doubt but the New Orleans specimens were the same fish, which is new to our coast now, as the blucfish was fifty years ago, but it is not the cayalli.

TENNESSEE ANGLING NOTES.

EVERYBODY has gone wild on the subject of angling. Fish are reported as more abundant than ever known before, and as business is rather dull, the banks of the streams in close proximity to Nashville, are lined with hundreds of persons of all colors, ages, and both sexes. Col. Akers and Ed. Horn went out this morning to wet their lines in Mill Creek, and as both are noted manipulators of the rod and reel, it will not surprise me to see them return with a hundsome creel.

I regret to say, that among our well-to-do people there is a

and reel, it will not surprise me to see them return with a landsome creel.

I regret to say, that among our well-to-do people there is a decided spirit of lawlessness existing, and many of them not a particle too "square" to indulge in siming where they can do it on the sly. This is shameful, inasmuch as our protective laws are the most lenient passed in any State, and the increase of fish in our many beautiful streams depends entirely upon a cessation of wholesale slaughter for a few years. By the time the next General Assembly meets here, it is to be hoped that amendments will be offerred and passed to the present bill, and those persons violating the law be severely punished. With our streams well stocked with game fish, and the forests with turkeys, deer, and quail, a great many Northern and Eastern sportsmen would be induced to pass a portion of the season, and enjoy our fine cligame 1819, and the torests with utriceys, deer, and quali, agreat many Northern and Eastern sportsmen would be induced to pass a portion of the season, and enjoy our fine climate, and perhaps become investors in properly down here. The Forest and Stream, ever ready to aid in the cause of game and fish protection, must come to our assistance. The influence of such a journal, and the able manner with which it deals of such subjects can have but a most salutary effect. There are persons who argue that a fisherman's is a lazy life, but these would-be murderers of fish find it to be the very reverse, hence they wish to set nets, traps, and other contrivances, by which to catch unsuspecting creatures that they are too indolent to capture in a legitimate way. Since the introduction of the system of extra fast trains, we are getting many varieties of fish hitherto unknown here. Andy Meadors displayed hard and soft-shell crabs on his stall to-day; also shrimp and crayfish; fresh herring are brought to us from the Chesapeate, and even the noble salmon reaches this far.

Nashynle, April 1, 1882.

TROUTING ON LONG ISLAND.

DOYS let us change the opening day for trout! All Fools' day is not a good one for trout and trappers combined. Last year our lines were frozen and this year the wind blew our flies off. I went a fishing on the two first days of April and only had two hours of good fishing. We left flies and leaders, too, on many a bush, and much of my good temper with them. Usually, it soothes our tempers to good bright and only able day on a stream which were

good temper with them. Usually, it soothes our tempers to get a good, bright and enjoyable day on a stream which we know of on the south side of Long Island, which is without an oral dam. But we cannot keep our tempers down if we have such April openings.

Think of it! In two hours we killed six fish, weighing seven and one-quarter pounds, and on the remainder of the two days could not drop a fly or land a half-pounder. A saint could not stand such treatment. The weather was sour, the beauties sulked; our favorite flies would not tempt them. The favorite fly used in some localities we know of, was a big fat worm, and even the worms were so cold and wiggleless that they had to be warmed in the mouth to get sensibility enough in them to squirm on the hook.

less that they had to be warmed in the mouth to get sensibility enough in them to squirm on the hook.

The best catches/that I hear of are: Imbrie and Clerk, fishility decen's Creek, Sayville, thirty-four; eighteen weighed ten and one-half pounds. Wilbur and Chapman, fishing the same stream, eighteen; largest one and three-quarters; six weighed seven and one-quarter pounds. John Ripper, near Glen Cove, two and one-quarter pounds. Mr. W. Holberton had excellent success somewhere on the south side. Very fine fish have been taken at the ponds of August Belmont. At Islip, Mr. P. Remsen took twenty-two pounds of trout in two hours, and a party of four are reported as having captured sixty-three pounds near Freeport.

It is said that President Arthur, who is an adept at casting the fly, and who has fished for a dozen years or more in the procks of South Oyster Bay, on Long Island, will be the guest of William Floyd Jones during his visit this season.

SOUTHERN FISHES IN 1775.

SOUTHERN FISHES IN 1775.

OUR valued correspondent, "S. C. C.," wrote us on this fish, and we printed it turpon, after the manner of Al. Freece's spelling. Mr. C. objected to this, and we wrote him that it was an oversight in proof-reading, as it is spelled in different ways. We incidentally stated that we always had spelled it turpon, having only the authority of Gill's Catalogue of the Fishes of the east coast of North America for such spelling. Our correspondent again writes:

As to Tarpum, I have written the word with an o, following one of the earliest writers on the Fishes of Florida, Capt. Bernard Romans, of the British Army, whose "Concise Natural History of East and West Florida," was published in New York, 1775. A very able and original writer was this captain of engineers, and had many ideas far in advance of his time. He writes: "The whole of the west coast of East Florida is covered with fishermen's huts and flakes; these are built by the Spanish fishermen from the Havana, who come annually on this coast to the number of thirty sail, and one or two visit Rio d'Ais or Indian River, and other places on the east coast. The principal fish here, of which the Spaniards make up their cargo, is the red drum, called in Bast Florida a bass; this is here a fine fish, although in the northern provinces they are generally poor. They also sait a quantity of fish which they call "pampanos," for which they get a price three times us high as for other fish. A few sea trout and the roe of mullets and black drum, and some oil from the liver of nugses and shark—a bottom fish, living on mollusks—of a sluggish disposition, and not ferocious or destructive, like their cousins. We sometimes book this species, while fishing for sheepshead P. H. Gosse, in his "Naturalist in Jamaica," describes it under the name of Septition extractor. Unn.

Capt. Romans gives the following list of species: "King-Sch bargeorget interparts.

"Naturalist in Jamaica," describes it under the name of Seglivian cirratum, Cur.
Capt. Romans gives the following list of species: "King-fish, barracoreta, tarpom, bouita, cavallos, amberfish, pampus, silver-fish, jew-fish, groupers, rock-fish, porgys, morgate-fish, hog-fish, angel-fish, yellow-tails, red, grey, and black-snappers, mangrove-snappers, dog-snappers, parrot-fish, mutton fish, grunts, muray, mullets, sprats, red and black drum, bonefish, stingrays, sharks, and an immense variety of others, all excellent in their kinds."

Most of these we know under the same names: "Muttonfish" are probably sheepshead, "rockfish" are perhaps striped bass, which have been taken recently in St. John's

River, but what are "amberfish," "dog snappers," and "muray?" The "parrot-fish" is a West India species.

I found a copy of Roman's book in the Boston Atheneum, from which I made extracts.

S. C. C.

In our last volume, page 511, we gave a list of Southern Sea Fishes in 1675, by Captain Dampier, just one hundred years before Roman's, and the common name of Megalops thrissoides was spelled, as in the present case, tarpom. Hence we will drop our orthography, and in future spell it as originally spelled. Marietta, Ga.

TROUT AND SALMON IN NEW HAMP-SHIRE.

In your notice of the trout season, you give it as opening in N. H., April 1. Please correct this, as it opens May 1, the same as Maine and Vermont.

Your correspondent, "Hodge," speaks of salmon fishing in the Merrimac and Pemigewasset, but your readers must bear in mind, that the prohibitory law does not expire till June 14

in mind, that the prominion has does not explicit the state of the latest the probably be as soon as any salmon get up the river, they not making their appearance at Lawrence usually much before the list of June.

The pools and eddies at Goff's Falls, four miles below Manchester, the large pool below Hooksett Falls, eight miles above Manchester, and the one below Garvin's Falls, five miles above Hooksett, would seem to be the most likely places to find them.

to find them.

The springs and lakes, at head waters, are full this season, and we hope that the salmon may be more successful in their efforts to ascend the Merrimac, than they were last summer, when they were caught by low water in June.

The robins and bluebirds have been plenty here for a fortnight, and the "May-flower," Epigea repirs, is just beginning to show its pink buds. I picked quite a little bunch yesterday. But the winds hold cold from the north, and it froze sharply last night.

But the winds hold cold from the north, and it froze sharply last night.

It is many years since I spent the early spring in a country village, and in wandering about over the hills, since the snow went off enough to make tramping possible, I am struck with the dissapearance of the old familiar woods.

No wonder our streams dry up in the summer, and our trout are exterminated.

We shall have to get boards of forestry yet, in New England, to preserve our water-powers, for manufacturing purposes, for they are becoming more variable yearly, as the timber is stripped off of the mountains.

Sam Webber.

THE DEAD FISH.—Concerning the tile fish found on the borders of the Gulf stream the following report is made by Captain Ole Jorgensen, a Norwegian, to Secretary Wilcox, of the Boston fish bureau: "On March 14, in lat. 40tleg., lon. Tideg., I commenced sailing at 1 o'clock in the afternoon through great quantities of dead fish, which I kept seeing until dark. They were from one to four feet in length, but mostly from one to two feet long. On March 15 there was a severe storm, with rain and snow, and I did not see any fish." The captain also states that his men tried to hook up some of them, but they did not succeed, as the wind was blowing very hard from the northwest. At the rate Captain Ole Jorgensen was sailing he must have seen the dead fish for forty or fifty miles. Other seamen must also have seen the same fish, since their statements agree as to the latitude and longitude and the date of seeing them. Prof. Spencer F. Baird, of the United States Fish Commission, in a letter to the Boston fish bureau, desires all seamen who have come in contact with these dead fish to give all the facts they observed concerning them, either to the newspapers, to the fish bureau or to communicate with him personally. The object is to identify them, if possible, beyond a doubt. Prof. Spink hay they who they facts they observed concerning them, either to the newspapers, to the fish burreau or to communicate with him personally. The object is to identify them, if possible, beyond a doubt. Prof. Baird at present has no doubt but what they were the tile fish—Lopholatilus—seen by his commission, both in 1880 and 1881, on the borders of the Gulf stream. Prof. Baird thinks they were rendered lifeless by some great natural cause, and hence they were seen in such great numbers. He is of the opinion that they might have been killed by the force of the recent gales which had previously prevailed. Other men of science are not inclined to this idea, since, they say, such wholesale destruction of a powerful fish as the tile fish is known to be, by the force of the waves alone, would have been simply impossible. They incline to the belief that some volcanic action of the ocean must have destroyed them. Their death could hardly have been the result of disease, since some of the captains report having taken one or two on board and having found them hard and nice, and to have enjoyed good dimers from them after cooking. The locality mentioned by Captain Ole Jorgenson N. lat. 40deg., W. lon. 71deg., corresponds almost exactly with where the Lopholatilii were found by the United States Fish Commission in the summers or 1880 and 1881. Any facts concerning the tile fish, either dead or alive, should be communicated to Prof. Baird. Prof. Baird is of the opinion that they exist in great numbers in and about the locality mentioned, and that in them exists one of the great food supplies of the ocean.

A COMPACT ANGLING ROD.—We were recently shown by Mr. W. Holberton, with Couroy & Bissett, almost complete and compact fishing rod. It is called the Holberton pattern split bamboo trout rod, and, with the exception of a short but which can be carried in the pocket or in the creet, the whole thing goes inside of the landing-net handle. When the angler arrives at the stream, he takes the rod out of the bamboo landing-net handle, screws the folding ring in, puts the rod together and all is ready for business. As an extra rod to take along, it is very desirable, for, though not over ten feet long, it is powerful enough to kill a good sized black bass and to cover a cast of sixty feet in expert hands.

bass and to cover a cast of sixty feet in expert hands.

Whitebart, Pawtucket, R. I., April 4.—I send you by this inail some fish which of late have been caught in small quantities in the Pawtucket River in tide water. Our fishermen are trying to sell them as "whitebait," I fell them that they are not whitebait, although I am not posted at all on fishes, but think such fish have been sold in your city by that name. Will you have the kindness to identify them for me, giving both common and scientific name? Any information which you may give about them will be appreciated by—Samuel F. Denten, [The fishes came to land. They are called "silver-sides," and "friar" along the coast. The systematic name is Ohirostoma notato. Mitch, Gill. They are sometimes sold as whitebait in New York, but are not the genuine article. The true whitebait tree the young of herring, alewives, etc. New York market men call them "spearing."

They grow no larger than your specimens.

Hishculture.

FISHCULTURE IN NEW HAMPSHIRE.

FISHCULTURE IN NEW HAMPSHIRE.

A Ta meeting of the New Hampshire Fish and Game League, held in Manchester April 4, the president called on Gen. John Moneli of Winchester, Mass., to state what progress had been made in the culture of salmon and shad in the waters of New England.

In response to the invitation, General McNeil said that it was generally understood that if the Commissioners of Massachusetts would build a suitable fishway at Lawrence, the State of New Hampshire would restock the streams. A fish-through the fishway we have no means of knowing, but it works well, and I don't think the people of New Hampshire through the fishway we have no means of knowing, but it works well, and I don't think the people of New Hampshire 400,000 salmon, but they were declined, because there was a lack of funds, I suppose. I spoke of this matter to Col. George, and he advanced the proposition to pay for half of them if I would purchase the remainder, and the result was that these 400,000 salmon were put into your waters, and they are the salmon coming up this river now. The river has also been stocked with a leawyes and lampreys as far as Lowell, and they have been seen there in great quantities. Col. Ridle has obtained the lampreys there and placed them above the falls in your city. It has been a matter of doubt with regard to shad, but four of them were discovered this year in the fishway at Lawrence. The only thing we need now is a channel at the foot of the dam here in Manchester. The fishway here is a perfect outrage, and it should not be allowed to longer obstruct the passage of salmon up the stream. I understand that arrangements have been made for its improvement, and something should be done in this direction before salmon commence running this year. I understand that Mr. Kidder still claims that the alewives seen at the mouth of Colas Brook were transported from Lawrence, and I will advance the proposition to give him \$5 for every alewire that he will transport from Lawrence if he will give me five cents for e

transport from Lawrence if he will give me hive cents for each dead one. I have no doubt that fish can be restored to our streams, and can see no reason why shad cannot be taken from the Connecticut River and hatched out at the hatchinghouse at Plymouth.

Mr. John B. Ellinwood said he had never caught fish that were any more lively than the alewives at Cohas Brook.

Mr. Joseph Kidder said: I am still firm in the conviction that we have never had any alewives at the falls here. It seems remarkable that they were plenty at Cohas Brook on year and have not been seen since. Why don't they come again? Had I been the one to transport them, I would have done so for several years, and thus have given the appearance that they came up the river. If they shall come here in any quantity, it will show the good results of our fishculture. I have called the attention of our fish commissioners to the fact that the fishway here in Manchester is wholly inadequate for the purposes for which it was intended. The question arises in view of the expenditure of money, time and labor if the result achieved is commensurate with the labor performed. With our lakes and ponds the result has been satisfactory, but not so with our rivers. If the experiment has been successful in the rivers of Massachusetts, we are glad of it. I am not aware that more salmon were seen this last year in New Hampshire than the year before.

Gen, McNeil—Then you have not read the annual report.

Mr. Kidder—There may have been more seen at Livermore Falls. Several died at the falls in this city for the reason that they could not get over them. There is no pool or place for them to rest at the fishway here, and the fishway is not so constructed that a salmon any size can get into it. It is entirely inadequate. I trust the fish commissioners will succeed in getting it into a more satisfactory condition. The one at Lawrence was built over several times before the present one resulted, and I presume the one there now is not incapable of being improved. It is a shame

accept his proposition, and the latter replied that he would consider it and advise him, he thought he could make money by it.

Dr. Spaulding of the Board of Fish and Game Commissioners, being called upon, regretted that Mr. Powers, who had charge of the hatching house at Plymouth, could not be present. The fishway at Amoskeng Falis was considered at the meeting of the New England Fish Commissioners, held in Boston last week, and Mr. Lyman and myself were appointed a committee to confer with Col. Livermore to see if something cannot be done to improve it. We are satisfied that Col. Livermore will accomplish whatever is necessary. There is need on a channel on the west side of the river, as the drouth has been so severe the past few seasons that the fish could not reach the front of the fishway.

We have a fine supply of Atlantic salmon, having received 30,000 eggs which we hatched out; this gives 460,000 Atlantic salmon which we propose to place inghe upper waters of the Merrimack. We have 55,000 fine speckled trout which are to be distributed in various towns of the State that voted to protect their trout streams for a period of three years, and many towns have so voted. Of the land-locked salmon, we have only been enabled to secure 59,000, and propose to put them in two or three of the largest bodies of water in the State.

RAINBOW TROUT.—Boston, April 6.—The fame of the beautiful rainbow trout had so long sounded in my ears, that I felt anxious to behold its beauties. I went to New York on the 1st. inst. to see those which Mr. Blackford was about to exhibit. I have beheld them. I don't want to see any more. The great coarse, black, ugly beasts! A dingy brown with darker spots and a heetic flush along the side as if it had a fever. And to compare this coarse, scaled brute with our delicate aquatic gems of fontinatis! O, get out! Don't tell me any more about them. I have seen them once and am disgusted. I wouldn't eat one of the fever-flushed looking things unless starved. Good-bye, Rainbow!—H. R. G.

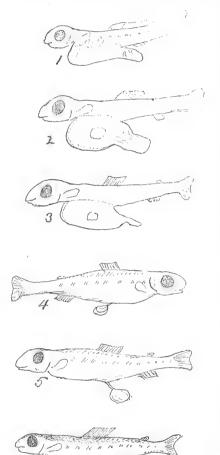

REPORT OF THE COMMISSIONERS OF WEST VIRGINIA.—We have just the report of the Fish Commissioners of this State for the year 1881. Three new ponds have been built at the State hatchery. The seven carp received in 1879 spawned very largely last summer before a pond was ready for them and the greater part of the eggs failed to hatch, still a few young were distributed. The two-year old carp now in its ponds will weigh ten pounds each. A list of fish distributed follows, which shows: 1,052 carp, 8,500 land-locked salmon, 7,000 brook trout, 545 black bass, 125 silver perch, and 21 wall-eyed pike. Financial statements and Dr. Hessel's monograph on the carp conclude the report.

THE AMERICAN FISHCULTURAL ASSOCIATION.

[Paper read at the meeting of the Association, April 3.] REMARKABLE DEVELOPMENT OF EMBRYO SALMON

BY FRED MATHER

Persons who are unfamiliar with the development of animals during their embryonic state often ask, when viewing young fish just from the egg, "When does the sac drop off?" This question has often been ,put to me, as no doubt it has to other lishculturists, and hen put to me, as no doubt it has to other lishculturists, and an explanation of how it is absorbed usually follows. I have believed heretofore that every portion of the sac was necessary to the complete development of the fish, and have been rather amused at the innocent question given above. All lishculturists have noted the fact that an embryo with a small coagulation in its sac, caused by an injury while in the egg, or after hatching, will die near the time that the injured portion is about to be taken up by the absorbent vessels, but, to my surprise, I have seen portions of the sac thrown off this winter and the fish have lived and taken food afterward. In the hatchery of Mr. Thomas Clapham, at Roslyn, L. I. which I fitted up the past winter to hatch salmon for Prof. Baird and Mr. Blackford, the troughs were all new, and the haste with which they were made allowed but little time for coating with tar. One trough in particular had but a very light coating, and soon after the hatching of the eggs a singular spotted appearance was observable among the fry. This was caused by the turning white of their livers. Both Prof. Ryder and myself examined them under the microscope, and saw the clouded liver, through which the blood appeared to

circulate feebly. Knowing no other eause than the exudations of unseasoned pine wood I removed the fry at once and placed them in a well tarred trough and watched the result. Neither Frof. Ryder nor myself thought that the fish, some 15,000 in number, could live. He was of the opinion that the trouble originated in the sac, and that a deficient circulation in some portion had affected the liver. It was a new experience to both of us, and his extensive knowledge of embryology gave his opinion a weight which led me to accept his view, although I could not see any trouble in the sac. I gave him some specimens afterward which confirmed this theory, which I am now satisfied was a correct one.

The first indication of trouble in the sac was an elongation of the posterior portion of it, and a constriction about midway between its extremity and its connection with the body. This is shown in the specimens here before you in the vial's Nos. i and 2. Sometimes the portion beyond the constriction contained the large oil globule, and sometimes it did not, and this globule seemed to be very irregular in its position. All the his in this trough were so affected, and in addition to the "liver complaint," the blue swelling, or "dropsy," appeared. The latter was fatal in every case, the microscope showing a deposit of watery fluid between the two membranes of these, in which great numbers of blood corpuscles could be seen drifting about.

No. 3 shows one form which followed. In this the part cut off from the circulation by the constriction seemed to wither away, and I suspect that in these specimens only a small portion was affected. No. 4 shows a small globe separated from the sac by a cord, and this globe is clear and has no sign of an opaque spot or injury. No. 5 shows larger portions of the sac cut off by the cord and held suspended. Thus far I had but small hopes of the fish surviving until one day while trying to appure a lively fellow which had a large ball hanging by a string, the fish made a sudden turn to escape the fe

whole lot would have been past saving if left in that trough twenty-four hours more.

I do not know that any such experience is on record, and will frankly say that I should have considered this a very suspicious story if told by some fishculturist whom I do not know, or, at least, a story that required verification; and while I am aware that it actually happened I cannot help feeling that some persons may suspect that a mistake has been made in some material point. To this I can only answer, "here are my specimens, and I have seen the cast-off balls from the sac in the bottom of the trough where the fry which were affected as described are now swimming and feeding." When I say that I might have considered such a story "a suspicious one," I do not wish to be understood as meaning that I would reject an experience related by a brother fishculturist which did not accord with my own, but wished merely to state that I fully recognize the fact that a naturalist should believe nothing that he hears and only half of what he sees. We have no word to express the state of mind which is open to conviction, but neither believes nor disbelieves. To those to whom it seems incredible that part of the sac of a trout or salmon should be thrown off by a mighty effort of nature when found to be poisoned, I would suggest following my experiment, if a blunder can be so called, and when the liver of the fry turns white remove the fish into a clean, healthy trough and note the result.

In this connection it has occurred to me that the reason that trout do not fourish below sawmills is on account of the water being impregnated with either pine or oak. In 1875 I lost a lot of California salmon, at Blacksburg, Va., in an oaken trough which one of the then fish commissioners of Virginia, in whose employ I was, insisted upon my using. The impregnation of taunin was perceptible to the taste and the fry died as fast as hatched. The theory of the fishermen near sawmills is that the sawdust gets into the gills of trout and kills them. This ma

know too well.

FISHCULTURE IN DELAWARE.—The city of Wilmington has a local fish association, composed of Mayor Allmond, Dr. E. G. Shortlidge, Jacob Pusey, S. N. Trump and others, which is carnostly desirous that City Council shall take immediate action upon the request recently sent to that body, that permission be granted to construct ponds on the lot at Cool Spring Reservoir. Dr. Shortlidge recently said that he and his associates were sorry Council should delay taking action one way or the other on their petition. It has been their desire to have the hatching establishment in operation by this time, if it was located at the reservoir lot, and that they had expected to have California salmon in the proposed basin by this time. He also said that the fish company intended to spend money liberally, the lot would be graded and improved, and by co-operation with Fish Commissioner Moore, the streams would be stocked with fish. There seems to be a favorable sentiment among the members of Council, and many of them think that the recommendation of the Chief Engineer with reference to the waste water basin should be carried out at this time. Chief Engineer McIntire thinks the basin the city needs could be constructed for from \$8,000 to \$4,000. The Water Committee is expected to consider the petition soon.

THE FIRST CALIFORNIAN EEL CAUGHT.—The San Francisco Chronicle of February 8, reports the catching by George Bird of the first eel, resulting from the plant of 12,000 made by the California Pish Commissioners. It was caught on the easterly shore of San Francisco Bay, and measured on the easterly shore three feet in length.

BROOK TROUT WANTED.—See advertisement in another column of party wanting 5,000 or 10,000 yearling trout.

The Bennel.

FIXTURES.

BENCH SHOWS.

April 18, 19, 20 and 21—New York, Sixth Annual Bench Show of the Westminster Kennel Club. Entries close April 3. Chas. Lincoln,

NATIONAL DERBY.

WE give below the remainder of the entries for the N. A. Oilver's Dan (Rake-Bessie Lee) black, white and tan English setter dog, Aug. 6. J. H. Kraft, New Albany, Ind. Kraft's Rake, litter brother to Oliver's Dan; same owner, Countess Mollie (Count Noble-Spark) white and lemon English setter bitch, July 15. John D. Ladd, Martin, Tenn Elsa (Drake-Countess May) black, white and tan English setter bitch, April 12. E. E. Hardy, Boston, Mass. American Dan (Lincolh-Daisy Dean) black, white and tan English setter dog, April 12. Montview Kennel, Columbia, Tenn.

English setter dog, April E. Montree Academ, Crem.
Count Titcomb and Pride of Fairlew, white and liver, litter brothers to American Dan; same owner.
Daisy Lion, white and liver, litter sister to American Dan; T. E. Gordon. Columbia, Tenn.
Old Waet, white and lemon, litter brother to American Dan; J. A. Titcomb, Columbia, Tenn.
Cynthia Walker (Guy Mannering-Whirlwind) black, white and tan English setter bitch, June. Chas. H. Raymond, New York.

York,
Midnight (Chipps-Nettie) black pointer dog, June 13. E. S.
Wanmaker, Elnavood, N. C.
Darkness, black, litter sister to Midnight; same owner.
Rip Van Winkle (Count Noble-Spark) white and liver English setter dog, July 13. J. W. Orth, Pittsburg, Pa.
Pope, lemon and white, litter brother to Rip Van Winkle; same owner.

Pope, lemon and white, litter brother to Rip Van Winkle; same owner.

Startle (Leicester-Crook) blue belton English setter dog, July 12. Major G. R. Watkins, Brooklyn, N. Y. Chester, orange and white, litter brother to Startle; same owner.

Flire (Thunder-Minerva) blue belton English setter bitch, Aug. 9. A. S. Bishop, Pittsburg, Pa. Reddy (old-Meg) liver and white English setter dog, June 27. Samuel Scranton, Olneyville, R. I. Garnet (Elcho H.-Dell), red Irish setter dog, April 5. Thos. Stodd, Catasauqua, Pa. Nannie, litter sister to Garnet. Same owner. THE NEW YORK SHOW.

THE NEW YORK SHOW.

Lower thing promises well for the coming show, and under the coming of the most successful exhibition that has ever been held in this country. The entries number over twelve hundred, comprising many of the most noted dogs that have appeared in public, as well as a large number of new aspirants for fame. The entries in the setter classes number over three hundred, and without doubt, will afford a larger and better exhibition of the "silken-haired beauties" than we have ever beheld. The inembers of the Westimister Kennel Club have labored assiduously to insure the success of the exhibition, and we heartily congratulate them upon the brilliant prospects of their sixth annual show.

An extra special prize of a silver medal will be given for the best collection of five collies.

A CONSIDERATE MOTHER.

A CONSIDERATE MOTHER.

I AM a Connecticut farmer, or at least I own a farm in Connecticut, where I keep some fancy stock and some dogs. One of my dogs is a Gordon setter, who was as a puppy not too proud to exhibit himself and take a first prize at the dog show. I had some young pigs some years ago and he took quite an interest in them, visiting the pig sty frequently and standing on his hind legs, with his forefeet on the edge of the pen, watching them for several minutes at each time. This interest in pigs grew upon him to such an extent that he began to watch the grown up animals, and, in order, perhaps, to extend his knowledge of hogs he adopted, after a while, the practice of going daily to all the neighboring hog pens, and inspecting the animals confined in them. My worthy neighbors, I am sorry to say, at first suspected my good dog of having designs upon their eggs, but after watching him carefully they discarded their unworthy suspicions and reported the case to me as a curiosity.

When my fat hogs were killed in December he happened to be present, and seeing the slaughter, and hearing their cries, he sat down and howled most unhappily.

Now for another equally true tale. Among my pets at the farm I have a beautiful Scotch collie bitch, which has a litter of pups just weaned. The pups are allowed, for a few hours each day, to run at large. The mother will not permit any attempts to suck, snapping and snarling whenever any are made. A few days ago one of the neighboring farmers, while backing out of the kitchen door, stepped on the foot of one of these puppies. The pup set up a howl and ran to the woodhouse near by, where he was met by his mother, who looked him over carefully and tried to connotor him, but he wouldn't be comforted; he held up his foot and continued to whine, not-withstanding her caresses. At last, finding that nothing else would do, the bitch coaxed him across the road, into the lot, and driving the others away, she lay down and let this puppy suck as long as he wished!

This treatment

New York, April 8, 1882

SALE OF THE HARVARD KENNEL CLUB.—The Harvard Kennel Club have sold their dogs, with the exception of a few young ones, which they will dispose of at once. Mr. A. M. Tucker, of Charlestown, Mass., has purchased Dash Hi. and Countess H. at a long price (\$2,500, we hear); also the year-old bitch Sious by Dash HI. out of Rhoebe (Rock—Dora), who will run in both the National and E. F. T. Derby. Mr. Tucker has just completed extensive and well-arranged kennels at Lexington, Mass., and has removed his recent purchases there, Dash III. and Countess H. arriving there from Storm Lake, Ia., last Friday. He will wisely retain the name of "Harvard Kennel" for his establishment, and we are well

assured that the world-wide fame of this celebrated kennel will lose none of its prestige through its change of ownership. When the Harvard Kennel was removed from Massachusetts to Iowa we expressed our regret that the breeders of the East should lose the services of so valuable an animal as we believed Dash III. to be. Since that time the wisdom of this belief has been abundantly confirmed by the public performances of his progeny—Countess May, Pollux and Bessie—and the well-known reputation of many others of his get; and it gives us great pleasure to announce that he will remain in the stud, and we have no doubt that the breeders of New England will eagerly embrace the opportunity to infuse into their kennels such valuable blood as this has proven itself to be. Mr. E. E. Hardy, of Boston, Mass., has also purchased from the club the dog Roll by Dash III. out of Countess II. and the two bitches Elsa and Gleam. Both of the latter will run in the National and E. F. T. Derby, while Roll will run in the National and E. F. T. Derby, while Roll will run in the National and E. F. T. Derby, while Roll will run in the National and E. F. T. Derby, while Roll will run in the National and E. F. T. Derby, while Roll will run in the National Chicken Trials and at Grand Junction. Mr. Luther Adams, who organized the club, will retain for his own use the two bitches Shadow and Bessie. The latter we consider the best young bitch in the field that we have seen for a long time, and if nothing goes amiss with her, we shall confidently look to see her well placed at the trials next fall. The sale of the kennel was rendered imperative by the constantly increasing duties of the Nesbité brothers, who had charge of it, in the care of the large stock farm which they are managing.

care of the large stock farm which they are managing.

THE PENNSYLVANIA RAILROAD COMPANY has issued a notice to baggage agents that "kennels for the transportation of dogs in baggage cars are now provided by this company, and will be at the disposal of sportamen desiring special accommodations for valuable animals, at the following rates per each kennel and contents: For transportation over one division and between any two points on the same division, 50 cents; for transportation over more than one division, 50 cents; for each division or each part of a division. The rate computed on this basis is illustrated as follows: From New York to Newarak, 75 cents; Lancaster, 81; Harrisburg, 81; Huntingdon, 81.50; Altoona, 81-50; Greensburg, 82; Pittsburg, 82; Baggage, agents will forward these kennels in the same manner as baggage, issuing checks therefor and entering the numbers on their record books. Baggage masters will enter the numbers of checks on their way bills, and take receipt from the agent at destination, who will return empty kennels, under reverse check to the starting point. Receipts will be accounted for and reported to the anditor of passenger roccipts in the same manner as collections for excess baggage, except that a separate entry will be made under the appropriate head. Shipments will be made by accommodation trains exclusively, except when there is available room in the bazgage cars of express trains in excess of the requirements of regular baggage business. Checks will not be issued to any points off the lines of this company, or of roads operated by it, and in all cases a release will be taken from limiting account of loss or injury. By order of the General Passenger Agent.—F. J. McWade, General Baggage Agent.

Agent."

DOGS AND RAILROAD CHARGES.—In our issue of March 2 we mentioned the complaint of Mr. Geo. D. Barker, of Boston, Mass., regarding the excessive charges of railroad employes for transporting his dogs. Upon his arrival home he wrote the superintendent of the road in regard to the material received the following reply: "Office Seaboard and Boanoke Railroad Company, Portsmouth, Va., March 24, 1882.—Geo. G. Barker, Esc., Yours of 18th received, and would have been answered before but for my absence. Capt. Drummond in collecting from you on your dogs disobeyed my order. My order to conductors is to charge on dogs, for any distance, one dollar each, but not to charge on the solvenge or hunting dogs. My object in issuing this order was to prevent the negro swamp hands from carrying their miserable curs and hounds, which sometimes is a missance, especially holidays. I am pleased that you have written to me, for I now know that my order is not fully carried out. I shall see that it shall be done. Inclosed are three (\$\frac{1}{2}\$) dollars.—E. G. Gino."

COKER SPANIEL PRODUCE STAKES.—I have received the following additional entries for the Cocker Spaniel Produce Stakes: Mr. E. C. Hale, Sherbrooke, Province of Quebec, enters liver and white bitch Nina, by A. Maepherson's dog, 1st prize Montreal, ex A. Molson's bitch, served by owner's liver and white dog Shot, alias Peezer. Mr. J. K. Kirk, Toronto, Ontenter simported black bitch Jet, by Nigger, ex Belle, served by owner's insported by Secretary A. C. S. C., 453 West Forty-third street, New York.

THE BOSTON DOG SHOW.—This show bids fair to be a very successful one. A large number of entries have already been received, and judging from the applications for entry blanks, there will be as many dogs as can be accommodated in the building. Many first-class animals are already entered, and many more are promised. The officers of the association express themselves as abundantly satisfied with the prospect, and predict the most successful show that they have ever held.

EASTERN FIELD TRIALS CLUB.—There will be an important meeting of the members of the Eastern Field Trials Club at Delmonico's, corner of Broadway and Twenty-sixth street, Thursday evening, April 20. Every member should be present, as action will be taken upon the proposed amendments to the by-laws, and the locality for the trials will probably be decided upon, as well as the arrangements for the Members' Stake.

PUG IMPORTATION,—Mr. E. F. Mercilliott; of New York, has just received from the kennels of Capt. C. H. White, of Lancashire, Eng., a capital pair of pugs—dog and bitch—which he will send to his extensive kennels situated at Maspeth, L. I. Mr. Mercilliot has probably some of the best animals of this favorite breed that can be produced in this vicinity.

IMPORTANT SALE OF DOGS.—Mr. A. H. Moore will dispose of his surplus dogs at auction on Saturday, the 22d inst., at the American Horse Exchange. Among them are several well-known animals, and visitors to the bench show in want of line dogs should not fail to avail themselves of this opportunity.

LENGTH MEASUREMENT.

Editor Forest and Stream:

I have seen it stated that length measurement is gaining ground in spite of your able exposition of its faults. Is this really so?

COMMON SENSE.

Editor Forest and Stream:

I have seen it stated that length measurement is gaining ground in spite of your able exposition of its faults. Is this really so?

Length measurement is not gaining ground. Statements to the contrary are devoid of truth. There are eighteen cabin yeacht clubs on the Atlantic coast and the lakes, as follows: Royal Nova Scotia, Portand, Salem Bay, Eastern, Dorchester, Boston, Beverly, New Bedford, Larchmont, New York, Seawanhaka, Atlantic, Quaker City, Buffalo, Cleveland, Toronto, Bay of Quinte and Royal Canadian. Of this list cleven measured by length two or more years ago. To-day only five lave retained length measurement: the Boston as the sole representative East, the New Bedford and Quaker City, both having many small on the Aarchmont both representing heir action, and the Atlantic and the Larchmont both representing heir action, and the Alantic and the Larchmont both representing heir action, and the Alantic and the Larchmont both representing heir action, and the Alantic and the Larchmont both representing heir action, and the Alantic and the Alantic and the Larchmont both representing heir action, and the Alantic and the Larchmont both representing the raction, and the Alantic and the Larchmont both representing the records of one Swedish, two Danish, one Belfaian, three French, one Portuguese, and one Italian Yacht Club. Not one of these sails or thinks of sailing under a length rule.

Out of a total of seventy-six regulary acht clubs, five, or in reality, only three regular cabin yacht clubs (Boston, Larchmont, and Lavo obtained the Alantic Alan

MODERATION IN MODEL.

Mr. Gouverneur Kortright had a fine sloop, the Wizard, built last year. She was in type the extreme of bean combined with more dead rise than usual. She swung an enormons spar to make so big a lump on her length go through. No more capable man than Mr. Philip Elsworth could have been found to do the modeling upon such extraordinary diffensions. Wizard was as fine, handsome and clean as ever a block was chiseled. Yet she has completely falled in

practice, and after one year's trial has been hauled out and lengthened by splicing in some 15ft, andships. As a racer she was not successful, but whether on account of poor management or because there was no "go" in such an extravagant form, we cannot undertake to say. As a cruber she carried the sticks and sails of a boar of modifice of any lind; unsuccessful as a racer, wholly impracticable as a cruiser. These are conclusions like fortight seems filtewise to have reached after a year's actual trial and an expenditure of several thoustands. The same night have been obtained for ten cents invested in a copy of Forest and Stream. Mr. Kortright will thy his burges from a keel cutter this session. She is to be built by Pollon, of Brooklyn. Length, 38ft., on the line 28ft., beam ift. 4fn., and hold oft., with often we have made is gratifying in a high degree. The orthodox style of a few years ago, before Forest and Stream knocked the frying pass out of time, would have been 13ft. beam and 39ft. hold, a centerboard and the shoop rig in 'all its deformity. Now a narrow, deep boot, keed, shipshape rig, housing topmast, and all for a gentleman who has given the other extreme a full and fair trial. In this new departure Mr. Kortright has our bost wishes for success. We venture that he will that himself in possession of a ship out of which he can get better satisfaction than paying heavy bills for very little salling.

HULL YACHT CLUB.

Ellitor Forest and Stream:

At our annual meeting the act of incorporation and the new constitution and by-laws were agreed to. The freasurer reported a halance to the club's credit of over seven bundred dollars. Plans have been completed for a fine new club house, and we hope to occupy our new quarters early in June. They will contain committee-rooms, hall, piazza, lockors, etc., and a wharf und landing stages. The officers for the year are: Commodore, Mondy Abertil, Piese Captsin, George A, Perkins, Rear-Commodore, W. B. Lambert; Vice-Commodore, C. A. Perkins, Earl-Commodore, Mondy Abertil, Piese Captsin, George A, Curtis; Treasurer, H. P. Stanwool; Measurer, W. H. Litchfield, N. Curtis; Treasurer, H. P. Stanwool; Measurer, W. H. Membership Committee and the Committee of the Membership Committee and the Committee of the Batter
cottages dot the shores and hillsides, making Hull a populous summer city.

The new club house of the H. V. C. will be finished about the middle of June. It is to be built on the end of the steamboat wharf, and will be a large and commodious building, surrounded on three sides with wide verandas, affording a spleadid view of all the regatas that occur, and well provided with float stages and landings.

This club will be incorporated this month, and will issue their first club book in May. The season will be opened by a review and challenge pennant regata, and the programme further comprehends of the provided of the club house will offer ample large hall on the upper floor of the club house will offer ample facilities.

OUR LAPTHORNS.—McManus, & Son of Boston are very busy this spring supplying the canvas to an exceptionally large disct. Cutter saits, hose-footed mainsails and square-headed topsails are rapidly becoming the fashion. They have in their loft complete new shifts for Mr. Hemmenway's new cutter, also for a new cutter for Mr. Geo. Boutwell, both building by D. J. Lawlor, at Chelsea. Likewise for Mr. Paddleford's new teut-fon cutter, launched recently by Lawley & Son at City Point. The Addle V. hos got a new rig, full fledged cutter in all respects, save standing jib stay. Long gaft and housing topmast, and a huge square header to make her foot in light winds. Also sails for Miesses Scavey and Harding's new schooner, building at Armisquam; for Mr. J.E. Sherman sakinoner, Spect, security by Lawley & Son: also sails for Mr. C. R. Cobb's Mr. Chas. Armstrong by Lawley & Son: also sails for Mr. C. R. Cobb's Greenfully for the hard weather cat yachts of Mr. Sidney Burgess and Mr. John Q. Adams, both now building. Concerning the distribution of sail, we are glaut to find such emineur makers in accord with our own views. They write; "Yachtsmen are beginning to see the advantage of having large light sails on short poles, there being of course a great advantage in having nearly two-thirds of the grey poor windward sail, it being impossible to bold it at a sharp angle in a breeze, while in a seaway it will catch aback everytime the yeach plunges.

BATTIMORE YACHT CLUB.—Editor Forest and Stream: We have

yacht plunges.

BALTIMORE YACHT CLUB.—Editor Forest and Stream; We have elected the following officers for the season: Commodore, William M. Bussy; Vice-Commodore, William B. Ohver; Rear-Commodore, Estanley Gary; Secretary, J. William B. Ohver; Rear-Commodore, Estanley Gary; Secretary, J. William B. Ohver; Rear-Commodore, E. Stanley Gary; Secretary, J. William S. Unicetors, Whi. P. Towler, J. Towler, J. William S. Unicetors, Whi. P. Towler, J. Towler, J. William S. Unicetors, Whi. P. Towler, James J. Towles, and Ches. Cugle, The Charles four selectors, James J. Towles, and Ches. Cugle, J. William S. William S

suen a une sneet of water as the Chesapeake at our very door.—G.

CLEVELAND YACHTING ASSOCIATION.—Editor Forest and
Stream: At the fifth annual meeting held April, the following were
cleeted officers for the ensuing year, viz: Commodore, George W.
Gardner, Vec-Commodore, James M. Raleight, Rear Commodore, M.
Shipman: Secretary, J. S. Williams; Treasurer, H. G. Phelps;
Shipman: Reart Gornacher, Collector, F. H. Smead, Executive Committee—James Gibbons, W. H. Eckman, Robert Gill, R. D. Mix, W.
Scott Robson. There are now nearly one hundred members and about
thirty yachts enrolled in the squadron. The annual regata, open to
all yachts on the chain of lakes, takes place July 4, and the local
regata on September 11, over the C. Y. A. course. The first Saturday
in August has been set for the commencement of the annual cruise.—W.

in August has been set for the commencement of the annual cruise,—
W.

SOUTH BOSTON YACHT CLUB.—Editor Forest and Stream:
Our officers for the year are: Commodore, James E. Chaudler; ViceCommodore, Alexander Kild; Fleet Captain, Honry Hussey; Secretary, John Winniatt; Treasurer, Thomas Christian. Measurer, James
Bertram; Trustees, W. L. Sunth, C. T. Harder, C. McKomas, C. Folker, C. L. Eingham, George F. Kenney, Charles Griffin. We have
about \$100 in the treasurer, 137 active members, and 43 yachts, the
average size of which has materially increased from former years.
An appropriation of Silv for a spring regatta has been made. A very
lively season is anticipated.—City Foirs.

KMICKERRIOCKER YACHT CLUB.—Editor Forest and Stream:
The annual election of officers of the club was held Tuesday evening,
April 4, and the following elected: Commodore, G. R. Hobby, yacht
Sard; Vice-Commodore, C. E. Baker, yacht Alice; Secretary, Alfred
Yarian, yacht Quits; Treasurer, Win. Potter, T., yacht Sharpie;
Measurer, Chas. Coughtry: Sleward, John Brunner, Board of Directand a. E. Baker, Stream of the Commodore, Charles of the Commodore of

Decoration Day, May 30.—V
VOLUTE.—Mr. II. W. Eaton's keel sloop Volute, ex-Vision, of Boston, is having her must shortened 2ft., her spreader widened 2ft., and a housing topmast 43-ft. longer than that of last year. Her cabin floor will be lowered in, and lead hallsts given her. The iron on her keet weights 1,40 lbs. had will have the her. The iron on her keet weights 1,50 lbs. had will be litted 2ft. shaft the fore end of the 2ft outboards to as to give docent room forward for a man. A toss of a cent will decide as to sloop or yawl rig. If the first be settled upon the extrayagant boom, 275-ft., will be shortened 3ft., and the gaff lengthened a like amount.

Rifle and Tray Shooting.

THE FOREST AND STREAM TOURNAMENT,

THE FOREST AND STREAM TOURNAMENT.

The gallery marksmen have had a rare season of competition during the past week, and the several contests for the Forest AND STREAM medals have brought out some extra fine effort on the part of the leaders in the large company of riflerane when the part of the leaders in the large company of riflerane when the management of the contest in the large company of riflerane when the contest and the leaders are not season of clubs in this city and vicinity which should have had their selected champions in the contest. The match was an open one, with all its details in charge of those taking part in it as contestants. From first to last everything was done by everybody connected with the tournament to secure an open, fair contest, and we have notyet heard the faintest suggestion of a grumble. The captains were given the collent choice. Zettler's gallery, at 20 Howery, is a well-known resort for those who delight to test their skill with the small bore rifles. It is in charge of men who are not only fine shots themselves, but are thoroughly up in all that pertains to the care and management of rifles. Their gallery is at once an armory and an arm-testing center, and the rauge was so arranged that the scores as made were beyond question in their accurate record. Every shot as made were beyond question in their accurate record. Every shot as made were beyond question in their accurate record. Every shot as made were beyond question in their accurate record. Every shot as made was at once placed upon the score in which they were deror whose over provided below is the second of the state of th

FORESTER CLUB.—At a meeting of the Long Island Forester Club, held on the evening of the 11th inst., a large number of prizes was donated for a glass-ball tournament, to be held on Decoration Day. The club was also presented with a handsomely designed etching on copper, illustrative of duck shooting at Moriches Bay, by Mr. J. F. Sabin, one of the leading memoers. The etching will be used to print the club's notcheads, notices, etc.

club's notcheads, notices, etc. WORCESTER, Mass., April 7.—Yesterday, which was Fast day, spent by the Worcester Sportsman's Club as a field day at grounds. They had guests from Ashland and Marlborough, shooting begun at 9 in the morning, and was kept up until ne dark, except the hour spent for dimer. They had a right good to over forty taking part in the shooting, which was for pleasure for record. Class balls and clay pigeons were used.

for record. Glass balls and clay pigeons were used.

SHREWSBURY, Mass., April 7.—The members of the Worcester and Shrewsbury Rifle Clubs recently consolidated, had a meet at Pine Grove Range yesterday, some thirteen taking part in the sport, shooting 200, 400 and 500yds. The new association is to be known as the Worcester Rifle Association. The Lovell range at Peat meadow, in Worcester, is to be abnudoned and the building removed to the Pine Grove range. Two new double sash targets are soon to be built.

NEW ROCHELLE.—Wednesday the 5th inst. the New Rochelle Ride Club elected the following officers for the ensuing year: H. C. Calenberg, Captain; A. Diel, Tressurer: F. W. Ellenberger, Secretary: Executive, B. Kirchhof; T. Traphagen, Martin Burns. The club commonly represented by the common state of the common state of the common state of the common state of the month, and practice every Wednesday afternoon during the season.

third money. Second Shoot.

Second Shoot.

Five dollar entrance; class shooting; three prizes, 50, 30 and 20 per cent; ten single birds, rise eighteen yards; use of both barrels. English rules, with the exception that both barrels must be fired while the pigeon is in the air.

Take New York and Greenwood Lake Raifroad. The waters are public. The only book on black bass is Dr. Henshall's; price \$3. We can furnish it.

N. S. Elizaville, N. Y.—Can you inform me if it is contrary to law to list with fikes and set-nets in lakes stocked with black bass, pickered and perch! We have two lakes at this place, one of which I have stocked with black bass, and the other I intend to stock with carp, having procured them from Washington and at present placed them aring procured them from Washington and at present placed them spring, regardless of my protest, at the season at which they were spawning. Informed John H. Jessup of Hudson, N. Y., said to be a fish and game protector, who paid no attention to it until after the spawning. Informed John H. Jessup of Hudson, N. Y., said to be a fish and game protector, who paid no attention to it until after the season closed and the nets were taken up. Preparations are making at the present time by parties with several nets to fish, and I would like to be informed if there is no

NEW BOOKS RECEIVED.

HORTICULTURAL ESSAYS.—By Peter Henderson, 35 Cortlandt street,
New York. Price 75 cents.

New York. Price 75 cents.

European Breezes.—By Marie J. Pitman. Boston: Lee & Shepard,
1882. A spley and entertaining book of travel.

Schdued Southern Nomility.—A southern ideal, by One of the
Nobility. New York: Sharp's Publishing Company. A book better
unwritten, and now that it is written, may profitably be left unread.

EARLY SPRING IN MASSACRUSETS.—From the journal of Henry D.
Thoreau. Boston: Houghton, Mifflin & Co., 1882. A welcome addition to the Thoreau library. A book full of the spirit of the spring
time.

First Aid to the Injured,—By Peter Shepherd, M. B. Revised by Bowditch Morton, M. D. New York: G. P. Putnam's Sons, 1882, Price, 50 cents. This is an exceedingly useful little manual of instructions how "to act in cases of injury or sudden illness pending the arrival of professional help."

meartival of professional help."

Marriage and Parentage: And the Sanitary and Physiological Laws for the Production of Children of Finer Health and Greater Ability. By a Physician and Sanitarian. New York: M. L. Holbrook & Co., 1882. The author thinks that it is not utopian to hope that by and by men and women will consult sanitarians before entering the marriage relation. We think that it is.

PUBLISHER'S DEPARTMENT.

CLUB HOUSE FOR SALE.—A small club in want of a suitable house bready furnished will do well to look in our advertising columns.

THE SMORRES MATCH BOX, recently patented and now put on the market, is an excellent little thing to have on a windy day. We have examined the article, and find that it does all that is claimed for it in the advertisement.

examined the article, and find that it does all that is claimed for it in the advertisement.

Mr. W. R. Schaffer, the well-known manufacturer and dealer in fire arms, of Boston, Mass., has lately admitted his son into the firm, thus making a slight change in the firm name. It now reads W. R. Schafer & Son. We know the new firm will continue to make and sell just as fine goods as formerly, and the infusion of young blood into the business will doubtless lead to an increased business.

Mr. J. F. Marstres, of Brooklyn, dealer in rods, fishing tackle, etc., has displayed considerable enterprise in getting up a show of trout at the opening of the season, for the amusement and benefit of his friends and patrons. He has a fine lot of fish from the ponds of H. Friends and patrons are the has a fine lot of fish from the ponds of H. bigh by six in length and make a very pretty show, the ulling six fire on both sides. We saw there the other day a good practical illustration of what kind of flies the fish take best. Mr. Marsters placed on a light bamboo tip the Baldwin Hy, a white grub with a red hackle and malkard wings. This, when dangled at the side of the tank, the fish snapped at greedily. This would seem to be an excellent way of testing the killing qualities of different flies. Mr. Marsters has also some live Michigan qual, and one or two specimens of Aldyndor mississiphicasis. Altogether his store presents a very attractive appearance.

The Parker Gun.

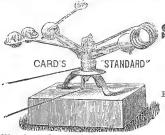

MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent proportunity of testing their power beside those of every exhibitor in the world, and they came off conjuerors over every other maker. Their highest award comes to them from a country whose reputation or this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have you more laurels than any other run when brought in competition in the field or at the trap. At Coney sland last year, at the New York State Convention, the PARKER won the Fierce Diamond Badge and the Forest and Stream" Badge for the best average over nearly 230 competitors. Send for Catalogue.

H.L. Leonard's Split Bamboo Rods

WITH PATENT WATERPROOF AND SPLIT FERRULES.

No. 1 SHOWS WATERPROOF CUP IN FERRULE (PATENTED OCTOBER 25, 1875).
This prevents any moisture from reaching the wood, and the Ferrule from becoming loose. The constant wetting and drying of the bamboo must rot the wood, and make other makes of rods less No. 2 SHOWS SPLIT FERRULES (PATENTED SEPTEMBER 3, 1878).

No. 2 SHOWS SPLIT FERRULES (PATENTED SEPTEMBER 3, 1878).

This split thoroughly strongthens where the forrule is joined to the wood, which is the weakest part of a rod, and where so many of other makes of rods (hamboo especially) break. Mr. Leonard has yet to hear of a single instance of breakage at this point since the PATENT SPLIT FERRULE has been applied. We consider this the GREATEST IMPROVEMENT that has been introduced in rod making since rods have been made.

No. 3 SHOWS SPLIT FERRULE WHIPPED WITH SILK AS IT APPEARS ON THE ROD.

GUNDOWGER

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6½ ib. kegs. A fine grain, quick and clean, for upland praire shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6½ and 19½ (lb. kegs. Burns shouty and very clean, shooting remarkatily close and with great practration. For field, forest or water shooting it rates any other brand and it is equally serviceable for muzelo or breech-loaders.

Hazard's "Kentucky RMe."

FFF Hard's "Kentucky Ride."

FFFG, FFG and "Sea Shooting" FG in kegs of 23, 12% and 64/ lbs. and cans of 5 lbs. FFFG is also packed in 1 and 14 lb. canisters. Burns strong and model. The FFFG and FFFG and FFFG are favorite brands for the first packed in 1 and 14 lb. canisters.

Superior Mining and Blasting Powder. GOVERNMENT CANNON and MUSIERT POW DER; also, SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN OR PROOF MANUFAC-TURED TO ORDER. The above can be had of dealers, or of the Com-pany's Agents, in every prominent city or whole-sale at our office.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY. | SIX MONTHS, \$2.

NEW YORK, APRIL 20, 1882.

VOL. XVIII.—No. 12.

CORRESPONDENCE:

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be re-garded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

SUBSCRIPTIONS

May begin at any time. Subscription price, \$4 per year; \$2 for stx months; to a club of three annual subscribers, three copies for \$10; five copies for \$16. Remit by registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States and Canadas. On sale by the American Exchange, 449 Strand, W. C., London, England. Subscription agents for Great Britain—Messrs. Samson Low, Marston, Searle and Rivington, 188 Fleet street, London.

ADVERTISEMENTS

Advertisements of an approved character only inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices 50 cents per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted.

Address all communications,

ANSWERS TO CORRESPONDENTS.

" POT-HUNTERS."

THERE are pot-hunters and pot-hunters. Every right-minded man detests the brute who "crust-hunts" deer when they are his almost helpless victims, and even their hides are worthless; who kills brooding birds and their halfgrown young for market or the tickling of his wolfish palate; and catches fish any way he can, the fish that are spawning or guarding their fry. He is a nuisance, that should be abated by any means within the law, or even by straining the law a little.

But many a reader of Forest and Stream has known, or knows, a man the kindliest and most law-abiding, who, according to a certain construction, would be relegated to the class of pot-hunters. He never in his life shot a bird on the wing, perhaps never tried, though his long single-barrel fowling-piece was as certain as fate on a fox at top speed or a hare bounding through the brush—if he would ever demean himself enough to kill such a worthless innocent. He would creep through the sedges with all the stealth of a deer-stalker and get a shot at a flock of sitting ducks, and pick up his half dozen, and go home satisfied. He would provi through the woods for a half day, this "prowling backwoods gunner," as "Frank Forester" called him, as stealthily as an Indian on the warpath, and get three or four shots at ruffed grouse sitting or skulking, and every one of his shots meant death—and when he had gathered these he had enough for a "stew" (think of stewing the noble bird!), and all the sport his simple soul craved.

He never cast a fly in his life, perhaps never saw one of those queer things which are known as flies to the scientific angler. When he went fishing his rod was a sapling, without a reel, and he baited his hook with a worm or a grasshopper, or a "minny." Yet he caught some fish, and had a deal of quiet enjoyment in doing so. When he had enough for a "mess" he quit fishing, and as he lugged home his string of fish he thought, with some watering of the mouth, how good they would taste when the "old woman" had them nicely fried. In all his wanderings in woods and fields and by waters he was blessed with a deep but unexpressed love of nature. He saw
"God in the clouds and heard Him in the wind,"

Yet he was a pot-hunter. But if our old friend had killed a chine on the frontier.

hundred ducks on the wing and left half of them to rot in the marshes, he would have been a "true sportsman." had blazed away at every one of the score of ruffed grouse he flushed, and peppered and maimed a dozen which he never saw again, and had picked up three, he would have been an 'honorable sportsman." If in a perfectly scientific way he had caught five times as many fish as he could make use of, half of them fingerlings not heavy enough to hang down on a hook, he would have been a "true disciple of 'Sir' Izaak."

Verily, there be distinctions which are too nice for the ordinary mind to comprehend.

THE FORESTRY CONGRESS.

If the forests of the country are destroyed, during the A next twenty-five years, at the rate of the last ten years, there will at that time be no woodland of spontaneous growth. This is a startling proposition, but we have the statistics of the last census to substantiate it. The sooner its truth and meaning are understood the better. After years of thoughtless, wanton and improvident forest destruction, it is now time for the people of the several States to

reflect upon what has been done, and what is to be done.

A move has been made in Ohio. A National Forestry Convention will be held at Cincinnati next week, extending from April 25th to the 29th. A large number of specialists in forestry matters will be present, and others will contribute papers to be read. And it is proposed to put the more important of these papers into permanent form for extended circulation.

Besides these discussions there will be some actual tree planting. Next Thursday will be set apart in Ohio upon recommendation of the Governor as Arbor Day, and the many local Roadside Tree-planting Associations throughout the State will plant trees by the roadsides and upon suitable sites for groves. At Eden Park, Cincinnati, a President's Grove will be set out, one tree being planted for each president of the United States. The trees will be brought from historic localities, and a silver spade will be used in planting them; and where it is practicable, the descendants of the various men in whose honor the trees are named will officiate. Then there will be an Author's Grove, and also a Pioneer's Grove. The citizens of the State are thoroughly interested in the work, and the Forestry Convention promises to be a significant and important turning point in the attitude of the people on this question of woodland waste.

It is high time that other States emulate this example of

Ohio, and join in a movement of which the results may be transmitted as a blessing to generations to come.

RETURN OF THE MIGRATORY QUAIL.—Three years ago this spring Dr. Arnold Stub, of Brooklyn, L. I., procured from Mr. Tobey, of Boston, one hundred migratory quail, which he afterward turned over to the Lehigh County Sports man's Association, of Allentown, Pa These birds, it is said, have returned each succeeding spring to the region where they were liberated, and have been seen there so often that there can be no mistake about their being the imported bird. It is further said that Mr. Eli Serger, of Copley, Pa., and Mr. Simon Mayer, of Mayersville, both found nests last June, and saw the old birds about them. It is encouraging to hear this news, and we trust that there are other localities, as yet unknown, where the birds are prospering.

A PRETTY KETTLE OF FISH!-This exclamation is often used to denote an accident of small account, or a non-serious one, as: "That is a pretty kettle of fish you've made of it!" i. e., a mess, or what printers call a "pi." The word kettle is really a corruption of keddle [Latin kidellus] a kind of trap or weir for taking fish. In the original, therefore, instead of meaning a pot, or other culinary utensil full of fish, it really signified a net full.

Dog Thieves at the Show .- A daily paper hints that unscrupulous dog fanciers point out to professional dog thieves the particular animals at the bench show that they would like. Then the thief consults the catalogue for the owner's address, and presto! the thing is done. The moral is, beware

"WACHINEWAH" supplements his note on Nevada game by telling us that his name is an Indian word, meaning "little machine." It was given by the Indians to our correspondent some years ago, when he was operating a telegraph ma-

SELECTION OF MILITARY ARMS.

N the matter of the selection of a new rifle of a magazine for the use of the United States Army, it would appear that the authorities are adopting a wise course. The article which we give elsewhere in our columns will show what is going on in that direction, and how a mixed board of officers have been busy for some months testing and trying various makes of arms. The point aimed at is not to fix upon a particular model and then by issuing it generally to the whole army, think that a finality has been reached. Such an idea would be chimerical. The armorer of to-day finds his best effort set aside by the discoveries and advances of tomorrow. Armored vessels and rifled guns have gone on with a see-saw sort of advance, each in turn surpassing the other, until further improvement has almost been abandoned and search is being made into the realm of torpedo practice for harbor defence on one side, while comparatively defenceless but fast cruisers are taking the place of the ponderous, unwieldy ironclads.

The question of small arms is in precisely the same transition state. The favorite arm of to-day may by the next season find itself laid on the shelf as an antiquated weapon, fit only to be looked at in a museum. The breech-loader has completely crowded out the muzzle-loader, just as fixed ammunition has supplanted every other sort of loading. The present endeavor is to devise a magazine rifle which shall set aside the old single breech-loader. It will be done. An admirable arm will no doubt be chosen, only to enable the authorities to find out that it is not adapted to the service, since a mere invention will spring out having all the advantages and fewer of the disadvantages of the weapon chosen. This policy of adoption and discarding seems to be the best that can be at present carried out. The army must have rifles, and the best, too; but while the whole question of small arms advance is in such an unsettled state, it is impossible for anyone to say that such and such an arm is and will remain the most desirable weapon.

The rifles of to-day, wonderfully accurate though they be are comparatively clumsy to what the arm of the future will We are now employing the old bulky, explosive mixture of sulphur, nitrate and charcoal, while the science of explosives has been making rapid advances. There is an opportunity for a really valuable display of inventive power in reducing the size and weight of our present bulky cartridges without incurring any counteracting disadvantages of increased risk or inaccuracy in their use. The device should be studied in its entirety, while instead the present plan seems to be to allow the cartridge to define and fix the form and character of the machine by which it is made available.

The work of the present board of officers is important, not only on this side the ocean and in our own country, but the decision reached will be studied in other lands and by other possible purchasers than our own government. are governments to whom the question of securing the best possible man-killer and peace-persuader in the way of a soldier's rifle is of vastly more consequence than it is to our own peaceful community. To an army doing mere police duty, and with next to no prospect of any immediate calling to arms, almost anything will suffice to go through the manual of arms, but it would be unfair to American inventive genius if the country where the best arms are made and sold should not supply its home guard with them, If for no other reason than to assist our rifle inventors and makers, our army should have placed in its hands the very latest and most approved model. It is only in this way and by similar displays that we can keep our present leading position in this industry.

The coming match between American and British riflemen, armed with the modern military breech-loader, will have an important bearing upon this question of arming forces of men. It will become a question for military men to determine whether soldiers shall be supplied with fine rifles capable of doing effective work at long distances and then taught to use them, or whether they shall be given a magazine rifle for short range work, but so arranged that for the time being the soldier is a sort of human mitrailleuse. The match will show what can be done with a service weapon at ranges running up to and over half a mile. If a body of such long range marksmen direct their fire against an approaching force armed with short range magazine rifles, the chances are that the attacking party will become demoralized before they can get into a position to use their own rifles. But on the other hand there are so many posi-tions where rapidity of fire is of the most critical moment that the search for a first-class magazine rifle is a very fit

The Sportsman Courist.

LONGFELLOW'S LAST POEM.

Mad River, in the White Mountains.

[This poem, on a well-known White Mountain stream, was corrected in proof by the poet only a day or two before his death, and is now in proof by the poer only ----printed in the May Atlantic.]
TRAVELER.

TRAVELER.
Why dost thou wildly rush and roar,
Mad River, O Mad River;
Wilt thou not pause and cease to pour
Thy hurrying, headlong waters o'er
This rocky shelf forever;

What secret trouble stirs thy breast? Why all this fret and flurry? Dost thou not know that what is best In this too restless world is rest From over work and worry?

THE RIVER.
What wouldst thou in these mountains seek.
O stranger from the city?
Is it perhaps some foolish freak
Of thine, to put the words I speak
Into a plaintive ditty?

TRAVELER.
Yes; I would learn of thee thy song,
With all its flowing numbers, With all its nowing numbers,
And in a voice as fresh and strong
As thine is, sing it all day long
And hear it in my slumbers.

THR RIVER.

A brookist nameless and unknown
Was I at first, resembling
A little child, that all alone
Comes venturing down the stairs of stone, irresolute and trembling

Later, by wayward fancies led, For the wide world I panted; Out of the forest dark and dread Across the open fields I fled, Like one pursued and haunted.

I tossed my arms, I sang aloud, My voice exultant blending My voice exuitant bending With thunder from the passing cloud. The wind the forest bent and bowed, The rush of rain descending.

I heard the distant ocean call, Imploring and entreating; Drawn enward o'er th's rocky wall I plunged, and the loud water-fall Made answer to the greeting.

And now, beset with many ills, Compelled to carry from the hills These logs to the impatient mills Below there in the hollow.

Yet something ever cheers and charms The rudeness of my labors; Daily I water with these arms The cattle of a hundred farms. And have the birds for neighbors.

Men call me Mad, and well they may, When, full of rage and trouble I burst my banks of sand and clay, And sweep their wooden bridge away, Like withered reeds or stubble.

Now go and write thy little rhyme, As of thine own creating Thou seest the day is past its prime;
I can no longer waste my time;
The mills are tired of waiting.

FAMILIAR LETTERS.

1.-THE TRUTH OF AN OLD ADAGE.

Dear Forest and Stream:

Did you ever happen to think that in the old adage, "All work and no play makes Jack a dull boy," "Jack" stands for every one of us?

work and no piny makes once a unit boy. Such stands for every one of ins?

You probably never thought of it at all; or if at some dreamy moment you did stumble over it in a careless mental ramble, you probably said to yourself: "The dear children; that's so; let them play!"

Of the children must play. It is as natural and essentially a such as
ramine, you promotely said to yoursell: "The dear children; that's so; let them play!"

Of course children must play. It is as natural and essential to healthy growth, as water to a duck. Child life, the world over, is one of development. Nothing so helpless to be found in the realm of nature as infint man. And equally true is it that a perfect and symmetrical development, physically, mentally and morally, of this puny, helpless babe, produces in the fullness of time, "God's noblest work."

And "play" is vital to such threefold development. Threefold, because we are more than brute. Physical strength must increase to permit the exercise of an awakened intelligence, while the sense of right and wrong must stand alert to direct the increasing action of a growing life.

The child must have play. Mere physical development is not far removed from the brute creation.

Mental growth, with sickly "constitution" and dwarfed "conscience," is likely to work only evil and sorrow until its end.

Abnormal development of the moral nature, without the

Abnormal development of the moral nature, without the healthy glow of physical strength and bright intelligence, means nothing but morbid fanaticism or fearful superstition.

To such healthy, harmonious development of child life then as shall produce the highest and best result, "play" in proper time and character is essential. And anything which interfers with such "play" is a curse to the individual and a misfortune to society.

But how about our noble selves, dear FOREST AND STREAM? As "children of a larger growth," does this apothegm have truth and value for us? Without question.

Every "Jack" of us, having passed the elementary time of boyhood, hus entered the intermediate period of life; when habits of "mind, body and estate" begin to crystallize, while later on lies waiting the time of life when the wasting of Nature's forces predominates; and we suppose it is in connec-

tion with these two facts that the truth of our adage becomes most plain.

In other words, to prevent one-sided growth, to make good the forces spent in real life work, we need "play," or health-ful recreation.

ful recreation.

Do you not see, if we stop to consider what is involved by becoming "dull," the wonderful value of healthful recreation is clearly revealed?

To become "dull," is to lose the perfect fruit of our am-

bitious efforts.

nious enors. It may mean failure, instead of success. It may mean trouble and trial for lives closely knit into

our own.

A brain a little less tired; hands a little less weary; a life might not have given out quite so quickly. Might

our own.

A brain a little less tired; hands a little less weary; a life less worn, might not have given out quite so quickly. Might have achieved the prize which we just fail to reach!

Unless fuel is renewed, fire goes out.

Unless wear and tear of machinery is made good, the machine becomes incapable of producing perfect work.

Violation of the laws of health, constant routine of thought, the whirl within a never-changing circle, the limits of a beaten path, make us "dull" indeed, and we need the repair and reparation which "play" alone can offer us.

It is a matter of no small interest, you perceive, dear Forest and Stream, that we find then what constitutes true "play"—that is open to each and every "Jack."

For our lives and habits are different somewhat one from another, and there can be no cast-iron rule which shall apply with changeless measure to us all.

It is true, however, that a principle of living which, within certain limits shall introduce into each life some "play," some healthful recreation, is open to us all.

Outdoot life and sport—this is the true interpretation of "play" in its best sense.

Outdoor life and sport—this is the true interpretation of "play" in its best sense.
Out in the open, pure air! Exercise driving the blood in swifter and healthier flow to its fountain of life—the lungs—while the pure air of heaven, breathed full and deep, works its oxydization into good, red blood.
Pores opened and the savage system of nature stimulated into normal activity! New views of life, new wonders revealed by each succeeding step!
New beauties as well, new depths, no thought of mysteries and glories of nature! By these the mind is diverted and changed, while the heart is moved to a grateful recognition of the Supreme Goodness and Wisdom which provides for us these good things free to all!

changed, while the heart is moved to a grateful recognition of the Supreme Goodness and Wisdom which provides for us these good things free to all!

Oh, the charm of breaking away for a few hours from indoor care and vexations and weariness, to the field or dingle, the river or lake! Alone, or with good fellowship! Heaven's songsters ringing their cheerful and varied songs into willing ears, the sweet perfume of a thousand blossoms filling the air with restful, healing influence, the beauty of color laid in rarest combination, making the eyes to rejoice unconsciously in an ever changing panorama of fleeting light and shadow, what sense is not appealed to? What heart is not "imade glad" unless lost to all good influences, and life is past redemption.

To walk, to ride, to row, to fish, to shoot, with eyes open to the fuller and deeper things of life, what pleasure!

The "Jack" who has all "play" and no "work," is to be pitted, because to him is denied the fullest enjoyment of these things we describe.

Things have their proper use and abuse. Familiarity breeds contempt, and satiety cloys. A life given up to "sport" without an earnest principle of living, is unworthy of the name.

But if we could successfully supplement your own good.

"sport" without an earnest principle of living, is unworthy of the naine.

But if we could successfully supplement your own good missionary work in this widening field, dear Forest and Stream, to the extent of bringing back the bloom to the faded cheek, the light again into one dull eye, the joy and vigor of renewed life to one bitter heart, this ink of ours and space of yours would not be thrown away.

B.

A HOMILY ON THE GROUSE.

A HOMILY ON THE GROUSE.

IN your issue of March 30 "Ruffed Grouse" pays his respects to "Nessmuk," and does it in the dispassionate manner that always demands respectful consideration. For his compilimentary remarks thanks. And I can agree with him on some points, not all. I do not exactly assume to "dispose of the grouse question." I find it an insoluble mystery, and am forced to leave it as I find it.

All the many causes suggested are trivial when brought to the crucial test of calm reason. The man who has of his own choice stepped down and out of all the paths that lead to wealth and position through an unquenchable love of nature and forest life, cannot bring himself to believe that vermin, large or small, have suddenly, almost in a season, nearly exterminated the hardy grouse over a section of country more than three times as large as England. Pothunting and treeing will not do either. There is no more of it, proportionately, now than thirty years ago; not so much. As to the snare, he would be very destructive if he were universal. But he is not. He is a pariah, whom every one is down on. His snares are demolished when found by potunters and true sportsmen alike, and those who break the game laws themselves are ready to prosecute the snarer. No army of snarers has suddenly taken the field throughout the Eastern, Western, and Middle States. Nor has there been any sudden swarm of grouse-destroying vermin descending on us like the plagues of Egypt. As to the "traditional valler dog," he is no numerous or strong array against the birds; neither is he, if a good treer, a "yaller dog," at all. In more than fifty years close communion with Nature, during all of which the ruffed grouse has been my favorite bird. I have seen but three perfect treeing dogs, and neither of them was a cur or a "yaller dog," to —I think the best—was a red sectier; one a large blue and white setter; the other a black and tan cocker. In the meantime I have seen hundreds of setters and pointers, well trained and good enough to satisfy an

Your correspondent speaks of the fact that not only the grouse, but all other game and fish have shared the same fate wherever exposed to the onward march of our peculiar civil-

wherever exposed to the onward march of our peculiar civilization. Had our civilization taken a sudden spring just before the hegira of the grouse, there might be some logic in this. But the advance of civilization is a steady, onward march, the grouse left in a season.

One autumn I often ran on to flocks of from fifty to one hundred gathered for food on the beech ridges, or flocks of a dozen or more among the thorn plums and wild grapes, while, returning to camp over the high oak and pine barrens, I would liush at every few rods an old lonely cock, these latter seeming to prefer a solitary life on the barrens. (I was mostly out all day starting dogs, and seldom sighted the rifle

on a grouse.) The next season I hunted over the same ground and the grouse were gone, vanished. Occasionally I flushed an old solitary, but only one flock of less than a dozen birds in a week's travel, over excellent grouse cover for the most part. Where had they gone? There had been no sudden rush of civilization, no accession of snarers, "yaller dogs" or pot-hunters. Very few had been shot the previous season—less than usual.

dozen birds in a week's travel, over excellent grouse cover for the most part. Where had they gone? There had been no sudden rush of civilization, no accession of snarers, "yaller dogs" or pot-hunters. Very few had been shot the previous season—less than usan! If danger had been "mysteriously" communicated from outside birds, the wisest and most logical course would have been for the outsiders to have joined our grouse, and all to have staid where there was most cover, most food, and least danger. Surely the superhuman wisdom that enables such shy, dumb things to telegraph danger from coverts where setter and breech-loaders make grouse life a burden to our safer thickets and pine barrens, would not inspire our birds to emigrate to more populous and dangerous localities.

There has been mention of every possible cause for the searcity of grouse save one.

"Wing shots," "gentlemen sportsmen," "true sportsmen," et it genus owne, have remembered to forget that grouse were plenty enough until the introduction of big-bored breechloaders bombarding and wounding the beautiful creatures, over well-trained setter dogs. If I wanted to talk chop-logic I would attribute the whole business to this and hold my position on it better than anyone can who takes the ground that grouse have disappeared because of vermin, pot-hunters, snarers and "yaller dogs."

It is not so many years ago that a couple of gentlemen sportsmen from Gotham came to this region, mainly for grouse shooting. They were referred to me for information as to grounds, etc.; and, as they were fine, hearty fellows, I took the old muzzle-loader and went with them as amateur guide. They carried high-priced Greener ten-bores, and had a fine English setter, trained specially for grouse, and a good retriever. I took them a tramp of eighteen miles, through alder swamps, pine thickets, barrens, etc. Much of the cover was so dense that we could not see the dog twenty-five yards away. This was remedied by making his bird. The party shot at twenty-one grouse that day. The

only Joe?

As for myself, it is utterly indifferent to me whether I am called a true sportsman or a pot-hunter. Every sportsman does—or should—save the last ounce of his game for food. The manner of killing is to be judged by its humanity, and the sportsman by his willingness to quit when he has a fair share and his desire to preserve the game and give it protection and fair play. I am a "wing shot;" I love the sport and practice it on some birds, but no more on the grouse. Do the best I could, three out of every five would get away—sometimes more; and the sickening part of it was that they went off leaving a little patch of downy, mist-colored feathers floating on the air much too often. It was no comfort to lie down after a hard day's tramp, and reflect that two or three bright-eyed, beautiful birds were hidden away under old logs or in thickets, panting away their innocent lives in fever and distress, while their murdeer was breathing at ease. Yes, as a rule, grouse must be taken on the wing by the quickest snap-shooting. You do not shut an eye or bring the gun to shoulder at all. Just point it at the first glimpse of him, and pull at the same time. Point the gun as you might the index finger or a stick. If you potter about aim or shoulder, the bird is gone; and, any way, you will wound about as many as you kill. That is the pity of it. I ceased to practice wing-shooting at grouse, for these reasons, about ten years ago.

I dare say I am a pot-hunter. For instance, I start out at the first glimpse of dawn, travel up and down the steep bills and mountains for hours, with two raving; ill-trained, unruly "setts" of hounds. With my clothes wet with perspiration, I succeed in getting them started on the tracks of separate deer. I take the most favorable point for a shot—and don't get it.

But I hear the races, the music of the dogs from the start until they break over the steep mountain brow, down to the runways—are somewhere less.

rate deer. I take the most favorable point for a shot—and don't get it.

But I hear the races, the music of the dogs from the start until they break over the steep mountain brow, down to the runways—or, somewhere else.

Then, I have a half day of happy, lonesome all to myself. I loiter under the shade of Norway pines. I smoke and muse. I climb the highest points and go down to the deepest gullies and dells, all with an eye to the habitat of the deer, and the points for next morning's start.

When the sun is low I start for camp. Going down, on the last 'bench.' I run into a flock of grous—a dozen or so. They are not wild. Have not been harried. Two or three jump on to logs, and, with ruffled neck-wings, await further action. Several get up into low pines, and stretch their necks out like pine knots. I raise the double barrel, bring the bead to a point, and touch the hair trigger. A headless grouse tumbles into the dim path. The rest are still. A second touch, and another grouse comes gyrating down. None go away. I might kill more, but I do not. I plunge down the steep mountain side to where I see a mellow, yellow glow, and quietly lay my birds on the shanty roof; for

I have seen a full-stretched deer hanging in the light of the camp-fire, and another skin by the side of it. And my woods-lore tells me that we have a whole deer and part of

I have seen a full-stretched deer hanging in the light of the camp-fire, and another skin by the side of it. And my woods-lore tells me that we have a whole deer and part of another.

As I round the corner of the shanty I am greeted by a welcoming lawhoop, and noisy tongues explain the death of the buck, and how it happens that the party below got our doe, and the best we could get was one hindquarter, and the skin. When, having my nip of bourbon and pot of hot coffee, I commence to dress and fit my grouse for breakfast the next morning. I am greeted with a storm of derision. "Suy, why don't you go for chipmunks?" "Look here; I know a place where yo' can turn over stumps, an' ketch any amount of medder-moles," etc., etc.

Notwithstanding the camp rigging, I usually manage to have a roasted grouse for supper, and another—packed in a casing of blue clay and roasted all night under the camp fire—for breakfast the next morning. Of course I am a pollunter. Verbum sep.

P. S.—I note that "R. E. R." refers to me in Forrest And Sprieam of April 6. He speaks well, and to the point. Treeing dogs are scarce; not the "yaller" whiffet that runs through a thicket yelping and whining, to drive the birds up, or the better blooded cocker, who hunts much after the same fashion, but the wonderfully sagacious—ave, rifted dog, that can flush a strong, wary old cock, and, although the bird raises a ridge and scales down the opposite side to a dense thicket—lost to sight of course—will go straight to the tree without slowing doubt or hesitation in marking his game. Not every time, but on at least five birds out of ten. It is another of the many mysteries. I shall understand it when I understand how my young hound, never having been a mile from where he was born, found his way back, in the night, over seventy miles of tortuous land route to Gayung, whence he had been brought in a box car, with no possible chance of seeing a mile of the route or catching the compass points. The start was made at supper time, 6 P. M. Next morning at 7 o

There are more things in heaven and earth than are dreamed of in poor philosophy.

By the way, "R. E. R." must have been afield time and again with "true sportsmen." Has he generally noticed a disposition on their part to be considerate and humane; to let up when they had a reasonable amount of game, or did they exhibit greed and eagerness to "bag" the last possible bird? I know more than one old forest loafer whom I have bird? I know more than one old forest loafer whom I have seen clip the heads of a pair of grouse with the hair-triggered rifle, and then glide silently away, leaving several birds sitting in easy range, and these men are called pot-hunters. They are certainly girds hunters—and humane.

If "R. E. R." can find a sound, resonant log, on high land, where a strong old cock grouse drums, he may hear the "muffled thunder" much more than a mile; and our observations seem to agree pretty well. My hand to him. N.

THINGS IN GENERAL.

WITH AN ILLUSTRATIVE STORY OR TWO.

THINGS IN CENERAL.

WITH AN ILLUSTRATIVE STORY OR TWO.

MONG all those who have written upon the subject of spots in the barrels of guns, Dr. Volney has, to my find, come nearer "hitting the nail on the head" than all others. If I understood him correctly, he rejects the idea that the best way to keep a gun bright is to keep it dirty, tand holds that the unconsumed powder which adheres to the barrels absorbs the moisture from the atmosphere, and thus if turnishes food for corrosion. I regard this as really too clear a proposition for argument, requiring only to be stated to command acquiescence. Now, I must be pardoned for the indulgence of some doubt, whether any gun can be found, entirely free from what is sometimes called "honeycomb," which has been left foul for days after shooting. Some gentlemen who have arrived at the age when their vision's requires the aid of lenses, may not be able with the naked eye to see these spots, but I venture to assert that in every case where the stain is made I can hold the barrels toward the light, and with my glasses discover them plainly. I now own a fine Tolley gun with Damascus barrels, which has the plaque-spots in abundance, notwithstanding all the care I have been able to bestow. With my naked eye all looks bright, but when my spectacles are brought to my sid a very different condition of things is exhibited. A year or have go I was the owner of a first-class gun made by the Webley's, which has kept as bright on the inside "as a now pin." This was done by "eternal vigilance." Having occasion to visit Washington City, and to remain there for some time in the discharge of a public duty, and not having the relisure to spend half my time in hunting and attending s "shooting matches"—as some public employes do—I left my figure to spend half my time in hunting and attending s "shooting matches"—as some public employes do—I left my figure to spend half my time in hunting and attending is "shooting matches"—as some public employes do—I left my figure to spend half my time in

and he would be so lean that even "the vultures would turn away and sicken at so foul a prey."

Why, this writer could not have been in earnest. He must have been engaged in what is called in the "Georgia Scenes" (a book, by the way, which contains as much genial humor as any I have ever seen) "A Lincoln Relucarsal." In that rehearsal, a bully was heard in the bushes near the side of the wood, cursing what appeared to be a fallen anlagonist, and congratulating himself on the achievement of tearing out his eyes. The kind-hearted gentleman who was passing by, stopped, went out to the scene of war, and remonstrated with the brutal wretch for maining a fellow-being. He god this for his pains. "Stranger, don't kick until you are spurred. Thar anit'n tohody thar, and hain't bin, neither, I was just seeing how I could a fout."

In your last number (Feb. 9) It see a remarkably well written and sensible article, by "H.G.P.," on loading for game. I do not concur with him in all his views, however, and especially in regard to the proper weight of gun, and the case with which they may be carried. I am in pretty fair physical condition—that is my health is good—and I should be loth to take a gun during a long day's shooting, which weighed so much as eight pounds. I weigh 180. For the game which we have a gun weighing from 64 to 74 pounds has been found pretty effective. If I wanted to hunt deer, I would prefer an eight pound, full chok—for I should expect my lorse to carry that nearly all the time. But when I go into the field on foot, in the pursuit of what we call partridges, and expect to have a walk of miles, over rocky hills or muddy valleys, seven pounds of gun, forty or fifty shells, and what game I can get, is quite asheavy a burden as I choose to undergo. I use, mainly, a 12-bore Westly Richards, which is cylinder, and with it I can kill every bird, under thirty yards, when I hodd it right, and often get them at longer range. For general shooting, on the wing, I prefer the cylinder to the choke bore. The former all

the merease is of better quality. Inasmuch as you have no means of deciding, the question, the delusion still holds its place.

And now, Messrs, Editors, I will end this mosaic article by relating an anecdote, which a legal friend of mine told his sporting associates, while they were sitting around the camprine, after a toilsome but successful day's hunt. A case was pendiug in the Superior Court of the county of—, "his Honor, Richard M. John, present and presiding. The defendant was represented by one of the distinguished lawyers of the State who once held a seat in the Senate of the United States. He had reasons for desiring a continuance, but the plaintiff urged a trial. One of the defendant's witnesses was named Sarah Mooney. She was "called, and failed." The counsel insisted that he could not safely come to trial without that witness. But the Judge decided that he must "try." Then Judge S., the defendants lawyer, with a twinkle of humor in his eye, said to the court. "Your Honor, it is hard to force the defendant to trial without Sarah Mooney" (ceremony). At this the bar and the more intelligent of the auditors laughed, and the Court, not quick of apprehension, thinking that something good had been said, but what it was he did not comprehend, allowed a faint smile to light up his stolid counténance. After the adjournment of the court, some lawyer explained the joke to the judge, and then seeing the "pint," he laughed too. It afforded him much amusement for the balance of the circuit, and he treasured it up as one of "the uncos that he saw and heard," with which he would regale his family on his return home. After the courts had closed, he started to —, where he lived, and induged in many a laugh on the dreary road which he had to travel. "At length his lovely cot appeared to view." He drove up, alighted from his buggy, entered the gate, saluted his good wife, and then the memory of the joke at—coming to his mind, he indulged in a hearty laugh. The madam

inquired what had put him in such jolly humor. When, after the paroxysm had passed, he narrated the story, frequently being interrupted by his own merriment. When his got to the remark of Judge S., he quoted it: "Your Hono: it is hard to force the defendant to trial without Mary Mooney." And then he gave full vent to laughter. Mrs. J. did not see the joke, and called his attention to the fact that there was nothing to laugh at in that. After thinking for a moment, he said, "Well Sally, I don't see that there is myseld—but if you had just heard S. say it, you would have nearly died with laughter." And then he fairly roared with the joys of memory. And we enjoyed the story, and concluded that as it was a good ending place, we would go to sleep without further Mary Mooney.

Natural Distory.

SOMETHING ABOUT BUZZARDS.

SOMETHING ABOUT BUZZARDS.

W HAT Southern scene would be complete without them?
Like a shark, they always have an appetite, and though they often give out at a feast, 'tis simply because they cannot help it—no more room—stuffed right up to the eyes, they cannot hold more, and will sit stupidly gorged and blink as you, scarce exerting themselves to let you pass. You may feel like kicking them, but don't. Remember what Coleridge, said about "seventy and two * * * all well defined" * 2 and pass on. If the "black beggars" stomachs were on a scale with their appetites, there would be no bounds to their voracity. However, when carrion is scarce they often roost supperless, and in the fall you may see them squatting o the cornstacks in the fields craning their ugly necks, and woo betide the poor field mouse who ventures within gulping distance. Down South they respect them as useful members of the Street Cleaning Department. The buzzards we have had in this department have been found equally voracious (some of them) though not quite so thorough in their work. But we are digressing.

in this department have been found equally voracious (somethem) though not quite so thorough in their work. But we are digressing.

The laugh was turned on me at one time on account of a "darned old stinker," as they call them. Living North, I had not been accustomed to seeing these great birds thying about, making themselves thoroughly at home, and totally ignoring the presence of man, gun, or no gun, and one day blazed away at one of the raw-headed chaps as he flopped overhead. The result was all I could have wished for, an I—I hate buzzards! A day or two afterward the enjant terribis of the household with whom I was stopping, and who had been an unobserved spectator of my discomifiure, lost his petcat, and refused to be comforted. Being a comparative stranger, I did not like to extend too much sympathy, but when at the fable some one remarked that "little pussy might have been stolen," I ventured to say that I did not believe it, as no one would be mean enough to steal such a nice little cat, etc. The little wratch, stilling his sobs, replied: "Ennabuddy mean enuf to shoot buzzud, wu'd steal a cat," A general smile, followed by most uncomfortable silence, during which my Maryland biscuit seemed to fairly double its flinty hardness, testified to the appreciation of young hopeful's satcasm. I hate buzzards.

Once in the air, however, the buzzurd is transformed from a loathsome scavenger to a most graceful creature. With

casm. I hate buzzards.

Once in the air, however, the buzzard is transformed from a loathsome scavenger to a most graceful creature. With outspread wings he gildes gently about, now circling round and round, now stretching far away over the tops of the grand old forest trees, almost brushing them as he saits along; again he takes a dive down over that grain field, and just as you think to see him dash among it he throws out his broad, fan-like tail with a quick flir, checks his descent amisticales off, while the nodding cas on the stalks below give a quick response to the swirl and rush of air set in motion by the rapidity of his movement. During all these maneuvers those broad wings have flapped but one or two strokes at the most. It is this total absence of all exertion that makes the buzzard's flight so attractive to the observer. A light breeze now stirring; see him! With a quite turn he faces it, and to your surprise, and without an effort, he mounts steadily upward, swinging round the widening circle with delightful assentially and the reappears, and while you watch he saddenly throws his wings up from the horizontal to an almost perpendicular position and down he comes like a shot.

"What's the matter with him, Brunt?"

"Dead horse, pr'aps," is his quiet rejoinder as he watches the fragrant smoke curl up from his old corncob.

Phew! truly this is a rapid descent from the sublime to the disgusting. Your romance disappears before this matter of fact logic, and you realize the truth of the old suying—

You may break, you may shatter the vase if you will, But the scent

Of a dead horse will attract buzzards; but I hear some learned ornithologist exclaim, "They don't smell, but depend on sight to discover their food." I say they do smell. They are fairly oloriferous at times.

CINCINNATI ZOOLOGICAL SOCIETY.

CINCINNATI ZOOLOGICAL SOCIETY.

THE eighth annual report of the Zoological Society of Cincinnati, being for the year 1881, has been received by us. The collections of this society are, as many of our readers know, in charge of Mr. Frank J. Thompson, who as great experience and indefatigable energy and interest in the animals under his charge, peculiarly fit him for the task of caring for them. Mr. Thompson has been unusually successful in breeding various species of wild animals in confinement, a matter ordinarily most difficult of accountingment, a matter ordinarily most difficult of accountingment, and besides having assisted at the birth of a young sea lion, and besides having done this he has given to science a careful account of the occurrence, and forwarded the placenta to one of our first zoologists for examination. The secret of Mr. Thompson's success is, no doubt, that he takes so thorough an interest in his charges, that he spares no effort to render them as comfortable as possible, and to render their surroundings as nearly as possible those which are natural to them. He is certainly to be congratulated on the remarkable success which has attended his efforts. During the year 1881, as we learn from his report, there were bred in the garden iffecen mammals and twenty-eight birds, of which the following is a list; Mammal—three raccoons (Provyon botor), three grizzly bears (Urans horribidis), one black sea lion (Zadophus gillespii), one Bactrian cannel (Camelus bactrianus), one aoudad (Annotrqus tragelaphus), one Angora goat (Capra hirous angoriensis), one follow deer (Carrea albay), one American elk (Cerrus canadensis), one hog deer (Cerrus and mammals).

porcinus), and one Virginia deer (Cerrus virginianus). Birds
—twenty undulated grass parakeets (Melopsitueus undulatus),
two wild geese (Branta canadensis), two English pheasants
(Phasianus colchicus), two gold pheasants (Thunmalea pictu),
two silver pheasants (Euplocamus ungethemerus). The total
number of animals now on exhibition is 811, of which 279
are mammals, 488 birds and 44 reptiles. The additions to
the collections during the year were 188, of which ten mammals, thirty-three birds and six reptiles were donated, twenty
manumals and twenty birds purchased, fifteen mammals and
twenty-eight birds bred in the garden, three mammals and
two birds received in exchange, and one bird captured in
garden. Owing to the intense cold of the winter before last
and the great heat of the following summer, it might have
been expected that the year would have been a severe one
on the collections, but, owing to the care expended by those
who had them in charge, the percentage of deaths has been
very small.

CANADA WINTER BIRDS.

QUEBEC, CANADA.

THE past winter throughout Lower Canada will remain a marked one for some years to come, for the atmospheric disturbances that were of such frequent occurrence. Whether this will account for the abundance of certain boreal species of birds and the abundrnal appearance of other summer migrants I know not. Herewith I append some extracts from my field notes:

October 9th—Snow bunting, Voisean blane (Plectrophanes nivalis). Abundant till first week of January, now passed south.

south.

November 3d—Pine grosheak, le roi (Pinvola canadensis) very abundant throughout autumn and winter to date.
December 1st—Lesser red-poll (Ægiothus linaria). Less common than usual.

very abundant throughout autumn and winter to date.
December 1st—Lesser red-poll (Ægiothus linaria). Less common than usual.
December 4th—Crow (Coreus americanus) a band of seven "Kilmarnock" field, since daily observed generally about Cote St. Ignace, ranging west along continuous groves terminating on St. Foye heights.
North of the St. Lawrence, the presence of the crow as a winter resident, is an event that rarely claims attention 1851-2, 1878-9, and the present season, are the only instances of such distributions recorded in the writer's diary. In some localities about the Eastern Townships, their presence during winter is almost regular.
6th to 16th—Hairy wood-pecker (P. villosus), downy wood-pecker (P. pubescens), log cock (Hylotomus pileatus) la poule des bois. The two first rather migratory, but occasionally met the year round; the latter sedentary, rare north of the St. Lawrence, not abundant anywhere. Hudsonian titmouse (Purus hudsonicus), autumn and winter only, very rare about settled sections. Yellow bird, le chardonneret (Chrysomitris tristis), a summer resident, occasional during winter. An adult male in company with "cedar birds' taken 10th February, 1871. The same year, a hermit, or Wilson's thrush, was observed on December 28th.
21st—Purple finch, l'oiseau rouge (C. purpureus) since February 4th—Wild ducks—three individuals at Crescent cove. Not identified—probably female golden eye.
February 14th—Robin (T. migratorius), a straggling band, consisting of six or seven birds. One male made an attempt at song, but failed to find voice. Robins are known to range far north; these, it may be presumed, find here their extreme southing.

Mr. W. U. G., lately returned from the St. Maurice River, states that he detected a company of waxwing (Ampells garrulus), an inhabitant of the extreme north of this, and the continent of Europe—a very rare winter visitor. Of its habits little is known. As to owls, whisky jacks, red and white-winged crossbill—the lattera rather rare variety—none have been observed the

hatch rare. Dornald, Cap Rouge Road, St. Foye, Feb. 17, 1882.

THE MADSTONE.

Palestine, Texas, Feb. 15, '82, Editor Forest and Stream .

Palestine, Texas, Feb. 15, '82.

Editor Forest and Stream:

The following is clipped from the North Texan, a paper published at Paris, in this State:

"Mr. A. Z. Arnold, of Blossom Prairie, was bitten by a rabid dog on Monday last, the flesh being pierced on the right hand. In a short time after the bite the dog died in convulsions, which alarmed Mr. A., and he at once set in search of a madstone, which was found four miles north of Cothran's store, in possession of Mr. Calvin Pfaff. The stone adhered to the wound for ten hours, and drew, it is believed, all the poison therefrom."

I have seen many paragraphs in the papers relating to this so-called madstone and its wonderful effects when applied to the bite of rabid dogs. It is popularly held that it will stick unto the bitten part like a leech, and, like a leech, will not fall off until engorged, or at least until it has sucked every part of the venom out of the wound. It is held that when thus applied it is sure to prevent hydrophobia or any other unpleasant results. Now, what is this so-called madstone? Is it a popular myth, or a popular nonsense? Is there any sense, or truth, or virtue in it? And what sort of a stone is it? Is it sandstone, or limestone, or granite, or quartz, or claystone, or trap, or trachyte, or lava? Let us have light, ye who can give light. If this is a fraud that has been walking the world for ages, let us puncture and destroy it. If it be a true and good thing, let us know all about it.

I'The helief in the madstone is a very ancient one, and this

[The belief in the madstone is a very ancient one, and this remedy is still implicitly relied on in certain sections of this country. We have been informed by persons of the utmost reliability that they have been cognizant of cures by its means so well authenticated that they could not doubt that they had been thus effected. The madstone is said to consist of calcined bone, and therefore is really not a stone all. It is supposed to act by eapillary attraction, and it is stated that an instrument of rubber has been patented which may be used for the same purposes and with the same effect as an original and genuine madstone. This particular remedy or charm, as the case may be, seems to be somewhat more in favor in the South and West than in the East. A certain Mr. John Gatzinger, of Martin county, N. C., has one of these stones of great potency, and we believe that there are one or two people in the same State who possess the secret of their manufacture.] [The belief in the madstone is a very ancient one, and this

A Book on Dog Training.—Mr. S. T. Hammond's book, "Training vs. Breaking" is now ready. It should be in the hands of every dog owner.

Annisquam Laboratory.—A seaside laboratory will be opened at Annisquam, Mass., during the coming summer, by the Boston Society of Natural History, under the direction of Prof. Alpheus Hyatt. It will be capable of accommodating only a limited number of students, and will be open from July 1 to September 1. Annisquam is situated on an inlet of Ipswich Bay, on the north side of Cape Ann, and is about three and a half miles by coach from the Eastern Railroad Company's station in Gloucester. The purpose of this laboratory is to afford opportunities for the study and observation of the development, anatomy and habits of common types of marine animals under suitable direction and advice. There will therefore be no attempt to give lectures or any stated courses of instruction. It is believed that such a laboratory will meet the wants of a number of students, teachers and others who have attended practical lessons, or who have taught in the schools are sufficiently qualified to make use of this opportunity. The work in the Haboratory will be under the immediate care of Mr. B. H. Van Vleck, assistant in the museum and laboratory of the Boston Society of Natural History, a thoroughly competent instructor, and one who has also had long experience in colecting and observing at the seaside. The crection of a windmill, which will supply running water, will enable the laboratory to offer additional opportunities for the study of the labits of living animals kept in aquaria, and also essentially facilitate the work of making a higher class of observations and original investigations. The apparatus in other respects will consist of the simplest laboratory furniture, collecting implements and row-boats. The yacht Arethusa (thirty-four tons old measurement), belonging to the undersigned, will take out dredging parties at suitable intervals. Students will find it to their advantage to provide themselves with a microscope. A convenient magnifying-glass and a case of dissecting instruments will be furnished at reduced prices to those ton Society Natural History.

My Per.—Norwich, N. Y., April 10.—Late in the fall of 1880, I saw in an apple tree in my dooryard, a bird which at once secured my closest attention. It was unlike any bird I had ever seen; it was the size and shape of a robin, but the back of the head, neck, and parts of the wings and tall were white. Getting as near as I could I looked him over thoroughly. Could it be? Yes, it was a robin partially white. When he flew, he showed the white much more than in sitting. I saw him frequently until the cold weather came, when he left. In the spring of 1881, he again appeared, and, with a mate, set up housekeeping in a tree in front of my house. I watched him and pointed him out to many during the summer. Last fall he again left, and ever since the robins came this spring I have been looking for him, well knowing how many chances there were against his returning. I had heard of his being seen, but I did not get my eyes on him until the 7th of this month. He is the same chap. He is assuming "squatter sovereignty" in my dooryard, and is making it warm for the other robins who dare intrude. This proves conclusively (perhaps it has been abundantly proven before) that birds return where they were reared. Many have remarked, "What a fine specimen he would make mounted." But I have plead for his life, using the argument, "The greatest good to the greatest number" should govern. If he were killed and mounted ever so nicely, but few could see him. Now, many see him every day, and enjoy him as a curiosity; and more, then his sweet song would be hushed forever. As I look at him, the question comes, What has guided thee, dear little bird, in thy long journeys over mountain, river and plain, and brought thee again and again to thine early home. There is but one answer. He who "marks the sparrow's fall" has been thy guide.—A. C. L.

answer. He who "marks the sparrows fall" has been thy guide.—A. C. L.

Protection of Song Birds.—New York, April 18, 1882.
—Editor Forest and Stream: In your issue of the 13th inst. I notice that your correspondent, "Homo," complains bitterly of the indiscriminate slaughter of small birds "from a tit to a thrush" in the vicinity of Philadelphia. The same trouble exists in the vicinity of the city of New York and other portions of the Empire State to an equal, if not greater, extent. The abuse has become so glaring here that the "Linnean Society" of New York, at a recent meeting, appointed a committee to investigate the matter and see if some remedy could not be found. The law in this State is substantially the same as in Pennsylvania, viz: a person shooting has only to swear that he is shooting for scientific purposes and he is relieved from any and all penalties for destroying song or insectiverous birds. The committee of the Linnean Society, after carefully considering the matter, determined to go to the root of the trouble and apply the only remedy that would effectually protect our feathered friends, viz; to have a suitable amendment to the game law passed by the Legislature now in session. To that end they drafted an amendment, using the Massachusetts statute as the basis, and by the courtesy of the committee appointed by the "New York State Society for the Protection of Game," the same was embodied in the game law which they were then preparing for presentation to the Legislature. If the bill becomes a law no birds, except those coming under the head of "game" can be killed, except they persons holding a permit from one of the five natural history societies mentioned in the bill. I would suggest that "Homo" endeavor to have the same remedy applied in Pennsylvania.—Ww. Duytcher, Member of Linnean Society and of the committee.

The "Nuttall Bulletin."—The April number of the Bulletin opens with an interesting paper by Mr. William Brewster, on a collection of birds lately made by Mr. F. Stephens in Arizona. The remarks on the species taken are quite full, especially in relation to the localities which they prefer, their habits, and their relative abundance, as indicated by the collector's field-notes, and the characteristics of the individual specimens are given with considerable detail, and make the paper one of unusual attractiveness. In his notes on the Os prominens Mr. F. A. Lucas gives us the results of his observations on a number of birds in which he has sought for this bone. It is present in most of the Bubonidæ in which it has been looked for, as well as in many of the Fulconidæ and in some of the gulls. A further study of different forms is needed to decide what, if any, are the functions of this

bone. A paper by Mr. O. P. Hay, entitled "A List of Birds from the Lower Mississippi Valley, Observed During the Summer of 1881," with brief notes, contains nothing especially now, except the statement that Parvia americana is abundant in Mississippi and Tennessee in midsummer. Mr. Brewster's impressions of some Southern birds make up a delightful little article, written in his own pleasant style and attractive to all readers, whether they are bird-wise or not. Mr. Montague Chamberlain gives notes on a short list, twenty species, of the rarer birds of Southern New Brunswick, and Mr. C. F. Batchelder a much more full paper on the "Bumer Birds of the Upper St. Johns," which contains a number of points of interest. The "General Notes" of the Bulletin are, as usual, full of news interesting to the ornithologist.

gist.

Partial Albino Snowbird.—I found among a flock of tree builings and snowbirds, which it seems habitually associate, a single specimen that was in many respects identical with the snowbird, but yet strikingly different. The contour and size were the same; bill light fesh-color; head, neck and breast dark uniform slate; below white; marginal tail-feathers white. These also correspond to the colors of the snowbird. The difference, and the only difference, as well as I could judge by the use of a good field glass, was that the wings, back and lower side neck, although having the ground color of slate, were yet covered by irregular and numerous blotches of white. This admixture of white, together with the white marginal tail feathers, made the bird conspicuous as it flew in company with the others, so that it could not fail to attract attention. I do not know that hybrids occur among these birds, or what such a cross should look like, but that it was one occurred to me at once as an explanation, after carefully looking the specimen over and noting its general resemblance to the snowbird. I cannot identify a bird marked as this one was from my books.—J. Quay. (Walertown, N. Y., April 10.) [No doubt a partial ablino Junco hyemalis.]

WILSON'S SMIPE WINTERS IN WYOMING.—A correspondent who resides at Como, Wyoming Territory, and who is well acquainted with all the game birds and mammals of the West, writes us under date of March 23: "I see in the Fontest and Stieband to find Wilson's snipe in the New England States in winter. I have seen them here in every month this winter. They stay around the 'Spring.' The 8th of January I killed on the Spring Creek, four mallards three teal, and a gadwall, and three Wilson's snipe, and it has not been a very open winter, either. Ducks are here now in considerable numbers, and the shooting is very fair on the marsh." [The winters at Como are usually terribly severe, the mercury often falling to -30 or -40deg. Fahrenheit. The Spring spoken of is, however, a warm one, and never freezes over, and ducks are usually to be found on it, all through the winter. We were not aware, however, until now, that the Wilson's snipe ever braved the severe cold and biting winds of a western Wyoming winter.]

oming winter.]

Spring Notes.—Oskaloosa, Jowa.—I have a few late "spring notes" to present. April 1.—Temperature 86 deg. in the shade: I first heard the chatter of the martins overhead to-day. April 8—Fruit trees budding out. The little house wren came yesterday, and the mocking-thrush (*Marporhynchus rufus*) I think, sweetest songster of this region, came to-day.—J. G. Sleever.

Rushylle, N. Y., April 10.—To-day the thermometer stands 24 deg. above zero, which makes it quite disagreeable. A considerable snow has fallen to-day, but the birds seem to enjoy it singing merrily from bush and tree. Robins, bluebirds, crow and red-winged blackbirds are quite numerous. A few meadow larks, also a few kildee have been seen around here. Quite a good many wild geese have passed over here, flying north. A flock of about thirty-five lit in a field north of here, but I heard of none being shot. Ducks are very scarce.—A. W.

A Turkey Bearn—Evening Shade Arkansas.—I send

A TURKEY BEARD—Evening Shade, Arkansas.—I send you the beard of the champion gobbler of Chomley Hill. Notice the ring around the beard, which is the first one of the kind that I ever saw; and I have killed a great many turkeys. This old fellow was one of the smartest of his race; but his cunning failed him, and he had to succumb to my wiles. What will smooth the wrinkles on a mother-in-law's brow when a fellow wants to go fishing ?—J. G. S. [The beard measures 9\frac{1}{2} in.]

White Muskrats in Canada.—Tilsonburg, Ont., April 5.—In your issue of March 80, I notice a clipping from a Hornellsville (N. Y.) paper, wherein is mentioned the capture of an albino muskrat. With us it is not a very unusual occurrence to take these white rats. While down at Port Royal Marsh after ducks and geese a few days ago, the trapper in whose shanty I slept took two of them in one visit to his traps. They answer the description given in your clipping.—H. B. H.

Binds that Have Come.—Bay Ridge, L. I., April 10, 1882.—During the past week I have observed numbers of golden-winged and yellow-bellied woodpeckers, with robins, purple grakels, song and fox-colored sparrows, and a few snowbirds. On the ninth were seen four hermit thrushes and one pine finch, also a flock of about seventy-five wild geese flying north. Weather very mild.—A. L. T.

BEAVER IN KEUKA LAKE.—Hornellsville. N. Y., April 10
—The carcass of a beaver was found under the dock at Idlewild, Keuka Lake, a few days ago. It was a very large one, and had evidently died of old age, as its teeth were worn very short. It is a mystery where this animal came from, as its species were supposed to be extinct in this part of the State many years ago.—J. Otts Fellows.

A Nebraska Eagle.—Fairmont, Neb., April 4.—On last Thursday, Messrs. Beecher and Nixon, while hunting ducks and geese, about five miles southwest of this town, killed a large gray eagle measuring seven feet and four inches from tip to tip of wings. It was donated by them to the museum of Doan College, at Cerete, Neb.—D. B. F.

SOUTHERN INDUSTRIES is the title of a new monthly publication which is to be issued at Nashville, Tenn. We understand that it is to be a progressive journal dealing with the live topics of the day. Published by the Southern Publishing Co., Nashville.

A Sad Loss.—It is said that Mr. F. Elshes of Mobile, Ala., devoted the labor of fourteen years to gathering an entomological collection of 8,000 specimen. Last week the whole collection was destroyed by fire.

Game Bag and Gun.

As Sir Humphrey Dayy and I shot partridges together in the more ng, I perceived that a man might pursue philosophy without abandoning field sports.—Sir Roderics I. Murchison.

EASY READING LESSONS-VIII.

The O-bli-ging Sportsman, and the Prom-I-nent Citizen.

A. LESSON IN PO-LITE-NESS FOR THE LITTLE READERS OF FOREST AND STREAM,

TIS Midnight's Solemn Hour. Hark! Was that a Knock at the Door? I will Arise from Bed and open it. Ah! Good evening, Sir. You are, I think, the Gen-tle-man to whom I was In-tro-duced at supper time. Excuse me, but your Knock a-wa-kened me, and I did not, at the moment, remember you. You wish to Borrow my Gun, for a Few Days. Cer-tain-ly, my Dear Sir! Anything else, besides the Gun? Boots? Shirts? Razors? Tooth-brush? Any Man, who is not a Sel-fish Aris-to-crat, will Cheer-ful-ly Lend his things to a New Ac-quaint-ance! All I have, is Ever at the service of an In-tel-li-gent Public. Cartridges—did you say? Here are All that I have, but I will Get up Early, and Load some more Before Break-fast. Well, Good Sport to You! Pray don't trouble yourself to Clean the Gun; the Moist Air of the Marshes will do it Good. Leave it at the Village Store, when you are quite through with it, and I will Call for it. Goodnight—I mean Good-morning!

GEESE AND DUCKS IN CALIFORNIA.

SNIPE SHOOTING ON THE PACIFIC SLOPE.

SNIPE SHOOTING ON THE PACIFIC SLOPE.

THE shooting season closed in this State on the 15th of March, and the ducks and quail are now having a respite from the warfare that had been waged so relentlessly against them for many months past—and they are enjoying it, too. We have had a very late winter, and to-night, as I write, I can hear the ceaseless patter of the rain upon the roof, the soughing of the south wind, and an occasional low muttering of distant thunder—something quite unusual with us. Indeed, it is one of our regular winter nights, or rather a spring night with wintry characteristics. Hence the ducks are still with us in great numbers and very tame. Some mallards, blue-winged teal and spoonbills have paired off and will soon be making their nests in the clover fields, along the margins of sloughs, and in the heart of the title swamps. But the great mass of wilgeons, sprigtails, green-winged teal, etc., are still in flocks. Just before sundown this evening I stood on my back porch (in the heart of the city) and saw several great flocks of ducks crossing the outskirts of town and evidently having a grand time of it in the rait. In a few weeks more, however, they will all have disappeared from sight, except the few that will remain here to breed, and the cripples that can't get away. Your readers have doubtless heard and read some of the statements concerning the extent of the damage done to the young grain in this State by the wild ducks, and which may have seemed to them to be greatly exagerated.

But I assure you the facts are, if anything, worse than the reports would lead one to believe. Despite the incessant shooting that had been going on since the middle of September, the number of ducks seemed to constantly increase; and as soon as the young grain began to make its appearance the fields were subjected to nocturnal invasions by myriads of

But I assure you the facts are, if anything, worse than the reports would lead one to believe. Despite the incessant shooting that had been going on since the middle of September, the number of ducks seemed to constantly increase; and as soon as the young grain began to make its appearance the fields were subjected to nocturnal invasions by myriads of the fowls. So great was the damage done to some of the grain fields that farmers were obliged to station men throughout them at night, and keep up a constant banging with guns in the hope of preventing the total destruction of their crops. This might do on an ordinary New England "ranch," but here, on one of our California garden-patches of five or ten thousand acres, it is no small undertaking. Take, for instance, the grain fields of such men as Finnell and Glenn, of Colusa and Tehama counties, who have each from 40,000 to 60,000 acres planted in wheat. It would take a pretty good army to hold one of these places against the winged midnight foc. I suppose that such persons have to trust to luck. This has indeed been an exceptional season in respect to the number of wild fowl that has visited us. From the upper end of the Sacramento Valley to the Gulf of California the ducks and geese have fairly swarmed upon the country this winter. The latter have not done quite as much damage as the other, because they do not attack the fields in the night, and during the day can be kept off by horsemen and dogs. It is really a queer sight to see men and dogs hurrying hither and thither over the grain fields to scare off the clouds of geese that come up from the marshes every morning and evening for their food. To all who delight in duck and goose shooting I must say that I don't believe they could do better than to make a trip to California about January or February.

Just now, we are in the midst of the spring flight of snipe. The season has been a very good one for them, also, and the birds are plentiful in all their usual haunts. I believe that the best snipe-shooting is to

could not understand why it was that the birds were so scarce. One contended that the day was too windy and cold, but this argument didn't find much favor, because it was not shown that snipe were afraid of a little wind. It might not be a good day to shoot them, as they would not probably lic very close, but then, where were they?

Another, who was once an army officer in Texas, declared that he didn't believe there ever were a dozen snipe seen in any part of the country outside of that State; and all were expressing their disgnst at the situation, when a tall young granger hove in sight, followed by a shaggy retriever, and—probably attracted by the scent of a black flask in the pocket of one of the party—bore down upon us.

He said he lived near by and had been through most of the fields that morning' in quest of the long-billed fellows and had found a few, and we all noticed that the ample pockets of his coat were pretty well swelled out with something, but restrained our curiosity and asked the youth to pilot us to some field where he thought we might possibly corner a snipe. He expressed his willingness to do so, and we scrambled through one of those abominable nuisances, a wire fence, and scattered out over a fifty-acre meadow.

After beating it for an hour or so and getting up but half a dozen birds, which rose at an average distance of seventy-five yards from us, the youthful granger, with a wicked twinkle in his eye, dragged from his pockets a beautiful bunch of plump, brown beauties, and after exhibiting them to us, said: "I reckon I've got about all of 'em that I want; you fellers kin hev all the rest." With that he strode off homeward and left us to our fate. We afterward met another young gentleman, who informed us that the aforesaid y. g. had been out since daylight and had worked every hole and corner of the fields in that vicinity, and that what birds, he hadn't shot he had frightened off.

There was nothing to do but go back to the tavern and rest till afternoon, by which time perhaps some of t

able circumstances.

The Sacramento Bee last week published an article from the Forest and Stream on "Loading for Game," which I thought one of the most sensible articles on that much discussed subject that I had seen. In loading my cartridges for the shoot above referred to, I was forced to change my usual method somewhat, and my success was so marked that I cannot help attributing much of it thereto, I use a 12-gauge gun and paper shells, which I have generally loaded with No. 11 Eley wads—two pink-edged over the powder, and one black-edged over the shot. I have got much better results in this way than when No. 12 wads were used. But this time I found when I came to load my shells at night, that I had no No. 11 wads for the powder, nothing but some No. 10 white felt ones, each about as thick as two of the pink ones. I felt a little dubious as to the policy of putting them in No. 12 paper shells, but concluded to try the experiment. I loaded with three drams of Hazard's Ducking, No. 3, (I use that brand for all kinds of shooting) and 1½ oz. of Tatham's No. 9 shot, chilled.

I never before had such good luck in a day's shooting. Every bird but one that was hit fell stone dead, and I do not vargargate when I says that they made all have been from

Tatham's No. 9 shot, chilled.

I never before had such good luck in a day's shooting. Every bird but one that was hit fell stone dead, and I do not exaggerate when I say that they must all have been from forty to fifty yards off. I never saw cleaner killing done in my life, and I could not help noticing also that when I was through shooting there was not a stain of burnt powder on the breech of the gun. Usually it is quite blackened by the powder. My inference is that the large wads made the carridges fill the chamber more perfectly and thus prevented the escape of gas, adding proportionately to the strength of the gun's shooting powers. Of course in loading I use a 12-gauge tube for centering the wads, so that they are easily forced into the shells.

NIMROD.

SACRAMENTO, CAL., April, 1882

Spring Shooting at the West.—Oskaloosa, Iowa, April 11.—Editor Forest and Stream: Score me as one of those who think that if the sportsman would abstain from shooting snipe and ducks in the spring, he would be amply repaid by the increased numbers in the fall. Whatever the sportsmen of the East may think of this doctrine, we of the West, who knew nothing (by experience) of "sink-hoats," "night-reflectors," etc., are slower to accept it. Still, if a universal law were made prohibiting spring shooting, we would, I think, stand up for it as long as the next; but, if such a law were passed in this State while our Northern neighbors were left unrestricted, we would certainly feel ourselves justifiable in "kicking." It is a small estimate to say that for every pair of ducks which escape the gunner in the spring, three times as many come back to him in the fall. What sportsman would think of taking his dog and gun and going after quail in April; Yet he does not hesitate to go for ducks. Wherein lies the difference? The quail mates in April; so does the wild duck. I she latter more prolific than the former? I opine not. I think our extreme Noythern States (where great numbers of the wild birds breed), should take the initiatory in this matter, then their Southern neighbors would no leave the wild beek have winter States (where great numbers of the wild birds breed), should take the initiatory in this matter, then their Southern neighbors would no longer have cause to hold back, but might profit by the good example. Our local sportsmen have not been making much havoc among the ducks this spring, because very few stopped here, and those few seem now to have winged themselves away to the reedy banks and marshy sloughs of the lakes of the far north.—Teree.

Daniel Boone's Gun.-The museum of the Polytechnic Society of Louisville, Ky., has been enriched by the addition of the first gun Daniel Boone brought into the State, with his shot-pouch and horn and other relics prized by Kentucki-

CARIBOU HUNTING IN CANADA.

CARIBOU HUNTING IN CANADA.

The pleasure of shooting a caribou I had often promised myself, but never had a favorable opportunity of carrying out my project until the last winter.

Having received word from my old hunting chum, M. Grein, train despatcher on the I. C. R. at River du Loup, that he was prepared to spend three weeks in the woods, or that he was prepared to spend three weeks in the woods, or that he had made arrangements with a veteran trappist and hunter, F. Lepage of Assmetquaghan, one who is well-known to some of the salmon-fishing gentry of New York, or in fact, to all those who look for that delightful sport on the Matapedia and Restigouche rivers, and that we were also to have J. C. Trottier, another of the same. I was not long in making up my mind and outilt, and at \$1:0 A. M. on the 4th of January, I was on the I. C. R. train bound for River du Loup, and with the genial John D. Kippen, Canadian express conductor, and Hugh Jackson of the I. C. R. Company, time and miles went by very rapidly, and my destination soon turned up or rather brought me up. At River du Loup the short stop was spent in getting on board sundry packages such as tent, stove, provisions, rilles, and I did not exactly know what, till the train was again under way.

St. Luce Station was one of our places of interest, as we were to pick up Trottier here. The train was hardly into the station before he was in our car and shaking hands as delighted as a schoolboy on a month's holiday. Assmetquaghan was another place of interest; here we were joined by Frs. Lepage and his fixings, so that now our party was complete and a good time in view.

Campbellton, situated on the Restigouche River and 314 miles from Quebec, a comfortable little town, one of the principal points on the Intercolonial Railroad, was our last stopping place by train conveyance, and we were soon seated to supper in Dan O'Keefe's hospitable hotel, and next morn.

stopping place by train conveyance, and we were soon seated to supper in Dan O'Keefe's hospitable hotel, and next morn-ing were to start by sleigh conveyance to Nouvelle on the Bay de Chaleur, twenty-eight miles from Campbellton.

de Chaleur, twenty-eight miles from Campbellton.

The 5th of January saw our tixings all packed into the sleighs of Alex. Belois and Ed. Arsenautt, both from Nouvelle, to meet us; and we were soon under way. The roads in some places were very heavy on account of drifts, but our progress was very fair. At 4 o'clock P. M., after resting our horses on the road a couple of times, we crossed the Barachois or discharge of the Nouvelle River into the Bay de Chaleur, and put up for a couple of hours at Belois until the tide would fall enough to allow us a good crossing on the Bay, and at 7:30 P. M. we were once more on our way, this time crossing the Bay de Chaleur to Nouvelle, and from Nouvelle to the mountains; and Christians Day saw us in the mountains preparing to move to camp, and as we were now at the last stage where horse and vehicle were to be abandoned, we decided to take a rest, as we had been traveling pretty constant, from

the mountains; and Christmas Day saw us in the mountains preparing to move to camp, and as we were now at the last stage where horse and vehicle were to be abandoned, we decided to take a rest, as we had been traveling pretty constant from our time of starting. We passed the night at Louden's, the last house in Nouvelle, and high enough up in the mountains to be last on earth.

On the 7th of January our packs were all ready, and a trip of eleven miles before us to camp. We started, Lepage leading and carrying a pack of sixty pounds weight as well as Remington ritle, Trottier next with his pack and breech-loader. M. Crean with pack and Snider Enfield carbine, and self bringing up the rear with the smallest pack, but the heaviest rifle, a Winchester express. Such a tramp I never had or ever wish to have again—over windfalls, up mountain, going almost on all fours; and the next minute on the broad of your back. It took us from nine o'clock in the morning until three o'clock in the afternoon, with the exception of half an hour's rest, to go those eleven miles, every step would take eight inches of snow over our shoes, I pitied those that were breaking the road. However, we reached camp and got things in order, started a fire and had our tea, fixed our ritles for the morning and went to bed pretty well tired out.

J. C. Trottier, who built this camp some six years ago when he was trapping here, had an eye for the beautiful; the camp is built on the edge of Silent Lake, commanding a view of the whole lake and nestled among as high mountains as one would wish to climb; in summer there are abundance of fine trout, but in winter not one can be caught. January 8, Sunday, we decided to take a whole day's rest. Wind west and the weather very fine. Trottier made the time pass quickly by recounting his adventures among those hills in days gone by, and promises to show us his trail through the bush, and as he was a very profane man in his way he made use of that strong lunguage, "By Jim Crow!"—nothing stronger than that, but

standing and occasionally an old bear traip now failen to decay.

Monday morning the wind was westerly and fine clear weather. Breakfast over, we got our snow shoes, rifle and ax, and with a biscuit in our pocket we were ready for game. Lepage and Crean went off together in a northwest direction, and Trottier and myself took an easterly course from "Silent Lake," kept our course for about three miles and then went northeast and crossed Lake "Perdu" and Lake "Bien Venu." Not a sign of game so far. We had a most tiresome tramp over windfalls of most extraordinay confusion, in one gulch, where the wind had a sweep of about nine miles. The trees were leveled for a distance of three-quarters of a mile, not one left standing, some of them sound birch sixteen to cighteen inches in diameter snapping off like pips stems. We returned to camp at 4:30 P. M. and found the others there before us. We both had the same luck, not a sign, but hoped for better on the morrow.

The morrow brought a continuance of the same and the following day the same, so we decided to return and packed our things and started back to Loudens and from thence proceeded to Cedar Hall on the Matapedia, where Lepage said we would find deer every day, as this was where he had hunted for the last twenty-five years.

Well, we reached Cedar Hall Station on the 12th of January and proceeded twelve miles into the bush to the logging camp of Alex. Grant, and where we were very hospitably received by A. Grant, Jr. and W. Grant, who were in charge of the camp, having some eighteen men to work getting out spruce and pine saw logs for their mill at Amqui.

We started out in the morning and had not gone half a mile from camp when we struck a fresh trail. We divided

spruce and pine saw logs for their mill at Amqui.

We started out in the morning and had not gone half a mile from camp when we struck a fresh trail. We divided into two parties, and Lepage and I followed this trail until four o'clock in the afternoon without sighting the beasts, the timber in some places being so thick that you could not see fifty yards ahead of you. At times we were within 100 yards of the deer and could not see them, and by and by would come to that part of their trail where we would see a succession of holes in the snow about eighteen to twenty feet apart, where they had gone off on the jump. We returned to camp tired, but in good spirits; the others had the same

luck, had followed a trail about twenty minutes after we had

them.

The next four days were a continuance of the same. One y Lepage and I followed a herd of eleven. Lepage inted them, not by seeing them, but where they had been ng down. We never saw a tail or horn of them after the property of the earlbou is very creatic. counted lving down.

lying down. It is tramping about eighteen miles. The carried in his habits.

On January 16, when all hands turned up at camp in the evening, there was a decided change in the current of affairs. Trottier reported one buck and Crean another, so things in the carried down to close with a buck to be considered.

in his habits.

On January 16, when all hands turned up at camp in the evening, there was a decided change in the current of affairs. Trottier reported one buck and Crean another, so things looked brighter.

January 17 brought another good day to close with a buck for Trottier, one for Crean, and one for self, the nearest to cump being Crean's, about two miles off and a steep mount in to bring him over.

The 18th of January came in very stormy, snowed all day long and coming on night commenced to blow a gale. We remained in camp and hoped the wind would keep up until the morrow, as it is a good time for hunting when the wind is high; it deadcas the sound of tramping, or rather, the trees crackling all around conceals your approach to the deer.

January 19, wind died away about 5 A. M. 4his morning. We started and soon came across fresh tracks, but snow very heavy for walking. Lepage and I followed a track for two hours, and the place we started in on it and where we came out was not twenty yards distant and did not go two miles irom camp; followed it up and at 12:30 P. M. we came on the deer; a beautiful beast he was, and had two companions. Lepage was first to see them and gave me the sign. I crawled up as quietly as I could and saw them behind a fallen jinc tree, cating the moss, and on a slope below me. I fired in dimissed, fired again and missed, and just as he was on the jump fired again, and brought him down, and then tried is chance shot at the offices, but without effect. I traced the tests two shots I fired, and found them in two trees, both on it line for my mark, but in such a position as to project slightly on the line of aim. The fact of the matter is that you have to fire through such a lot of branches and trees that you cannot get a decent aim, and you have just to guess, were the office of my mark, but in such a position as to project slightly on the line of aim. The fact of the matter is that you have to fire from your source, and the others.

Our first trouble had been to get the game—now it w

RHEUMATISM AND SQUIRRELS.

RHEUMATISM AND SQUIRRELS.

VESTERDAY evening, using my gun as a walking-stick or crutch for support, I hobbled to a swamp near the house to give the squirrels a round.

It is the rheumatism that has put me to hobbling. Because "Birdo' has the rheumatism, it does not follow that he is the oldest inhabitant and superannuated. He's not been down in the good book longer than 1847. But to the hunt. Arriving at the edge of the swamp, a rabbit purs up, offering a splendid shot, and I'm almost tempted to shoot, but I reflect that rabbits are not fit to eat at this season of the year. What's that on the ground, right where the rabbit passed! It must be another rabbit. No, it's a squirrel; I see his bushy tail. There't he looks up. Now's my time, for he presents a full broadside, and I salute him with the left hand barrel. I soon know from the quick, short jumps, and the noise he makes, that the deadly pellets have done their work. In the excitement incident to firing the first shot I quite forget my rheumatic pains and game leg, and walk up right briskly to bag my game. I then start off slowly again. I must not impose on that left leg. Ten days ago I was flat on my back, barely able to turn over. Now there I am in a swamp where the water is knee deep in places.

There, I will have to turn to the left there; the water is too deep. I tell voult will not do to go home with wet socks. ago I was flat on my back, barely able to turn over. Now here I am in a swamp where the water is knee deep in places. There, I will have to turn to the left there; the water is too deep. I tell you it will not do to go home with wet socks. I'll hear a lecture sure. Then, with the butt of my gun down and the muzzle pomting under my right armpit, I must keep a sharp eye upon the hammers. But without some support I could not get along. Slowly, several squirrels get up before me, but scamper off wild, and I do not get a shot. Proceeding a short distance, cautiously scanning the ground before me. I hear a voice above me, and looking mp, see in a small oak one making track for tall timber, when I give him the contents of the left-haed barrel, and down he tumbles kersplash in the water. He swims like a muskraf, and I am about to try him with the other barrel, when he swims behind an old log, then leaps out in the water, which less it. I twas a right exciting scene, as I stood on the bank with my hand on the hammer, ready to give him the comp de optor. Then I got a big stick and retrieved him. Forgetting that game leg again. Hunting and fishing will be the ruin of me yet. Getting mighty close to water again for a remandle patient. The doctor will never hear of this trip f om me. He gave me fits Sunday for going to a neighbor's house. My mether than said, "He will be fishing and luntiful mext."

But left's fin is this lung. A bubbled around and turned that the said and the said and the said. The doctor will never hear of this trip.

several more, but they were very wild and I did not get another shot. I then struck out for the house. As I went hobbling up to the house my father noticed where the muzzle of the gun pointed, and asked, "its that gun loaded, Bitdo?" I told him it was. "Well, be very cautious." I dressed my squirrels, put them in a small kettle and parboiled them, and this morning I had a royal meal of fried squirrel. This evening I tried the same trick again—went hobbling off again, saw my old rabbit near the same place, and I approached him with hostile intentions too. I wanted to see how far my gun would tumble him—make a trial shot, you know; but as I approached him I saw a squirrel, and forthwith I hauled off. But I did not get a shot at the squirrel. Another one ran up a large oak. I stopped, and in an instant out popped his head from behind the tree. I waited some time, hoping to get a better shot. No; he's got his right eye on me, and no more of that squirrel is coming out. I stood still until my game leg fairly ached. I could stand it no longer—I must sit down; but he will jump back, sure. No, he didn't, Law, if one of my barrels was choked I'd try him anyhow. But I'll shoot if he will let me get to that tree six or eight feet to my right, where I can see his head better.

I move, and so does he. Exit that one. I advance a short distance and see one on the ground. I try to keep the tree between us, but he sees me and scampers off.

To my left, near the edge of the pond, I hear a general racket and scampering among them. I advance cautiously and see one in a tree that stands in the edge of the pond. He jumps behind the tree as I go up. I wait a moment. Then he lumps upon a limb in full view. I let drive at him with the left barrel—he tumbles in fine style, but catches again. I am ready with the other barrel, and as I see one going up the tree I turn loose at him, but he does not fall, but keeps going up, up, higher; but just at that moment I see one tumble and hear something fall in the water, kersplashup, and I know my

my first shot was not in vain. My other one is now in one very tip-top of the tree. I turn loose again, but he don't—he gets a little higher. I can see his white belly. I take good aim and touch the trigger, and at the crack of the gun be came tumbling, and right in the pond he fell, as dead; as Hector. I then retrieved them with a long stick, and then hobbled toward the house, for the sun was down. They were prepared like the first two, and in the morning some-body will have a big fry.

Burdo.

MANAHAWKIN BAY, N. J.

MANAHAWKIN BAY, N. J.

SPENT three days of last week in Manahawkin Bay trying to induce the brant and geese to pay a flying visit to the decoys, while I lay snugly enseonced in a sneak box with my gan beside me waiting to give them a fitting reception, but the winds were unfavorable and I had to be contented with a bag of about twenty-five ducks, one goose, one brant and one blue heron.

After each day's shooting I returned to the cosey cabin of the Ark, which was anchored within a quarter of a mile of the shooting ground, where a good supper and comfortable bed awaited me. After cleaning my gun and loading shells for next day I retire to my stateroom and am soon in the "land of nod," dreaming of splendid shooting. At 3 A. M. the alarm clock in the cabin startles me from a sound sleep, and by daybreak we have finished breakfast and are on our way to the shooting grounds. My leave of absence expires almost before I realize it, and I reluctantly pack my traps and start for Gotham.

Myriads of brant and black ducks are still feeding on the flats, and on Thursday morning nine or ten flocks of geese went up the bay. Sheldrakes are quite plenty and afforded good sport, but the weather was rather too cold for good sheldrake shooting; in another week or two it will be better. A few English shipe were seen in the meadows, and several large flocks of quail have been located near Manahawkin, so there are good prospects for quail shooting next fall. The bay gunners complain of the unfairness of the game laws, which will not allow brant shooting from boxes on the feeding grounds, they have to be contented with an occasional chance shot from some point, when immense flocks of the fowl are feeding and swimming about within a few hundred yards of them.

yards of them. yards of them.

The feeding grounds in Barnegat Bay are so extensive, and the brant naturally so wary, that there is little danger of their being driven away from them any more than from Great South Bay, where boxing is allowed, and where the shooting has been better this season than usual.

ROCHESTER GUN CLUB.—Rochester, N. Y., April 18.—At the annual meeting of the Rochester Gun Club held Monday evening, the following officers were elected for the ensuing year: President, H. L. Ward; Vice-President, I. W. Butts; Secretary, L. A. Amsden; Treasurer, Dr. C. R. Sumner; Executive Committee, F. L. King, G. D. Butler, F. A. Ward; Vigilance Committee, II. M. Briggs, Dr. R. A. Adams, Dr. H. S. Miller, A. P. Bigelow, S. G. Raymond, J. H. Richmond, W. H. Reid. The annual report of the treasurer was read, showing a handsome surplus on hand and no outstanding indebtedness. The report of the secretary showed an active membership at present of forty-seven, exclusive of the honorary list. The election of delegates to the convention of the association resulted as follows: H. L. Ward, L. A. Amsden, Dr. C. R. Sumner, F. L. King and A. P. Bigelow. The executive committee were instructed to procure new club grounds for practice and match shooting, and also directed to make arrangements for the fourth annual prize shoot of the club, to be held the latter part of May. In addition to the prizes donated it was resolved to appropriate the sum of \$25 for prizes. It is the intention of the club to secure a strict enforcement of the game laws in this county and vigorously prosecute all violations. With this in view a committee was appointed to interview our member of Assembly, Hon. C. S. Baker, and ascertain the nature of the proposed amendatory acts to the game law before the Legislature and solicit his carnest ecooperation in effecting the passage of a bill to largely increase the present number of State gome protectors. A communication was read from the Onondaga County Fish Chub, of Syracuse, in mid I am about to try him with the other barrel, when he wims behind an old log, then leaps out in the water, which see is crimsoned; then he turns over on his back, and all is real from the Onondaga County Fish Club, of Syracuse, in reference to the same matter. A discussion by the club of with my hand on the hammer, ready to give him the comp device. Then I got a big stick and retrieved him. Forgeting that game leg again. Hunting and fishing will be the distingtion of the property of the passage of a bill to largely increase from present number of State game protectors. A communication was read from the Onondaga County Fish Club, of Syracuse, in reference to the same matter. A discussion by the club of rules relating to the glass ball shooting brought up the injustice of the present handicapping rules governing prize or match shooting which makes no discrimination in favor of communication was read from the Onondaga County Fish Club, of Syracuse, in reference to the same matter. A discussion by the club of rules relating to the glass ball shooting brought up the injustice of the present handicapping rules governing prize or match shooting which makes no discrimination in favor of the summalic patient. The doctor will never hear of this trip out to the glass ball shooting brought up the injustice of the present handicapping rules governing prize or match shooting which makes no discrimination in favor of summalic patient. It was the sense of the meeting that such rule, although apparently universal, should be modified. The club, after the transaction of considerable missing adjourned. In this connection it might be proper to refer to the rapid progress the club has made that leave the present handicapping rules governing prize or match shooting which makes no discrimination in favor of such state game and the present handicapping rules governing to rules relating to the glass ball shooting brought of rules relating to the glass ball shooting brought of rules relating to the glass ball shooting brought of the g

its infancy it is now numbered among the first organizations in the State. It possesses, perCaps, considering its membership, a greater number of crack wing shots than can be produced by any similar organization in the State. Notwithstanding the fact that its members are mostly young amateurs, they possess all the traits and characteristics of true sportsmen. The club has already achieved an envisible record at the trap. In a match contest with the Dansville Club last year the unparalleled score of 192 out of a possible 200 balls was made by the club, shooting a team of ten members, this being an average of over 19 out of twenty for each man. The club proposes shortly, when their new grounds shall have been procured, to engage in a contest with the Monroe County Club, to determine the tie resulting from the contests was handsomely won by the Gun Club; the second resulting in a tie, and the third to determine the tie being in favor of the Monroe County Club. Hence the coming contest will be looked forward to with much interest.

Connecticity Notes,—Windsor Locks, Conn., April 2.—
Probably no State in the Union has more tinkering done to the laws that relate to the taking of fish and game, than Connecticut. The present Legislature has been asked to protect several small ponds stocked with the pesky bass and the land-locked salmon, and there has been no end to the amendments offered to the law protecting game. Laws are well enough but should not be so cumbersome as to destroy their intent. One legislator proposed that it be a misdemennor if a person was found upon another's land with a piece of string and a fishhook about his person, even if said hook were fast in the calf of his leg. The law against snares set for partridges is a good one, but not carried out at all. Old hunters here never go out without kicking up from six to a dozen or more, and if they could kick their proprietors up a short hill the real sportsmen would make no objection. Although the winter was a severe one for quall, we have it that several have shown their sprightliness in the swimps between here and East Granby, and the prospect for a good crop of partridges is also promising. Trout are very scarce. Reason, caught and eaten in previous years when not over two inches in length.—Lower Buyk.

Connecticut Non-Exfort Law.—A bill which has passed both houses of the Connecticut Legislature and now only awaits the Governor's signature to become a law, provides as follows: Section 1. No person shall at any time kill any woodcock, ruffed grouse, or quail, for the purpose of conveying the same beyond the limits of this State. Section 2. No person, corporation, or company shall transport or convey any woodcock, ruffed grouse, or quail killed within this State beyond the limits thereof, or sell or have in his or their possession any of such birds with the intention to procure the same to be conveyed or transported beyond the limits of this State. Section 3. The reception by any person, company, or corporation within the limits of this State of any quail, woodcock, or ruffed grouse for shipment to a point without the State, shall be prima facin evidence that the said bird or birds were killed within the State for the purpose of conveying the same beyond the limits of this State. pose of conveying the same beyond the limits of this State. Section 4. Any person violating any of the provisions of the preceding sections shall be fined not less than seven nor more than fifty dollars and costs of prosecution.

PHILADELEHIA NOTES.—Our lovers of the dog and gun are pleased to learn that Mr. Harry Gatzmer, a son of ex-President Gatzmer of the old Camden and Amboy Railroad, is erecting a fine hotel at Crumpton, Md., for the accommodation of such sportsmen as may visit this section of the country for the enjoyment of snipe, duck, quail and wood-cock shooting. Crampton and thereabouts has always been famous for its shooting grounds; and Mr. Gatzmer is sparing no effort to make his house comfortable. Mr. Brown, or as we know him as John Brown or "Browny," is superintending the gas fixture work of the building, but will be ready with his gun and dog to act as pilot for any who may wish his services. Snipe are plentiful now at Crumpton, Gatzmer and Brown having (in a portion of two days' shooting) killed seventy-five birds last week. The weather now bids fair to be mild and just suited for them and those who want a few days' sport. There are a few "stiffeys" or raddy duck yet in the Delaware above and below Wilnington. A few are days' sport. Th or ruddy duck yet above and below Wilmington. being killed .- Homo.

Dakota Shooting Grounds.—Sanborn. Dakota Territory, April 5.—No better place can be found for wild fowl shooting than right here at Sanborn. The currounding country is dotted with numerous small lakes, and ducks and geese are here in all directions by the hundred thousand. Sanborn is a thriving young town of scarcely two years growth, seventy miles west of Fargo, and twenty-three miles east of Jamestown, on the Northern Pacific Railroad. Right is the heart of the best wheat country in the parthwest; good east of Jamestown, on the Northern Faculte Rainfoad. Right in the heart of the best wheat country in the northwest; good hotel accommodations can be had at reasonable rates. The people here as a class are A.No. 1. A number of real genuine sportsmen reside here, who take great pleasure in showing one around. Any one desiring information will receive the same by addressing the postmaster at this place.—LAUGHING

Capital City Gun Club.—Washington, D. C., April 11.—
At a meeting of the Capital City Gun Club, held Thursday evening, March 30, for the purpose of effecting a reorganization for the coming season, the club was found to be in good condition financially and the members enthusiastic. The committee on constitution and rules made a provisional report and asked for further time. A committee on grounds was appointed, which has since secured ample space for shooting on the bluffs north of the city, near a picturesque grove, from whence a fine view of the capitol and other public buildings can be had. Officers were elected for the ensuing year as follows: S. E. King, President; Wm. D. Mc-Elden, Vice-President; J. E. Hosford, Secretary; C. J. Stoddard, Treasurer.—J. E. H.

WOLE HUNT.—Washington County, Va., April, 1883.—
There is a talk of arranging a battue on Bromley Ridge for the purpose of exterminating the numerous wolves there. It any of the readers of Fonest AND STREAM desire to take a hand in this unusual sport, they might spend a week in camp on the mountain very pleasantly (there are hundreds of grouse there), and might combine health, sport, and profit too. Every wolf's scalp is worth \$10, \$5 from the State and \$5 from the owner of this baronial forest. I need not add that visiting "portsmen would receive a most cordial welcome."

DRNMOM -DENHIGH

Live Jack-Rabbits.—Carthage, Mo., April 3.—Your correspondent who wants live fack-rabbits can get them by writing to E. L. Hoopman, Belle Plain, Callahan county, Texas The rabbits are very plenty there. Mr. Hoopman can also supply live prairie dogs.—N. U. S. [Live jack-rabbits can be had here; I can get them for shipment in July, and will deliver them at express office here, box separately, for five dollars each. We have two kinds here, the white-tieled (Lepus campestries) or prairie hare; and the black-tailed (Lepus callotis) or true jack-rabbit. I can also supply some antelope fawns.—W. J. Dixox, Cimarron, Kansas.]

Jack-Ranbits in Nevada,—Austin, Nev., April 7.—
Jack-rabbits are more than abundant throughout this State, great numbers being killed by the Indians for their fur only. Have never seen any live ones brought in, but think they can be trapped. Probably cost five dollars a pair, ready for shipment. A day's bag of less than twenty is a poor day's sport. A party of twelve—six on a side—shooting for the "supper," killed 487 one day in eight hours. Prospects good for sport with sage hens, or mountain grouse. Ducks have been plentful, but they have it all their own way now.—Wachine-wah.

Manchester Shooting Club.—Manchester, N. H., April 10, 1882.—The annual meeting of the Manchester Shooting Club was held at the City Hotel on Tucsday, April 4, at 7 o'clock P. M., with a good attendance. The reports of the secretary and treasurer showed the club to be in a good condition. The following named gentlemen were elected officers for the ensuing year: Frank J. Drake, President; Frank Dowst, Vice-President; Lewis K. Meud, Treasurer; Will C. Clarke, Secretary; Z. Foster Campbell, Clark Hadley, Carlos C. Clark, Executive Committee. Number of members, 83.—J. E. W.

FLORIDA GAME ABUNDANT.—Jacksonville, Fla. April 10. I have several times told you of the great abundance of game in the Gulf Hammock. Here is a report in a Cedar Keys paper, which says: "Jack Brown, an old typo residing at Rosewood, says within the last eight years he has killed in the Gulf Hammock, 416 turkeys, 396 deer, 16 bears, 7 wild cats and 5 panthers. Who can beat this?" This proves that my reports were not mythical. And what that typo did with his shooting-stick, others can do with their breech-loaders.—Al Fresco.

Boston Campers Want a Ground.—Can some correspondent of the Forest and Stream mention a place within say 300 miles of Boston, where two fellows, not afraid to rough it, would be pretty sure to find good shooting this fall? Would like wild foul shooting if I knew of a place not already crowded with sportsmen. Should prefer camping out rather than stopping at hotels, and would be willing to tramp many miles and work hard if I could get a few weeks? Shooting outer a very with either ride or storage. Boston shooting once a year with either rifle or shotgun.—Boston Boy.

Chicago Notes.—Chicago, April 12, 1881.—Golden plover are here in thousands. I shot eighty-six yesterday without a call, and with only a few dead birds for decoys; they are brought into the city by the barrel by market hunters. Snipe are scarce at present, the weather is too cold for them. Duck shooting is nearly over, though a few good bags of bluebill were made at English Lake and Thayer Landing last week. Geese are numerous, but they are shot at so much that they are very wild.—Tex-Bone.

Minnesota.—Sauk Centre, Minn., April 5.—Ducks and geese are here in countless numbers—in fact, I never saw so many around in the spring before. I have been out, but would not like to have shown you the empty shells as compared with the ducks. They are very wild, and hard to have anything like a fair shot at, for the marshes are flooded with water, and it is impossible to get at them. As the water goes down it will be better, and then I hope to report one fair bag at least.—DELL. fair bag at least.--Dell.

ANOTHER PISTOL SHOT.—Chippewa Falls, Wis., April 7. 1882.—Anent the subject of pistol shots, look at this, taken from a local print: Jno. D. Williams, foreman for W. T. Price, killed a bald eagle Saturday, 25th, which measured from tip to tip of wings seven feet and eight inches. The bird was at the top of a tall pine, and the shot was made sixteen rods from the tree with a .32cal. Smith & Wesson revolver, which the boys here call a good shot.—Badger.

Charleston, Ill., April 10.—On the 7th inst. Joseph Liston, Otto Weiss, John Connolly and Wilson Hughes were out on the prairie, eight miles northwest of here, for a day's water fowl shooting, and they bagged one duck, four bullheads and sixty-seven jacksnipes. They reported snipe very numerous; plover and kill deer in fair numbers.—J. B. Dunlap.

New Yorkers in Florida.—Cazenovia, N. Y., April 12.—Geo. Brunn, Geo. Atwell and Seymour Brunn have just returned from Florida after a four months' absence. They report fine sport on the Indian and St. Lucie rivers. Thomas and Card are still at the latter river, and expect to remain two or three weeks more.—Hammerless.

MINNESOTA.—Pillsbury, Minn.—Ducks began to arrive here in March, and now they are far more numerous than I ever knew them to be in the spring. The lakes are not open yet, so they are confined to the river and overflowed meadows. I think I saw a thousand on one little meadow to-night.—J. F. L.

A BOOK ON DOG TRAINING.—Mr. S. T. Hammond's book, "Training vs. Breaking" is now ready. It should be in the hands of every dog owner.

I'M GOING IT FOR DEER LIFE, as the buck said when he

NEW BOOKS RECEIVED

FIELD BOTANY.—A hand book for the collector, containing instructions for gathering and preserving plants and the formation of the herbarium. By Walter P. Manton. Boston: Lee & Shepard, 1882. Price 50 cents. A useful little book, almost too brief, but good, so far as it goes.

The Bit goes.

Sea and Biver Hishing.

FISH IN SEASON IN APRIL.

Brook trout, Salvelinus fontinalis; salmon, Salmo salar; lake trout, hristivomer namaycush. This list may be in conflict with the laws

The "Reverend" William Musters, at one time minister of Colwick, was an ardent disciple of old Izaac Walton. Indeed, his attention seemed to be engaged in piscatorial pursuits when his mind ought to have been occupied in matters of a more sacred character. It is said that one beautiful morning he was deeply absorbed in his favorite occupation of angling in the "silvery winding Trent." at Colwick, when he was approached by an individual, who was soon recognized as his parish clerk, who thus addressed him: "Please, sir, the place is full and the people are waiting for you." "What place is full, and what people are waiting to see me?" "Please, sir, the church, and the congregation. It's Sunday, you know, sir." "Bless my life, I had forgotten it was Sunday; I will be there in a minute or two."—Butscos's Book of Nottinghamshire Anecdotes.

THE BROWN FISHER MAID.

BY PORTE LYTE.

Bare and brown were the feet of the lithe fisher maid, And the rose on her cheek it was tinted with brown; But her soul was far whiter than thine, I'm afraid, O, too knowing maid of the dissolute town.

And she leant her against a ribbed wreck there There on the strand by the big sobbing sea: And she sang to herself, O, I wonder from where, From where will my lover come here unto me

And the voice of the sea murmured low, as in sighing, On my bosom there rushes a ship in a gale— At the helm is thy lover, and impatient he's flying, To clasp thee he's flying with tall mast and sail

Then the fisher maid turned, o'er the hills disappearing, And she sang as she went, O, my love will ne'er fail: Then hasten, my lover, and with words most endearing. O, hasten thy coming with tall mast and sail.

Washington, March, 1882.

SIGNS.

PEADING your articles on the signs and supersitions are conversation I had not long since with an enthusiastic brother of the angle. Said he, "I am not superstitious nor over credulous, yet there are some thinga taken in connection with others lead a man, to say the least, to very curious thoughts. Here in town, as you know, there has been an aquarium which once did hold some speckled trout.

"Now, from boyhood up we have all known, and perhaps practiced, a good many signs, rules and formulas necessary to success, among others is the one pertaining to the signs of the zodiac. Here was an opportunity to note whether the almanac's distribution of the signs to the human body had any effect on these trout or not. Accordingly I set about to watch the signs and fish, and daily I noted their actions and the position of the signs. For a long time, four months at least, I continued my observations and tests.

"As a result I discovered one thing at least which appeared inevitable. Whenever the signs were in the stomach or above that point then the fish were exceedingly lively. A slight stir of the surface attracted them at once. An insect thrown on the water was the signal for a grand rush. In fact, they seemed constantly on the move, their heads and bodies always, when they made a slight stop, pointing toward the surface as if eager to detect the first glimmer of food.

"On the contrary, when the signs fell below the stomach."

toward the surface as if eager to detect the first glimmer of food.

"On the contrary, when the signs fell below the stomach they would hug down to the bottom. Their movements were dull and sluggish. They refused to be attracted to the surface, even by the most tempting lures, except, perhaps, occasionally one would sluggishly float upward, nose about the food, and perhaps nibble a little. But ambition had departed and, apparently, life was nearly extinct. I don't pretend to account for these facts. I don't even pretend to trace a connection with the almanae, but what I have told is true, for, as I said before, I kept careful watch of these fish for more than four months."

This much my friend told me. I present it as he said it as nearly as I can recollect, leaving the subject without comment. One word, however, for my brother piscators: Now that the trouting senson is fairly opened let us beware! let us, until this question of zodiacal influence on the funy tribe be definitely decided or described, keep close watch on the position of the signs and go trouting only on "stomach" days.

RHODY.

ON THE POTOMAC.

THE Woodmont Rod and Gun Club celebrated the opening of the bass season on the 8th inst. That the members and their guests had a grand time, caught bass, saug songs, ate a big dinner, and made themselves unanimously merry, is a foregone conclusion. But first let me tell you something of the location of the property and personnel of the club.

merry, is a foregone conclusion. The mass for the tenter of something of the location of the property and personnel of the club.

One hundred and four miles from Washington, on the Baltimore and Ohio Ruilroad, is the little town of Great Cacapon, at Dam No. 6, one of the feeders of the Ohio and Chesapeake Canal, and one mile further, beautifully situated on a hillside, overlooking a delightful stretch of mountain seenery, is the Woodmont club house. The club owns 3,000 acres of land, three-fourths of a mile on the Potomac, and reaching back several miles, embracing a territory that is well populated with deer, bears, turkeys, grouse, qualis, squirrels and rabbits. The river is well stocked with black and other bass, and there is the usual supply of less gamy fish, such as carfish, eels, sunfish and suckers, which are thrown in for good measure. The club has introduced land-locked salmon and California trout, and arrangements are being made for hatching, so that the general supply of native and imported fishes may be rapidly increased. increased

The club house is a model in its way, admirably adapted The cut house is a mouer in its way, admiratory adapted to the wants and comfort of members and guests. There are fifteen rooms in the house, and adjoining is a building for the accommodation of the superintendent and his family and servants. In the large hall is an elaborate rod and gun rack, while an adjoining room is well arranged with closets and latherise

From the portico of the house there is a charming view across the Potomac over to the Capon Mountains, south, the Tonoloway Mountain, east, and what is called Sidling Hill, west, the first two being great enough and regal enough to show the royal purple with which mountains are clad to the eyes of the distant beholder.

The club was organized in Washington two years ago, the prime mover being Mr. A. H. Evans, of Washington, President, who is a hale snd hearty old gentleman, an enthusiastic sportsman and a prince of entertainment. Among the members who were present at the base opening, were the President, Mr. Evans, Gen. R. C. Drum, C. S. A., Senator Warner Miller, Commodore English, and Capt. R. D. Evans, U. S. N., Col. R. J. Bright, Sergeant-af-arms U. S. S., Crosby S. Noyes, editor Erening Star, Washington, and Messrs, Levi Woodbury, W. C. McIntire and Thos, Russell, of Washington. Among the invited guests were Senators Frye, Hawley and Harrison, Representative Calkins, Col. Jno. M. Bacon and Major Wm. Dunn, U. S. A., J. C. Burnett and W. H. Clark, Washington.

A few of the party came up in the afternoon of the 7th, and though they did not sally out till late, a dozen bass were brought in. On the 8th, with one-half the party on duty, about fifty bass were captured and rare good sport was had. In the evening—well you ought to have been there, liking fish and fun as you do, and having the capacity, as may be inferred from the columns of Forders and Streen, for the good things of earth. The spread was a royal one from soup to cigars, with an intermediate fulness and finish surpassing a White House entertainment, as one of the Senators testified.

The Baltimore and Ohio Railroad Company is liberal with

a White House entertainment, as one of the Senators testified.

The Baltimore and Ohio Railroad Company is liberal with the club in the way of special cars, stopping opposite the club grounds, etc.

The club has an ample supply of boats, and good attendants for parties angling, procuring bait and rowing are near by. Much pleasure is anticipated by the members for themselves and their friends at this delightful sport, the facilities for which will be increased from year to year. The spring fishing fine opportunities for skifful handling of the rod and reel. Above the dam in the late summer and in the fall there is good fishing from a boat, trolling and easting. In short, the year round by land and water there is good sport to be had, pure, sweet air comes to the lungs with the odor of pine and the fragrance of flowers, the distant droning of the dam, the cry of the whippoowill, the drumming of pheasants, the hooting of owls, are among the voices of the night, and here, if anywhere, one is sure of rest and recreation.

J. C. B. Woodfort, Md. April 10, 1882.

BLACK BASS AND ENGLISH ANGLERS.

BLACK BASS AND ENGLISH ANGLERS.

I noticed in your valued paper of 6th inst., your excellent remarks on this subject, and the extracts from the two casual visitors from England to Canada.

"R.N." is doubtless right to some extent about the black bass not taking the fly, but I wish to inform him that he is only correct to a limited extent as regards the particular stream in which he fished, and other of similar character. The water in that and other streams which enter our lake, is generally of a muddy, milky nature, and deep. I have tried fly in three of these streams without success—but go up to clear water at the foot of a rapid, and if you know how you will catch bass to your heart's content. In the River Thancs here, close to town, I have filled my fishing basket in less than an hour, and not one of the bass under a pound, and in some instances have had two on my flies at once. Last fall at the mouth of the Thames, where it enters Lake St. Clair, I saw a man catch twenty black bass, in a short time, with a small trout spoen, casting it as he would a fly. Our black and green bass are "game" to the back-bone, will give good play and jump clear of the water when hooked. Had Mr. "R.N." been more familiar with our rivers, he would not be so ready to belittle our bass. I would not advise their introduction to English fish-ponds with a view to fly-fishing, but if placed and bred in their rivers, would give ample satisfaction. Large trour files of a sandy color, and black and claret-colored palmers seem to me to be the best to use, and your favorite fly rod and tackle will be sufficiently strong to look them. The best time to fish for them with fly is in July and August, after they have spawned, on hot sunny days, or just before a thunder storm—also in the evening.

Losnos, Ont.

This trait of human na'ure 1s sometimes the result of general and prediction. The trait of human na'ure 1s sometimes the result of general to general to the sunny days, or just before a thunder storm—also in the evening.

Londor, Ont.

This trait of human nature is sometimes the result of ignorance of the subject, person or thing in question; sometimes of education by which the mind is imbuted with certain predilection; sometimes of pride by which we are led to esteen ourselves better than others, and to estimate our opinion at more than they are worth.

It simply excites our sense of the judicrous, mingled with a feeling of commiscration for the man's ignorance to hear a British angler (2) talk about "black bass not taking the fly; their ungamines, soft mouth," and at the same time, "their walloping about and getting rid of five hooks at once;" the need of "worm hooks and poles," and to cap the chimax, "the cultivation of black bass in a sluggish, deep river, or in a dam, deep and still, with muddy bottom."

Any boy knows that if he would eatch bass, he must go to a swift river, or a pebbly bottom lake; that bass are too high-toned to dwell with eatfish and suckers in the mud. And I for one have seen many a three-pound and four-pound bass caught with a fly on a ten-ounce rod in the hands of an American expert, the bass fighting every inch like a tiger for dear life.

"Like everything else American 'all cry and little wool."

American expert, the bass ngnung every inch like a tiger for dear life.

"Like everything else American 'all cry and little wool,'" says "Koorb," referring to black-bass fishing at Alexandria Bay on the St. Lawrence. It reminds me of the Englishman whom an American traveler fell in with on the railway train. Said the Englishman: "You Americans over there can beat us in some things, perhaps, but you have no such locomotives as ours," The train being required to wait at a certain station for some time, they alighted and walked leisurely up to the head of the train, when the Englishman's attention was called to the lettering upon the locomotive, which was "Rogers Locomotive and Machine Co., Paterson, N. J., U. S. A."

Partnerson N. J.

TROUTING IN CANADA.—Venuor's Weather Bulletin for April and May contains some new facts relative to the raven's nesting and wintering in Canada. In the May number there is a great deal of interesting matter for sportsmen. A scries of articles are about to be commenced on "The Trout Lakes of Canada, and how get at them." Mr. Venuor hus spent fifteen years campling out in Canada, and few men, any, know more about the "good spois" for front than he dates. Published by Henry G. Venuor, Mantessi.

THE AMERICAN FISHCULTURAL ASSO-CIATION.

PROCEEDINGS ELEVENTH ANNUAL MEETING

THE AMERICAN FISHCULTURAL ASSO-CIATION.

PROCEEDINGS ELEVENTII ANNUAL MEETING.

THE PRESIDENT called on Col. Mc Donald to state what had been done in the way of retarding shad eggs with a view to transportation across the ocean.

Col. McDonald—The results of the experiments have shown that retardation cannot be carried beyond six days, in the case of shad eggs. In connection with Prof. Ryder I undertook to retard them by keeping them at a constant temperature, but it was late in the season and the water was up to 75deg. We found that at 60deg, we could secure a better development in from seven to eight days, but when the temperature was below that figure the development was abnormal, and the result was only a period of eight days, not enough to take them across. Eggs had been taken from the fish at a temperature of 75deg, and then kept in water at a temperature of 60deg. for seven and eight days, and healthy fish hatched. When kept for a longer period, or at a lower temperature, the fish were invariably unhealthy. It had been proved by experiment that eggs kept in wet flammels in a damp atmosphere at a temperature of 60deg. for forty-three hours could be successfully hatched. The problem of successful hatching while the eggs were en route has now been solved by the use of closed hatching apparatus. This consists simply of a jar of about five quarts capacity, with two tubes leading into it. One of these, at the bottom, furnishes a constant supply of fresh water, and the other, at the pottom, the motion of a train or rolling of a vessel would not affect the spawn. If we cannot retard the hatching until reaching the other side we might at least delay it so far that the fish would reach there before requiring food. This closed apparatus has an advantage over the open ones for ocean travel, in the fact that the eggs are not displaced by motion as in the closed jars, the rolling of a ship would not affect the eggs in the least; they would lie as quietly as on a labratory table. All that we would need is a water suppl

at Washington.

The President—Who invented this apparatus?

Col. McDonald—It was not a new invention. It was the same system used in transporting salmon eggs on flannel trays, but it had not been tried with shad, and it has generally been believed that shad eggs are too delicate to transport in this year.

THE PRESIDENT—What has been done in the batching of

The President—What has been done in the hatching of cod eggs?

Col. McDonald—The eggs of the cod, Spanish mackerel, sea mackerel, bonita, and other fish whose eggs float on the water, cannot be hatched in the closed apparatus used for propagating shad eggs. Just how to hatch them while being transported is a question that the Fish Commission is now trying to solve. The trouble is that the eggs are so buoyant that they will follow the current and pile up against the screens and clog them. A series of experiments is being made with a funnel-shaped apparatus which is fed from the bottom with pure salt water. To carry off the inspure water a syphon is used, the arm inserted in the upper portion of the apparatus being long enough to reach below the mass of floating eggs. The experiments have proved partially successful, and it is expected that they can be made wholly so. The transportation of the eggs of the cod from this city to the Washington hatching-houses is a problem which still awaits solution. An attempt was made last fall by the use of hermetically scaled jars. The eggs were taken at the Fulton Market slip and impregnated, and their development retarded by placing them in water at a temperature of 34deg. In attempting to batch them artificial sea water was used, and the

metically scaled jars. The eggs were taken at the Fulton Market slip and impregnated, and their development retarded by placing them in water at a temperature of 34deg. In attempting to hatch them artificial sea water was used, and the failure of the attempt, it is thought, was due to that fact.

Mr. BLACKFORD—The possibilities of codhatching at Fulton Market are simply immense. I wrote to Prof. Baird, the U. S. Fish Commissioner, this winter, and offered, on behalf of the Fulton Market Fishmongers' Association, the use of the ripe cod brought alive in the wells of the fishing-smacks, and offered to give all assistance possible. Prof. Baird sent two experts and Prof. Ryder, who wished to study their embryology. The first lot of eggs sent on trays and in kettles from the market to Washington was a failure. The second shipment went in glass fruit-jars half full of eggs and filled with salt water, and arrived safely, which proves that they can be sent that distance. Whatever failure occurred afterward was due to bad water. I have suggested to Prof. Baird that next fall the steamer Fish Hawk, with its appliances for hatching, be sent here, and offered, if this was done, to furnish 100,000,000 eggs per diem for hatching purposes. This could easily be done, as a large cod will strip 9,000,000 good eggs. This method will save the expense of sending out a great waste of both fish and eggs.

The following gentlemen were elected members of the association: Charles W. Smiley, Smithsonian Institution, Washington, D. C.: Lieut. Henry B, Mansfield, United States Navy; Prof. Alfred Mayer. Stevens Institute of Technology, Hoboken, N. J.; Col. M. McDonald, Fish Commissioner of Virginia; W. L. Gilbert, Plymouth, Mass.; H. P. Schuyler, Troy, N. Y.; Erastus Corning, Albany, N. Y.; John T. Agnew, Charles Banks, and Benjamin Wood, New York city. A recess taken until 2 P. M.

Upon again assembling an election of officers for the following year was then declared in order, the first being that of president.

10110wing year was said.

Mr. deorge Shepard Page for President. No other name was proposed and he was balloted for and elected.

Mr. Blackford recounted the services of Mr. Page to Salandhara and stated that it was from his suggestion that the

MR. BLACKFORD recounted the services of Mr. Page to fishculture and stated that it was from his suggestion that the United States Commission on Fish and Fisheries had sprung, and other facts which are matters of record.

MR. MATHER then named Mr. James Benkard for Vice-President, and his election followed.

MR. PAGE alluded to the fact that the South Side Sportsenen's Club, of Long Island, of which Mr. Benkard is President, would market four thousand pounds of brook trout this year, bringing the handsome sum of \$8,000. He mentioned this because it has been asserted that this fish cannot be successfully raised for market, an error that the club is slowly correcting.

MR. BLACKFORD named Mr. Charles B. Evarts for Treasurer. Mr. Annin named Mr. E. G. Blackford; upon ballot Mr. Blackford was elected and Mr. Evarts moved that it be made unanimous; carried.

Mr. Blackford was elected and Mr. Evarts moved that it be made unanimous; carried.

Mr. Evarts named Barnet Phillips for Corresponding Secretary; elected.

Mr. Blackford named James Annin, Jr., for Recording

Secretary; elected.

An Executive Committee, whose names are given below, was then elected. The officers of the Association for 1892-3

DW ARE:
GEORGE SHEPARD PAGE, New York, President.
JAMES BENKARD, South Side Club, Vice-President.
EUGENE G. BLACKFORD, New York, Trensurer.
BARNET PHILLIPS, BROOKLYN, CORTESPONDING Secretary.
JAMES ANNIN, JR., Caledonia, N. Y., Recording Secretary.

EXECUTIVE COMMITTEE. EXECUTIVE COMMITTEE.

PRED MATHER, FOREST AND STIERAM, (Chairman).

G. BROWN GOODE, Smithsonian Institute, Washington, D.C.

BENJ. W. WEST, Fulton Market, New York.

T. B. FERGUSON, Washington, D. C.

CHAS. B. EYARTS, Windsor, Vt.

DR. W. M. HUDSON, Hartford, Conn.

[By an oversight the first paper, read by Mr. McGovern, was omitted from our last issue. It will be given in our next issue.]

BULL TROUT AND POMPANO.

IN your issue of March 23 I find a note on the "Bull Trout" of Lake Cœur d'Aline, Idaho, in which the statements are made, on the authority of Drum Mojor Lattes, that this bull trout is a "charr;" that it is identical with the charr of the lakes of Scotland and Ireland, and that it was first described by Dr. Richardson as the "hood charr" (Salmo hoodii)

I have examined specimens of this bull trout sent by Capt. I have examined specimens of this bull trout sent by Capt. Bendire to the National Museum. It is the species which we call Salvolians madma, the "Dolly Varden trout," first described as Salmo malma by Walbaum in 1792. It is a "charr," and not a "trout," as those words are used in England, although not quite the same as the charr of Scotland. It is not the "hood charr" of Richardson. I have examined Richardson's specimens in the British Museum. One of these specimens, considered by Dr. Gunther the type, is a lake trout (Cristicomer namageush), the others are common brook trout (Salvelinus funtinuits). The Salvelinus hoodli is therefore to be suppressed from our lists. pressed from our lists.

pressed from our lists.

The large "pompano" referred to by correspondents in the same issue belongs, as you suggest, to the "African pompano," or "permit" (Trachynotus goreensis), a species not rare in southern Florida, and possibly simply the adult form of the round pompano (T. ovatus). If anybody ever heard the pompano called "pompanose" at New Orleans, it would be a gratification to have him speak up, or else for ever after hold his peace and let us drop that atrocity from our list of "common names."

"J. R., Jr.," RISES TO EXPLAIN.

"J. R., Jr.," RISES TO EXPLAIN.

Editor Forest and Stream:
When I wrote the article "How is Your Fishing Tackle?"
When I wrote the article "How is Your Fishing Tackle?"
Which appeared in your issue of March 30, I had little idea
of getting Ned Buntline into my wool; had such a dreadful
alternative been before my eyes, I doubt if the article had
ever seen the light; and now let me tell why.
I remember the time, long years ago, when Ned Buntline
commenced the publication of "Ned Buntline's Own," in
an office on Spruce street—I was a boy then, and well do I
remember him as he appeared on the streets in those days;
we boys looked up to him as a perfect hero, one who cared
for neither man nor beast—who dared do anything—and I
can recall how anxiously we watched for each number of
his paper as it was issued, and how eagerly we devoured his
tough yarms with the keenest relish; but woe to me if my
good father found in my pocket a copy of the aforesaid
paper. He, a true blue Presbyterian, could not tolerate that
kind of literature—I could. In later years I have heard terrible stories about Ned, with rifle in hand and fire in his
eye, chasing Alvah Dunning around the Raquette Lake
region, and again of Alvah chasing Ned. Both alive at last
accounts, however.
With all this in mind, well might I dread the thought of

With all this in mind, well might I dread the thought of crossing swords with our worthy friend; but as it happens to be only pens that are crossed this time I guess the affair

crossing swords with our worthy thene; out as a nappens to be only pens that are crossed this time I guess the affair will not hang crape on very many doors.

My article was made up from actual experience either of myself, or of some others of my fishermen friends. * * * *
One of the keenest fishers I ever traveled with, was one of the most careless men with his tackle. I had him in mind when I wrote of the tangled mess of rusty hooks, etc.

When we went to the Saranac Region he had his fishing tackle in a large tin box. On our arrival at Martin's the bex was opened and he begun to get out a rig to go trolling with, and it took most of an afterngon to get things into decent shape, and then it was a miserable apology for an suifit; and he is not the only one of the kind that I could name.

The flybook alluded to was one made for the purpose, with leaves of parchment alternating with leaves of cloth into which the flies were hooked, and when opened the collection of flies were the the most forlorn my eyes ever lit upon. Scarcely a perfect one left—the moths had gone through the whole business in a business-like way.

Now, in regard to the kingfish which were credited to "Old Reliable Rod." In the waters of New York Bay I have taken at various times several fish that have always been

called, by those that pretend to know, "kingfish." I have also bought them from fish dealers, and they gave them the same name. The fish in shape somewhat resembled a trout, and in length was from ten to fifteen laches; color, if my memory does not fail me, dark yellowish brown, with some little marking on the sides. Those I have taken have always been on weakfish grounds. Webster's dictionary gives an engraving of the Southern "kingfish or opah"; this is nor the fish I referred to.

I thank Ned Buntline for the kindly manner in which he has overhauled my article; it shows that he is in search of light; hope he got some.

J. R., Jr.

light; hope he got some.

TROUT IN THE ADIRONDACKS.—Enclosed find a slip from the Chateaugay Record of March 24, 1882. The statement is wholly true, and much more might be added to it, for while on a flying trip to take lake (Upper Chateaugay) one day last week I saw five salmon trout, the smallest weiging six pounds, and the largest eight and one-quarter pounds, all taken from one hole through the ice. Our "shad," or white fish, (a delicious fish by the way) are being taken in the same way. The speckled trout I am glad to say are saving their strength for the fly. All the fishermen and guides that I have come in contact with from different parts of the Adirondacks within the past six months speak of last senson as being an 'off year," but that the "signs of the times," and the extra-ordinary way in which the fish are now taking bait indicate that the coming season will be one of unusual success in that direction. The slip from the Record says: "As a result of the efforts of Messrs. Humphrey and Boomhower, and other gentlemen who have caused many thousands of lake and salmon trout to be placed in the waters of Upper Chateaugay Lake, the fishermen are now catching with sunk bait many pounds of as fine fish as were ever taken from those waters, and one gentleman, who is good authority, declares that the Chateaugay Lakes are to-day as well stocked with lake and salmon trout as any body of water of the size in the State of New York." Ralph's, the popular summer hotel, has been enlarged this last winter to three times its former capacity, and many of the old guests have already engaged rooms there.—Jno.

THE CONNECTICUT RIVER has flowed a much larger body of water this season than the spring of last year. In consequence thereof the catch of shad and alevives promises to be first rate. Already the Douglass Brothers have caught several bushels of "whops" and one shad, besides a considerable quantity of suckers, perch, and dace. In their pot, which they set close to the shore every spring, they caught, last Saturday morning, a fine muscalonge, which weighed an ounce less than eight pounds when taken from the water. The beauty was presented to Mr. E. M. Reed, Vice-President of the New York, New Haven and Hartford Raftroad. Just what the effect will be with the shad because of the closing up of the Enfield dam, four miles above this place, last summer, as regards their going any further up the river, remains to be seen. We think that the fishway is sufficient, because the dam is so low, but others think differently.—Lower Bunk. LOWER BUNK.

Tennessee.—Nashville, April 8. There were a great many jackfish in our market this morning, varying in size from two to twenty pounds weight. Within the last few days we have gentle warm rains, and the streams are now in excellent condition for angling. A party of gentlemen returned from White Oak last Friday. They had unusually good luck and a delightful trip. Fish in that noted stream are not only abundant, but large and of most delicious flavor. Jim Palmer, Colonel Griffith, Hermann Buckholz and Jack Bentley are making grand preparations for an expedition to Buifalo. When that team do start, they are indefatigable, and do things up in the best of style. Carp about here are reported to be spawning; if they turn out as well as is desired for them, by this time a twelve month there will be millions of them in the State.—J. D. II.

Mountain Trout in Southwest Virginia.—Under the shadow of White Top, Washington Co., Va., April 1882.—It has occurred to me that the closing sentence in my last note to the Foliest and Stream may mislead some eithusiastic fisherman, who might suppose from the simple statement of the abundance of trout, and their ignorance of the dangers of rod and fly, that the situation was adapted to the use of the fly. The creek is upon an average scarce twenty feet wide, and its banks are lined with lanrel and rhododlendron. Though I am no fisherman I should imagine it next to impossible to east a fly there, and as a matter of fact, people fish with a line from a rod five feet long, and catch with almost any sort of bait. The fish themselves are speckled beauties indeed and in great numbers.—Denbed.

A Spot for Big Bass,-A few miles south of Wilming A SPOT FOR BIG BASS.—A few miles south of Wilming ton on the upper Potomae River is a rare spot for black bass, namely, Chambersburg, Pa. Rod fisherman camp there during the summer and take them in numbers. Dr. Hoke, on wo of Philadelphia, formely of Chambersburg, speaks of the place as his choice over all others, and will spend his speaks of spend his the place as his choice over all others, and will spend his vacation intent upon the capture of big fish. Your correspondent is told that both the minnow and the little toad are taking baits at this point on the Potomac, and has been invited to join the "canvass party" that will tarry a week there.—Homo.

TIM POND AND THE SEVEN PONDS.—We understand that several of the gentlemen who were at Tim Pond, Maine, last year, are going there again this summer. The accommodations are to be enlarged.

MAINE.—Parties who desire some excellent spring fishing would do well to visit Enfield, Me. All particulars in relation to it may be obtained by addressing A. J. Darling, Enfield, Me.—J. F. S.

PUBLISHER'S DEPARTMENT.

The Semi-Hammerless.—Attention is called to the semi-hammerless gun, manufactured and sold by the American Arms Company, the well-known makers of the Fox gun. The semi-hammerless is just suck a gun as many demands have been made for.

WE HAVE RECEIVED the elegant catalogue published by Messrs. J. Palmer O'Neil & Co., of Pittsburgh, Pa., the well-known dealers in fine guns and all sportsment's supplies. The catalogue is admirably illustrated and does credit to the house, whose advertisement will be found elsewhere.

TRAINING vs. BREAKING.—In book form, with two sketches, entitled "My Old Dog Trim" and "The One-Eyed Grouse of Maple Run," by S. T. Hammond—"Shadow"—now ready.

The Bennel.

THE BOSTON DOG SHOW.

ENTRIES are coming in finely, and everything looks promising for a very successful exhibition. Arrangements have been made with the railroads to transport dogs free when accompanied by their owners or attendants. The express companies will carry for one-half their regular rates. The secretary of the club is at the New York show, and has received quite a number of entries from the exhibitors; among them are many of the prize winners. We shall probably be able to announce the judges next week.

THE NEW YORK DOG SHOW.

of the prize winners. We shall probably be able to announce the judges next week.

THE NEW YORK DOG SHOW.

THE sixth annual Bench Show of the Westminster Kennel Club commenced on Tuesday at the American Institute Fair Building, at the corner of Sixty-third street and Third avenue. In point of numbers the present show has been exceeded but once in the history of the club, as will be seen by glancing at the list which we publish below. The quality of the animals exhibited has never been surpassed, and the judges have no easy task to make their selections. At no previous show has everything run so smoothly. Mr. Lincoln has so arranged and systematized the vast amount of labor necessary to successfully carry on the show, that apparently there is no friction, and even the minor details seen to have been as considered the state of the case were new ones employed.

Over one-half of the entries arrived at the half on Monday afternoon, and before the hour of opening, nearly every animal was in its place. The dogs were received at the Sixty-third street entrance, and as soon as identified, they were at once placed in their proper stalls. The entrance for the visitors is at the Third avenue end of the building.

Passing through the corridor to the half and turning to the left, we come to the dogs of the Westminster Kennel Club, seven in number, which are on exhibition only. Champion shales are the state of the state of the state of the state of the proper stalls. The entrance for the visitors is at the Third avenue end of the building.

Passing through the corridor to the half and turning to the left, we come to the dogs of the Westminster Kennel Club, seven in number, which are on exhibition only. Champion shales the state of the passe of the animals.

Next to the club dogs come the matiffs, which occupy nearly two-thirds of the space upon this side of the building. The St. Bernards fill the rest of the space on this side, and also that across the rear and of the half.

THE AWARDS.

Class 1,—Champion mastiffs, dogs—Gurth, Col. Stuart Taylor, New York,

Class 2.—Champion mastiffs, bitches—Leah, L. C. and H. L. de Zayas, New York.

Zayas, New York; Class 3.—Mastiff dogs—ist, Zulu, James Smithson, Jr., New York; 2d, Warwick, M. Rathburn, New York; 3d, The Amal, P. C. Hewitt, New York; hc, Hereward, Miss S. C. Hewitt, New York

New York; he, Hereward, Miss S. C. Hewitt, New York. Class 4.—Mastiff bitches—1st, Dido, J. L. Young, Irvington-on-the-Hudson, N.-Y.; 2d, Tigress H., Mrs. Charles E. Wallack, Long Branch, N. J.; 2d, Betsey, Julius Grau, New York.
Class 5.—Mastiff pupples, dogs, or bitches—1st, entry of James L. Young, Irvington-on-the-Hudson, N. Y.; 2d, Monmouth Bess, Charles E. Wallack, Long Branch, N. J.

Class 6.—Champion rough-coated St. Bernard dogs—Turco, D. P. Foster, New York.

Class 10.—Champion smooth-coated St. Bernard dogs—Harold, John P. Haines, Tom's River N. J.

Class 11.—Champion smooth-coated St. Bernard bitches—Judy, John P. Haines, Tom's River, N. J.

John P. Haines, Tom's River, N. J.

Class 12.—Smooth-coated St. Bernard dogs—1st, Leo, the Hon, Samuel J. Tilden, New York; 2d, Mitre II., Isaac R. Denman, Newark, N. J.; 3d, Monk, A shton Howard Potter, New York.

Class 13.—Smooth-coated St. Bernard bitches—1st, Jura, John P. Haines, Tom's River, N. J.; 2d, Zug, same owner; 3d prize witheld.

Class 14.—St. Bernard pupples, dogs or bitches—Rough-coated: 1st, Dagmar, J. D. Prince, New York; 2d, Rosseau III., Clarence Whitman, New Brighton, Staten Island; vike, pupples entered by D. P. Foster, New York; 1b, Abbott, H. V. S. Thorne, Black Rock, Conn. Smooth-coated: 1st, Lohengrin, Thomas W. White, New York; 2d, Marco.

John P. Haines; hc, Dina, Don, Jr., and Bruno, same owner.

Class 15.—Rereglund dogs. Let. Powner Demispin, Edg.

John F. Haines; hc. Dina, Don, Jr., and Bruno, same owner.
Class 15.—Berghund dogs—1st, Rover, Benjamin Edge, Jersey City;
2d, Dan, William A. Fureron, Jersey City Heights.
Class 10.—Berghund bitches—Minx, G. Cæsar, Jersey City.
Class 17.—Newfoundland dogs—1st, Jack, S. E. Warshing, New
York; 2d, Carlo, Charles R. Lamb, New York; vhc. Bogasinus,
George Upsher, Ibberson, New York; hc. Ponto, C. C. Balley, New
York; c. Sport, S. E. Warshing, New York.

Class 18.—Newfoundland bitches—1st prize withheid; 2d, Topsy, the nly entry, G. D. Cooper, Brooklyn, N. Y.

Class 19.—Newfoundland puppies, dogs or bitches—1st, Brave, Robert Bonnet, Bayonne, N. J.

Class 20.—Champion greyhounds, dogs or bitches—1st, Spring, Charles E. Dawson, Montreal, Canada.

Charles E, Dawson, Montreal, Canada.
Class 21.—Greychound dogs—1st, Don H., Patrick Neary, New York; 2d, George, H. E. Brisben, Philadelphia, Pa.
Class 22.—Greyhound bitches—1st, Clio, Dr. O, F. Coe, Jersey City; 2d, Fan, Joseph B, Fierson, Buckingham, Pa.; vhe, Fan, Robert Lincoln Lee, New York; pc, Zullu, J. S. Cattanach, V. S., New York; Class 23.—Deeri.ounds, dogs and bitches—1st, Fly H., William C, Gulliver, New York; 2d, Frida, Milsa A. R. Hewitt, New York; vhc, Sancho, William C. Gulliver; he, Bruce, J. A. Butler, Jr., Newport, Vt.

Vt. Class 24.—Champion pointer dogs over 55 pounds—1st. Faust, St. Louis Kennel Club, St. Louis, Mo.

Class 25.—Champion English pointer bitches over 50 pounds—Grace, Luke W. White, Bridgeport, Conn.

Luke W. White, Bridgeport, Conn.

Class 28. — Pointier dogs ever 55 pounds—1st, Croxteth, A. E. Godeffroy, Gaymard, N. Y.; 24, Tally Ho, R. Lamb, New York; 3d, Lord
Dufferin, C. Du Bois Wagstaff, Babylon, Long Island; vhe, Talke, C.

THE SHEFFIELD (ENG.) DOG SHOW.

THE SHEFFIELD (ENG.) DOC SHOW.

The first show of the Sheffield and Hallamshire Kennel
Club at Sheffield, Eng., last month, was a very successful
one; over nine hundred dogs were present, and the collection
was pronounced by good judges to be one of the best ever
shown in England. Want of space prevents us giving an extended notice, and we can only give a list of the awards in the
pointer and setter classes.

THE PURE IRISH SETTER.

Editor Forest and Stream;
I have been considerably interested in the letters appearing in your valuable paper on black and tan dogs called Gordon setters, and on Laverack pedigrees. I think the red dog called Irish might also have been mentioned. One of your correspondents asks how to breed field trial Gordons; this I cannot say, but I can give him some information of black and tan setters, which our show benches make classes for. In order for a black and tan dog to take a prize he must be a mongrel as the rules now stand.

There are two acknowledged breeds of setters, the Irish and the English, and both of them have black and tan as one of their colors. Stonchenge says that there are good black and tan Irish setters, and that the Gordon has been unquestionably crossed with the bloodhound. Now, if this cross improved the dog over either the Irish or the English, there might be some excuse for making a distinct class for them, but it is shown that the mongrel is inferior to either of them, and if a pure black and tan shows good qualities, the mongrel gets the credit.

pure black and tan shows good qualities, the mongrel gets the credit.

Years back the black and tan Irish setter was as good for the field as any to-day, but it is hard to find one; they have been destroyed by the show bench in the same manner that the liver, red or chestmut has been destroyed, thereby infuring the lover of field sports and benefitting dog mongers. This is a fraud on the public. We look to the managers of show benches to encourage pure bred dogs, and as there is not one in every hundred thousand who knows what a setter should be to be pure, they depend on the show bench, and, if possible, bred to a dog which takes a prize. All the old writers admit that the Irish setter was the finest in Europe on account of the purity of his blood, and that the English was inferior owing to his impurity. To-day the dogs called Irish, according to the rules of the show bench, and the Gordons, have the greatest number of gun shys and inferiors in the field to their numbers and so-called pedigrees than dogs of any other color.

When the net was used in Ireland there was some resean.

Irish, according to the rules of the show bench, and the Gordons, have the greatest number of gun shys and inferiors in the field to their numbers and so-called pedigrees than dogs of any other color.

When the net was used in Ireland, there was some reason to brag of color, and this color to be a liver red or dark chestnut. Dr. Lewis called it a reddish brown. This is the color of the beather, a shrub which grows in the bogs and under which nearly all the game is to be found. While it is open at the bottom or underneath, it is quite thick at the top; and a bird can see for some distance through the opening, and would selden lie for a dog of any other color, for in order to net the birds they had to be located, and this is why the liver dog became so valuable; two hundred and fifty guineas would not be considered high for a brace of them, and they were hard to get at that. These dogs became noted all over Europe as the red frish setter, and dog dealers soon took advantage of the word red and sold for good prices a dog of a lighter red, which is nothing more than an orange crossed with the liver, and is in no way identified with the setter which made freland popular for her dogs. This color also became popular in England, and the pure dog was immediately condemned as soon as they found they could not imitate the liver by crossing the black; this is why the Irish gentlemen denounced the black which could be readily seen, even when the color was as dark as a liver. If the pure liver could be produced by crossing, as the Gordon was by the hound, it would be all right, and the liver dog would be the ideal of an Irish setter; but the countre foil could not be made, and the pure dog had to be got rid of, and the only way was to say that he was a cross on the water spaniel. This suited, and he Irish setters was run out and a red English mongrel fills his place.

Now I would like to know if Stonehenge ever saw a livercolored water spaniel. I have heave a pellow tings with fades in the summer almost to a dirty yellow. I

to his inconsistency. In his works on the dog he places orange and white and lemon and white at the head of colors. In his letter to the Field blue beltons stand at the head and fiver beltons stand fourth, in his works liver and white and liver ranked as the lowest grades, now red or yellow takes this position of ten and eleven. He is describing English setters and by the statement you can see that this 'cashiomable red is not confined to the Irish as a good many think. In his letter he says there are many red dogs which are not Irish, and many black and tan which are not Gordons; and if an English sotter of this color had the points of the show bench he would be entitled to this class (or words to that effect), and that he should task things as he finds them and describe the dog and the prize list. This in itself is sufficient to show any resort on the prize list. This in itself is sufficient to show any resort on the prize list. This in itself is sufficient to show any resort on the prize list. This in itself is sufficient to show any resort of the Border, says that the reverack, in writing of Pride of the Border, says that the reverack, in writing of Pride of the Border, says that the reverack in writing of Pride of the Border, says that the reverack in which we have settly offered to the prize discrete the color of the ***a settle, objects to referring to old authority on the subject, and that the dog is subject to the same improvement as the horse, and that we must take the authority of the day. If that be so what is the good of pedigrees; for we only refer back to dod dogs to prove the purity of blood. This being the case, the dogs of one hundred years back must be considered of the best blood, or no breeder of to-day would want to trace back to them; and this being the case the pure dog heart me must have known what consisted a pure dog heart me must have known what consisted a pure dog heart me must have known what consisted a pure dog heart me must have known what consisted a pure dog heart me must hav

last was irst. This for staunchness and chedience is equal to the best dogs of to-day, although it is eightly wears back. This does not tally with Stonehenge's statement that the Irish setter is headstrong, or with "Mont Clare's," that the Irish setter is improved.

Now to prove that the Irish setter is not the English spannie! if the dog was imported from England he would have retained his English name of spanie! which, with the Irish speaking people he would be called the English spanial, but this is not the case; the name of the Irish setter in the Irish the wolfhound was called ea, which is "pet hound." In Irish, the wolfhound was called ea, which means "powerful," like a rushing stream, to drive before. The common hound was called ea, which means "powerful," like a rushing stream, to drive before. The common hound was called ea, which means "powerful," like a rushing stream, to drive before. The common hound was called ea, which means "powerful," like a rushing stream, to drive before, The common hound was called ea, which means "powerful," like a rushing stream, to drive before. The common hound was called ea, which means "powerful," like a rushing stream, to drive before, The common hound was called gnather, and the common name of dog was madric. This proves that the Irish yaddhrim was a native of Ireland long before the Norman invasion, and could in no way be classed as a dog of English origin. Henry the Second of England compelled Roderick, King of Commanght, to Turnish him with hawks and hounds; and, in fact, we find in old writings that the hawks and hounds; and, in fact, we find in old writings that the hawks and hounds; and, in fact, we find in old writings that the hawks and hounds; and, in fact, we find in old writings that the hawks and hounds; and, in fact, we find in old writings that the hawks were in noe at an early date in Ireland. We know that the spanish were in great demand all over Europe, and in some cases the most valuable gnath freeh and all over Europe, and in some cases the most va

rect; for Pilot's pedigree falls to show the cross. He did not breed old Ponto or Molt, therefore he could not have introduced this Edmond Castle strain before Ponto and Moll's time; therefore his own letter proves the pedigrees of his dogs, not alone Pride of the Border, but all of them, to be incorrect, and wilfully so. He went four times to Ireland to find an Irish setter to cross with his. He failed with the foshlonable color, but I think he succeeded with the liver. He first crossed when he brod Pilot—then trying to breed out the color he bred out the Irish blood too, and then found it necessary to introduce it again in order to improve his dogs, and as there was a prejudice to liver, it would not do for him to say that it was to this dog he owed all the good qualities of his exterts, for if he did he could not claim them as his strain.

I suppose all the liver and white dogs will soon be called Edmond Castle setters; then they will have a title and they will have a chance for a place on the show bench. The man who owns a liver and white dog would have as great a right to call him an Edmond Castle setter as the owner of a black and tan would have to call his a Gordon. There is one evidence, and that is, that Pride of the Border has advanced the position of liver in the grade of colors, he having the title of Laverack if the Laverack is a pure English setter, which I do not consider him, but a cross of the English and Irish, and it is to the lirish he owes his good qualities, why does the English show bench make a class for bin. Why make a pet place for any man's kennel! If he is an English setter he should be classed as such, and in that class contend for the prize, no matter what his name or who bred him, and if he is a cross between the English and the Irish he should be classed on this breed of dogs; thus making classes for the benefit of individual kennels is not right, sand the managers of show bench. This manage is as they please. This I grant. But no man has a right to do that which will be likely t

and Irish setters, and the Gordon frand rubled out of existence, and prizes offered for black and tan in these classes. Then you would find the black and tan equal to any in the field.

As for the Irish setter, this red mongrel called Irish should receive the same fate as the Gordon. All red dogs are classed as Irish, I mean the fashionable red, and that this shade is peculiar to the Irish setter is not so to-day. Stonehenge places this shade of red as the lowest grade of color of the English, and says that if the English setter possess the marks of the Irish, he would be entitled to a prize in that class. Now, is this consistent? How can an English setter have the points of the Irish, there being as much difference in the pure dogs of both nations as there is in the setter and Newfoundland? But as neither the Irish nor English dogs of this color are bred pure it would be hard to class them. Take the show bench standard for English and Irish, a black and white having every point of a full-blooded Irish setter would be classed as English, and would take prizes in this class, and a red dog having overy point of an English setter, except it's size, if the alsa red coat he would be entitled to a prize as an Irish setter. I will take Belton, a dog classed as an English setter; if he had a red coat he would be a prize winner in the Irish class, although a good judge would say that he was neither an English nor an Irish setter; and yet this dog is a prize winner in the English class, and the dog showing that he is neither English nor Irish, but distinctly showing that he has the blood oboth. This is the method adopted by the English to improve heir dogs at the expense of the Irish, which is the superior dog, if bred pure. The American show bench should not encourage this method of crossing dogs and then entering them as pure dogs of either one nation or the other, for while it improves one it degenerates the other; and this is why the Irish setter has dropping the lover of field sports when he had a red cass should be

for the field.

There are distinct marks both with the English and Irish setters. If these were adopted by the show bench as standard, and not color the lover of field sports would soon be able to recognize one from the other, or the cross of them, no matter what the color, as we are now able to tell the horse from the ass, or the mule from either. And then the sportsman can breed pure dogs, for he will not be breeding in ignorance as is now the case.

can breed pure dogs, for he will not be breeding in ignorance is now the case.

I spent five years in Ireland some thirty-five years ago. Then I saw both the English and Irish setter in his purity and each could be recognized by any lady, just as a lady of to-day can distinguish a Newfoundian I from a setter, no matter what its importance of the fushionable red called the seen very handsome dogs of the fushionable red called the Fish, about thirty-years back; but I cannot say the same for them to-day. The most of this color that I do see now have not that papearance even of a half bred Irish setter.

The name of these dogs is the red Newry setter, they no doubt take that name from the small town of Newry in Ireland, where they were bred about fifty years back; for I can find no mention of them previous to that time of Youatt. The chestrut or liver-red Irish having such a flue reputation as the red Irish setter, and but few of them outside of Ireland, on account of their extremely high prices, and most people knowing him only by reading of him, the Newry dog soon found his way into England, where he was represented as the red Irish as great tleusand. This dog was much rheaper than the liver Irish setter gaidhrie. The cld Irish penteurs name and all their dogs, and on this sound in the work in the laws of the prices, and on this sound in the work in the laws of the setter gaidhrie. The cld Irish setter hear in the liver Irish setter gaidhrie. The cld Irish setter hear is great tleusand. This dog was much rheaper than the liver Irish setter gaidhrie. The cld Irish setter hear is great tleusand. This dog was much rheaper than the liver Irish setter gaidhrie. The cld Irish setter hear is great tleusand. This dog was much rheaper than the liver Irish setter gaidhrie. The cld Irish setter hear is great tleusand. This dog was much the setter hear is a set of the price of the prices and
account this dog could be purchased for much less than the pure quidhrim. At first this dog was well marked, for he was bred to resemble the Irish setter as much as possible, and his light red color made him one of the handsomest of dogs. As the demand increased this color became more widely known, and in fact the ruling color recognized for the Irish setter. The color became the standard, and the coat and form of the Irish setter became a secondary consideration, and this enabled dog dealers to palm their red mongrels on the people for Irish setters.

dog dealers to paim their red mongres on the properior and softers. If the managers of show benches want to preserve colors by making classes for them, then this dog should be known as the red Newry, and not as the Irish setter; and if they want the big-headed mongrel called Gordons, let them have it so, but at the same time let them make classes for the black and tan English and Irish setters, for black English and Irish and chestaut or liver, not brown, English and Irish. Then there will be no chance to claim that any one color indicates the purity of blood, and breeders will have to breed for pure dogs, which will be a benefit to the lovers of field sports. At any time I can describe the English and Irish so that any person can distinguish one from the other and the cross from either.

BENCH SHOW DERBY

BENCH SHOW DERBY.

THE Directors of the Pittsburgh Bench Show have decided to inaugurate a Bench Show Derby for English setters. Conditions to be as follows: All puppies whelped on or after March 1 of the previous year to be eligible, one dollar forfeit to accompany each entry, and two dollars additional for puppies confirming their entry. The forfeit money and ten dollars added by the society to form a purse, and to be divided in a first, second, and third prize in proportions of 50, 30, and 20 per cent. Entries to close on Dec. 1, previous to the show. The two dollars paid in confirming the entry to allow the puppy to be entered in the regular puppy class (if eligible) without extra charge.

Petriserron, April 12, 1882.

SALE OF COLLIES.—Mr. Thos. H. Terry, of New York, has purchased of Dr. J. W. Downey, New Market, Md. his celebrated kennel of Scotch collies, including the champion bitches Lass o' Gowrie and Lassie, and the famous dog champion, Tweed II.; also the bitch Like (E. K. C. S. B. No. 16745), and Aleg and the young dog Prince. The sale also included the red Irish setter bitch Kathleen. Mr. Terry will remove the dogs to Bernardsville, near Morristown, N. J., May I.

DR. J. S. NIVEN had the misfortune to have his colebrated Irish terrier Norah run over by a wagon, breaking her leg and otherwise injuring her; consequently she will not appear at the New York show. She will probably recover.

THE Homestead (Springfield, Mass.) tells of an aristocratic pug who lately celebrated his tin wedding, with a couple of small bootblacks as ushers. The way the dog tore down the street was a caution to pugs.

TRAINING vs. BREAKING.—In book form, with two sketches, entitled "My Old Dog Trim" and "The One-Eyed Grouse of Maple Run," by S. T. Hammond—"Shadow"—now ready.

We wish to impress upon the minds of those who send us items for our Kennel Notes, that to avoid mistakes all names should be written in PRRY LEFTERS, as we find it very easy to make mistakes where this is not done. We also would like to be informed whether the animal is male of remale, and to know the date of birth and the breed to which it belongs, whether pointer, setter or other. A careful study of the notes in this number of the paper will show just what is wanted.

NAMES CLAIMED.

Princa. By Mr. H. T. Danforth, New York, for black and tan Gordon setter dog, whelped Jan. I, 1889, by Orgill's Rip out of Dr. Aton's Nellie Horton.

Mellie Horton. H. By Mr. H. T. Danforth, New York, for black and tan Gordon setter blich, whelped Jan. I, 1889, by Orgill's Rip out of Dr. Aten's Nellie Horton.

Rush. By Mr. W. G. Smith, Templeville, Md., for red. Irish setter dog, whelped Sept. 15, 1881, by Cout (Derg.—Cora) out of Bell (Owney—Jessie).

BRED.

—Jessie).

BRED.

Colleen—Rock. Mr. Lawrence Timson's (Red Hook, N. Y.), red Irish terrier bitch Colleen (Splinter—Norah) to his imported Rock (Gaelio—Midge), April 4.

Blue Bell—Thander. Mr. W. H. Besbe's (New York) English setter Blue Bell—Thander. Mr. W. H. Besbe's (New York) English setter Blue Bell (Mederic Dhu—Mina) to Mr. A. H. Moore's champion Thunter. March M. Market Diverse (Mederic Mederic Mederic March Ma

April 11.

Lucy-Flute. Mr. N. Elmore's (Granby, Conn.) beagle bitch Lucy (Inno-Old Bess) to owner's Flute (Rattler-True), April 12.

Winnie-Ringwood. Mr. N. Elmore's (Granby, Conn.) beagle bitch Winnie (Rattler-Belie) to owner's imported Ringwood (Ranter-Beauty), April 13. WHELPS.

azeppa. Mr. Wm. F. Todd's (Portland, Me.) liver and white ter bitch Mazeppa whelped April 5, nine (two dogs) by Carter's

pointer bitch Mazeppa whelped April 3, nine (two dogs) by Carter 8 Clip.

Nellie Horton II. Mr. II. T. Danforth's (New York) black and tan Gordon setter bitch Nellie Horton II. (Orgill's Rip—Nellie Horton) whelped April 3, tea (four dogs) by Dr. Afen's Glen. Three dogs and three belenes since deal. Xike's (Grooto, Canada) black cocker spaniel bitch Toronto Jet whelped April 10, five, by Toronto Beau.

SALES.

rt-Belle whelps. Two setter dogs, whelped March March 25, J. H. Phelan, Jersey City, N. J., to Mr. H. Louis Shortemier,

Sport—Belle whelps. Two Spaces.

y Mr. J. H. Phelan, Jersey City, N. J., to Mr. H. Louise Vork.

Treced H. Black, white and tan rough-coated imported Scotle dogs, Tyears old (Mr. Lloyd Price's Twood—J. Thomas's May Dr. J. W. Downey, New Market, Md., to Mr. Thomas H.

He dog, 'i years out (an. Looya by Dr. J. W. Downey, New Market, Md., to Mr. Thomas H. Terry, New York. Prince. Scotch collie dog, 18 months old (Rex.—Lassie), by Dr. J. W. Downey, New Market, Md., to Mr. Thomas H. Terry, New York. Lass of Gorrie. Sable and white, rough-coated imported Scotch collie bitch, 35 years old (Toss.—Lassie), by Dr. J. W. Downey, New Market, Md., to Mr. Thomas H. Terry, New York. Lassie. Tawns red, rough-coated imported Scotch collie, 15 awns red, rough-coated imported Scotch collie, 4 awns old. Thros. H. Terry, New York. Mr. Downey, New Market, Md., to Mr. Thos. H. Terry, New York. J. W. Downey, New Market, Md., to Mr. Thomas H. Terry, New York.

Lilae. Black, tan and white, rough-coated imported Scotch collie bitch, whelped May 12, 1880 (Wolf—Lila), by Dr. J. W. Downey, New Market, Md., to Mr. Thomas H. Terry, New York. Kathiteen. Red Irish setter bitch, 5 years old (Rufus II.—Colleen North Corp.). New Market, Md., to Mr. Thomas H. Terry, New York.

Lass' Black and tan Gordon setter bitch, whelped Oct. 16, 1878. New York.

IMPORTATIONS

Nock. Red Irish terrier dog. 2 years old, by Stewart's Garlie (Sport-Vie) out of Graham's Midge (Sport-Molly), by Mr. Lawrence Trupson, Red Iriok, N. Y., from Richard Niven, Esq., Chrome Hill, Elsburn, Ireland.

Mr. T. G. Dawey, of London, Ont., received on April I, by steamer State of Indiana, the pure Lawrence setter dog Lawa Rock, from the kennel of Mr. E. Lawrencek, Sunderland, Eng. He is a blue belton in color, and will be three years old next month. He is by Dash (E. K. C. S. B. 1,333) ont of Malf of Honor, and is quite an acquisition to the Canadian breeders. He arrived too late for the New York show, but will probably appear at Roston next month.

Answerd to Correspondents.

B. S. T., Philadelphia.—Go to Lackawaxen or Milford.
R. K., New York.—See answer to H. H. R., in this number.
Subscriber. Wabasha, Minn.—You can get the cartridges of our
city dealers.
Blue Barrels.—To re-blue barrels costs \$4 for double set; \$2 for single barrel.

single barret.

J. B. D., Charleston, III.—The address of Food and Health is Waverly Place, New York city.

C. H. H., Bognor, Ont.—Aus. We shall soon publish a comprehensive article upon the subject.

H. A. P., Grand Rapids, Mich.—I. We know nothing of the whistle, The Michigan open season for wild fowl begins Sept I.

N. A. S., New York.—Snipe appeared on the New Jersey meadows ree week ago. There are many there this week, we hear.

W. W. A., Georgia.—The use of wire cartridges improves the shooting of some guns. They are apt to be irregular in time of bursting,
A. A. M., Otsego.—I. The firm do not now make guns with topactions, but they are preparing to do so. 2. To change barrels, as you
suggest, would not make your gun lighter. 3. The length of shell is

right.

F. R. W., Hudson, N. Y.—Will you please inform when the red and gray squirrels breed in this State. Also when does the chipmunk breed? Ans. The time at which the young are produced varies somewhat with the season, but is usually during the month of May or early June. The chipmunk brings forth in May.

A. M. W., P. A. L., One.—t. Can Italian greybounds be kept in this climate? 2. What is a fair price for them in New York? Ans. 1. They do not thrive so well in a cold climate, but we presume that with proper care you could keep them. 2. The prices vary greatly according to breeding and beauty, \$25 to \$50 should purchase a good one.

A. C. D., Phila,—I. Where can wild rice be bought? 2. What is proper time for sowing it? 3. Should it be sown where wild celery is now growing? Ans. I. R. M. Valentine, Janesville, Wis., or Chas. Gil enrist, Port Hope, Ontario, price \$2 per bushel. 2. Sow in fall or early spring. 3. We do not know what effect it would have on the celery.

spring. 3. We do not know what effect it would have on the celery.

A READER, Wheatlands, Pa.—1. Some time ago I saw a chrono entitled, "Sports in July." It represented a pointer, firsh setter and white setter. It was by some firm in Philadelphia, I believe. Please give me address. 2. What is average weight of I rish setter. Ans. 1. We are not familiar with the picture.

2. Irish setters range in weight from 45bs. to 63bs.

From 43bs, to 60bs.

W. B. M., Harrisburg, Ph.—I received wild rice from Valentine Bross, as recommended by you, and will sew in Susquehanna River. I. Will common rice grow in our swamps? 2. I want a work on ornithology that will enable me to identify any bird, especially waterfowl—ducks and waders—I may shoot. Ans. I. We think not. 2. "Cours" Key to North American Birds," price \$7. We can supply it.

MOUR American bruce, proceed, we can support.

H. S. MONDOE, N. C. -1. In bending genestocks, is the stock taken loose from the breech-piece, or is all bent together? 2. Should though of that gun-stock be such that it will deliver the center of charge point-blank at 35 yards? 3. Which are considered hardest to kill from trap at 30 yards, a pigeon or quail? Ans. 1. All bent together. 2. No. 3. Quail are not, or at least should not be, shot from the trap.

Schschiffer, Moncton, Canada.—I. What is the average weight of the collie? 2. Are collies and Skyeterriers in much demand in New York and Boston, and what price do well-bred animals bring? 3. What gun is the best for goose and duck shooting? Ans. 1. About 59 lbs. 2. The demand is fair for good animals. The price varies so much that we could give you no accurate information. 3. Many shooters use a 10-lb. 10-bore with good effect.

Boors.—What is the best preparation for keeping bools and sh from cracking? Ans. A Boston correspondent writes us in h praise of Title's "leather life." a preparation sold by (4.1, Bro 125 Federal street, Boston, Mass. There are many home-made recip one of them heing tallow. A preparation is also made of tallow rubber, equal parts boiled together, till the rubber is dissolved. Ap hot; the mixture takes fire readily and has an unpleasant smell. R ber is obtained from old rubber boots.

DEER, Oktained from old rubber boots.

JERER, Oktailoosa, Iowa.—Can you from my rude description name
the following: A bird that frequents low underbrush. Size: length,
l'inches, extent of wings 17½ inches. The head, neck and back at
black, tail black above, except two white feathers, white underneath, white spot on each wing; sides, underwings are bright brownbreast, pure white; bill, black, short and heavy. Ans. Except as to
size description might do for the towhee bunting, chewint or ground
robin, (Pipilo crythrophthalums) but it is about one-third too large.

REX.—I. I have a rifle chambered for an extra long 44 Wesson cartidge. For ordinary work a lighter cartridge would be pleasanter, after, and less strain to the form. Can a "short" one be obtained that rill do accurate work at short distance? 2. Is it right to hunt rubbits this season of the year, for the sport of shooting them, where not rotected by law? Ans. 1. A short shell would not give so accurate seattle. You may reduce load of powder by inserting a light cork wad etween powder and builet. 2. They should not be shot after February 1st.

results. Four half reduce load of powder by inserting a light cork we between powder and builds. 2. They should not be shut after February 1st.

1. Lockwood, N. Y.—This vicinity is largely infested with L. B., a cool-chucks, and weasels, and our creeks are full of large work of the chickens are killed by the cool-chucks and weasels, and our creeks are full of large work of the chickens are killed by the cool-chuck of the chickens are killed by hanks. What is the bounty on hawks? 3. Can you give score of hawks, weasels, etc.? Ans. Yes. 2. There is none. 3. Make a score of hawks, weasels, etc.? Ans. Yes. 2. There is none. 3. Make a score for yourself, basing it upon the relative abundance or destructiveness of the different species.

O. R. McK, Chrwinsville, Pa.—I. Should the red Irish setter have black or brown eyes? 2. Should they have black nose? 3. Have they any white on breast and toes? 4. My dog sometimes passes bloody urinc; what is the cause and cure? 5. What does it cost to have a dog registered, and where can I have it done? 6. Is the —— gun relia on breast, and occasionally on toes. 4. We cannot tell the cause without a more definite description of the symptoms; would advise small doses of iron and calisaya bark. 5. Entires for the stud book Exceed April 1. 6. Yes.

Ex Garba, Winous Point Club House. Sandusky Bay.—I. What would be the result of firing from a close-choked gun, largest shot that would not chamber at the muzzle? 2. What is the direct cause of the blowing off of the muzzles of obserchoked guns, other than accidental obstacles in the barrels? Ans. I. When the charge wedges, the liability of the gun to burst is in proportion to bulged out by the charge; and in fact the very best may be burst in this way. 2. We know of none save an improper load, when the shot-choke may be too large, or even where too stiff wavis are employed.

phoyed. H. H. R., Hallfax, N. S.—I. My Newfoundland dog has a sore an inch in diameter on his shoulder. It was a red spot at first but now the sent is black with matter under it and the late has come off around the sent is black with matter under it and the late has come off around the sent is black with matter under it and the late has come of around the sent is because of the late of t

Bifle and Trap Shooting.

SELECTION OF MILITARY ARMS.

SELECTION OF MILITARY ARMS.

THE examination of the existing inventions in the way of repeating small arms, leoking toward the adoption of a magazine rifle for the use of the U. S. Army, is now engaging the attention of a board of officers. The order detailing the six officers making up the board was lessed by Gon, Sherman on March 21, 1831, under provision of the fiscal year ending June 39, 1832, approved Feb. 21, 1831, which contained a clause providing "For manufacture of arms at national armories, three hundred thousand dollars: Provided. That not more than fifty thousand dollars of this amount may be expended by the Secretary of War in the manufacture or purchase of magazine guns, to be selected by a board of officers to be appointed by the Secretary of War. The hoard was ordered to converne at the Army Building, and consider all magazine guns that might be brought before it, and and consider all magazine guns that might be brought before it, and and consider all magazine guns that might be brought before it, and arms submitted should be of calibre 45, and be chambered to use the U. S. service cartridge, which is a center-fire metallic one, using 70 grains of provier. The personnel of the board is significant. Generally such heards are made up of ordinance officers who are more caparines of powder. The personnel of the board is significant. Generally such heards are made up of ordinance officers who are more caparines of powder. The present board is a mixed one, and every branch of the service is represented.

The President of the board is Gen. John R. Brook, a Pennsylvanian

the present board is a mixed one, and coop, presented.

The President of the board is Gen. John R. Brook, a Pennsylvanian he entered the army from West Point in 1861, was brevelted Brigater-General for meritorious conduct at Spotsylvania, Courf. House, and is now in command of the Third Infantry, which post he has held the burne 1879.

who entered the army from west, tone to defer deneral for meritorious conduct at Spottsylvania Court. House, and is now in command of the Third Infantry, which post he has held since June 1879.

Col. Frederick W. Bentem represents the cavalry on the board. He is a Virginian, and was of the class of '61 from West Point. He was several times brevetted; 'as Lieutenant-Colonel for conduct before Columbus, Ga., and as Colonel for bravery in an Indian fight on Salme River, Kansas. Since July '66 he has filled the post of Captain with the Seventh Cavalry, and is thoroughly familiar with the needs of the Major Geo, Shortley belongs to the infantry. He is a New Yorker, Major Geo, Shortley belongs to the infantry. He is a New Yorker, but entered West Point from Pennsylvania, and graduating in the class of '61, saw the full service of the war. He was brevetted Major or conduct before Fort Stedman, and since October '67 has been a Captain in the Fifteenth Infantry.

Col. Henry G. Litchielled is known to all riflemen as a member of the Board of Directors of the National Rifle Association, and he also fills a post on the staff of General Hancock, being espocially charged with the supervision of rifle practice. He entered the army as a private in Rey, was brevetted a Captain for bravery as Chiekamauga. He then entered West Point, b-ing uppointed from the army, and since Januar 1871, has been connected with the Second Arfillery.

Capt. Green represents the ordance wing of the Service on the Say '35, has been a Captain for bravery as Chiekamauga. He then entered West Point, b-ing appointed from the army as a private in Bay '35, has been a Captain for bravery as Chiekamauga. He then entered West Point, b-ing appointed from the army as a private in the Springfield armory, and is an expert on all manner of shooting devices.

conservence to Aspatal for orarrey at Unickamanga. He then entered West Point, bring appointed from the army, and since Jann-Capit. Greer represents the ordunace wing of the service on the locar! He is a Pennsylvanian, entering the army in 1887, and since Jann-Bart San Pennsylvanian, entering the army in 1887, and since Jann-Bart San Pennsylvanian, entering the army in 1887, and since Jann-Bart San Pennsylvanian, entering the army in 1887, and since Jann-Bart San Pennsylvanian, entering the army in 1887, and since Jann-Bart San Pennsylvanian West Point, and, upon graduation, wont into the artillery service, and since Jann-Bart San Pennsylvanian West Point, and, upon graduation, wont into the artillery service, and since Jann-Bart San Pennsylvanian San Pennsy

weighing 1.355 grains, the man without cleaning, and then to be thoroughly examined.

3. Facility of manipulation by members of the board.

4. Liability to accidental explosions of cartridges in the magazine. Additional tests may be made by the board to clear up doubts raised by previous trials.

To determine the comparative rapidity of fire and facility of manipulations.

nipulation, as contemplated by the third supplementary test, each zun to be fired twenty shots by three men to be selected by the board, and to be fired twenty shots by three men to be selected by the board, and fired from the cartridge-box and firing with aim at a target of suitable size 100 yards distant. The average of the three trials to be the recorded time of firing twenty rounds. The magazine to be loaded from the cartridge-box before the start, the remainder of the cartridges to be fired away first, using the gun as a single shooter, and the magazine to be empticed last.

Under the fourth supplementary test, in addition to the test already to be explained as a single shooter, and the magazine to be empticed last.

Under the fourth supplementary test, in addition to the test already to be joited in a tibe without the spring; and if there be no explosion, then the lowest builet in the column to be replaced by a pointed steel plug, first using the spring below the plug, and in event of its not producing explosion, to be tried without the spring. Also, if there is no explosion, to be tried without the spring, at the bottom of the tothe, to the supplementary test of the supplementary cartridges heavily weighted at the lower end to insure its correct position, and having the spring at the bottom of the tothe, to the tothe Afterward, a pointed steel plug to replace the lowest buillet in the column, and to be dropped as before without the spring in the tube. Afterward, a pointed steel plug to replace the lowest buillet in the column, and to be dropped with the spring in the tube, then the spring in the steel plug to replace the lowest buillet in the column, and to be dropped with the spring in the tube. Afterward, a pointed steel plug to replace the lowest buillet made of the secretary of War before May next.

The bourd hopes to have its tests all completed and its report in the hunds of the secretary of War before May next.

The bourd hopes to have its tests all completed and its report in the hunds of the sec

reage Maria, while the Springfield was not capable to cope with a consistency of the desired was not capable to cope with a Abroad the question of expense is gradually giving way before the necessity of having such arms, and European army masters are following the example set them some years ago by Switzerland and arming their Infantries with some form of magazine weapon. In France the Navy have adopted the Kropatschek, while the Norwegian Navy has the krag-Petersen, and its army the Jahrmann gun. In Austria the Kropatschek, which is a bolt gun having a magazine below the barrel, has been successful in a series of experiments, and a number have been introduced that a series of field trials may be had. In Italy a repeator known as the Vetterli-Berthelot has, after experiments with it and other rilles, been issued for trial to the Bersagliert. Spain has beside ordered machinery for the making of the weapons at home. In Russia a long scries of experiments has been conducted, and here the Evans is considered the best type of those presented for trial. In France it appears likely that the Kropatschek, which takes the same cartridge as the present Gras rifle, may be introduced into the army as well as the navy. In Germany experiments looking to the conversion of the Manser from a bolt breach loader into a magazine gun are almost if not quite completed, and in England Capt. W. II. James, of the Royal Engineers, is at the head of a commission for the same task of selecting a magazine gun. The Nordenfeldt model is a favorite one the England.

of selecting a mugazine gun. The Nordenfeldt model is a favorite one in England. In South America there is a general desire to secure magazine rifles, and many of the private American armories have executed some very profitable contracts with these powers. They buy, however, in a somewhat reckless fashion, and one commissioner from a South American republic was more favorably impressed with a certain arm because it made more noise than another. In Europe the cost of furnishing new weapons by the million for an army of the size of those now kept on foot on the continent is so great, that various compromises are aimed at, thus in Russia the Kruka quick-loader has been introduced, though the adoption of the Evans is the ultimate intention. The authorities of Demark and Holland are awaiting the arrival of certain American models of arms before opening commissions on the selection of magazine guns, and Sweden has made similar requests.

rival of certain American models of arms before opening commissions on the selection of magazine guns, and Sweden has made similiar requests.

Many of the systems which were at first thought very servicable, are displaying faults when placed in the hands of troops. THE MILITARY MATCH.

THE MILITARY MATCH.

THE comments which are given below on the subject of the coming match are taken from the New York Times, of the 16th inst., and show the interest which is taken in the contest by the press at large. There is a growing feeling that the managers of the affair are dependent of the comments of the provided of the contest by the press at large. There is a growing feeling that the managers of the affair are dependent to victory. That policy has been very successful apparently in times past, but if it does not win it subjects those who try it to a great deal of harsh criticism, and justly so. The weather is now open sufficiently for outdoor practice, and within a very short time we should hear the notes of preparation from many ranges. It will not be creditable to the rest of the country if the whole task of meeting the Battonian possibly his city. As yet New York has not acted in an official capacity, but there is every assurance that the militia of the State will coine forward to make a good showing in the selective competitions for places on the team. The Times says:

Although it may seem premature to discuss the probable result of this contest, since there are yet no practices cores to study and the teams are not even chosen, still, some general clues may be derived to the country in the state will contend to the country in the probable result of this contest, since there are yet no practices cores to study and the teams are not even chosen, still, some general clues may be derived two probable result of this contest, since there are yet no practices cores to study and the teams are not even chosen, still, some general clues may be derived two probable result of this contest, since there are yet no practices cores to study and the teams are not even chosen, still, some general clues may be derived two probable result of this contest, since there are yet no practices cores to study and the teams are not even chosen, still, some general clues may be derived working as the state of the state of t

PROGRAMME FOR MAY AT CREEDMOOR.

PROGRAMME FOR MAY AT CREEDMOOR.

WEDNESDAY, 8d. 3:45 P. M., first competition, off-hand match, 200, 200, 400, open to everybody. The short each entry. Entries millimited at 50 cents each but only the disc each entry. Entries millimited at 50 cents each but only the disc each entry. Entries millimited at 50 cents each but only the disc each entry. Entries millimited at 50 cents each but only the disc each entry entries millimited at 50 cents each but only the disc each entry entries each entries at 515, 310, six at \$5, and five at \$4 respectively.

Saturday, 6th, 2:45 P. M., first competition, first stage of International Military Fractice Match; arranged to furnish practice to those desiring to compete for places upon the team the British Volontoers in September next, though any person may the British Volontoers in September next, though any person may the British Volontoers in September next, though any person may at 500 and 600 dys. Cleaning of ridge not allowed, except between distance. Standing at 200, prono or sitting (head toward the target) at 500 and 600 dys. Cleaning of ridge not allowed, except between distances. Members of the National Guard entering in this match will not be required to appear in uniform. Entrance fee for each stage at each competition \$1. Re-entries at \$1 each permitted. For this month 7 prizes, cash, respectively \$15, \$10, \$5, \$5, \$5, \$5, \$5, \$5, \$6, to temple process in order of neach who shall have made the highest complete cores in order of neach who shall have made the highest competition shall be a warded at end of season. 3 medias offered by Gen. Robit Olyphant as follows: To the competitor making the highest aggregate complete score in any three competitions determined by adding together the highest complete score in any three competitions (estermined by adding together the highest complete score in any three competitions) and international Practice Match, 2:45 P. M., first competitions are sufficient and many and the competition. Wednesday, 17th, Remington District, 24:45

wednesday, 17th, Kenungton Gold Match, at H.A. M., conditions as in previous competitions since 1878. At 2:45 P. M., third competition, Off-hand Match, Saturday, 20th, Off-hand Match, fourth competition.
Wednesday, 24th, International Practice Match, second competition, first stage.
Saturday, 27th, International Practice Match, second competition, excend extractions.

econd stage. Wednesday, 31st, Off-hand Match, fifth competition.

JERSEY SCHILETZEN CORPS.—At the quarterly meeting of the above named corps, held at their headquarters, at 80 Hudson street, Hoboken, April the 5th, a resolution passed to have practice-shooting during the summer moutias at the practice shooting during the summer moutias at the summer of the summer moutias at the summer of the summer moutias at the summer moutias at the summer of the summer moutias at the summer moutias at the summer summer moutias at the summer summ

to be held during the summer.

ALBANY, April 18—The attendance at Rensselaerwyck was very fair, considering the cold weather and high winds which provailed all sterenom. The fifth competition in the dispural Match was the attraction, and good scores were made. The majority of the men were in good form, though the high wind was the cause of an occasional wild shot. The scores were as follows:

Maynard Match—500 yards, off-hand

Maynard	maten	-:XV V	aras,	OH-HE	ına,

OUTSIDE BALLAST.

OUTSIDE BALLAST.

UNLESS it be the actual introduction of cutters and the adoption of the double head rig. Forest AND STREAM can point to nothing with more pride than the rapidity with which outside ballast is being introduced up and down the coast, and now even in New York waters, the acknowledged stronghold of the old school of light displacement and shoal draft. Two years ago hardly a yach hailing from this port had ballast outside, and Fonest AND STREAM was relicited for the ideas it advanced in this tespect. Bellow as was pointed of the hidsen that the state of the

of one-sided experience to overrule what must have appeared to them the very simplest of problems to decide.

The mythical advantage hitherto ascribed to weight which is the most of the problems of the prob

THE YAWL TRIED.

Editor Forest and Stream:

I fully and heartly agree with any words you have written in praise of the yawl rig and think it will eventually come into use wherever there is length of deck enough to give it a fair chance. I don't think our short, beamy sloops can very well be altered into that rig, as they require such an enormous spread of sail to supply sufficient motive power. But give a boat a reasonable length to beam, suy, 4 or 5 to 1, so as to get the great central propelling sail (mainsail) of good length on the boam, and 1 don't think the schooners will want to try conclusions with her, and at times neither the sloops nor cutters will find in our bear length to beam, and the conclusions with her, and at times neither the sloops nor cutters will find in our bers lowness and spoiled cabin, as you so clearly show. But all this you have so well expressed that I can only add, by way of confirmation, that after extended experience with a yawl, knocking about between Watch Hill and Montauk all summer, and in some nasty seas, with tide three-quarters ebb and southeasterly wind in that locality, I am so enamored of the rig that my next yach certainly will be a yawl. By ideal would be a slightly "Americanized" yawl of 50ft. Soly in the slightly will be a yawl. By ideal would be a slightly "Americanized" yawl of 50ft. Soly in the slightly will be a yawl. By ideal would be a slightly "Americanized" yawl of 50ft. Soly in the slightly will be a yawl. By ideal would be a slightly "Americanized" yawl of 50ft. Soly in the slightly will be a yawl. By ideal would be a slightly "Americanized" yawl of 50ft. Soly in the slightly will be a yawl. By ideal would be a slightly "Americanized" yawl of 50ft. I should earry the stay of the slightly will be a yawl. By ideal would be a slightly "Americanized" yawl of 50ft. I should earry the stay of the slightly would step mast only 25 per cent. aft from cutwater, and so get a fair length of main boom, give her a gaff, well peaked up, of nearly length of boom. To get a

DEADRISE IN CANOES.

DEADRISE IN CANOES.

Editor Forest and Streum:

I have read with interest the description of the English canoe Laloo which appeared in your columns some time ago. It appears very singular to me that after the Diamond had been designed and used for one season in America a distinguished canovist in England should design and build a canoe that rescubles the Diamond closely should design and build a canoe that rescubles the Diamond closely appear that the contract of the contra

keeled over under sail down to Sin., she is just getting down to her work. But the Laloo must get down Sin. further to get the benefit of her bearings as I understand her. Although the biamond is somewhat on the 'outter' plan, yet in padding triu will draw no more water than a Laloo of the same size with her 24/in, keel. In regard to the well in the Laloo there is one thing I like very much, that is, its width of after part, giving a good chance for the skipper to get to windward. But the Laloo has no air-tight buildheads, but in place thereof rubber bags filled with air expressly to fit her shape. I would she should get wait was word become of the cargo of the Laloo fishes should get wait will would become of the cargo of the Laloo fishes should get wait will would become of appears to be one of the best for racing, but I prefer the lateen, as I do not like too many lines to handle, and as that can be reduced or struck with one pull and no ropes required, except main sheet.

Perhaps we can make an amicable arrangement to meet "Wren" at the next cannoe congress and test the two models and ascertain just the Union of the Laloo are the same time than the Diamond "on the American eagle" with an upset half a mile before the flinsh.

F. JOYNER.

GLENS FALLS, N. V.

DELAWARE YACHTING.

Editor Forest and Stream:

At Kaln's Point, lower end of Camden, N. J., Mr. Ledyard has just completed a nextly lined open yacht, 20ft. over all, 11ft. 2in. bean and 37in. deep, called the Elwell. She is, unfortunately, to be "cat." This necessitates a cutaway aft, and rather full bow; that a jib rig would have avoided. However, she is sigaily; her midsl:ip section and the properties of the signal of the si

gether out of order.

The correspondent sending above information is himself a practical yeach-to-lider of reputation on the Delaware. We are glad to learn that many builders understand the unfairness of sailing large and small boats of a length on even terms. As R. G. W. properly puts it: Give them equal builk and let the best shape win regardless of length. To ask a small boat to meet one perhaps twice her size on even terms, is permitting a good shape to be "buildozed" out of her record by "power."

YAWLS IN NOVA SCOTIA.

YAWLS IN NOVA SCOTIA.

Billior Forest and Stream:

If the Edith, of Boston, was the first American-built yawl on the Atlantic, in United States wavers, and Coquette, imported from England in 1878, the first of her rig in those waters, Nova Scotia was several years alread, as in 1873, Mr. S. A. White, of Halifax, had a yawl built for him by Eben Moseley, of Dartmouth. She was called Nymphoea, and her dimensions are: Longth, forestde of stern to attside of sternypost, 3812, breadth, 916, 611, depth, covering board to garboard strake, 3ft, 8fn. She is a keel boot, raking stern, and light board strake, 3ft, 8fn. She is a keel boot, raking stern, and light board strake, 3ft, 8fn. She is a keel boot, raking stern, and light board strake, 3ft, 8fn. She is a keel boot, raking the way bought of the control of the control of the strake, 18fn. She is a keel boot, and the board of the control of the control of the property of the control of the control of the control of the property of the control of the con

n 1875 Mr. W. Webb had a four-ton yawl, Swallow, which he worked

In 1875 Mr. W. Wedd had a four-ton Yawi, Swanow, when he worked single-hands. A. White commissioned Eben Moseley to build him another yawi, to replace Nymphoa. The new one, one of the fastest yachts of her size on Halifax Harbor, is called Kestrel, her dimensions beinz: Length, 3ftt., breadth, 10t. Sin., depth, 4ft. Her rig is exactly similar to Nymphoca's, and both boats would be improved for cruising by the substitution of housing topmast and reefing bowspit for the standing spars they at present sport.

Mr. W. Wallace has a small centerboard yawl, Maraquita, very fast and handy. She is rigged with single jib forward.

A small yawl intended for use in all weather should have but a very small cockpit—this, at least, in open waters.

F. C. Schichrast.

Editor Forest and Stream:

Seeing an article in one of your contemporaries, "A Safe haven for the Madge," I would like to say a few words on the subject:

The desire of Mr. Conts to present his "wee cutter," the Madge, as a present to the N. Y. Y. Club, should meet with all praise from fair-minded people, but this knight of the pen will not allow this generated that the give it to S. Y. Y.

The former victums, Schemer, Wave, Shadow, besides a dozen other boats, are being filted out expressly to race the Madge, we are told. I humbly suggest to their patriotic owners to fit them out as freight boats on the cannis, and instead of wasting time and money on a useless, unsafe style of boat, to build good cutters; boats that are safe, fast, sightly and comfortable.

I know it is hard to admit that the much lauded sloop can only sail tast on paper, but nevertheless this is a proved fact.

The writer goes on to say: "Some extravagant stories have been to determ which he admits are in the carpenters' hands at present.

How many does this beamy, flat man expect to be built in one year?

the details of ten which he admits are in the carpenters manus ar present.

How many does this beamy, flat man expect to be built in one year. Not more than eighteen months ago, not one man in American yaching circles would have necepted a cutter as a gift, even for racing purposes, still he admits the building of ten new ones.

It is quite time for our yachismen to cast aside these flat, useless boats, and accept what has been thoroughly proven before their eyes. He further prophesies that next year not one cutter will be built in America. I say we shall read in the columns of Fonzst and Stream of cutters building all over the States, and probably about three fogles who still adhere to the glorious American useless sloop.

Handdown.

or enters busining all over the States, and probably about three fogies who still adhere to the glorious American useless sloop.

Our correspondent used have no alarm about the future of cutters in America. That is already assured. The development of the cutter in America has been phenomonal. We recollect no such rapid control of the cutters of the cutters are not such as the property of the cutters being the control of the cutters being the cutters being the cutters being the cutters of the cutters being being the cutters being the cutters being being being the cutters being being the cutters being
endorsement of American owners published in these columns stands as testimony. The old school is rapidly going to the wall, and it is natural enough they should do so with very bad grace. The cutter and yawl are already acclimated.

A LENGTH RULE CHEATER.

Battor Forest and Stewart

The manner of cheating the length rule, showing its inability to fairly rate boats of different style, has been fully commented upon in your columns. The weakness of the rule was well understood in New Orleans many years ago. I send you herewith the dimensions of a "length evader" which had a very successful career in racing with much smaller yealts than herself. From her dimensions you will see that though \$50t. on load line, owing to a "nam stem," sho will be the standard of t

are size with sufficient accuracy, as you have often 1	Rings

Jib on foot

This boat was built and sailed many years ago, on a "meen length" measurement, and was the winner of many races. The rudder was a linge affair, and made clastic by steel straps on each side. She carried an extra tiller, some five or six feet long. This was shipped in a catha or very light wind, and on such occasions three or four of the even would work that tiller back and forth, and she would go two of three mines an hour dead to windward.

THE CUTTER FLEET.

THE CUTTER FLEET.

LIARDLY a week passes but what it becomes our pleasure to ansuch a pace that we are warranted in anticipating a very fine display such a pace that we are warranted in anticipating a very fine display such a pace that we are warranted in anticipating a very fine display to the order of Mr. Gov. Kortright. Concerning her the Herald says:

"The keel for Mr. Kortright's new yacht has been got out by Messrs, Pollon Brothers, and it looks as if it belonged to a long-legged craft. The owner is doubtless a 'heavy draft and lead in the keel' believer. It is said that Mr. Kortright made the model of this boat himself. It this is so he deserves great credit, as it is very likely looking. Mr. Kortright, it is safe to say, will take more pleasure with the majority of the owners of larger yachts, for the latest of the mental says of the cruster law started at Driscoll's yard, Greenpoint. She is to the order of Mr. Edmund Warren, of the Seawanhaka Corinthian Y. C. Mr. Warren has had experience in cutters, and knows just what he wants. That he is likely to get a most serviceable ship in his new venture the dimensions indicate. This yacht was also modeled by her prospective owner, we believe, and if fair and clean in her body, ought to give a dead of satisfaction. It is perhaps only a coincidence, yet it is a fact that those who have so far mastered havat design as to draft their own vessels, almost over all, 29ft, load line, 9ft, beam and Warren's plans call for 33ft, over all, 29ft, load line, 9ft, beam and Warren's plans call for 33ft over all, 29ft, load line, 9ft, beam and The fair of the owner, the old course. Two tons of lead outside, three more inside, cast to fit, Phil cutter rig, like any smart yacht ought to lave. The 30-tonner on the tide; the cutter boom is fairly upon us.

MARINE GLUE.

MARINE GLUE.

Editor Forest and Streem:

Tack by the Forest and Streem:

See by the Forest and Streem:

I addes "mest with" best marine gine. "Such marine gine as I have stand of the bard before any extent of surface could be streem with I lead, and the paper which came with I I found that there are a variety of kinds adopted, I suppose for different purposes, and distinguished by numbers I to 6 or thereabouts. I have been told that the hollow mast used by Ira Smith on the Silence, I think came apart. On the other hand, Wilks, of Cow Bay, tells me that Blackburn built a boat for the Government with two thicknesses of plank put together with marine glue and that an axe would not separate them cleanly, but the wood tore apart.

See a supplied to the see a supplied that a supplied has the supplied by the is protounly skeptical about the value of the receipts, and the practicability of making anything in this line that would be serviceible. At the same time he is anxious to do it if possible, but has never seen the genuine article I do not know Lawlor, or I would write and ask him what particular kind of glue he used, where it can be got, and how it answers. I occured to mot hat in view of the general interest in the matter, you mist put my new mass in hand this week and and ask him what particular particular side of the seen as strough some enterprising individual might make a good living by starting a general sterepting individual might make a good living by starting a general sterepting in dividual might make a good living by starting a general sterepting the relief of the subject of the collection of the subject of the property and the subject of the subj

grounds.—W. D. T.

THUNDER BAY YACHT CLUB.—Vachting on the lakes is growing fast. A new club has been formed at Prince Arthur's Landing-Lake Superior, under the above title. The following have been considered officers: Commodore, P. Jones, Yuc-Commodore, H. & Wicksteed, Secretary and Treasurer, W. J. Clarke. Constitution and by-laws are to be drawn up and official matches arranged.

LOW RIG AND KEEL BALLAST.—Either Forest and Stream; Our yachtsmen on the Delaware are beginning to listen to reason, and those who see notice the state of the stream of t

cabin yacht. Many open books are also bulkling. Allvely time is anticipated, all the chibs making great preparation.—R. G. W.

HANDINESS OF THE YAWL.—An experienced yachtsman writes: "For crudsing purposes the yawl is infinitely handler to the sloops or even the cultier." have while abroad, sakel many times in an ils-ton even the cultier. There while abroad, sakel many times in an ils-ton the yawl indice way alone." Our work on board. He frequently got the yawl indice way alone. "Our work on board, the frequently got the yawl indice way alone." Our work on board. He frequently got the yawl indice way alone. "Our work the work of the fact way to between the mouth of the Thames, England, and the legan may be the wear the mouth of the Thames, England, and the legan may be the mouth of the Thames, England, and the legan may be the mouth of the Thames, England, and the legan may be presented by a couple of hands if leisurely disposed. A yachtsman on the lakes writes: "I know your head is dead level on the yaw business, and I loop, like one of our Buffalo editors, you will never let up."

BATTEN LUG.—According to the American Uniocist, the following are good dimensions for a batten lug for a lift, centerboard cancer alone the property of the state of the latter loot. Dannly: luff, leach 1ft, foot if, lead 5ft, fin, all rest batten 10t, Dannly: luff, leach fit, foot fit, lead 1ft, fin, all rest batten 10th, Dannly: luff, leach batten 10th, lead 1ft, fin, all rest batten 10th, Dannly: luff, leach batten 10th, lead 1ft, fin, all which was originally devised, we be fore, it the simplest form of that which was originally devised, we be fore, it the simplest form of that which was originally lettied, we be fore, it is the simplest form of that which was originally devised, we be fore the simplest form of that which was originally lettied, we be fore the simplest form of that which was originally devised, we be fore the simplest form of that which was originally devised, we be fore the simplest form of that which was origin

mast or on the deek near the mast step.

MURIEL—This handsome 10-ton entire, Mr. Paul Trokerman, S. C. Y. C., is fitting out with all dispatch at dreemper, L. L. and has shipped an English crow for the season. Will probably store up and put to sea in company with the 23-ton cutter Oriva, Commodore C. E. Lee, S. C. Y. C., for a cruste to the sonthward. We have seen Muriel do some wonderful things in light airs, and if she is put through her work in right tashion she will give even the best of our stops as tight reach or dead before the will ha a jump. Muriel is not so good on a reach or dead before the will ha a jump. Muriel is not so good on a reach or dead before the will ha a jump. Auriel is not so good on a transfer or dead before the will be a first the reach or dead before the will be a first the first thing the state of single stickers.

LOOSE-FOOTED MAINSAILS.—Several Boston yachts are to be supplied with mainsails loose on the front from the loft of McMansails and Son, including one for Captain McCornaic's new sloop. They are live to innovations in Boston. But New York does not propose to we are glod to bear bulk as she has been on outside bulkes; for we are glod to bear approved fashion. But New York does not propose to we are glod to bear approved fashion. Last year allowed the shortest a stock of British-made hemp canvas, and is prepared has imported a stock of British-made hemp canvas, and is prepared has imported uside lates and most approved fashion. Last year Julian came out with a loose footer, and liked the change very much. We believe such mainsails much preferable to the laced style copied from the North River lighter.

this latest and most approved fashion. Last year Julian came out with a loos footer, and liked the change ever much. We believe such mainsails much preferable to the laced style copied from the North River lighter.

SAN FRANCISCO YACHT CLUB.—The annual meeting. April 4, showed the club in sound financial condition. Additional members have been added. The proposition to admit all yachts in the bay to entry for the club in sound financial condition. Additional members have been added. The proposition to admit all yachts in the bay to entry for the club matches was not adopted. Election for officers reserved to the control of the club in the club in the proposition of the club matches. The proposition of the club matches was not adopted. Election for officers reserved to the club matches. The club is the proposition of the club matches and the club in the club

tons. He mas also of the manner schooler out, total line, when less than 20th, beam and high, dearl. I row keel of course and lead ballast.

ECLIPSE.—The only fault we could find with Mr. Willard's new stoop built last year by Willett's of Port Washington, L. L. was her deep fore-foot. This has now been cut away and lead added outside, as Mr. Willard appreciates the advantage of having weight where common scase indicates it should be put. Indiging by actual experiments upon other boats, also will be none the slower for being safer, or many upon other boats, also will be none the slower for being safer, year or two more the boats with all their load, asside will be curiosities of bygone days. "Gone to join the shoop rig."

MERRIMACK YACHT CLUB.—Exitor Forest and Stream; The Merrimack Y. C. of Haverbill, Mass, organized March I, 1881, has entered its second year under favorable auspices. The officers for the coming year are: W. F. Titcomb, Cummodore; C. W. Glines, Vice-Commodore; Frank Wiggin, Flect Captain; Walter R. Fickering Committee of the property of

Morrison, W. F. Titcomb, C. H. Dow, Regatts Committee. The clin now has twenty-three members, but yachts and one steamer.—F.

SUCCESSFUL CUTTER.—Mr. Paddleford's 12-ton beauty which Lawley & Son, of South Boston, recently hunched, has been on her trial and worked like a charm. A very fine addition to the real yachts trial and worked like a charm. A very fine addition to the real yachts trial and worked like a charm. A very fine addition to the real yachts are supported by the control of the contr

PACIFIC YACHT CLUB.—The following officers have been elected bunnedore, R. S. Ployd; Vice-Commodore, J. McDonough; Measurer, C. Kelly.

J. C. Kelly.
LEAD.—Says the San Francisco Call: "Lead is fashionable now. Even the new sharple, building by Dr. Mewritt, of Oakhand, will have lead bullast and iron centerboard."
SAN FRANCISCO CANOE CLUB has three enthusiastic members who propose reviving the institution and introducing the sport more extensively in California.

GUN SIGHT

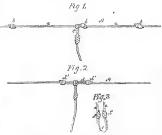

Makes a Sporting Rifle perfect. Send for circular containing full description. Address,

WILLIAM LYMAN,

SHIELDS'

American Improved Gut Leader

CASTING LINE.

My invention consists in adding to a leader a reenforce at the several points where the upper flies
are to be attached, by which the size of the line at
such point is doubled, the result being that the wear
upon it by chafing from the loop of the firs at
size is price to the size of the size

in the act of looping on such suell greatly facilitated. Heretofore, in looping the upper flies of a cast about a leader of single gut, the latter soon becomes badly chafed and its enameled surface worn off.

It is a surface worn off.

It is not sufficiently rigid. By doubling the shell to be sufficiently rigid. By doubling the thickness of the leader at the point of attachment of the fly 1 avoid these objections. The drawing Fig. 1 represents a leader as heretofore in mee. Fig. 2 is a leader made in accordance with mp invention. In the surface words we would be sufficiently a surface word of a staching the fly. In these drawings, 4, Fig. 1, denotes a leader of silkworm gut adapted to the purposes of fly-fishing for trout or bass, and as heretofore made, such leader being composed of several lengths of gut knotted together, as shown at b b, and the snell attached to the hybeing looped for several lengths of gut knotted together, as shown at b b, and the snell attached to the hybeing looped invention into practice, 1 add to the leader 1 at our or more points (according to the number of flies to used in the cast in addition to the stretcher) an additional piece of gut 4, which I term a "reneforce," thus doubling the body of the leader as such points. This re-enforce may be added in several words of gut are laid side by side and knotted together, as shown at d' d'.

The easiest way to apply a fly, and the one generally practised, both with my leader and those heretofore in use, is to double the leader rate a loop, as shown at e in Fig. 3, and then apply the fly by which the dy is attached, and after passing the fly by which the dy is attached, and after passing the fly how which the boop of the leader raw the whole taut, as in Figs. 1 & 2. With a single gut the actor holding

in consequence.
All fly fishers will readily see the advantage there is in using them.
The easiest way to apply a "fly" or to remove it without impairing the strength or durability of the leaders. Length 3, 6, 8 ft., made of superior slik worm gut in all varieties.

CHARLES ROBERT DARWIN.

THE greatest naturalist of the nineteenth century is dead. Charles R. Darwin died at his residence, Down House, near Orpington, on Wednesday, April 19. The third of a line of men eminent for their attainments, he was born at Shrewsbury, England, Feb. 12, 1809, and his early education was received at the public schools of that town. He entered the university of Edinburgh at the age of sixteen, and after spending two years there, went to Cambridge and graduated from Christ's College, of that university, in 1831.

From very early boyhood he had manifested a strong predi ection for the study of natural history, and his enthusiasm and attainments were such that it is not surprising that within a few months after graduation he was selected as the naturalist of the Beagle Exploring Expedition. This expedition, which was under the command of Captain Fitzroy, had for its object the exploration of portions of South It sailed America and the circumnavigation of the globe. Dec. 27, 1831, and was gone nearly five years, reaching England on its return Oct. 2, 1836. Shortly after his return appeared "The Voyage of a Naturalist," and this was followed by "A Journal of Researches into the Geology and Natural History of the Various Countries visited by H. M. S. Beagle." In 1840-43 appeared "The Zoology of the Voyage of H. M. S. Beagle," which was published by the British government and was edited by Mr. Darwin. From this time on until his death he was untiringly engaged in scientific investigations. His contributions to our knowledge of biology have been so numerous that a list of them cannot well be given.

His most important work was his "Origin of Species, published in 1859. Although the theory of evolution was not new, it had never been enunciated so clearly nor supported by so much and so forcible evidence as Mr. Darwin now produced. But that natural selection, by means of the survival of the fittest, is a prime factor in the accomplishment of the processes of evolution, was new. To the genius of Darwin and to that of Wallace, who independently worked out the same conclusions and published them at the same time, we owe the explanation of the doctrine of evolution as accepted to-day almost without modification by the scientific world.

In 1862 he published an important work on "The Fertilith 1862 be published an important work of The Fertilization of Orchids," and in 1867 appeared his "Variation of Plants and Animals under Domestication." "The Descent of Man and Selection in Relation to Sex," (1871) gave rise to more popular interest and discussion than the "Origin of " although only applying to the human race the principles laid down in that volume. His more recent works are, in the order of their appearance, "The Expression of the Emotions in Man and Animals," "The Power of Movement in Plants," (1880), and his monograph on Earthworms, published last year. In addition to these works he has contributed to various journals, proceedings of scientific societies and the like, a vast number of special papers, observa-tions, notes and memoranda, all of them of great value to

It is a very common error to imagine that evolution and Darwinism are synonomous terms. The doctrine of Evolution supposes descent with modification. It assumes "that every living thing is evolved from a particle of matter in which no trace of the distinctive characters of the adult form of that living thing is discernible." The doctrine of Natural Selection, as Darwinism has come to be called, is a reasonable, natural and logical explanation of the methods by means of which evolution takes place.

Mr. Darwin's great service to science consisted in this, that he showed that the two prime factors in the process of evolution are (1) the universal tendency in all living things to vary, and (2) the influence of the surrounding conditions upon the existing forms of life, and those which are subsequently produced from them.

The tendency to vary is readily established by observation on the living creatures which we see about us, and we all know that any breed of domestic animals can, in the course of comparatively few years, be so modified as to be markedly different from its parent form. No living creature is exactly like any of its fellows; the daughter is not precisely like her mother, nor the son like his father, nor is the stand of wheat grown from a single seed exactly similar to the stand which gave origin to this seed. Notwithstanding this variation, there is a constant tendency among all living things to transmit to their descendants the characteristics of the parents. Thus the distinctive characters of a species are likely to be transmitted, and also the individual variations of parents. Suppose, now, that some slight variation takes place in any animal which gives it an advantage over the others of

its kind, by means of which it can get more food, can more easily escape from its enemies, can scent its prey at a greater distance, or can secure for its mate the best and strongest females of its kind. The animal which has this particular character which gives it this slight advantage over its fellows. will be likely to live longer and to produce a larger number of offspring than those which lack it, and which are, therefore, less well nourished, more likely to succumb to the attacks of enemies, less fitted for securing their prey, or obliged to be satisfied with weakly mates. Having produced a greater number of offspring, there is a stronger probability that in some of these, this advantageous variation will be produced, perhaps more markedly, thus giving to the descendants further advantage over their fellows.

This process might go on indefinitely, and in time a spe cies be evolved, in which what had been at first the, trifling variation, has now become the distinctive character of the new form. At the same time the old form might remain unchanged, and have sent off other shoots in different and quite opposite directions, so that the differences between these two side branches might be so great as to make it appear that they were not at all, or, at most, only very distantly, related. Should it happen that from any cause the parent stock and some of the intermediate branches were to become extinct having left no trace of their existence, we would just have such a state of things as now exists upon the earth. That is, we would see a number of species, many of which are in appearance so unlike their nearest relations, that no one but a naturalist would ever think it possible that there existed be tween them any relationship whatever.

The conditions of the environment of any species act pow

erfully upon it either in modifying it, or in preventing its modification. Huxley has said: "If the surrounding conditions are such that the parent form is more competent to deal with them and flourish in them, than the derived forms. then, in the struggle for existence, the parent form will maintain itself, and the derived forms will be exterminated. But if, on the contrary, the conditions are such as to be more favorable to a derived than to the parent form, the parent form will be extirpated and the derived form will take its place. In the first case there will be no progression, no change of structure through any imaginable series of ages; in the second place, there will be modification and change of Such are very briefly the two salient features of the law of Natural Selection.

Dr. Darwin was buried yesterday, April 26, in Westminster Abbey, in close proximity to the tomb of Sir Isaac Newton.

THE DOG SHOW.

YEW YORK'S Annual Dog Show, which took place last week, was a success. The full reports given elsewhere show that while the number of dogs entered was not far from that exhibited last year, the animals entered were better than ever before. This steady increment of improvement in quality is the most encouraging feature of our shows, and is the test of the good accomplished by them. There appears to have been but little grumbling at the decision of the judges, strangely little when we consider the circumstances of the case.

Nothing is more difficult than for the owner of a dog to view it with unprejudiced eyes and to impartially compare it with another. The average man finds it impossible to it with another. separate the physical from the mental qualities of the animal. He thinks of his dog as his friend and companion, in whose society he delights—a being only less dear to him than are his human friends. Just as every mother proverbially thinks her own baby the most beautiful child on earth, so does the owner of a dog, be it good, bad or indifferent, feel more or less strongly that for him it is "the best dog in the world." And so, when this man stands outside the judging ring where his animal is being critically compared with others, and remembers all that his canine friend has been and is to him, he cannot understand why the judge too should not regard his favorite with like partial eyes. This is the exhibitor's posi-

The judge, on the contrary, sees this dog and each one of all the competitors with a lot of others; knows nothing of its intelligence, its tractability or its affection. To him it is one of a crowd, in none of whom he has any special per-

When it is considered how almost universal is this feeling of partiality on the part of the owners of the animals ex hibited in the bench shows, it seems remarkable, not that there is always some expression of dissatisfaction at the decisions of the judges, but that there should not be more

It is interesting to note, in comparing the present exhibi-

PROTECTING THE RAIL.

THE Nutmeg State is to the fore again with an addition to her game laws, which has long been needed. It was five years ago that the game law was so altered that neither woodcock, quail nor ruffed grouse could be shot prior to October 1st, and we have repeatedly called attention to the fact that for the four succeeding years the fall cock shooting was bet ter in Connecticut than for year's before. It was not so good last year, but only because of the terrible drought which made it impossible for the birds to find food in the accustomed spots, and obliged them to pass on to other and moister States. The non-export law, to which we called attention last week, will, if it can be enforced, be productive of great good. Connecticut has always been famous for its "patridge" covers, and while the law may bear a little hardly on those of us who have been accustomed to shoot within her boundaries, quorum pars sumus, still, if it will prevent the extensive snaring and shipment of these superb birds to New York and other extra State markets, we do not think that those whose pleasures are curtailed by the act will be disposed to grumble. This law will, it is hoped, soon receive the approving signature of the Governor. A bill for the protection of rail has long been needed in Connecticut, for it has been the custom in many localities to go on to the meadows in August, and before the migration has begun kill off the young birds reared there. The young thus destroyed are thin, and many of them scarcely full grown, and the old ones are only just beginning to recuperate after the fatigues of rearing their broods. Moreover, the weather is so warm that birds, if killed in considerable numbers, are extremely likely to spoil before any use can be made of them. It is much better to pospone the opening of the season until the grass is ripe, and the birds, by feeding on its nutritious grain, have become fat and strong of wing, if rail can ever be consid ered strong flyers. The excellent features of Connecticut's game laws we believe to be due, in a great measure, to the efforts of Dr. Alsop, of Middletown, Conn., who for the last two years has been the Senate Chairman of the Committee on Agriculture, and who is the president of the Middlesex County Association, of which favorable mention has been made in these columns.

The Connecticut rail law may well be adopted in other States, so far as to protect the birds on their breeding grounds. They should be treated as are other birds in this respect.

tion with previous ones, how the interest in certain strains of dogs has grown since the Kennel Club gave its first show in 1877. 'The catalogue of that year shows that seventeen St. Bernards were exhibited; this year there were fifty-two entries in this class. In 1877 there were four Irish water spaniels, in 1882 seventeen. At the first show there were twenty-five fox-terriers, at the last sixty, while in 1877 only eight collies were exhibited as against sixty this year.

In the well established sporting classes no similar increase in number has taken place, although of course more dogs are exhibited now than formerly; but in these classes the principal change to be noted is the constant improvement in the quality of the animals entered for competition. Most people have learned that it is worse than useless to send a commonplace animal to the show, and hence, as a rule, the dogs entered are above the average so far as form and beauty are indications of excellence. And if there are still some obstinate people who persist in believing that their dogs must win on the bench, notwithstanding the testimony of good authorities to the contrary, let us be thankful that their number is each year growing smaller.

An exhibition of this kind has other uses than the mere education of the masses. It serves, too, as a sort of convention of breeders and owners, and affords opportunities for the exchange of views and experiences which must have a good effect on the different strains of dogs.

The pressure on our kennel columns this week has obliged us to leave over much interesting and valuable matter.

BIG GAME IN WYOMING.

T is very gratifying to announce the passage of a law by the Territory of Wyoming, which is intended to prevent the wanton destruction of large game by the skin-hunters and others. The open season prescribed for the killing of deer, elk, moose, mountain sheep, mountain goat, antelope and buffalo is from August 1 to November 15.

The law strikes directly at the traffic in hides, by making it unlawful for any person to purchase or obtain by barter any green or untanned hide of the animals mentioned, and for transportation companies to have the same in possession for transportation.

The general provisions of the new law are excellent. Its passage by the Wyoming Council and House of Representatives is an encouraging indication of the changing public sentiment regarding the game slaughter. The framing and passage of the law have been in the hands of intelligent, determined and influential gentlemen; and the same vigor displayed in securing its enactment will, we believe, provide for its enforcement. A Wyoming game league is now being formed in which will be found the leading business and professional gentlemen of the Territory, as well as the federal and territorial officers. In the good work for which it will labor, this Wyoming game league will have the support of all friends of game protection; and it is to be hoped the "visiting sportsmen" will be among the strongest allies of the league.

DECAPITATE THE DOGS.—Pittsburg, Pennsylvania, is notable as one of the few cities in this country capable of sustaining a creditable bench show of dogs. It is generally considered to be a strong dog centre. All the more startling, then, because coming from Pittsburg, is the proposition that we should dispense with the use of field dogs. pleted, writes a Pittsburg man, because setters and pointers show the shooter just where the birds are, and then it is a comparatively easy matter to kill the game. Do away with the dogs, and, left to his own cunning, the gunner cannot get so many birds. The gratifying result will be that game will speedily increase and multiply upon the face of the The reasoning is sound; the conclusion is impregnaearth. ble; the plan proposed a most excellent one. We can think of only one suggestion to add; that is, that having sent all his dogs to the pound, our Pittsburg friend should sell his oun for old metal.

A Spring Plague. - With the May days come the song birds to nest in the orchard and by the roadside; and with them come the fellows who rob nests and destroy the songsters for the milliners' shops. Every spring brings this abominable nuisance. The bird robber's business is a regular trade, carried on by loafers and vagabonds, who are too lazy to earn an honest living. Many of the chaps who shoot the song birds and rob the nests to sell the booty, will just as readily steal chickens, and anything else they can lay their thievish hands on. The only way to save the birds is for every man and woman to constitute a self-appointed committee of one to combat the robber nuisance. The laws in most of the States provide proper punishment for these offenses. With a little pluck the laws can be enforced, and the vandalism suppressed. There ought to be a strong public sentiment on the subject in every viilage.

MR. OBER'S LECTURES.-The Boston papers speak in high praise of Mr. F. A. Ober's illustrated lectures on Mexico. Those who read his letters from that country, published in the Forest and Stream, will recall Mr. Ober's graphic descriptions of the country, the people, and the natural history of the Southern lands which he visited, and they will readily understand the pleasing way he has of entertaining

THE ICHTHYOPHAGI.

SMALL meeting, limited to the executive committee MALL meeting, limited to the executive containing will precede the regular annual dinner of the Ichthyo phagus Club. It will take place on a small island in the Great South Bay of Long Island as soon as the sign in the moon is right for eating strange fishes. The ostensible object of this most mysterious meeting is said to be to discuss the causes of the recent alarming mortality among the Lopholatilus chamaleonticeps and to inquire into the reason for the deterioration of the Ostrea virginiana in the Great South Bay. It is darkly hinted that the executive committee intend to try and use oyster shells for food, and that the president, Mr. John Foord, of the New York Times, has a process of extracting the lime from them and of converting the remainder into a jelly which will take a flavor equal to We know nothing of the truth of the finest ''calves foot,'' this rumor, which may have originated in the fact that the gentleman in question was seen to examine the shells of his Shrewsburys" and to compare them with those from some "Blue Points."

However this may be, we are glad to know that the mys tery of the dead tishes found so plentiful at sea, and which covered miles of ocean, will now be penetrated. The veil will be lifted from Ostrea virginiana (some folks calls 'em isters) and the astonished world will wonder why things now brought to light were not known before. Nothing is said of investigating the qualities of Johannisberger or other wines, with the more solid refreshments, so we suppose that nothing will be done in that line, but a significant hint of returning the next morning is given, so we presume that the hard-working investigators intend to return. But suppose that they should not! Suppose that the monsters of the deep, whose just anger these experimenters have aroused, by eating such of their relatives as might be so unfortunate as to fall into their hands, should rise and devour them! They could never be replaced-the Ichthy fellows we mean; and then there would be none to risk their lives in eating of the strange and hideous creatures which dwell in the water. None who would impair their digestions and suffer the pangs of dyspepsia for the sake of teaching their fellow mortals how to destroy their stomachs with different preparations of octopus, shark, sea worms, and the thousand leggy, slimy borribles which swim, crawl and burrow below the

Truly Congress ought to pension these noble men who so sacrifice themselves for the public good. The soldier has the applause of his comrades and the inspiring fife to encourage him in his career of slaughter for thirteen dollars per month, his food, clothing, medical attendance, and the privilege of being buried in his boots. But the Ichthyophagi have merely the approval of their own consciences and the nightmare to cheer them. Therefore let them have pensions sufficient to purchase weekly supplies of water snakes, hellbenders, octopods, lob worms, and such delicacies as will tickle the ichthyophagan palate.

We are not sure but a better plan would be to erect a home for such members of this noble club as may have destroyed their digestive apparatus by carrying experiment beyond the bounds allowed by their department of the interior, where they could be regaled on soups of razor clam, horsefoot crab, etc., and look upon a collection of such stuffed monsters as they ate in former times before their stomachs were laid up in ordinary. We speak feelingly on this subject, for we have dined with the club. We well remember the bisque of razor clams which started a vinegar factory to work on full time in our stomach in half an hour after eating. The indigestible devil fish then stimulated our gas factory (which is in the same place and works when the vinegar mill stops) to operation at its full capacity, while the shark steaks laid the foundation for a vigorous nightmare which was as frisky as a colt. We saw a shark with green goggles try to swallow John Foord, the president of the club, and was only prevented by a gigantic hellbender in knee breeches, which held on to his boots, while an octobus with a sewing machine tried to sew on a salt codfish to our left ear. Yes! They are nice fellows, and very enthusiastic in their good work, but somehow, ordinary fishes and meats are about suitable to our appetite; shad, Spanish mackerel, and trout, for instance.

FOREST AND STREAM FABLES.

I.—THE WISE AND FOOLISH PIKE.

NCE upon a time there were two Pike, who established themselves in two streams which were as like in size and character as two streams well can be. These Pike were both lusty fellows, and the terror of all the little fish that swam

Yet one of them, when the little fish were going up stream to spawn at the seasons when Nature commanded each kind to do so, was very forbearing toward them, and quite as careful of them as if they had been his own children, perhaps more so. He would go hungry rather than gobble up a Da or Shiner swimming past his reedy lair, heavy with eggs. He would comfort his interior with a Frog or two and the promise of many good things by and by, and turn his tail on temp-

Not so his fellow of the other stream. Woe to the little fish, no matter how heavy laden with spawn, that attempted to run the blockade of his port. He would devour them by the dozen and score, and even follow them relentlessly to the upper stream, where the water clattered over the pebbles, too shallow for him to pursue them further. He would not give over gorging himself upon them till his jaws would not

hide the tail of the last one taken, and for a while he had great sport, as he called it, and very jolly times indeed, get-ting much fatter than his neighbor of the other stream, whom he called a very silly fellow for not making the most of his present opportunities. But after a time it did not fare so well with him. The little fish grew shy of his stream, and chose rather to go up the other than to risk their lives and precious freight in the dangerous waters of this. So it came to pass that in the Fall, however sharply he watched, it was seldom that he saw the gleam of a down stream faring minnow's scales, and for very hunger he would have been thankful for a tithe of the fry that, out of pure gluttony, he had swallowed when he did not need.

Meanwhile his neighbor was in no such strait. Dace, Chubs and Shiners were sculling past his door in throngs, from those as hig as ever they could grow down to little chaps making their first (and last) voyage; and the Pike had as many as he liked, of whatsoever size or kind he chose. It is true he was a little out of practice, and at first did not snap a minnow at every rush in his accustomed dashing style; but with so many chances he did not mind the misses, and all his old trick of skill soon came back to him. Knowing how poorly off his neighbor was, he thought of inviting him over to share his sport with him a few days, but on second thought concluded it was better to let him suffer the whole consequences of his greed. At the beginning of Winter the self-denying and fore-casting Pike was as full of fat and contentment as his scales could hold, while his greedy and improvident neighbor was so starved and thin that he more than once mistook his own shadow for a slender minnow.

The Sportsman Courist.

HULKWA-WEWA.

A WEEK ON A FLORIDA RIVER.

A WEEK ON A FLORIDA RIVER.

It was midnight, and we were half way up the stream, the Hulkwa-wewa—the "Bad Water"—of the Seminoles, and the Ocklawaha of degenerate "Crackers."

There was rivalry between the two river steamers; the Okahumpkee passed the Panasofskee in the only "reach" wide enough for such a feat, and there was rejoicing and jeering on the one and lamentation and cursing on the other. The bursts of speed were tremendous, at times even reaching the unprecedented rate of four miles an hour. Old steamboat navigators of Florida waters watched this unparalleled attainment with breathless interest, and, whether friend or foe, retired after it was over to drink to an event that "marked the opening of a new era of travel in Florida."

This was at Buffalo Bluff. Victory crowned our efforts, and, amid showers of sparks and lurid gleams of light, we passed the Panasofskee. On the top of our wheelhouse was a blazing fire of pine knots, which shot its flashes far into the black depths of the swamp. The effect was sublime; tall cypress trees loomed up like ghosts and waltzed away into the darkness; every lichen on every tree stood out distinct, every tendril of tillandsia, and every seed pod of the maple. A squirrel, surprised on a limb of a tall tree, dropped his paws in wondernnent and stared at us openmouthed. The last quarter of the old moon shone through the moss-draned limbs of the forest trees; event bunches of maple. A squirrel, surprised on a limb of a tall tree, dropped his paws in wonderment and stared at us open-mouthed. The last quarter of the old moon shone through the moss-draped limbs of the forest trees; great bunches of mistletee and clumps of tallandsia, clinging to the blanghed tree trunks, looked like shaggy bears, in the white moon-like.

Astern could be seen the red glare of the vanquished Pana-

mistletoe and clumps of tallandsia, clunging to the bianched rere trunks, looked like shaggy bears, in the white moonlight.

Astern could be seen the red glare of the vanquished Panasofskee, now gleaming through the trees, now sending a broad lane of light across the stretch of glassy water.

At daylight I climbed to the pilot-house and found a negro at the helm. What a wonderful descendant of Ham was that negro! How skillfully he guided us!-now shawing a whole broadside of shrubbery, now grazing a protruding stump, and now just slipping over a sunken log. Placid, lake-like reaches, seldom more than a thousand feet in length, gave a bit of variety to the tortuous channel; but nakedness and misery were predominant. Bayous opened out at every turn, dotted with lilies and lettuce, reaching their blue and green into the gray of the cypress. Monarch of the swamp is the cypress, holding high its head and thrusting its spreading feet into the water, about which grow palmetoes and interlacing vines. This makes a lunding for a little vegetable matter, then a bit of earth, about which gather bignonius and water-lettuce, and land is formed.

The high rate of speed at which we were running required constant feeding of furnace, and at the first woodyard our steamer stopped, panting and wheezing, and sending valorous puffs through the forest.

Ill-starred Okahumkee! Most fortunate Panasofskee! This was the opportunity for our rival. She had wood and watershe passed us with triumphant snorts. And she kept ahead. Our superior speed availed us nothing, for attempting to pass her in that narrow channel would be like two trains passing on a single track—it has been tried, and failed. So we sailed up into Silver Spring, with the Panasofskee kicking up her heels at us defiantly, ludicrously, a great cascade breaking and foaming over her stern wheel.

Was this the spring De Leon heard of, this the Fountain of Youth that started him off on his chimerical scarch? By rare good fortune I have trodden in the footsteps of this gallant old

that the smallest silver coin may be followed by the eye as it sinks to the limestone ledges sixty feet beneath the sur-

that the smallest silver coin may be followed by the eye as it sinks to the limestone ledges sixty feet beneath the surface.

To ascend the Ocklawaha by steamer was interesting, though commonplace; to descend it by dug-out would enhance every beauty and add the poetry of exploration to the prose of ordinary travel. A bout was hired, a companion was in readiness, and ere the sun had set on the day of our arrival, we were gliding down the stream. For the use of the bout we paid two dollars; she was low, flat, and fifteen feet in length, propelled by paddle power. The Okahumkee was to take her back when we should reach the St. Johns, on her return trip. Then of the storekeeper who had thus honored 'us with his confidence, we made a purchase for the trip; a blanket, matches, some fishlines, crackers, sardines, tin cup, sugar and eggs. Paddle in hand, we drifted down Silver Spring Run, borne along by a four-mile current, past long walls of huge cypress and plots of beautiful illies, a turn every hundred yards, and every bend revealing some new beauty. Every object on the stream was clearly reflected and the minutest particle visible on its bed as in the spring itself. Every little white the current was increased by other springs that caused miniature whirlpools above the deep caverns whence they sent out their aqueous tribute.

"Seems like a dream," said Long, my companion, "to be swept so swiftly onward, past such a ceaseless panorama of beautiful scenes."

Five miles down we passed a beautiful orange grove grow fallen limbs and drift logs, and secured a cluster or two of histors where they seed and Long clambered ashore, over fallen limbs and drift logs, and secured a cluster or two of histors where.

The Ocklawaha has its source in some small lakes south and west of Silver Spring, though the latter contributes the greatest volume of water. At the confluence of the "trun" with the main stream we found a barge, old and abandoned, and here we halted a while to take a parting glance at the silver stream, which plunge

"Over our heads the towering, tenebrous boughs of the cypress

Met in a dusky arch, and trailing mosses in mid-air Waved like banners that hang on the walls of ancient cathedrals; Death-like the silence seemed, and unbroken, save by the herons, Home to their roosts in the cedar trees returning at sunset.

Or by the owl, as he greeted the moon with demoniac laughter.

Home to their roosats in the cedar trees returning at sunset. Or by the owl, as he greeted the moon with demoniac laughter."

In the gloom we drifted uncertainly: the prospect for a dry camp was not promising, but in turning a bend we saw a light, an open fire; near the fire was a woman, over the fire was an iron pot, both pretty certain evidence that there must be a man near, and hence a shanty and civilization. But this woman advised us not to camp there; she "lowed" the land was high and dry and the light-wood plenty, but, in her opinion, the water was bud, and would "even spile yer whisky ef yer had any." The yearning expressed in that woman's face as she interjected this—"ef yer had any," caused us both to cast an involuntary glance at the blanket covering our outfit, and then sped us on our way without regret. A mile below we found a place for a camp, landed and made a fire, and, with sardines, tea and canckers, and a dessert of wild oranges, supped satisfactorily. A pile of palmetto leaves formed our bed, and here, at our first camp, arose our first dilennma. We had but one blanket. By lying down in that interesting position known as "spoon fashion," we could barely manage to make it cover us. The question arose: Should we sleep on the blanket or under it; should it cover us or we it? This was perplexing a problem that we sat up half the night trying to solve it. At last it was decided that one of us should sleep outside and the other inside, taking turns at intervals of three hours. We drew lots for position, and it fell to Long to take the first outside; but I had not slept half an hour before I awoke shivering with cold and found my friend rejoicing in a whole "inside," which he had secured by rolling over. After this we slept beneath the blanket, and placed heavy stones at the corners to keep it down. The man with heaviest ballast on his side generally secured the greater portion of blanket.

As our fire blazed brightly far into the night, it attracted

by rolling over. After this we slept beneath the blanket, and placed heavy stones at the corners to keep it down. The man with heaviest ballast on his side generally secured the greater portion of blanket.

As our fire blazed brightly far into the night, it attracted the attention of some men who had been out hunting linkins, or Indian pullets, and they alarmed us by landing and inspecting the camp. We had but one firearm between us, and that a small revolver, which we both instinctively grabbed for as we awoke and saw those evil-looking faces bending over us. After a social smoke and a pull at the bottle they departed, with little speech, save to warn us against burning too much light-wood from the pile near us, as "the man ez cut that ere light-wood mought bring in a bill afor sun-up." This vision that they had evoked of the watchful wood-cutter, filled us with apprehension, and one of us kept hourly watch, in momentary expectation of being prodded with a knife or plugged with a bullet. The stars twinkled, the frogs and lizards chirped, the owls hooted, the limkin sent out his maniae laugh, and the night was vocal with their medley.

The "limkin," or "crying bird," is such a queer ornithological specimen that I cannot refrain, in this connection, from quoting its quaint description by Bartram. One hundred years ago this enterprising botanist penetrated the then wilderness of Florida, and discovered many things new and strange, among others the limkin. "There is inhabiting the low shores and swamps of this river and the lakes of Florida a very curious bird, called by an Indian name, Epikonskya, which signifies in our language the Crying Bird. It is about the size of a large domestic hen, all the body above and beneath is of a dark lead color, every feather edged or tipped with white, which makes the bird appear speckled on a near view. The eye is large and placed high on the head; the bill or beak is five or six inches long, arched or bent gradually downward, and flatted at top and beneath, which makes it appe

The renewing of the fire under these circumstances was a matter of extreme discomfort; but the crackling of twigs and the blazing of pine-knots soon enkindled in us a flame that quickened pulse and limb. To remove the last vestige of fog and chill from our systems Long brewed a pint cup of egg.nog, that is what the sinful would call it, but he said it was not regular egg.nog, as it lacked the principal ingredient, against which total-abstainers set their faces.

This was Sunday; there arose a question between us, whether we ought to tie up and lie idle all day, or let the boat drift with the current. Long advanced the rather specious argument, that drifting was not working; that the stream performed its allotted task in obedience to the mandate of a Great Creator, that it followed on and on, Sabbath and weekday alike; that we might launch our boat and drift upon its bosom without a qualm from even consciences like ours, that had been made tender by New England precepts, and case-hardened by repeated applications of Shorter Catechism. "Again," he said, "look at our provisions! a few eggs, a little sugar, and two or three oranges, to say nothing of the low state of our flour and pork!"

His unrighteous argument prevailed, we launched our skiff and drifted with the current. We passed shelly bluffs with understratums of lime-stone, above which were fields of limited extent containing sheep and bleating lambs. As if further to recall visions of a Northern spring, on this January day, we startled, every now and then, great flocks of blackbirds from the corn-like grass, which flew into the trees with whistled 'chick-arces;" and a robin, a few warblers, and a wren, completed the illusion. The river narrowed, and graceful palms stood up at every point, bignonias and lilies, and water lettuce joining their bases with the water. We drifted through beautiful channels and looked down long vistas between palmettoes and cypress festooned with vines, their images reflected in the mirror-like surface.

Must 1 pass this dream-la

no more colledion nearer than Palatka, 100 miles away! We packed up and paddled on in gloomy silence. The same though seemed to be passing through our minds, for suddenly Long broke out with, "Well, you didn't break the Sabbath so very much, after all, did you?"

In the afternoon our lesson of the morning was emphasized by our bringing up against a great log fallen across the stream, and by our having to row several miles back to the main channel against the current. A little attention would have prevented this mistake, as that river was as distinctly "blazed" as any path through the forest by the steamboat bumps and bruises on logs and trunks of trees. At one point in this tunnel through the swamp the trees approach so that there is a passage of only twenty-two feet in width, and the steamers have but a foot to spare on either side. This is called the "gate," the gate-posts being two mighty cypresses, their broad buttresses extending deep down into the mud, their ghostly arms and fingers of limbs and brunches stretched toward the sky far out of sight, above the overarching canopy of twigs and mosses. Just below the gate is the town and landing of Eureka. What the cracker who opened the place to the world found here when he bestowed upon it the name above puzzled us to find out. What we found was a landing of stumps, with a plank leading to firmer land beyond. A sagacious man must he have been who bestowed this cognomen upon this landing. He knew of the weakness of the world in general—to give credit always for what is expressed, without questioning; for, the vision of passing travelers being limited by the barrier of cypress, they would be prone to imagine the unseen land beyond as possessed of charms unuterable.

limited by the barrier of cypress, they would be prone to imagine the unseen land beyond as possessed of charms unuterable.

But I later had cause for imitating the example of the grand old Greek, and joyfully shouting Eureka! at the top of my lungs, for I found here that which enabled us to sail serenely on down the stream, picturing its beauties as we went. A man who met us as we paddled up to the plank at dusk informed us that the owners of the clearing, the "Harrison boys," were absent, but extended an invitation to their cabin. Securing our boat, we followed our new acquaintance to a humble hut of logs, where he made us welcome. The inovitable hog and hominy was our fare and the floor our bed, but we spread the blanket contentedly, being full of good cheer, with a fire on the hearth before us and a roof above us. At about midnight we heard the tramp of horses feet, and two brawny men soon after entered, each with a saddle and bridle over his arm, which he flung into a corner. Of course they discovered us lying on their floor, and after the first start drew their housekeeper aside and questioned him. My dark-tent, being the most conspicuous portion of my luggage, excited remark, and one of the newcomers launched at once into a knowing dissertation upon negatives. Hearing this, Long nudged mo, who required no jogging, for at the first discussion of photographic lore I was on end immediately.

"This feller says," quoth the man who had invited us here, "thet he's gut tew go to Palatky fer chimmykels; thet he wants tew photygraph the hull darned river, but his colcolly-something's give out."

"Collodion's what you mean, ain't it?"

"Yis, thet's it; he's feelin' kinder pokey about it, 's right smart daown in the mouth. Naow, John, you've gut some uv thet air, ain't yer?"

"Yis, I've gut a bottle on't somewhar."

smart daown in the mouth. Naow, John, you've gut some uv thet air, ain't yer?"

"Yis, I've gut a bottle on't somewhar."

"What will you take for it?"

Their backs were turned toward us and the conversation had been carried on in a low tone for fear of awaking us. To say that they were surprised at my sudden demand would be stating it but mildly.

"What will you take for that bottle of collodion?"

A satisfactory bargain was concluded, and after much conversation we retired, happy to find, in this isolated clearing, far from any settlement, one of those deluded beings who,

at some portion of their lives, imagine they will wrest a fortune from the world as peripatetic photographers.

The young Harrisons had here a comfortable cabin, ten acres of cleared land, with various outbuildings, a large garden well plantes with thrifty orange trees, and at the river a warchouse, and a grist mill and cotton-gin run by steam. They had taught themselves everything pertaining to the running of the engine and cotton-gin, and seemed to be young men of more than ordinary intelligence. How it warms one's heart to recall, even after the lapse of years, such instances of cheerful pluck and large-hearted endeavor as were here manifest. Many a time, when reflecting upon the great number of young men in our cities carning a precarious living by doing woman's work behind counters and in office, have I recalled the noble exertions of these cheerful young men in this clearing in the wilderness. Thousands of acres of land are open to trial in this land of sunshine, which will give a young man decided returns for outlay of labor, in, at least, refreshing slumber and a contented spirit.

At noon, next day, we drifted down again, through the same tortuous windings, to Log Landing. A picturesque little creek tempted us to make a side-exploration, and we rowed past a thrifty little settlement, containing a nursery of orange trees, cofton and sugar cane, to where a large waterwheel was slowly revolving; and this made such a pretty picture, with its background of palmettees and express, that I tried it with my new collodion with success. The creek had been dammed and furnished sufficient water-power to turn this wheel with its manner, all over the State, when the creek had been dammed and furnished sufficient water-power to turn this wheel with its manner, all over the State,

of orange trees, cotton and sugar cane, to where a large waterwheel was slowly revolving; and this made such a pretty picture, with its background of palmettoes and express, that I tried it with my new collodion with success. The creek had been dammed and furnished sufficient waterpower to turn this wheel with its dependent cotton-gins, rice mill and grist mill. In this manner, all over the State, are the citizens of Florida settling the problem of its future. Running out of the creek into the river we rowed on, the banks not notably pretty, though hung with an increased abundance of bigmoniss, past Forty-foot Bluff, a long, high ridge, crowded with palmettoes and deciduous trees. In a couple of hours we suddenly came upon a lone and dilapidated warchouse standing on the river's bank, with a great pile of light-wood and orange-box shooks its only company. This, we concluded, was lola, where, we had been told, we should find food and lodging. There was no other sign of house or individual, but after a long walk we reached a rambling, disjointed planter's dwelling, surrounded by fields run wild of wild plums and cane grass. In these fields wild rabbits and gophers hurrowed in abundance, and flocks of small birds dwelf in the mulberry, oak and China trees that surrounded the stables and cookhouse. Here we were made welcome and our goods locked up in the warehouse.

From this point, the famous Orange Lake was at that time reached, and we hired a cart, with nule and attendant driver, to transport us thither, desiring to see a native wild grove in process of being subjected to man. At Ocklawaha Church, a noted landmark, we met the parson on his circuit, which embraced the territory lying between Orange Springs and Silver Springs, twenty-five miles by land, and sventy-five hyriver. The road was stumpy and sandy, passing through plannetto scrub and pine barren, and there were very few settlers. About ten miles out we crossed a graded roadbed, once intended for the raliroad from Waldo, on the "Florida Road," to Ocala, a

will show.

Paddling on, we reached at dusk an overgrown clearing, which, seen through a vista of cypress trees hung with Spanish moss, and containing a small shanty, invited us to rest there for the night. No man disputed our entry, and we cut fresh leaves for a bed and built a fire near the "lean-to" roof of palmetto fans. Having now nothing but our tea and a few crackers, we soon had supper disposed of and essayed to sleep. It must have been about midnight—everything of importancealways occurs at midnight, in a well-conducted camp—that Long leaped up with a loud shout and, to my alarmed and sleepy eyes, appeared trying to divest himself of all his appared.

and sleepy eyes, appeared trying to divest himself of all his apparel.

"I've got a centipede on me, or a scorpion; he's crawling down my back. There! there he is; by Jove, but what a beast!" And he jerked something out from under his vest and flung it on the ground, stamping it out of shape in a second. "Pooh!" said I, "it wasn't anything harnaful, there isn't anything of that kind here. Don't you remember what the land company's books say—"there are are no noxious insects—not one—in the entire State!?" "But that wasn't an insect, he was too big; he spread himself the whole length of my spine." "Oh, that's all imagination, you mustn't let such little things—Jerusalen! Long, just reach down my back and catch that animal. Oh, I know this is a centipede, sure; he's got a thousand and one legs."

"No, you don't," retorted the unfeeling Long, "there are 'no noxious insects in Florida, hey? How do you like it?" Meanwhile I was writhing in an agony of apprehension, feeling a most horrible rasping on my skin from this infernal

something, that had crawled down my back. Feeling gin-certy for the animal, and with my flesh creeping at the sen-

something, that had crawled down my back. Feeling gingerly for the animal, and with my flesh creeping at the sensation. I at last seized and drew it forth, dropping it at once it was in sight. Then the cause of our terror was revealed as a "walking-stick" insect, with a slender body some four inches long and winy legs, looking like an animated green twig. It rolled its protruding eyes so wickedly and felt for us so viciously with its wiggling legs, that, finding a lot more of them in the leaves, we unanimously agreed to sit by the fire the remainder of the night. This we did, groaning over our perverseness at leaving the widow's hospitable root, and thus the young ladies were avenged.

We found a trolling spoon and line tangled in some water plants, the next morning, probably dragged away from some ascending steamer, and that day we caught some fine black hass. It grieves me to relate that we had-no adventure with the alligator, and though I am aware that the reader will severely frown upon any Florida story without an alligator in it, yet it is impossible to lug one in at this late period. We saw but few, though every tourist that went up on the steamer and came down on the same, returned boasting that he had slain his thousands and tens of thousands. With our small revolver we peppered at a few black snouts, and once got near enough to one to rap him on the head with a paddle, but emptured not one. The river widened, as we neared its embouchure, and approached the mighty Saint Johns, and we drifted placifly along past outer by years. got near enough to one to rap him on the head with a paddit but explured not one. The river widened, as we neare its embouchure, and approached the mighty Saint John and we drifted placidly along, past quiet bays and siler creeks that were margined with lily pads and reflected the woods above them. On the other shore our voyage ended.

FREDERICK A. OBER.

PENNSYLVANIA RESORTS.

In your issue of 6th inst., "Constant Reader" asks advice as to a healthy location for invalids of consumptive tendencies. I am fearful of giving advice that may lead to regrets; but I do know that our high pine and oak barrens hold better promise for weak lungs than the Northern Wilderness. By consulting Colvin, and other reliable authorities, it will be seen that the Adirondack region is exceptionally damp and cool, which is the reverse of our highlands, and cannot be favorable to catarrhal, bronchial, or lung difficulties

ficulties.

What I said of Oregon Hill is true to the letter. What I said of Oregon Hill is true to the letter. But I doubt if more than a dozen boarders could find good quarters there. For information as to the Oregon Hill region, address George Dodd, Cumps Corners, Lycoming county, Pa. On Pine Creek, twelve miles from Wellsboro, is the host-

doubt if more than a dozen boarders could find good quarters there. For information as to the Oregon Hill region, address George Dodd, Camps Corners, Lycoming county, Pa. On Pine Creck, twelve miles from Wellsboro, is the hostelite of George Herrington.

He has a large hotel, for the backwoods, is in a healthy location, and in reach of several trout streams.

Six miles above Herrington is the "Izaak Walton House," in the little village of Gaines. It is a noted resort, often referred to by Genio C. Scott, who spent some time there, and other sportsmen.

Above Gaines, six miles, you reach the "Ansley House," Pike Mills, Potter county, Pa. This would be my objective point. West Branch, South Branch, the Genesee Fork, and several other trout streams are easily reached from here. The ground is high and dry. It is twelve miles from Wellsboro, over a most delightful and romantic route. The fare is \$1.50. Wellsboro is reached by rail.

Board at any of the above-named places may be had for from \$5 to \$7 per week, according to requirements. We have no lakes in Tioga county. Clear, brawling trout streams are in pleanty. In Pine Creek—which is a respectable river—there is good fishing for eels, chub, dace, etc., while below the dans, trout of a pound or more are often caught. You need no guide here at \$2.50 or \$8 per day, and found. You can possess your soul in peace. Twenty rods back of the Ansley House you may get away from all humanity, and you may climb to the top of the pine-crowned ridge to the north, lie there and read, inhale the fresh air, and wait for the dinner-hell, for which you will probably be quite ready. The only choice between Oregon Hill and Antley's, is, that Oregon Hill is more secluded and lonely. It like to be alone. Susquelanna county, Pa., has fifty lakes, stocked with bass, and with many summer resorts scattered about the shores, and among the hills. It is becoming popular. The county lies lower, and is a trifle more cool and moist than Tioga, but is very healthy. Edward Rose, who keeps summer loc

Twenty-two miles below Wellsboro is Cedar Run. It has some claims to the consideration of the health-seeker. Milk, eggs, trout, with venison in the season, may always be had. It is rather remote from market.

Lastly, the village of Wellsboro may be mentioned for the benefit of those who need a quiet, healthful rest, and do not care for woods-life, or "camping out."

There are six hotels and several private boarding houses in Wellsboro. The village is dry, well shaded, with eleven miles of good plank-walk for the pedestrian, with six trout streams within eight miles. I will only add that, after residing in thirteen different States, I chose Wellsboro as my home, and am not sorry; and that I have no interest in any hotel or resort on the carth. I will answer any letter sent to hotel or resort on the earth. I will answer any letter sent to me to the best of my ability.

Nessmuk.

Wellsboro, Tioga County.

Noticing in this week's issue of FOREST AND STREAM an item headed "Wolves in Virginia," I thought, perhaps, it might interest some of your many readers to know that quite a respectable sized pack of these animals roam in the wildeness of the Blacklick Creek region, in Cambria county, Pennsylvania.

ness of the Blacklick Creek region, in camera county, sylvania.

There are miles of the region named, although situated in a comparatively settled country, through which no human being would care to penetrate. A few deer are found in the same locality, but no doubt the wolves keep the number down by destroying the fawns, and perhaps the older ones also. There was great complaint made last winter (1880-81) by the farmers in that section by reason of the destruction of their sheep by these pests, but I have heard none this winter.

The game in this (Cambria) county consists of deer, wild The game in this (Cambria) county consists of deer, wild turkeys, grouse, squirrels, woodcook and pigeons in their annual flights; our streams contain trout, black bass, pikeperch, a few pike, sunfish and suckers. The trout are generally small, not averaging more than seven inches in length. Bass vary from one-half pound to three and four pounds, the latter kind very scarce, but all sizes of them gamy. Pikeperch are caught in the Conemaugh River, below this place, weighing eight and ten pounds.

A party of Pittsburg gentlemen purchased, some three years ago, the "Reservoir property," some eight or nine

miles from Johnstown. This reservoir was, in the days of the Pennsylvana Canal, used as a feeder for the same, but after the abandonment of the canal, in 1863, I believe, broke, and left five hundred acres, which had been under water, dry land. It was left in this condition until these gentlemen purchased it, when they at once went to work and recreeted the dam, which at the first high water broke again. Nothing daunted, however, they again erected it, and it has stood the spring and fall floods ever since. It is about sixty feet deep at the breast, and backs the water of the South Fork some three miles, and is perhaps one-half mile in width. Altogether, it is as fine a sheet of water as geese and ducks could choose to alight upon, or in whose depths the bass with which it is stocked could find to swim. The owners have erected a club house for their convenience and provided themselves with bouts for fishing and duck shootmiles from Johnstown. This reservoir was, in the days of provided themselves with boats for fishing and duck shooting. As a matter of course outsiders are excluded, and no one permitted to shoot or fish there except themselves. Johnstown has a Game and Fish Association in a flourishing condition and themselves. one permitted to show of the Johnstown has a Game and Fish Association in a flourishing condition, and the preservation of game and fish is looked after by the proper parties.

Matural History.

HOW THE OPOSSUM BREEDS.

HOW THE OPOSSUM BREEDS.

THE question as to how the animals of the order Marsupialia breed, is one which for a long time was involved in obscurity, and about which the general public have still very vague ideas. To enumerate all the absurdities that have been advanced by ignorant people to explain some of the puzzling facts connected with the production of the young of the opossum, would be out of place here. The subject was carefully studied by Dr. Bachman during a number of years, and at various times this author published the results of his observations, and finally, in June, 1849, prepared for the "Viviparous Quadrupeds of North America," a summary of his investigations into the breeding of the opossum.

Several times recently we have received inquiries asking for an explanation of the subject, which is to so many people enveloped in mystery, and for the enlightenment of those who inhabit the regions where the opossum abounds, we give

who inhabit the regions where the opossum abounds, we give

who inhabit the regions where the opossum abounds, we give a few facts about the matter.

It is interesting to run back over the early authors and see what impossible and laboriously ingenious theories they evolved to explain the long-known facts that the young of the opossum when first found in the natrophium or pouch of the mother are very minute and apparently imperfectly developed. It was stated that "the pouch was the matrix of the young opossum, and that the mamme are, with regard to the young, what stalks are to their fruits." Other authors wrote of "two sorts of gestation, one uterine and the other mammary." The newly-born young are spoken of as "abortions," "not fectuses but gelatinous bodies," and as recently as wrote of "two sorts of gestation, one uterine and the other mammary." The newly-born young are spoken of as "abortions," "not fectuses but gelatinous bodies," and as recently as 1842, Dekay, in his "Natural History of New York," said: "The young are found in the external abdominal sac, firmly attached to the teat in the form of a small gelatinous body, not weighing more than a grain. It was a long time believed that there existed a direct passage from the uterus to the teat, but this has been disproved by dissection. Another opinion is that the embryo is excluded from the uterus in the usual manner and placed by the mother to the teat; and a third that the embryo is formed where it is first found."

Owen's investigations into the birth of the young kangaroo showed that in these animals the young was born in the usual way, and was placed by the mother within the pouch, where it soon became attached to the teat, and this discovery afforded reasonable probability that the same thing would be

usual way, and was placed by the mother within the pouch, where it soon became attached to the teat, and this discovery afforded reasonable probability that the same thing would be found true of the opossum. It was a long time before Bachman was able to discover the young opossum in utero, and all his endeavors to breed the opossum in confinement were trule. He began therefore by setting to work to find out, as nearly as possible, the season of the year at which the young were brought forth. This he learned, by the examination of numerous specimens with the young already in the pouch, to be about the first week in March in South Carolina, but when he attempted to secure a series of females for the examination, he found himself unable to do so. He says: "In the third week in February, 1847, by offering premiums to the servants on several neighboring plantations, we obtained in three nights thirty-five opossums, but of that number there was not a single female. A week afterward, however, when the young were contained in the pouch, we received more females than males. From this circumstance we came to the conclusion that during the short period of gestation, the females, like those of some other species of quadrupeds, particularly the American black bear, conceal thenselves in their burrows and can seldom be found." By changing the method of capture, and directing that they should be sought for during the daytime in places where they were likely to be found resting, Dr. Bachman subsequently secured a few grayid females be found resting, Dr. Bachman subsequently secured a

method of capture, and directing that they should be solight for during the daytime in places where they were likely to be found resting, Dr. Bachman subsequently secured a few gravid females.

A dissection of these individuals showed that the young previous to birth are very small, some of those removed from the parent weighing two and one-half grains, and the largest obtained by a Clesarian operation after the birth of the remainder of the litter, weighing four grains. Others of the same litter, however, after birth weighed three and one-half and three and three-quarters grains. The young when newly born are naked and flesh-colored. The eyes and ears are closed by a delicate integrument, and the oral orifice is very small, being merely large enough to admit the very attenuated teat. The claws are visible, the nostrils open. The length of the body is about one-half an inch, that of the tail one-sixth of an inch.

It is thus seen that the young when born are perfectly developed. Dr. Bachman states that the large one referred to above moved several inches along the surface of a table, and lived two hours after its removal from the parent. The period of gestation appears to be fifteen or sixteen days. The observations made point to the conclusion that the young are placed in the pouch by the mouth of the mother, and its seems probable that she assists them to take hold of the teats. Young which had been sucking were detached from the mother, but allowed to remain in the pouch, and were afterward found to be attached to the manmae. Another experiment was then tried. "Believing that the mother would not readily adopt the young of another, or afford them any assistance, we removed six out of ten that composed her brood, returned two of her own to the pouch, together with three others fully double the size, that had been obtained from another female. She was soon observed doubled up with her nose in the pouch, and one half grains.

attached to the teat. Seven hours afterward she was examined again and both the small ones were attached, but the three larger ones still remained crawling about the pouch. On the following morning it was ascertained that the mother had adopted the strangers, as the whole family of different

had adopted the strangers, as the whole family of different sizes were deriving sustenance from her."

The growth of the young is very rapid, and we are told that in one week one of them increased in weight from three and three-quarters to thirty grains. It was now an inch and a quarter in length exclusive of the tail, which measured one half an inch. At this period the pouches of the females were quite apparent, and the young used the prehensile tails, twining them about the necks of their companions. The young venture out of their pouch when they are about five weeks old.

Such in brief is the story of the breeding of the young.

five weeks old.

Such in brief is the story of the breeding of the opossum. It is told by Dr. Bachman at considerable length and with many interesting details, in the work to which we have above. alluded. It is not surprising when we consider the habits of the animal, the short period of gestation and the other ac-companying circumstances, that its method should have so long remained a mystery to scientific men, nor that even now there should be much popular misconception in regard to it, and many fanciful and absurd ideas about how it takes place should be still implicitly believed in by the ignorant.

Two New Thrushes.—In the advance sheets of the proceedings of the U. S. National Museum, now publishing, we find the descriptions of Mr. Ridgway of two new subspecies of North American Hylocichlæ. One of these. Hylbrichlæ Juscescens sulicicola, is a Rocky Mountain form, not hitherto distinguished from the ordinary fuscescens. In coloration it presents some points of resemblance to ustuduta. It is decidedly larger than fuscescens, and the upper parts are much less tawney and the jurgulum less distinctly buff. Specimens are in the National Museum from Colorado, Wyoming, Montana and Dakota. The second new form here described, Hylocichlæ ukriciæ Bichnelli, was discovered by Mr. E. P. Bicknell, of Riverdale, New York, breeding among the Catskill Mountains, in Ulster county, N. Y. No one else appears to have met with it, and the only specimens known are those collected by him. It should also be said that Mr. Bickell detected the differences between the present form pears to have met with it, and the only specimens known are those collected by him. It should also be said that Mr. Bicknell detected the differences between the present form and the true alticia, and pointed them out to Mr. Ridgway. The seven specimens upon which the new race is based are all noticeably smaller than the true alticia, and have the bills more slender than in that form. There are also slight and not very well warked peculiarities of coloration. On this point Mr. Bicknell says: "In regard to the differences of coloration of the two forms, I find that, although some specimens in my series can be closely matched, the majority can be separated by color differences. These, however, are not very tangible, but most specimens of the smaller form present a somewhat undefinable appearance which separates them from the larger. This is best seen about the head, and seems to be produced by a brownish shade relieving those colors which in true alteix are dark and sooty. Though my two Catskill examples are darker than spring specimens of altein, specimens of the smaller form taken in the fall are quite uniformly paler than those of true alteix taken at the same season; and though this seems to be contary to a recognized law of geographical distribution, it is certainly the fact. season; and though this seems to be contrary to a recognized law of geographical distribution, it is certainly the fact. Besides in the general color it is noticeable in the legs and fect, some of the smaller forms having the tarsi a pale clear yellow, while in many large specimens they are uniformly dark. The base of the lower mandible is also more largely and generally yellow in the smaller form." Ornithologists and collectors will no doubt speedily detect other examples of this race, now that attention has once been called to it.

A REGIMENTAL PET ANTELOPE.—A doe antelope, about a fortnight old, was caught neur a garrison town in India, in 1875, and was adopted by the English regiment stationed there. Says the London Illustrated Sporting and Dramatic News.* "She was 'nursed' and brought up by Corporal Ward of the drums, and though very wild at first soon evinced a strong taste for music, so much so that, after about six months' drill, she was handed over to the band, and from that time marched at the head of the regiment on all occasions. From India 'Fan' came to England, where the ollicers of the regiment presented her with a massive silver collar with the regiment bonor of making acquaintance of several of the Royal Family. On the occasion of the visit of H. R. H. the Prince of Wales to Indore, when the guard of honor was furnished by the regiment, 'Fan' was the first to welcome him on his arrival at the Residency and received cordial notice. On the arrival of the regiment at Portsmouth she attracted the notice of H. S. H. Princess Edward of Saxe-Weimer, through whose kindly forethought a special order was issued to the sentries on the main guard to allow the little antelope to graze on the Governor's green. She was also much admired and petted by H. R. H. the Princess of Wales and her children, while they were staying at Government House, Portsmouth. 'Fan' accompanied the band of the regiment to the Grand Volunteer Review at Edinburgh in 1881, and, while standing opposite the saluting point, had the honor of attracting the notice of Her Majesty the Queen. After the arrival of the regiment in Enniskillen, 'Fan' very soon made friends with the townspeople, and was well-known within a radius of six miles of the town. It is believed now that she was not killed malliciously, but in mistake for a wild deer that was roaming about. Be that as it may, it seems very hard that, after fol-A REGIMENTAL PET ANTELOPE. - A doc antelope, about miles of the town. It is believed now that she was not killed maliciously, but in mistake for a wild deer that was roaming about. Be that as it may, it seems very hard that, after following the drum for seven years in India and England, the Pet of the Royal Inniskilling Fusiliers' should be shot within a mile of the very town from which the regiment takes its

The Boys and the Woodpeckers,—Upon the old homestead in Waldo county, Maine, where my brothers and myself were born, was a large orchard, a great resort for woodpeckers and many other varieties of birds. resort for woodpeckers and many other varieties of birds. The orchard was our play ground and we became as familiar with the birds as with the apple trees and their fruit. We got the impression the woodpeckers were spoiling the trees by picking holes through the bark, and undertook to drive them from the orchard with stones and clubs this gave us great sport, but was not always attended with success. The redhead was our favorite and we readily accorded to him the most intelligence and pluck, and it was rarely we succeeded in driving him from the orchard. He would hide away from us, and make circuitous dights that showed great cunning, as well as good judgment. After planting was over, about the list of June, the men up on the place would go to the woods to peel hemlock back. My brothers and myself would go with them to assist in piling up the bark as they cleaved it from the trees. On one of these occusions we had observed for a number of days our old favorite, the red-headed woopecker, making very regular flights to and from a number of maple trees that stood near us. As if it were but yesterday, I remember the bright June morning, my brother and myself climbed the trees and discovered that Mr. Redhead was catching flies, in the manner described in my paragraph to the FORESTAND STREAM. On several other occasions, I have noticed the red-headed woodpecker catching flies, but never in any other locality.—CLIFFORD. (Marion, Mass., April 8, 1882.)

Cars for New Zealand Rabbits.—The necessity of keeping down the rabbits which are eating up the colony of New Zealand has led to a demand for cats for rabbiting. According to the Pall Mall Guette, professional rabbiters, who are paid a price ranging from 1s. to 3s. for each dozen skins, according to their state, have been employing cats to aid them in the capture, and the venture has been so successful that in some parts good rabbiting cats can command half a crown each. That history repeats itself is an axiom often brought to mind, and perhaps before long some enterprising speculator, like the nursery hero who was thrice Lord Mayor of London, may lay the foundation of a colosal fortune by the export of cats. New York city can furnish one cat to every rabbit in the world.

A Destroyer of Birds' Nests.—A correspondent writes to us, expressing surprise that he has never seen the raccoon mentioned as an enemy of game birds, and affirms that, in his opinion, it is the worst one that they have. This is saying a little too much. No doubt this nocturnal provder does destroy many nests of eggs in the course of a season, but 'coons in most localities are not sufficiently abundant to do any great amount of harm. That they do some is undeniable.

Birds That Have Come.—Brooklyn, April 19.—While walking in the north end of Central Park, April 16, I was surprised to see a-specimen of the cardinal red bird (*C. virginalusius*). The bird was a female, rather shy, continually chirping and flying from tree to tree. As to identification, of that I am certain, being very familiar with this species in the South. I also saw specimens of the scarlet tanager, two males and one female.—Geo. B. Badder.

Squirrels in Confinement.—New York, April 21.—In regard to the question of "F. R. W.," in last week's paper, would say that I have a gray squirrel which had three young ones on the 6th inst. It was trapped, logether with its mate, which died a few days after I got them. on February 12.—H. T. W.

MEMORIES OF A FLORIDA TRIP.

MEMORIES OF A FLORIDA TRIP.

I THINK it was in November, 1847, that I left home for a visit to the Mississippi Valley, and not being in an extreme hurry to reach the particular place, concluded to take the State of Florida in my route. It was not the nearest way by any means, but some friends were going there about that time and my curiosity impelled me to take the trip. Indeed, I had heard much of its mild climate, its beautiful orange trees, its dense hammocks, and the game which abounded. I took my gun along, hoping that an opportunity would present itself whereby I could display my skill as a marksman and get something to add to the bill of fare, which I was advised was not the very best which was ever set before a man for the gratification of his appetite. Facilities for travel, either in or out of that State, were by no means so good as at present; so, after a ride of about seventy miles in private conveyance and mail, coach, we got on the train at Canden, S. C., and went to Charleston. From the latter place we took steamer to Savannah, and thence to Palatka on the St. Johns. on the St. Johns.

Palatkā on the St. Johns.

We left Savannah early Sunday morning, and to avoid the effects of an open ocean trip, took what was called the inland passage. Whilst the tide was up no difficulty was experienced and the steamer made fair headway through the tortuous channels which lie between the banks and the mainmanu passage. Whilst the lide was up no difficulty was experienced and the steamer made fair headway through the fortuous channels which lie between the banks and the mainland. But at low tide the water was insufficient for navigation and we grounded. Going out on the deck I saw the mate rapidly catching blackfish, and hastily going to my trunk I brought forth a line and hook—Sunday as it was—and for the first and last time in my life violated the obligation which I had been early taught, to "observe the Sabbath day." A near kinsman, who was traveling with me, thought it his duty to reboke me by telling me that my mother would be shocked to hear, if she ever did, that I had forgotten the precepts which she had carnestly sought to "chain in my memory." I had caught several nice ones before the reprimand, and upon its being given, "truly repented and was heartily sorry." But between the mate and myself over thirty had been caught—enough to make an excellent dish of a most excellent fish in most excellent condition. For be it known, that he who has never eaten a fish killed and cooked at once—the sooner the better—has missed a luxury good enough for mortals. Dinner came on in less than an hour, and at the center of the table was an immense dish of blackfish nicely fried. My monitor stood looking wistfully, evidently anticipating the joys of a splendid dinner. I mildly suggested that as the fish were caught on Sunday his scruples on the subject should prevent his "ratification" of the act by converting the spoils to his own use. But he thought, perhaps properly, that he could not inquire as to the time either his bread or his meat and been secured, and as he was fond of fish, he would see how they tasted; and seating himself opposite the dish, so soon as politeness would allow, he had helped himself to a choice one, and showed by the operation of his jaws that the food, to his taste, was quite as good as he desired.

Not many years before this, what purported to have been a sermon at Helena, Ark., by a flatboatman

of his jaws that the 1000, while what purported to have been a sermon at Helena, Ark., by a flatboatman from Indiana, who had carried down the river a load of whisky, had been published far and wide, and striking the fancy of the writer as an excellent thing in its way, he had easily committed it to memory. On several occasions, when passing along the

highways, and coming to a store where several persons had gathered, he amused himself, if he did not his audience, by repeating the sermon. During his meanderings he visited a little town in the interior of the State, stopped at a hotel kept by Mrs. Blank, the wife of an ex-elergyman who had gone to that country to convert the heathen (so it was said), and finding a widow somewhat advanced in life, who was the owner of considerable real and personal estate, he concluded that her money was better than calling the "lost children of the house of israel," and he took her and her worldly goods for "better and for worse." With him, at least, he did not enter these bonds "lightly and unadvisedly," but soberly, discreetly, advisedly, and in the "love of peft." Thereafter he had a home and she an object of support. He "hung his ministerial harp upon the willow," and contented himself by listening to the music of her authoritative voice. Well, she kept the hotel, and during the night in question two kinsmen and myself were her guests. We had a substantial supper, and after her regular boarders had finished their meal I remained alone and engaged in conversation with the hostess. During the talk I made some sober reflections upon the state of morals of the country, when she asked if I was a preacher. I replied that I had preached several times since I had been in Florida, but was sorry to say my congregations had been much smaller than I desired. She then told me that there was a church in the town; that there soldom had preaching: that her husband used to "hold"

asked if I was a preacher. I replied that I had preached several times since I had been in Florida, but was sorry to say my congregations had been much smaller than I desired. She then told me that there was a church in the town; that they seldom had preaching; that her husband used to "hold forth," but had quit it, and if I was willing, she would have the bell rung, and I could have a good and appreciative audience. I offered the apology for declining the use of the church, that I had been traveling and was too much fatigued for anything like a regular discourse. She then offered me the use of a large parlor, and I accepted the special call. On my part it was thoughtless lumor, and I left the table, not supposing I should hear of it again.

I joined my companions in the parlor, and it was not a great while before the "neighbor lads and lassies," with her servants, came in, the candles were duly lighted, a small table brought in, and there were placed upon it, "the big Ha Bible, ance her father's pride," and a hymn-book. When I bargained for, and told my friends that I was in a decided scrape. They reprimanded me for the indulgence of a disposition to humor, and consoled me by saying that they were both glad and sorry. There was, it seemed to me, but one way to get out of the dilemma, and that was to go through, and so I determined that they should have a sermon. Pretty soon the old lady approached me, and stated that the notice being so short the congregation would be small, and all were present who could be expected to attend. "Now, Parson," said she, "where will you have the candle stand placed?" It is almost needless to say that as I had been educated in the belief that I should not deal lightly with holy things, nor make a mockery of the "Book of Life," my conscience rebelled at the bare idea of having a Bible near me, when I delivered the sermon I was about to pronounce; so, thanking her for her courtesy, I told her that I was so very familiar with the portion of Scriptures upon which I proposed to desean

After aunouncing my subject as contained in these words, I saw a faint smile upon the countenance of Brother Blank, but all others appeared as if they thought a "candle of the Lord" had been kindled in their midst, and was soon to send I saw a faint smile upon the countenance of Brother Blank, but all others appeared as if they thought a "candle of the Lord" had been kindled in their midst, and was soon to send forth its blazing light to dispel the moral darkness of the kind. When I described the different kinds of "sperrits" the world contained, they still looked solemu. And so they looked when I spoke of "fox fire and camphire, and fire in the front and fire in the rear, and fire and fall back, and fire away Flanagan." I had an intelligent and appreciative audience, who hung spellbound upon the flowing cloquence which issued from my lips, making them think they had been "touched with fire." At last, when I got to the closing part of the sermon devoted to a vindication of the doctrine of the "final perseverance of the saints," and illustrated it by a "possum up a "simmon tree," the old lady discovered, for the first time, what manner of preacher I was. At the conclusion, seeing her busband induleing in laughter, she came forward shaking her finger at him and exclaiming: "You needn't laugh, for it is a better sermon than you can preach." I indulged the hope that as it was a custom for preachers and railroad men to be charged half rates, the old lady would give me the benefit of it when I paid my bill in the morning. But she did no such thing.

In Florida I took my first "fire hunt." It was near Orange Lake. The party consisted of Major Tole, James Ferry, Dudley Task and myself, and a negro man whom we carried along to assist in case we got any venison. A little stray hound had followed us, much against our will, but we managed to keep him under control. Tole, Task and I had guns, while Ferry carried the pan, and Granville, the darkey, the axe. I insisted upon having the first shot, and as it was conceded, after walking about a half-mile from the house, I took my position just behind the light. We had gone but a little way when Ferry whispered that he saw eyes. Then he stated that they had disappeared. We followed the direction, and soon came

reverented up and down an adjacent savanuan in repeated vibrations.

The two sparks had been extinguished, but we heard no running hoofs nor the stumble of death. Just then we thought of our little dog, and whistling him forward, he came at an eager pace, and soon told us that he was on the trail. After a run of fifty or sixty yards, he stopped. We went up, and there lay a peghorn buck, the result of the shot. One pellet had gone through his ear, another had fractured one of the spikes, and a third had struck on the top of his runp, cutting the hair and skin for several inches in its forward runge, and then entering about the middle of the back, near the spinal column. His tail was toward me, and he had looked back over the shoulders. He was strung, shot-bag style upon the shoulders of Granville, and we went on our way. Soon we heard, the wail of a panther, went on our way. Soon we heard the wail of a panther, who had smelt the blood, but we did not see it.

As we were wending our way through the pine woods, erry motioned to me to come forward and take another As we were wending our way through the pine woods, Ferry motioned to me to come forward and take another shot. But as I looked toward him, I saw the light, and knew that it was from fire. But to have a little fun at the expense of Task, I beckoned to him. He readily stepped in front, leveled his gun, and just as he was about to shoot the light blazed up, and we discovered it came from the chimney of a cabin occupied by negroes, and was not hore than thirty yards off. We thought it was about a quarter of a mile, and Task's shot would only have served to "adorn a tale" at his expense. If he had shot there would have been no joke to tell.

tale at his expense. If he had shot there would have been no joke to tell.

This country has, in many respects, greatly changed since I saw it. Many of the hammocks have been cleared and put in cultivation (the dry ones, of course, for many of them are rolling, and have the same contour as the surrounding country). Orange groves are to be seen nearly everywhere, and railroads offer means of easy access, where formerly a sandy road was the only facility.

From all reports, orange culture offers the best hopes for a large income from capital and labor, of any avocation in this country. That it is a good business, there is no doubt, and will continue to be, unless climatic influencesshall prove destructive to the trees, or these again become subject to the attacks of insects. It is a lovely crop. Nothing which I have seen surpasses the beauty of

"the orange trees Whose fruit and flowers in the breeze Are wantoning together, free, Like age at play with infancy."

Are wantoning together, free, Like age at play with infancy."

[The sermon alluded to by "Wells" was published in the April number of the *Century* magazine, in Mr. Henry Watterson's paper on the humors of the South. A correspondent of the Louisville *Contary* magazine, in Mr. Henry Watterson's paper on the humors of the South. A correspondent of the Louisville *Contary* magazine, in Mr. Henry Watterson's paper on the humors of the South. A correspondent of the Lauthor of the Harp-of-a-thousand-strings sermon was the Rev. Henry Lewis, formerly of Memphis, but afterward, and, if still living, now, a citizen of Homer, Louisana. Mr. Lewis was a gentleman of rare ability, a poet, a wit, and a humorist of the first order. He was also a Methodist clergyman of the highest standing, of unimpeachable integrity and veracity, and universally respected by all who knew him. He has hosts of friends all over the South and Southwest, from Tennessee to the Gulf and from Plorida to Texas, in many parts of which extensive region he labored as a preacher of the Gospel. When he resided at Memphis, a few years before the war, I heard him repeatedly say (or rather admit, in response to the direct question) that he was the author of that sermon. In answer to an inquiry of my own, he made substantially the following statement: As a matter of fact, he supposed that an old Hardshell Baptist preacher, navigating a trading "broadhorn' or flatboat down the Mississippi to New Orleans, away back in the second or third decade of the century, did the up one Sunday at Waterproof, a little Louisiana town below Vicksburg, and did deliver a sermon something like, or rather having a disant resemblance to, the one afteward written out by Mr. Lewis and published in a Mississippi paper. At all events, such was the purport of an anecode that circulated from mouth to mouth for a long time in that region previous to any publication. That ancedote was simply the germ, and a very small germ it was, from which the sermon as published slowly grew. At last, af

CONNECTICUT RAIL LAW.

CONNECTICUT RAIL LAW.

NOTICE that a correspondent in last week's Forest and Stream writes "Perhaps no State in the Union has had more tinkering done to the laws that relate to the taking of fish and game than Connecticut." That is the case even now in regard to fish laws, I think, and formerly was as to game laws, but since 1877 the general "Act Concerning the Preservation of Game" (a copy of which I inclose) has not been changed, though many bills have been introduced each session of the Legislature for that purpose, almost all to permit the summer shooting of woodcock. Two bills relating to game were passed the present ession—one is the "Non-export law," which was printed in last Forest and Stream, an experiment, directed chiefly to arresting the extermination of the ruffed grouse, which are snared in great numbers and sent to the New York and other markets out of the State; the other is an "Act to regulate the killing of rail," passed in accordance with numerous petitions, because the last of August and first week of September, when the rail are not in a proper condition to eat, and the weather too hot to preserve them any length of time, they are slaughtered by the thousand by visiting sportsmen (?) and the larger part thrown away. This is more especially the case in the lower part of the Connecticut River, where there are many fine rail covers and which are easy of access to yachtsmen. The rail act provides that "it shall be unlawful for any persons operson to hunt or kill, destroy or attempt to destroy, any Sora (commonly called rail) between the first day of January and the twelfth day of September in each and every year, and every person so offending shall for each offense be deemed guilty of a misdemeanor, and on convictint thereof shall be fined not more than twenty-five dollars."

"The Correction of the connection of the c

"The Corn on the Cobb."-Editor Forest and Stream: "I "The Corn on the Corn."—Lettur Forest and Stream: "I think, therefore, I am"—i. e., we are not logicians. Take, then, this syllogism. Major premise: "No sportsman wastes his ammunition on a loon or a coot" (see "Chasseur's" note in Forest and Stream of April 16). Minor premise: "Chasseur" shoots loons and coots (see his article in Forest and Stream of March 23.) Conclusion: "Chasseur" is no sportsman.—II. P. U.

Shooting Grounds Wanted.—"I. H. McC." wants good fall duck shooting between Cleveland and Sandusky, "Green Horn" wants a September camping ground with good wild fowl shooting and some fishing on the St. Lawrence River in the vicinity of Eel Bay. A Chicago man wishes to be posted in regard to other grounds than the marshes about South Chicago.

THAT GREAT MAINE BEAR HUNT.

OME interesting points in addition to the very exhaustive paper of Mr. Page, may claim the attention of sportsmen.

It seems that the bear circled through and about four towns, never going further than ten miles from Dixfield village, and keeping on the hills and in the thickets of the open country, when he might, by making straight off north, soon have reached an unbroken wilderness for hundreds of miles, and the bear must have known these woods perfectly well. Why was it?

lage, and keeping on the hills and in the thickets of the open country, when he might, by making straight off north, soon have reached an unbroken wilderness for hundreds of miles, and the bear must have known these woods perfectly well. Why was it?

All the dogs, far and near, were tried in this hunt—some mix of bull, Newfoundland, shepherd, and every description of cur, and all were found to be worthless—sorely afraid. After getting one good look at bruin, they could not be induced to try it the second time—if I may except two hounds which followed one-half day only, at das soon as they struck a fresh fox track, left the bear chase.

A bear leaves the least scent of any large game, and it takes a peculiar mix of breeds to make a good bear dog.

This bear lad worn his toc-nails all off going in the sharp snow crust, and left the bones of the toes bare, so he could not climb a tree if he had wished to.

Most of the men and boys through the region of the hunt joined the chase. Some for a day or less, and some for more, and in many instances women and children watched out and got a look at him.

No one followed the bear of nights, so he got a rest one-half the time. He could not have found a mouthful of food for all those fifteen days and nights, which accounts for his emaciated condition.

His head and legs weighed more than the rest of his body. If in condition, he ought to have weighed at least five hundred pounds. Again he would wait in his concealment until the scores of pursuers had drawn in together close about him, when all at once, when they least expect it, he would leap out right into their midst, with a loud growl and champing of teeth, and scatter the rabble right and left (none of their legs waiting to see their bodies abused), with perhaps a few random shots from some of the bravest.

The last day it was evident from the first, the bear was weakening. Commissioner Stanley, and the old hunter Babb, started him in the morning, Babb being ahead got in a shot that broke his fore shoulder, going through

Bethel, Maine, April, 1882.

Dedre in the Southern Floods.—New Orleans, La., April.—A correspondent of one of the local papers relates: "At a high mound back of the Dunbarton and Lanarque places, called Belle Isle, it was reported that there were many deer in a starving condition, and to save what we could Dr. Campbell and your correspondent started out in skiffs with some of the hands. Belle Isle is about two miles back from the Tensas and rises above the high water about eight feet, in the midst of a cane brake. Arriving at the mound it was found crowded with eattle and around it a sight the like of which will probably never again be seen by those who witnessed it. In the water the putrefying bodies of over fifty deer were lying festering in the sun, the stench poisoning the air for some distance around. The cattle had driven them off the crowded mound and they were lying five deep. Among the cows and pigs seven beautiful wild deer were standing quietly, their large eyes fixed upon the new comers. They appeared quite tame at first, but gradually drew away. With an improvised lariat two were soon caught and put on board the skiffs. They struggled but little, and were in better condition than would be supposed. The others swam into the cane and returned as we were pushing off. After they were taken on board the Susie they soon accepted food from the hand and seemed to become quite tame.

Montana.—Helena, M. T., April 12.—We have been tracing the geese and ducks through the Forest and Stream from the sunny South up North, until they have begun to arrive here pretty plenty. This country is quite a resort for swans, geese, ducks, and curlew. We have both the Canada and old honkers and a fair variety of ducks, such as mallard, sprigtail, black and redhead, wood, and teal. They all breed here in the low marshes, which abound in warm mud springs, surrounded by willow thickets and wild tye grass, which affords the best secluded resorts. I am told by some who have seen them that both geese and ducks are found on the top of old tree stumps with their nests and young, and after they leave the nest they take to the water and follow down the stream until able to fly. Our foot-hills are covered with curlew in their breeding season. When the young begin to fly one can easily fill his game-bag. Our hunting season closed on March 1 except for migratory birds. August 15 opens prairie chickens, grouse, sagehens, foolhens, pheasant, etc. Foolhens are so called because one can take a stick ten or twelve feet long, put a string with a loop on the end, and by being very quiet can get close enough to drop the loop over their heads, and in this manner catch a whole flock. They, like the grouse, are most excellent eating.—W. M. M. [The term foolhen is applied to several species of Western grouse. We have heard sagegrouse, dusky and Franklin's grouse is probably the dusky grouse, Canace obscura.]

A VIRGINIA MAN who was chopping wood in the forest, was so excited when he saw a deer near by, that, mistaking his axe for a gun, he slammed it against his shoulder, took deliberate aim at the deer, and sawed away with his finger, vainly trying to pull the trigger.

MICHIGAN—Monroe.—W. C. Sterling has a fine flock of domesticated wild ducks, including the greenhead, canvasback, black and mallard, also two geese. They are used for decoys, and some good bags have been made over them,

PHILADELPHIA NOTES.

PHILADELPHIA NOTES.

WE are having good snipe shooting in Delaware and Maryland now. The birds are in excellent condition, and lie well to the dog, and in many localities can be seen indulging in their very curious towering flights, which are poculiar to them in the mating season. A female snipe was shot on the Slaughter Neck marshes this week which contained an egg so far matured as to require the hardened shell only to be ready for laying.

On Wednesday last two black bear cubs were killed at Harvey's Lake, Pa. Harvey's Lake is but twelve miles north of Wilkesbarre, Luzerne county, and the country round about it is wild and rugged. Deer a few years since were fairly plentiful there, but hounding has driven them out of the county to a great extent. Wilkesbarre, you know, is the home of Mr. B. F. Dorrance, who has been instrumental in greatly protecting the game of Luzerne county and, indeed, of our entire State.

Harvey's Lake at one time abounded with trout, we are told, but a very enterprising Philadelphia gentleman, since dead, introduced the pickerel in its waters, and now the trout are non est. Bass have been planted there since the introduction of the pickerel and fishing for the former is quite good at times.

The State Fish Commission has just deposited four thou-

introduction of the pickerel and fishing for the former is quite good at times.

The State Fish Commission has just deposited four thousand brook trout in Dyberry Creek, Wayne county, Pa. The weather since the opening of the trout season has been entirely too cool for many of our anglers to be off about their business. This week, however, two or three gentlemen started for "Jim Henry's neighborhood," but we have not heard what success was met, Monday and Tuesday must have been delightful days on the streams and trout surely were on the feed.

Robin breast suipe may be expected at least a week earlier than usual this spring. We know of no better place near home for them than around about Corson's and Townsend's Inlet. A good stopping place would be at Mr. Theo, Shutes, Curlew Bay Club House, Townsend's Inlet. I can speak in high terms of Theodore's prowess as a whister. Either he or one of his men will pilot the sportsman in search of a spot to put up his blind and I guarantee will faithfully attend upon his wants.

wants.

his wants.

But few gunners get to Curlew Bay, the place is more frequented by fishermen, hence there is always a better chance of success in the shooting line. Make your start about May 1st to 5th this year and I am sure you will strike both the robin breast and brown back.

Homo.

FLORIDA NOTES.—Senford, Fla., April 15.—The shooting is about over for this season. Quail mated the first of April. There are still, however, a few ducks left on the St. Johns and on some of the lakes. Alligators and snakes are found in all directions. Turtle doves afford good shooting. I think it harder to hit them than quail, but of course they cannot be hunted with dogs. A week or so ago a party of us went twenty miles west of here to a small settlement known as Sorrento, where deer are very plentiful. One morning, while on a hunt, Rufus made a fine shot with a Winchester at a deer running fully 300 yards off. The deer fell, and Rufus rushed up to the prostrate form. The deer twas not dead, and R., instead of giving him another shot, being highly elated at the apparently successful shot, yelled for the rest of the party, some distance off, to come and see the deer. The shouts encouraged the deer to "put his best foot forward," and he arose and slowly walked away. Rufus tried to "surround" the deer instead of shooting him. The buzzards have probably feasted on that deer, as Rufus did not eatch him. He hasn't heard the last of "his deer" yet. Some weeks ago I found snipe in abundance on the borders of the St. Johns, and I shot the second rail I ever saw in Florida. Are they plenty in any part of the State?—Trum.

Ohio Rabbit Hunters.—In the vicinity of Chagrin Falls, O., during the past winter, the rabbits have been slaughtered by hundreds and thousands, and in the most barbarous manner. Men by the dozen have come from Cleveland with ferrets, returning in some instances with as high as one hundred rabbits caught in a single day. The Chagrin Falls Fish and Game Club propose that a portion, at least, of this business shall be broken up. They swore out warrants against a man named Westlake and another, who were fined five dollars each and costs, amounting in all to nineteen dollars. The club has the names of others who have violated the law by hunting with ferrets, and they propose to make arrests in each and every case where testimony sufficient to convict can be procured.

Decoying Geese to the Doorvard.—Algona, Ia., March 4.—I have twenty Canada geese that I keep for pets. They are in a yard conitaining about one-half acre, just south of my house. Going to the door just after breakfast this morning, I thought I heard a strange "honk." I went to my room and took down my gun, put in the shells, and looked out over the yard, where my geese were "honking" and flapping their wings. I soon saw the cause of the commotion. Four Canada geese on their way north flew directly over the yard. They saw my geese and came down within ten rods of my door. I shot one with each barrel, put in another shell, and one of the others came over the yard again, and I shot him.—J. G. S.

Manuscript vs. Type.—it is due to "Wells" to explain that in the manuscript of his "Trip to Texas," issue of March 16, he used the Latin expression idem sonans; and he disclaims all responsibility for the term which appeared in the print. In like manner "B.," in his very excellent "Familiar Letter" last week, wrote "sewage system of nature," which in the connection is more intelligible than "savage system," as printed.

Texas State Association .- McKinney, Tex., April 8.-Texas State Association.—McKinney, Tex., April 8.—Editor Forest and Stream: Our annual State meeting comes off at Austin May 29, 30 and 31, June 1 and 2, holding five days. The association proposes to give its influence to the protection of game and fish in every way that it possibly can. There will also be a shooting tournament for live pigeons, clay pigeons, and glass balls. All persons interested in the protection of game and fish are invited to meet with us at that time. Those who prefer to stand before the traps will have an opportunity to enjoy themselves in that way.—G. A. Foote, President Texas Sportsmen's Association.

A Sr. Paul, Minn., gun firm have a curious pair of deer horns. They are curled up, twisted down and generally distorted so as to be barely noticeable at a short distance.

Sea and River Hishing.

Therefore, honorable and worthy countrymen, let not the meanness of the word fish distaste you, for it will afford you as good gold as the mines of Potosi.—Capt. John Smith.

WALTON'S "COMPLEAT ANGLER."

WALTON'S "COMPLEAT ANGLER."

WE present to our readers the best list of the different editions of Walton's book ever published. It has been compiled by Mr. Thomas Satchell, of London, who has been for years engaged on a new edition of Westwood's "Bibliotheea Piscatoria," Mr. Satchell entered upon it as a labor of love, and it will be as near complete and correct as it is possible by indefatigable research to make it. He has purchased or borrowed every rare book that treated of angling which love or money could obtain, and the British Museum has been carefully searched for treasures which might have eluded others. The list of Walton's editions, which he kindly sends us in manuscript, shows how correfully the work has been done, and we print it, knowing that it will be of great interest, not only to the collector of different editions of Walton, but also to the general reader. The editions are as follows:

I have satisfied myself of the existence of these eighty-seven reprints, with one exception, by personal examination. There are others, but my attempts to obtain copies of them have failed. Many differ only in the name of the publishers or in the date. Those marked with a star have escaped the notice of Ellis, Pickering, Russell Smith, Bohn and Westwood (1864) and are here recorded for the first time. The most important of them is the Hawkins of 1791; the others are chiefly issues of the Hawkins-Rennie series.

Thos. Satchell.

Science versus Luck.—The Utica Herali says that "a trout-fishing contest was held in Palermo, N. Y., a few days ago, between two parties of ten each, respectively known as scientific and lucky fishermen. The contest lasted all day; the lucky men were successful, bringing home 103 trout, weighing 794 pounds. The other party obtained 32." [To us it matters little which side won. We regard all such contests as vulgarisms and contrary to the spirit of the angler. They are as coarse as eating matches, in which the victor is the one who nearest approaches a log. We often have accounts of "matches" sent us, but they seldom get as far as the printer. We only publish this one as a text for these remarks. We despise all fishing for count and the brag which follows. A well-kept fishing score is often of value as showing the increase or decrease of the fish during a term of years, but the angler derives pleasure from angling, and not from the number or value of his catch.]

NETTING BLACK BASS IN FLORIDA

Perhaps I can write something novel! The subject will be that of taking black bass with the seine in Florida lakes. As the law in that State prohibits the taking of shad after April I, and the fishermen who come from the North for the winter fishing leave the St. Johns River before that date, it almost cuts off the supply of fish in the quaint little town of Palatka to a great extent. But Mr. J. B. Thompson (who keeps the only fish market in the place) is "equal to the emergency," and gathering up his "traps," gave me a kind and characteristic Southern invitation to accompany him to Dunn's Lake, twenty miles distant up, and off the St. John's River. As it is evening, and I have just returned from a hard day's pull to Rice Creek and back, I reluctantly decline to go that night. But one day's idleness in P. brings news from Mr. T. that the trout (black bass) are striking in every direction. Just ten minutes later the steamer Georgia leaves for Crescent City on Dunn's Lake, and in that time I am on board.

Just before sunset, after winding through ten miles of dense forests which line the crooked but beautiful outlet of Dunn's Lake, called Dunn's Creek, a sudden opening ahead discloses one of the most beautiful scenes in this semi-tropical land of perpetual summer. Far to the south stretches the placid lake aimost to the horizon. Steaming out into the lake and glaucing into a deep, golden smilight cove, we can just make out the shape of a boat and three persons in the water near the shore. Capt. George Beach kindly heads his boat in that direction and blows his whistle, which brings Bobbie Davis, Mr. T,'s best man, to us in the row boat. I was too late to see a haul made that evening, so all hands return to camp.

And such a primitive camp one seldom sees; nothing but

Bobbie Davis, Mr. T.'s best man, to us in the row boat.

I was too late to see a haul made that evening, so all hands refurn to camp.

And such a primitive camp one seldom sees; nothing but palmetto fans laid on the ground, with blankets spread out under the dense foliage at the root of an enormous cypress. Mr. Thompson cooks the fish and bakes an enormous "corn dodger," Hopping it in the air and turning it most artistically. After a splendid supper of fried bream, and while stretching out by a cheerful fire, Mr. T. suddenly pricks up his ears and cautions us to hark! Ker chunk! Ker chunk! comes a peculiar sound of something jumping high out of and falling back into the now calm and moonlit lake. "Mullet," exclaims Bobbie. "I can't stand that," says Mr. T., and all lands are soon in the boat and carefully paddling off shore. The net is quickly run out, and then began one of the most novel methods off fishing, or rather driving the fish into the outstretched net. The driving is done by sculling the boat in a circle from one end of the net to the other, the sculler constantly splashing the water in the rear and a second person, scated in the middle of the boat, an oar in each hand, violently thumping up and down on the seats which, loudly echoed from the silent shore, reminding one of some peculiar Indian performance. When the net was drawn, about thirty nice mullets had gilled themselves.

Next morning found us astir befare sunrise, a light offshore breeze blowing and a fast rising mist on the water. "I wouldn't wade out there now for a hundred dollars," is Mr. Joc Thompson's first remark; "but as soon as the sun's up, it's all right." At sun-up, the net is laying silently on the water and all hands turn to and begin to haul, and as the net passes over the smooth bottom where the fish are bedding, there begins an occasional splashing, and as it gradually comes faster and nearer the shore, the water is lashed into a boiling pool. Now the fishermen haul heavy, and such a sight greeted my eyes at this moment, that

POMPANO AND CAVALLI.

POMPANO AND CAVALLI.

I HAVE read the article from "S. C. C." on the African pompano, the cavalli, etc., and it has opened a question to me which I thought settled in "Hallock's Gazetteer," as he gives a like description of the fish. I find in Norris' "American Angler's Book" an illustration of the "pompano or crevalli," in which there are seven spines in the first dorsal fin, and he speaks of the pompano and crevalli as one. In the U. S. Fish Commission Report for 1871-2, p. 825, it is given by Gill as "Trachynatus carotinus (Linn. Gill), the common pompano, or crevalli," Also Truchynatus vatus (Linn. Gunth.), the round pompano."

Mr. "S. C. C." has given us an interesting article on and my attention was called to the pompano just as I saw a fish in Quincy Market, Boston, which I judged to be one.

W. A. S.

[The misunderstanding is caused by the confusion of our

in Quincy Market, Boston, which I judged to be one.

W. A. S.

[The misunderstanding is caused by the confusion of our common names for fishes which are badly mixed. The facts are these: Norris copies his description of Truchynotus cavalinus of Linn., Gill, (the Bothroleanus pampanus of Cuvier) from Holbrook's Fishes of South Carolina. Now, if you will turn to your Fish Commission report you will see that Gill gives as the common names of this fish "pompano (Southern coast); cavalle or crevalle (South Carolina)." He also gives, on the same page, among the Carangdae, a different genus, the "Carangus hippos (Linn., Gill,) hores crevalle, etc. Hallock follows this nomenclature.

Now, it happens that our friend "S. C. C." lives in Georgia where the first-named fish is known entirely as "pompano" and is never called elsewhere "horse cavalli," and further the Carangus hippos of Linn., Gill, is the same fish which "S. C.," following De Kay's system, calls Carana defensor. The name of cavalle or crevalle being applied to two different portions of the coast. This is a very common occurrence and it often creates confusion. It will take namy generations to correct this and give us one name for one fish and one fish for one name.]

Muskalonge in Connecticut.—Hartford, Conn., April 17.—Last Saturday, in making haul for shad in Keency's Cove, in Glastenbury, they secured a fine muskalonge, which was sent to Sherman & Cooke, of Hartford. Weight 9% pounds. Dr. Hudson, the commissioner, pronounced it to be as above, and considered it to be a very fine specimen. Was not it a very strange place for such a fish? The night before they captured a very fine pickerel, with piece of line and tips attached to his jaw. Trout are not plenty, but very fine in flesh and flavor.—B.

A LAST YEAR'S SALMON.

LOWELL, Mass., April 24, 1880. Editor Forest and Stream:

Lowell, Mass., April 24, 1882.

The water was drawn out of the canals which supply the nills here, yesterday (Sunday) to search for the body of a man who was drowned on Friday night, and in addition to the body of the man there was found a large salmon in prime health apparently, but as slender as a Long Island pickerel. I had the opportunity to see the salmon, within two hours after it was taken, and found it to be apparently a female, from the shape of the head and jaw. It measured thirty-nine inches from point of nose to tip of till, and weighed only eleven pounds.

I have no doubt that it was a spent fish, of last year's run, on its way back to the ocean, as it must have come into the canal from the upper end, and as the weight of a fresh run salmon of that length should have been from 18 to 20 pounds. It could not have got into the canals on its way up-stream, as there are no means of access except through the water wheels, or up an impracticable waste weir, and it isyet too carly by at least a month or six weeks, for salmon to go up the Merrianc. This goes to corroborate the blennial theory, that the salmon of one year's run, spawning in November, spend one winter in the fresh water and return to the sea in the following spring. It froze sharply here last night, and I do not think the "trout opening" in New Hampshire will come off much before June.

BLACK BASS AND ENGLISH ANGLERS.

BLACK BASS AND ENGLISH ANGLERS.

IT is a pity that any of us should be troubled because some of our English cousins do not give the black bass the seal of their approval. It is a pity for the reason that the day is happily gone by when Americans must wait for England's judgment before forming a safe opinion, and for the reason that all Americans ought by this time to know that there could not by any possibility be produced in the United States, operfect a man, beast, bird or fish as would gain the unstinted praise of a certain class of Englishmen, for whom there can be nothing more than half good outside their own little island. The "most eminent sportsman of this or any other age or clime" happened to be an Englishman, and his opinion of what is now conceded to be the fluest game bird of the Northern and Eastern States was that it was not worth one's while to go out of one's way in pursuit of him. But in spite of this greatest sportsman's low esteem, the ruffed grouse lived and grew in the favor of American sportsmen, till now, from one end of the land to the other, they are mourning over his strange disappearance and bothering their heads to account for it. So too, though "R. N." and "Koorth" may be the most eminent anglers of this or any other age or clime, the black bass is quite likely to outlive their poor opinion and hold his place in the esteem of American anglers long after these English worthies are dead and forgotten. Let us continue to fish for him just as if nothing had happened.

R. E. R.

In your paper of the 20th inst., in my letter on above, your made a misprint. You make me say that flies of sandy" color are best. The word I used was "gandy lease note the error.

C. O. D. Please note the error.

Please note the error.

C. O. D.

The "Sounds" of Cod.—Codfish tongues and sounds are common articles in our great fish markets, and the popular idea that the latter are the bladders of the fish is not a correct one. Mr. Mattieu Williams thus describes them in Knowledge, in reply to another correspondent who has described "the swimming bladder, air bladder, or sound" as synonymous. Mr. Williams says: "There is a small mistake here, a misunderstanding of fishermen's technology that may mislead some readers. The same mistake occurs in anatomical textbooks. Dr. Wilson will readily understand the nature of the error by simply buying some "cod sounds" from any fishmonger. They are regular articles of separate commerce, salted by millions in Norway and exported in small barrels. He will find that the sound is not the air bladder, but the aorta, or chief blood vessel of the codfish, laid open, and with some of the larger branching vessels attached. This vessel, forming a shout membranous bag, is attached by its edges to each side of the under part of the spine of the fish, from which the Norse and Newfoundland tishermen tear or rip it when they split the fish for salting. Have a theory of my own concerning the ctymology of the word, viz., that it is of Scandinavian origin, like the commercial article, and is derived from *Sudor*, to sever or rip, from which we also derive our word assunder."

TROUT IN THE YELLOWSTONE PARK.—Mr. P. W. Norris, superintendent of the Yellowstone National Park, in his annual report quotes the following fish story from his journal of June 8: "Wishing a supply of trout for our men in the Gardiner canon, Rowland, Cutler and myself rode to Trout Lake, and after pacing around and sketching it, with brush and sods I slightly obstructed its infet near the mouth. Within eight minutes thereafter the boys had driven down so many trout that we had upon the bank all that were desired, and the obstruction was removed, allowing the water to run off, and in three minutes thereafter we counted out eighty-two of them, from ten to twenty-six inches in length. Of these forty-two of the larger ones, aggregating over 100 nounds, were retained for use, thirty of the smaller ones returned to the lake unharmed, and the remaining ten were, together with a fine supply of spawn, distributed in Long-fellow's and other adjacent ponds, which, although as large, and some of them apparently as favorable for tish as the lake, were wholly destitute of them." Mr. Norris adds that his men declared it was not a good morning for trout, but that the story is as big a one as he dares to publish.

A Black Bass with a Tin Tag.—Mr. John Rich, of Reading, Pa., caught a black bass last spring, which was kept during the summer in an aquarium. The fish attained the weight of several pounds, and was liberated early this season in the Schuylkill River with a tin tag attached, giving weight, date and place of its release. Anglers are requested to keep a lookout for the wanderer, and if captured to report the particulars.—Homo.

Lange Black Bass.—Capt. B. F. Cowdrey, of Bradford, Vt., caught the boss black bass in Fairlee Pond a few days ago. He was fishing for pickerel and to his surprise hooked and pulled up through the ice a 7½Hb, bass. The fish was a very large one for a small mouth bass, but the most extraordinary part is the cricking a bass through the ice at a time they are supposed to be dormant.—H. (Plymouth, N. H.).

Annin's Fishing Club.—Mr. James Annin, proprietor of the ponds and part of the famous creek at Caledonia, N. Y., has hit upon a plan of leasing the fishing on the streams which might well be followed by others. It limits the number of rods and amount of fish taken, and so prevents over fishing, while he agrees to keep the waters stocked. It seems such an excellent plan that we give the entire plan of what he calls "Annin's Fishing Club." The following rules and regulations will continue for three years or three fishing seasons. The fishing season commences April 1 and ends September 1. Tickets for a season's fishing \$20; half tickets \$10. A ticket will permit the holder to enjoy tweuty-two days fishing; half tickets cleven days fishing. Tickets transferrable only between members. No more than fifteen tickets will be sold for a season. A day to be considered as twelve hours fishing. No more than fitee punds of trout shall be taken from the stream by any member or ticket thekets will be sold for a season. A day to be considered as twelve hours fishing. No more than five pounds of trout shall be taken from the stream by any member or ticket holder in any one day. The proprietor agrees not to sell any fish to marketmen or restaurants, and that he will depost at least twenty thousand brook trout fry in the stream each and every year.

SPLIT BAMBOO RODS—The credit of the invention of the split bamboo fishing rod has been claimed by both England and America. The dispute over it has been long, and is not yet settled. The question is, however, a comparatively unimportant one. It is much more to the point to know which country now manufactures the best rods. That there is a growing demand abroad for rods of American manufacture would seem to indicate that this country is taking the lead. And this conclusion is strengthened by the fact that an American house has just been awarded the first prize for split bamboo salmon, pike and trout ily rods at the Edinburgh International Fisheries Exhibition.

Hauling the Big Seine.—The first haul of the big seine at Gloucester Fisheries, N. J., resulted in the taking of 500 shad, and herring and other fish by the wagon-load. "The Boss" says it augurs a good season, as this first catch has not been beat in numbers at these shores for some years. Why can not the black bass taken in the big nets at Gloucester with the shad be put back into the river again? They are not. It would repay some of your New Yorkers to go over to Philadelphia, witness the hauling of the big seine at Gloucester on the "high water slack," and try a planked shad served on the river shore.—Homo.

A Fishy Conundium. In 1858, after my second return from Brazil. I went to the coast of Maine, and passed a few days very pleasantly at Castine, which, you know, is near the mouth of the Penobscot. One morning, a splendid salmon was brought from the river. I bought it, had it packed in ice, and sent as a present to a gentleman in Philadelphia. He invited a party of friends to a salmon dinner, at which the following conundrum was proposed: "Why is this fish like one of the Waverly novels?" Of course they gave it up. The wag responded in African English: "Case its from de pen ob Scott."

Making Split Bamboo Rods,—Being an amateur rod-Making Splat Bamboo Rods.—Being an amateur rod-maker, and having made rods for my own use out of nearly all woods known, I would like a few points from some of your correspondents in regard to the preparing and making of a split-bamboo rod, i. e., the splitting and joining of it.— Constant Reader.

THE ATTENTION OF FISHCULTURISTS, and especially of trout breeders, is directed to an advertisement in another column, inviting proposals to furnish 5,000 or 10,000 yearling brook trout to stock a private preserve.

Mishculture.

THE AMERICAN FISHCULTURAL ASSOCIATION.

PROCEEDINGS OF ELEVENTH ANNUAL MEETING.

THE HABITS, ENDURANCE AND GROWTH OF CARP.

BY HUGH D. M'GOVERN.

Having mentioned something at our previous meeting on the habits and growth of earp, which was looked on by some of our theoretical fishenlurrist as a good fish story. I now wish to give them some more facts. Having lost so many carp last year by experimenting in ponds that were covered with ice, I this year confined myself to observation.

FIRST OBSERVATION.

I placed seven two-year-old carp in a small pond and was suc-ssful in getting 600 young carp, when I drew off my pond in

I placed seven two-year-old carp in a small pond and was successful in getting 600 young carp, when I drew off my pond in the month of November.

I was delighted at my success, and knowing that I had thirty-four of the same age and size in my large goldfish pond, I came to the conclusion that I would be able to "run opposition" to the U.S. Pish Commission in supplying the wants of the public. But alast when after three anxious days of expectation and hard labor my pond was drawn off, I found but thirty-one large carp in fine condition, and twenty-five young carp; three of my original thirty-four had disappeared in some mysterious manner. Thus ended my expected bonauza.

bonaiza.

I can account for the poor results in but one way, viz.: that the carp spawned after the goldish and the goldish eat up the spawn. I am well satisfied that those in the large pond were as well mated as those in the small pond. As it was, however, I would have been more successful had not my pond been so newly constructed that there was a lack of vegetation.

SECOND OBSERVATION.

been so newly constructed that there was a lack of vegetation.

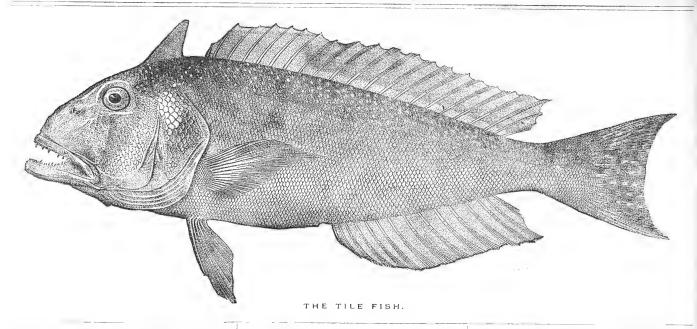

SECONO DESERVATION.

I placed six carp of the same age and size in one of my trout pends for the purpose of using them as scaveners, and, indeed, they did their work well. It is well known to all fish-culturists that if there is not a strong current of water passing through a pond in which you feed, some food will escape. The trout remain on the bottom; the food becomes fungus and fouls the water. There it will remain, for trout would scorn to go to the bottom for food. My notice was attracted to the fact that just as soon as I commenced to feed, two companies of fish could be seen, the trout on the top with their backs out of water, and the carp on the bottom with their backs out of water, and the carp on the bottom with their backs cours of water, and the carp on the foot my the princes of the ponds.

In this way I discovered that carp will eat chopped fish with a relish, for my trout are never fed on anything but the young of the goldfish—discolored ones—commonly known as silver fish. My early have no other food, and it is settled in my mind that they liked it, and that it agreed with them.

I never saw fish os fat, and there are gentlemen in Brooklyn who had the pleasure of dining on some of them, who will verify my testimony in this particular. None of the six carp showed at any time the slightest sign of spawning.

During the first week of November, I took them from the

pend, and they weighed from 5 to 73 fbs. each. Three of them I killed for my epicurean friends, and the remaining three I rolled up in a wet bag. I started with them for Brooklyn at 3 P. M., and on my way met Mr. James Ridgeway, counselor at law, and Messrs, Page and McLain, of the Eagle, who carefully examined them. I gave the dead ones to my friends, and placed the living ones on the roof of my house, with two wet bags over and beneath them. There they remained all night. Next day at 2 P. M. I took one of them to the Eagle office, and there showed him still alive and in good condition, but as the tender-hearted Kinsella thought some of Mr. Bergh; men ought to be sent for, I made my escape and went to New York to Messrs. Middleton & Carman's tish establishment in Pulton Market. These gentlemen were more consistent, and instead of calling on Mr. Bergh; they proposed to give the carp a drink after his long journey. That suited us all, and for the first time in twenty-four hours. Mr. Carp was in his native element, and it is needless to say that he enjoyed it.

The New York Sun noted the fact that of the fish distributed by the United States Commission, this was the largest cup yet found in our water. It turned the scales at 75 fbs.

The other two still remained in the wet bags in Brooklyn, and at 9:30 P. M. I poured a pail of water over them. Next morning I took them to Chief Engineer John Y. Culyer's house on the borders of Prospect Park, showed them to him and received his permission to place them in one of the lakes in the drove near to the water, and gave them to an attache, who in my presence deposited them alive and in good condition in the water of our beautiful Brooklyn Park. This occurred at \$3.90 A. M., so that for \$3.94 hours the fish were out of water. This is a considerably longer time for the carp to be out of water than that mentioned in my previous paner. If I remain in the fishculture business, and am spared for another year I would say, that persons owning trout ponds could do nothing better th

THE RAINBOW TROUT.

BY JAMES ANNIN, JR.

N bringing this subject before you, gentlemen, I know how unable I am to handle it in a proper manner, and have a fear that I may be considered liable to reproach for my in-

In bringing this subject before you, gentlemen, 1 know now unable I am to handle it in a proper manner, and have a fear that I may be considered liable to reproach for my incompetency.

Every article upon the rainbow trout that I remember to have seen has been greatly inits favor and loudly in its praise. It think that something is to be said in the negative, but don't wish it understood that I take decided grounds against them, but think that there are a few facts and surmises worthy of your attention.

The advantages claimed for the mountain or rainbow trout are gameness, rapid growth, hardiness, adaptability to waters that will hardly support the book trout, etc. Now as to their game qualities, they certainly are one of our gamest fish known, and are quicker than our Eastern brook trout, requiring all your attention after they take fly; but I have been told by a gentleman who has taken in our Eastern waters rainbow trout which weighed a pound each, that he thought after their first two or three rushes they tried out quicker than our native trout. As to their rapid growth it must be concelled that they grow faster than our native brook trout.

Are they a hardy fish? Yes. Decidedly so. A person has no trouble in raising them; they don't refuse food, pine away and die as many of the brook trout will do in confinement. but they will eat often and in great quantities, and will sometime take a bite out of their neighbor, as a pond of them will show to be a fact, by many marks, sexus, loss of parto a fin. etc. Adaptability to waters that will hardly support our brook trout is the best thing, I think, that can be said of them, for if such waters are stocked with them, we will have them in their proper place, their mission will be fulfilled, and people in general will then consider them a great acquisition.

What I consider all wrong is that they are turned into good trout streams before the results can be told. We would not consider it any advantage if bass or pickerel were put into that good trout stream or pond. W

make a good catch. He takes it into his head that he will put into this stream the rainbow trout, and carries out his plans. After a year or two he begins catching the new comers, of good fair size, and he is astonished to see how they have grown. He has lots of fun with them, they are so very gamy, but if the weather is at all warm, he will find on arrival home that the new fish are begining to be quite soft, while the native fish are hard. What I say about their becoming soft I have learned partly by experience and partly by what several fishermen have told me. One gentleman wrote that they were like dried herrings when he got home. Our gentleman don't think much of this, and a year or so more passes along when he invites a friend out to his preserve on the opening day of brook trout ishing, and they have plenty of sport, lish are plenty and perfectly willing to bite, but, concentration of the stream, as the law on them is not off for a month or more yet! Our friend works hard and long for a string of brook trout such as he could formerly take in a short time before introducing the rainbows. Now, gentlemen, if this suppositious case proves true, is it advisable to put them into your the trout streams? It is proving itself to be true as fast as possible in one of the best trout streams in the State of New York, that has been stocked some four years, I believe, with rainbow trout.

New York, that has been stocked some four years, I believe, with rainbow trout.

A word to fishculturists. Will it pay to make any great outlay, until we know that the rainbow trout are a profitable fish? And another question is, are they a good market fish? They certainly are not if they become soft very soon after coming from the water. What will the market price beg Will the fly-fisherman show his basket of mountain trout with the same pride, as he did when filled with the native brook trout, are also questions to be answered.

I know one fisherman that will not put one of them into his basket, but throws all of them away, and it has seemed to me that it will do no harm to consider well the questions here raised before we stock our brooks with a fish which may exterminate our native species and not prove to be so valuable in the end.

THE PRESIDENT—Mr. Aumin has opened a question which it may be worth our while to consider. Perhaps it will be well to learn more of this fish before filling our streams with it. I. Mr. Mather give us his opinion on it.

Mr. MATHER—I have had no personal experience with the rainbow, or, as it is sometimes called, the California mountain trout, and I am of the opinion of Mr. Page that it will be well to go slow until we know more. The fish came in with a hurral and everybody seems to want it. It grows fast and unay supplant our native trout entirely, and to my liting the latter is the best fish and the handsonest of the two. Imported species often thrive and drive out native ones, witness the so-called Norway rat, which has supplanted the native none until the latter is extinct on the seacoast, and even in parts of the West. An imported species often grows faster in its new home than it did in its original one, as witness the 'elemant carp in America. I am not prepared to say much of the ruin-bow trout! I have watched it with interest in ponds, but do not know how it will agree in streams with the native. If it grows faster, it will get all the food and the native will suffer some where the native will suffer some how howe the curse of sparrows upon us, brought about by enthusiastic introducers of foreign species, and with this example of mistaken benevolence before us, I think we should be cautious.

Mr. Blackmont—I do not yet know what value the ratinbow. Mr. Blackmont—I do not yet know what value the rainbow. Mr. Blackmont—I do not yet know what value the rainbow. Mr. Blackmont—I do not yet know what value the rainbow. Mr. Blackmont—I do not yet know what value the rainbow. Mr. Blackmont—I do not yet know what value the rainbow. Mr. Blackmont—I do not yet know what value the rainbow. Mr. Blackmont—I do not yet know what value the rainbow. Mr. Blackmont—I do not yet know what value the rainbow.

continusation introducers of foreign species, and with this example of mistaken benevolence before us, I think we should
be cautious.

Mr. Blackfordd—I do not yet know what value the rainbow
trout will bear in the market. When it first comes in it will
sell readily to those desiring to experiment. After that it will
rest on its merits. I have no fear that it will supplant the
footnalis on the table of the epicher. Mr. B. B. Redding, Fish
Commissioner of California, writes me that the Humboldt
River trout, Salmo darkit, is much superior to the S. frider,
or rainbow trout. The Californians are now introducing our
feastern brook trout into their streams, and are loud in their
praises of it.

Mr. PHILLIPS—Might the rainbow trout not follow the rule
that all the salmonide of the Pacific coast are inferior to those
of the Atlantic coast? I believe that I have understood Mr.
Blackford to assert that the Pacific salmon are inferior to ours.
Mr. BLACKFORD—They are. They may grow faster than our
Eastern coast fishes, but Californian salmon are not so good.
When they first began to send them here they sold car loads
of them at forty to fifty cents per pound. Now it is difficult
sell a small lot at thirty cents. I notice another market
man here, one who has had experience with these fish, and
would ask Mr. Middleton what his opinion is.
Mr. MIDDLETON—I agree with Mr. Blackford entirely. The
salmon of the Pacific are inferior and do not sell well here,
now.
Mrs. Lewis—I think all fish should be judged by the color

Mrs. Lewis—I think all fish should be judged by the ares. LEWIS-1 times an est should be judged by the color of its skin. The dark brook trout is coarser and of fuller fibre, and where this is the case it is the best. I think the rainbow trout brought East would be dust. California salmon have not gained the high reputation in the markets of Europe that the Salmo salar has. It is not considered a good

salmon.

Mr. Annin-I have eaten the rainbow trout. Lieutenan Mansfield, of the U.S. Navy, has caught them in the West

and in my stream, at Caledonia, N. Y. One of the party went on the lower end of the stream to take rainbow trout and caught many. He saved the larger ones in the well of the boat and had them cooked in the morning. We all ate of them and it was the unanimous verdict that they were inferior. Lieut. Mansfeld said that they tasted like black bass from warm and middy waters. Last summer I cooked one which was good. It had red flesh, the only one of the species that I ever saw with red flesh. Some Rochester gentlemen own the lower preserve on our stream, and they have said that they would give a hundred dollars if there was not a rainbow trout in it.

Min. Weers—We need all the trout we can get in Pennsyllania, but the proper thing to do is to get them into the right places. Rainbow trout should never be put into good streams where the native trout will thrive. Those who handle them should be certain that they are not making a mistake, and should have a correct knowledge of the habits and merits of the fish before distributing them too widely.

The meeting then adjourned until the following day.

THE TILE FISH.

LOPHOLATILUS CHAMÆLEONTICEPS-GOODE AND BEAN.

THIS fish was first discovered in 1870 by Capt. W. H. Kirby, of Gloucester, Mass, who forwarded a specimen to the U.S. National Museum, where it was described and named by Prof. G. Brown Goode and Dr. Tayleton H. Bean. Capt. Kirby took about five hundred pounds of this fish on a codifish trawl, at a depth of eighty-four fathoms, eighty miles south of Noman's Land. The largest one of his catch weighed litty pounds.

ounds. Land. The largest one of his cattern weighed into pounds.

Messrs, Goode and Bean say that the species appears to be generically distinct from the already described species of the family Latilide of Gill. It is related by its few-rayed vertical fins and other characters, to the genus Latilia as restricted by Gill, but is distinguished by the presence of a large adipose appendage upon the mpe, resembling the adipose fin of the Salmonide, and by a fleshy prelonzation upon each side of the labial fold extending backward beyond the angle of the mouth.

appendage upon the nape, resembling the aupose in or une Salmonidae, and by a fleshy profonzation upon each side of the labial fold extending backward beyond the angle of the mouth.

Several of these fishes have been taken and have been eaten and pronounced excellent, but no number has been sent to market. In our issue of March 30, will be found an account of the great number of dead fish which were found floating in the Adantic between the Grand Banks and Barnegat, N. J. Whether the miles of dead fish which half a dozen vessels, whose course was wide apart, report as visible, were all of this species is impossible to say. Prof. Baird thought that they were numerous, at least, among the dead fish, and afterward the specimen sent him proved his surmise correct, for they were all "tille" fish.

Strolling down to Fulton Market one day near the close of last week we saw a large fish hanging above Blackford's stand and a crowd of people surveying it. Upon neuring it we saw that it was the much talked of tile fish, a handsome yellow-flecked specimen of fifty pounds weight. This fish was pleked up on Thursday, April 20, by the schooner Herald of the Morning, Captain Levi N. McLean, inlat. 37, 28, long. 74, about eighty-live railes off the capes of Virginia. When seen it was floating on its back and struggling, and was brought on board with a gaff and lived for two hours on the deck.

The name "tile fish" is one designed by the scientists who described for the use of the fishermen, and those who caunot handle its full name. It will be seen that it is a shortening of its generic name. What has caused the excessive mortality in this fish is at present unknown, but if all the dead fish reported to have been seen were of this species, they must exist in immense numbers, and if not exterminated, would be well worth fishing for.

FISHERY EXHIBITION IN LONDON NEXT YEAR.

FISHERY EXHIBITION IN LONDON NEXT YEAR.

O UR English friends are already stirring in the matter of inducing the United States to take part in the Fishery Exhibit of 1883, and we wish them success in it. There is no doubt of the advantages to be derived by our fishermen and others interested by an exhibition of our fishery resources in London. As the case stands it will require a special appropriation by Congress to enable our country to be represented, as the Commissioner of Fisheries has no tunds which he can use for this purpose. If, however, Minister Lowell moves in the matter it may be accomplished. Advices by cable from London, April 20, say: A meeting was held at the Mausion House to-day in furtherance of the proposed fisheries exhibition at London in 1883. Mr. Lowell, the American Minister said that he had grounds for believing that his government would participate. He had, he said, this morning transmitted by eable to Washington the formal invitation.

The Prince of Wales has interested himself in this matter, as may be seen by the following which was cabled to the New York Herald on the 20th:

At an influential meeting held at Willis' Rooms, London, the Prince of Wales presided, and thus briefly stated the objects of the exhibition: "Ladies and gentlemon, the report of the Duke of Richmond has brought before your notice sauent nonts and important statistics in connection with this

proposed great International Fisheries Exhibition. You are all aware what a great success the one held at Berlin was, and I am inclined to think that as that exhibition was so great a success, and as the population of Berlin exceeds only by a little 1,100,000, an exhibition held in this great metropolis, where we number nearly five million inhabitants, has every chance of being successful in all respects. We are also very anxious that foreign countries should co-operate with us, and we look especially to America on all important matters with reference to fishculture, whether for inland or sea fish. I am told that the United States Commissioners reared in 1878 no less than 15,700,600 shad alone, and the United States government voted \$20,000 toward the expense of American exhibits at Berlin. I therefore hope that for our exhibition next year they will also be very liberal to us. The statistics which have been given here with regard to the enormous amount of fish taken and delivered in our great narkets are. I may say, considerably under the mark, as I am told and I believe I am correct in stating, that it amounts very nearly to a million tons of fish amountly taken in British waters by our fishermen, and that last year nearly 154,000 ons were delivered in Billinesgafe Market. The value of the salmon fisheries in England, as some of you may be already aware, amounts to £800,000 a year. Of course in the great exhibitions of 1851 and 1862, and in the international exhibitions and those who had the advantage of seeing the remarkably well arranged exhibition at Norwich last year, will have formed some idea of what this exhibition will be in London. Is will, however, be on a very much larger scale. I may mention, also that it is intended not only to show everything connected with lifeboats and life saving apparatus of every kind. There is another point which has been alluded to in the report—that it is to be hoped this exhibition will not be a mere show, but that some good may accrue from it, since international discu

COL. GEO. F. AKERS.—Tennessee has an able and philanthropic fish commissioner in the person of Col. G. F. Akers, who has done much work at his own expense of time and money. Most fish commissioners give their time cheerfully, but not all of them would give money also. The penurious Legislature of Tennessee is so short-sighted that it does not see that it would benefit the people of the State to increase the food supply, or, if it does not see it, is willing that Col. Akers should bear the burden. The louisville Convier-Journal recently said: The propagation of fish is becoming an important industry in Tennessee. All the best and most productive foreign varieties have been introduced into the State within the past five years, and the streams are now plentifully supplied. The credit due for this satisfactory condition of the State's hishing interests belongs to Col. George F. Akers, the untiring fish commissioner. The Legislature having refused to make an appropriation for the purpose, Col. Akers, fortunately being a wealthy man, has given much of his time and money in building up this important industry. He has induced farmers and others all over the State to establish carp ponds, and where they were unable to do so he has generously and unostentatiously aided them. Through him many of the mountain streams and spirings have been stocked with all the game varieties of fish. In this respect he has been a greater friend to the State than the State has been to itself. He has induced an spiring a love in the Poole for the cultivation of fish, and has done more to prevent the wholesale destruction of fish by the seine than all other men combined.

FISHCULTURE IN MAINE.—Tuesday, April 10.—1 enjoyed the pleasure of a journey to Enfield, thirty-five miles above Bangor, on the E. and N. A. R. R., in company with Hon. E. M. Stillwell, of the Game and Fish Commission of Maine; J. T. Leavitt, Esq., of Bangor, general ticket agent of the E. and N. A. R. R., with other gentlemen, where we visited the new salmon hatchery at that place. Over 200,000 land-locked salmon and Penobscot River sulmon eggs on trays are in the process of hatching in this house, to be distributed in different parts of Maine. The hatchery is under the direction of Mr. A. J. Darling, and is situated on Cold Stream waters, a short distance below the neautiful sheet of water known as Cold Stream Pond. This pond, or lake, is about seven miles long and three miles wide, skirted by forests, hills and mountains. For the past five years from ten to twenty thousand land-locked salmon have annually been planted in that water. The native fish are lake trout, spotted trout and white perch.—J. F. S.

THE EDINBURGH FISHERIES EXHIBITION.—On the 15th inst., Mr. George Shepard Page sailed from New York to spend some time in Europe. His first point of interest will be the fisheries exhibition now in progress at Edinburgh. Mr. Page took with him a number of live black bass, which after the close of the exhibition will be presented to the Duke of Sutherland. The fish are a present from Mr. S. L. M. Barlow, and came from Maj. Ferguson, Commissioner of Fisheries of Maryland, who bred them in Druid Hill Park, Baltimore. Mr. Page also had in charge for Mr. E. G. Blackford, dead specimens of our market fishes, such as shad, striped bass, red snappers, pompano and brook trout.

BLUE CARP.—Mr. Geo. Eckardt, Jr., recently had a score of the new variety of carp which are called in Germany the blue carp. It is a form but little known even in that country, and we will look up the literature of the subject, and give our readers what is known of them. Mr. Eckardt received them in good order, and they are now in his ponds near Cincinnati.

THE TEXAS FISH COMMISSION.—The Governor of Texas has appointed Mr. R. R. Robertson, of Austin, as Commissioner of Fisheries, in place of Mr. J. H. Dinkins, deceased.

GREAT SNAKES!—The Accomack, Va., Virginian tells this story with a straight face: The topic of conversation in Franklin county for the last week has been the death of a dog from the most singular cause. Edward Ling, of that place, had a valuable dog, that several weeks ago showed symptoms of a disease that baffled the skill of every one in that vicinity. The sides of the dog became distended and almost as hard as stone. The animal refused food, the swelling in his sides increased, and in a week's time he died. The case created so much interest that the owner of the dog had a post mortem examination, at which there was found in the dog's stomach seven good sized snakes, the largest being over two feet in length. The snakes had been feeding on the dog's heart, a part of which was entirely enter away. The examination was made in the presence of some gentlemen of Franklin City, the story is vouched for by them. An old gentleman of this place informs us that it is generally believed in some parts of the poinisula that if a dog is bitten by a water snake, snakes will breed in the animal, and that, perlaps, the death of the dog at Franklin City was caused by a bite of a water snake. If such was the case what has here-tofore been a superstation becomes a reality.

THE NEW YORK DOG SHOW.

THE NEW YORK DOG SHOW.

THE Westminster Kennel Club are entitled to great credit for the very satisfactory exhibition of sporting and nosporting gogs, given by them last week. In everything pertaining to the accomplishment of the end sought by the club in naugurating and continuing their annual shows the improvement of the different breeds of dogs, and the creation of a love for them among the masses, this show stands pre-eminent for its unbounded success. It is true that the great improvement in the animals exhibited, and the increased interest manifested by the public is due to the influence of provious shows among which these given by the club must be great interest manifested by the throngs of visitors to the exhibition, and to hear their expressions of delight, as they intelligently commented upon the points of the animals shown. The old stagers were not alone in giving utterance to words of wisdous, for in many instances we heard from rosy lips words of praise or censure, that would have done to discredit to the wisset veteran present. This wide-spread knowledge among the multitude was indeed a revelation to us and a most convincing proof that bench shows are assuredly accomplishing that mission the attendance was not what we had hoped to see, it gives us pleasure to amounce that the receipts more than cover the expenses. As we stated hist week, the quality of the animals exhibited has not been surpassed at any previous show hold by the club, and in the arrangement of the stalls and benches there was a great improvement over any show that we have attended. Especially noticeable for the fine effect produced were the wide open benches for the large dogs, which extended entirely around the large hall, giving the spectator an uninterrupted view of the noble creatures who occupied them. The care bestowed upon th

THE DOGS.

MASTIFFS.—The champion prize for dogs was awarded to Gurth, who is a splendid a mimal. Leah easily carried off the honors in the bitch class. The open class for dogs brought out some good ones. Zuln (wrongly entered as Tulu) was by far the best mastiff in the show, and is truly a majestic animal. Warwick is also a grand one. The animal has a first-class head, but was shown in very poor condition. In the bitch class we should have reversed the positions of Dido and Tiggress. Dido has a trifle the best head and shoulders, but Tigress is greatly her superior in back and hind-quarters. The pupples were rather an ordinary lot; they were rightly placed.

St. Bernange.

Inc puppes were rather an ordinary lot; they were rightly placed.

St. Bernards.—There were some grand animals in these classes. Monk, the winner in the rough-coated open class, is the best one, and Priam comes next, both are magnificent and in capital condition. Bayard, Jr., who won second, has a splendid head, but is in very poor condition. The remainder were very well placed. There was a grand lot of puppies, and it was a hard task to decide which were the best.

Berghunde.—These are new aspirants for fame, and as there is no standard to judge them by, we presume that nearly the same points should be given as for the St. Bernards, who are responsible for at least a portion of their looks.

NEWFOUNDLANDS.—One of the most attractive features of the show was the display of these noble animals. There were some very fine ones present, who were well placed.

GREYHOUNDS.—These were very good, although some of the best ones were not in good condition. They were very well judged.

DEERHOUNDS.—Fly II. who was first we did not like years.

judged.

DERHOUNDS.—Fly II., who won first, we did not like near so well as Frida, the winner of second. She is one of the best built and best muscled ones that we ever saw; her lofu and quarters are wonderful; she is well built for speed, and has the size that is requisite to pull down her game. Many thought that Toby should have been first, but we do not consider him so good as Frida. He has more size, but is not so well put together, although there is not much to choose between them.

They make a splendid couple, and we would go a long way to see them slipped at a deer.

see them slipped at a deer.

POINTER CLASSES.—In the champion class for large pointers Faust was decidedly the best and secured the ribbon. His only competitor, Rap, was not so fat as last year and looked all the better for it, although his coat was not in good condition. Neither of the two bitches in this class were up to the mark. Grace, the winner, has arrived at the three score and ten of canine years, and her numerous family cares have not added to her comeliness; still she is a very good bitch and deserved the pride of place. Dolly, although a well put together one, has not so good a head as Grace and her front teeth are gone. She is heavy in whelp, which detracted somewhat from her appearance.

has not so good a head as Grace and her front teeth are gone. She is heavy in whelp, which detracted somewhat from her appearance.

In the open class for large pointer dogs Croxteth was an easy winner. We never saw him looking so well. Tally Ho, who was placed second, is also a good one, he is by Snapshot and resembles him more than any that we have seen. There was not much to choose between him and Lord Dufferin, who won third. The others were well placed, except that Mingo was unnoticed; he is a very good one, well built and powerfully muscled, although a little too long coupled. We thought him well worthy an he.

The bitch class was a good one, and contained several very fine animals. Lassie was perhaps the best, although there was not much to choose between her and Bonnie Kate, who should have had second instead of the he, which she received. Minie, who won second, is also a good one, and will, when mature, be a hard one to beat. We also thought well of Nan, who is well built, and looks a good one. Snowlake is of very good form, but threaty and out of condition.

In the small champion class Donald was far alread of his competitors. He is every inch a pointer, and was shown in capital condition. Snipe is also a good one, but was too fat to show to advantage. Drake, with his grand head, was looking well, and were his loin and quarters as good as his chest and shoulders, he would be invincible.

The bitch class brought out four good ones, but how anyone, especially so good a judge as Capt. Wise, could place even so good a bitch as Duchess over the incomparable flue, we fail to comprehend. Rue was in splendid condition and as hard as anils, and is, perhaps, as perfect an animala scan be produced, while Duchess, though she has a capital neck, body and legs, is lacking in both head and stern, and was shown too fat, and was a trifle soft.

The open class for small dogs contained several very fair animals, but there was nothing extra nice, and the awards were fairly made, except that we thought Tim deserved more th

were fairly made, except that we thought 11m deserved more than he got.

The bitches were a very good lot. Lady Dufferin, who was awarded first, has improved since last year, and is a capital one with lots of quality, and was shown in first-rate condition. Little Nell should have been placed second, as she is an exceedingly well-formed one. Beliona, who secured the place, is also a rare good one, but was not in good condition. Grace II, should have had one, if not two, more letters, as she is of good form.

The dog puppy class was nothing extra, except the two winners, who will undoubtedly make good ones. Many of the others are quite young, and at just the age when they look worst.

worst.

The bitch class was much better, and several of the animals shown were very good ones. Lalla Rookh, who captured first, is a sweet little thing, and, should nothing befal her, will be heard from again. Vie, who was unnoticed, was nearly as good, and should have had second. Hazel Kirke was also a good one. The others were well placed, except that we thought Nina well deserved an he. She and Vie are of the stamp that often turn out good ones.

thought Nina well deserved an he. She and Vic are of the stamp that often turn out good ones.

English Setters,—There were five good ones in the champion dog class. Thunder added one more to his long list of victories. He is a very hard dog to beat. He was shown in the very best of condition, although he was a trifle too fat. Emperor Fred and Coin were also in good condition, except that both have been hunted the past season and were lacking in feather. Plantaganet was not looking quite so well as when at Pittsburg. He is young yet for the champion class, but if he improves as he should we shall look to see him achieve the highest honor, as we think him to be a rare good one. Don Juan is also a capital little dog of good form and grand coat. with a great deal of quality.

The bitch class brought out eight, only one of the entries being absent. Petrel II. was very properly given the pride of place. She is not only a very handsone animal, but a well put together one, and we think her to be as good a Laverack bitch as we have in the country. Old Petrel, notwithstanding her many years, was looking very well. Lizzie Lee was in good form. She is very handsome, and her owner may well be preud of her. Clip and Pearl carry their years very well. We remember them both as being at the first New York show. We then took quite a fancy to Pearl, and still think well of her.

The open class for imported English setter dogs was a regu-

We remember them both as being at the first New York show. We then took quite a fancy to Pearl, and still think well of her.

The open class for imported English setter dogs was a regular surprise party, at least so far as first was concerned. The knowing ones had all booked Foreman as sure of the place, but the winner turned up in Frince Taxis, who is a blue belton of not very prepossessing appearance, as he is scarcely more than a puppy and has quite a curly coat. Upon a closer examination we found him to be of capital form and giving promise, when fully developed, of turning out a first class one; but we did not think him quite the equal of Foreman, who who is of nearly the same type, was placed second, and koll who is dittee older, is more fully mattered and a very well put together animal. He was placed second, and koll who is of nearly the same type, was placed third. Prince well deserved his three letters, and we thought that bashing wore shuld have received the same. Chalkley D. was also wore shuld have received the same. Chalkley D. was also wore shuld have received the same. Chalkley D. was also wore shuld have received notice. We were surprised in the field is of the best grand, all but four of the thirteen present receiving well-merited notice. We were surprised that Fetch I. He was unnoticed, as we fully expected her to show of mainty of the same type and the second in the field have been found how each exceived and fault could have been found how each exceived and a fault could have been found her each exceived and a fault could have been found how was placed second it also a very fine one. Innu. May and Lasso' flowrie, both capital bitches, were sadly out of condition. Blue Belle belt with the same sade of the show well, as so is heavy in whelp and much too fat. She is a line animal of great beauty when at her best. This class was one of the gens of the show and we believe that so good a lot all through were never before brought into the ring.

class was one of the gems of the show, and we believe musus so good a lot all through were never before brought into the ring.

NATIVE ENGLISH SETTERS.—After the weeding out, there were about twenty good ones remaining. There was no difficulty in selecting first, as Pairy Prince was decidedly the best. He has improved since we saw him at Pittsburg, and we are still inclined to predict a brilliant future for him. Hacket, who won second, is a good dog, and was very well shown. London was placed third, and was well worthy the honor. There were seven whe's given in this class, and there were three more that we considered fully their equals. Afton, although much too fat, is one of the best formed animals that we have ever seen. St. Elmo II. and St. Elmo III, were also well worthy of notice. The bitches were fully equal to the dogs. Blue Belle, who won first, we did not like so well as Liddersdale, who was placed second. Crook, who received third, was well up to these two. Dolly Day, unnoticed, should have had a vhc, as she is a very good one. Maida was in splendid condition, and fairly carried her honors.

The puppies were only fair, although there were sone good ones among them. Jester was awarded first. He is a nobel booking animal, and when grown, will undoubtedly he very handsome. Folderol we liked exceedingly, and Emperor

Fred, his sire, will have to produce but few such ones to make his reputation in the stud first-class. General, Arthur we also liked. Chester, we thought, deserved better than a single letter, as he is very well formed.

The bitches were well placed, except that Princess Vera, who was unnoticed, should have had an he, at least. Pembina was deservedly given first. Floss, who won second, had not much the best of Lady Faye and Blanche Lewis, who were each given a vhc. Taken as a whole, the English setters were a grand lot, and we have no lesistation in pronouncing them superior in quality to any collection that we have ever seen.

each given a vhc. Taken as a whole, the English setters were a grand lot, and we have no lesistation in pronouncing them superior in quality to any collection that we have over seen.

BLACK AND TAN SETTERS.—Bob was awarded the prize in the champion class. He was very well shown and is a very good animal. Old Grouse shows his years and was not in first-class condition. Turk is a grand dog of capital form, and quite as good as the winner.

In the bitch class Lady Rapid was justly entitled to the award, although if Lady Gordon had been in proper condition she would undoubtedly have carried off the hoior, but she was grossly fat and had to stand seide.

The open dog class, although not large, contained some very good animals. Filot, who only received a vhc, was by far the best of the lot. Indeed, we consider him to be the best Gordon in the country, and were greatly surprised that his superiority was not acknowledged. He is of the true type and proper markings, and is a thorough Gordon from the end of his nose to the hip of his tail. He is a trifle slack in the loin, but will probably improve as he gets older.

This class was for black and tans. Judged by the standard for color alone, Pilot was fully the equal of any, and his superior form should have carried him through. When the special class XX—which was for the best Gordon dog—was called for, Filot was subthich was for the best Gordon dog—was called for, Pilot was called on the ground that he had been beaten in the open class and was not eligible. Mr. Dixon, his owner, protested against this decision, and the committee requested Mr. J. G. Higgins, of Delaware City, Del, and Mr. A. E. Godeffroy, of New York, to decide upon the question. The dogs were brought into the ring and carefully examined by the gentlemen, who unlesitatingly awarded the prize to Pilot.

The bitches were well placed, although had the class rejudged. The purples were not numerous, but so good that every on received a ribbon.

The classification of the Gordons and black and tans is decidedly

well, and we think him to be the occupied. And we think him to be the occupied that he was a trifle too fat.

The bitches were all good. Rose was decidedly the best, but was only on exhibition. Norcen, who secured the pride of place, is a very nice one, of good form and color. Norah O'Moore and Gussic are also first-class and were well shown. In the open dog class Minrod was placed first, Spy second, and Zig third. No less than a dozen ribbons were deservedly distributed among the remainder. This was a very good class and we thought very well judged.

The bitch class did not display so much quality, although there were several capital ones present. Meg, who secured only a vhc, bas the best head of the lot, and was every way as good as the winner. Aside from this the awards were well bestowed.

In the dog puppy class quite a laughable mistake occurred. Entry No. 625 was a litter of puppies, and a bitch was taken into the ring instead of a dog and awarded the prize, and the mistake was not dissovered until the specials were judged class, and quite a number of ribbons were given.

The bitch puppies were also very good, nearly every one.

The bitch pupples were also very good, nearly every one receiving notice. Venture was deserving of the three letters instead of only one, as she is a prime one, and if nothing befalls her when matured she will make it warm for the best

The bitch pupples were also very good, nearly every one receiving notice. Venture was deserving of the three letters instead of only one, as she is a prime one, and if nothing befalls her when matured she will make it warm for the best of them.

The Irish classes were capital and attracted much attention from all who visited the show.

Intsh Water Spankers.—This was the largest class that has has ever been shown, and as good as it was large. Champion Barney was in capital condition and was justly placed first. Irish chief, a son of his, took second place; he gives promise of showing up grandly when mature. Several of the others are not fully developed and will undoubtedly be much better another year.

Stankers (other than black) over 28 pounds.—This class was well judged. Nero, the winner of first, is a trifle too long in head to suit us, but otherwise he is first-class. We also took quite a fancy for Bob, who is well put together.

Cocker Spankers (other than black) under 28 pounds.—Trincess, who won at Pittsburg, again came to the front. She is a beauty, and only lacks a little more bone to be perfect. Firt II, we liked better for second place than Alma, whose head is a trifle too dome-shaped for acocker. Aside from this, he is a capital one.

BLACK Spankers over 28 POUNDS.—Benedict easily captured first although not in first-rate condition, and Black Frince was properly placed second. The Horneil Spaniel Club captured overy ribbon that was awarded in this class. In the class under 28 pounds Black Bess was first, also winner of the American Spaniel Club special. Beatrice was second; both are capital bitches. Every entry was noticed except of the American Spaniel Club special is a beauty; she also won the American Cocker Spaniel Club's special for the best puppy in the class.

FOXHOUNDS.—In the champion class Roxey came in first. In the open class her son, Forrester II, should have been placed first instead of second, as he has better shoulders than Coustgand, who secured the place. Both are good ones with not

the best, and easily won first. Tartar was second, but not so well-formed as Prosper, who was placed third. We imagine that his size was against him, as he is too large, although of good form. The bitches were well placed, except that Gipsy, although a very pretty one, should have changed places with Sally, who is as good and possessed of a little more bone. We also liked Flighty, and think that she deserved a vhc. The puppies were correctly judged, although two or three more ribbons would not have been amiss.

Colles.—This beautiful and intelligent animal is fast growing in favor, and at no previous show in this country have so many really fine ones been seen. In the champion class Marcus had a walk-over, as none appeared to contest for the honor. He is well worthy the title, as he is of good form and possesses one of the best of coats, Jersey Lass also had no competitor, as Lass o' Gowire was shedding her coat and was not shown. We like Jersey Lass very much. She has an intelligent look and a ladylike appearance that is very taking. We carefully examined all the animals in the open classes, and should say that the awards were well bestowed. In the bitch puppy class we should have given Comet a vhc, as she is of capital form, although her color is much against her.

Bulldoos.—Ben, who was given first, we do not like; his head is too small for his body, and one eye is defective. We think Blister decidedly the best. In the open classes we should have placed Bonnie Boy first, instend of Crib, who is a little shaky on his pins, and should have been content with a vhc. The others were rightly placed.

Bull-Terriages.—The champion and open classes we thought were very well judged. In the puppy class White Silk should have been content with a vhc. The others were rightly placeed.

Rough-Hamed Terriages.—Tyke was properly placed first; he is very good looking and well put together. We liked Meg for second better than either of the others. Widdbriar, who got second, is a trifle coarse and stands too high on his legs.

BLACK AND TAN TERRIERS.—Wallace and Gipsy, whiners of first and second, are too large to suit our ideas. We greatly preferred Squaw and Nottle for the places, as they are capital ones. Vorbigers is also better than the winners.

DANDIE DIMMONTS.—This class was rightly judged, except that we should have given whe to Badger II., who looks like a well bred one.

IRISH TERRIERS.—There were only three entries in this class, and the awards were correct.

Skyns —These were a very nice lot and properly placed.

and the awards were correct.

SKYPS.—These were a very nice lot and properly placed.
PUGS.—This was also a capital class, and although the judge was very lavish of the much coveted ribbons, we could not find it in our heart to dispute the propriety of a single one, even had he been still more prodigal of his favors.
YORKSHIRE TERRIERS.—We falled to find an animal in this entire class that came up to our idea of what they should be, although there were quite a number of very fair specimens among them.
Toy TERRIERS.—Jumbo we thought the latter of the specimens are the strength of the specimens are the specimens are the specimens are specimens.

among them.

Tor Terriers.—Jumbo we thought the best as his coat was much better than any of the others, and he was of as good form as any. Peter also deserved favorable notice.

form as any. Peter also deserved favorable notice.

KING CHARLES SPANIELS.—Both the winners were very good specimens.

JAPANESE SPANIELS.—There were quite a number in this class that were very good, but their coats were not in good condition. Chico, who was in the miscellaneous class, is almost a perfect specimen of these lovely pets, and was shown in beautiful condition.

MISCELLANEOUS CLASS.—This was the most difficult class to judge in the show, and we would not court the task. The Chesapeake Bay dogs were all very poor. The others were all good and each should have had a prize.

SPECIAL PRIZES.—Nearly all of the special prizes were

judge in the show, and we would not court the task. The Chesapeako Bay dogs were all very poor. The others were all good and cach should have had a prize.
